"One matter that concerned the faculty is anything in the document that seems to offer a new definition of the curriculum, a definition different from the one that has been put in place by the Common Learning Agenda and Foundations for the Future," Payne said. He cited the fifth tenet, which supports a learning environment committed to its Judeo-Christian values and principles, as one such instance where alternate aspects of education are being stressed.

"Another matter has to do with admissions," Payne said. "There is concern here about whether the document is advocating a lowering of academic and intellectual requirements for admission, while emphasizing potential in the person based on extracurricular activities ... that is worrisome."

According to the Chairman of the Board of Trustees James Schubauer, the document is not meant to impose the views of the group on the rest of the campus. In fact, he noted that it was originally intended to simply be an internal document. Once complete, however, the board decided that it should be shared with the University. This action was

Public Safety Log

NOVEMBER 24, 1999

UNIVERSITY PROPERTY DAMAGE–While on routine patrol, Public Safety observed a broken pane of glass in an exterior door of Vedder Hall. No witnesses or suspects were located in a search of the area. Reported for repair.

INFORMATION–Public Safety responded to Roberts Hall for the report of someone in possession of possible drug paraphernalia. The report was determined to be unfounded.

NOVEMBER 27, 1999

MEDICAL TRANSPORT–A student contacted Public Safety to request transportation to Evangelical Community Hospital Emergency Room. Public Safety provided the escort and later the individual returned to campus.

NOVEMBER 29, 1999

MEDICAL TRANSPORT–Public Safety transported an ill student to Evangelical Community Hospital for treatment and later escorted the individual back to campus.

HARASSMENT BY COMMUNICATION–A student reported to Public Safety that she received a harassing phone call in her Hunt Hall room. The incident is under investigation.

MISSING PERSON–A student reported to Public Safety that a male juvenile, her son, was missing from their Faculty Court residence. East Buffalo Township Police was notified and a general police alarm was issued. The young man returned home on his own.

INFORMATION/FREON LEAK–Public Safety responded to Lambda Chi Alpha Fraternity for the report of freon leaking from a refrigerator. The University Safety Manager responded to supervise the cleanup operation.

THEFT–A student reported to Public Safety that a locked bicycle was taken from the Smith Hall bike rack. Lewisburg Police was notified. The incident is under investigation.

NOVEMBER 30, 1999

LARCENY/THEFT–A student reported to Public Safety that the rear wheel of a bicycle was taken from the Smith Hall bicycle rack where the bike was locked. Lewisburg Police was notified. The incident is under investigation.

Susquehana Valley Limousine Inc.

With a long tradition of quality service to the Bucknell community, SVL offers:

- Service to and from any destination: door to door
- Schedule your own shuttles to and from Airports for breaks
- Ride sharing network to cut down on costs
- Many available vehicles: vans, town car and limousine bus
- Service 24 hours a day, 7 days a week

Michael Payne calls for University to address needs of independent students

Faculty meeting motion calls for a University task force to study residential life

By Anne Monoky

While Greek life receives a significant amount of attention on campus, members of the University community are now beginning to question whether students who are not involved in such organizations are also receiving enough support at the institution.

Professor of English Michael Payne recently voiced concern on a topic that seems to be inundating the University arena. At the last faculty meeting, Payne made a motion for President Adams to appoint a task force to study the future of residential and social life at the University with particular attention to the needs of independent students.

"I think that this is a good time at Bucknell to examine the support given to independent students on campus" Payne said.

Payne believes that Greeks are given a great deal of support at the University through their own assistant dean of Greek life, Roy Baker, in the dean of students' office. In addition, they are given special space in University residence units.

For Payne, this issue of discrepancy between Greek and independent support became one of particular importance when he taught a Foundation Seminar last semester. "Three of the twelve best students approached asking for recommendations to transfer," Payne said. Each of these male students told Professor Payne that the campus seemed, "too male." Payne explained that they were implying that the campus, "was dominated by fraternities and that this was just not right for them." The students felt that the campus did not provide an other social options for students.

"I do not in any way want this to penalize Greeks," Payne said. He simply believes that changes in the system would benefit both Greeks and independents in that, hypothetically, perhaps each group would receive more committed participants.

Associate Dean of Students Gerald Commerford explained that steps are being taken to try to deal with the issue. First, a task force that will evaluate the future of residential and social life is currently being named by the President. Also, preliminary discussions have begun between the representatives of the Residential Life Office and members of the faculty on the topic of possibilities that will open up with the building of the new 300-bed dorm.

He further explained that there are several options that are being looked at. For example, Professor of Chemistry Margaret Kastner, head of the Common Learning Agenda, has studied what the new facility might mean for Foundation Seminars. Furthermore, preliminary discussions have been conducted about the possibility of extending the Residential Colleges into the new space. He believes that these discussions will enable the University to rethink the options on campus.

"In conjunction with this and the efforts on the part of the Office of Campus Activities, I think what we have is the possibility of doing some neat things residentially that would have a direct impact on the social life of students," Commerford said.

Commerford also indicated that the new area in Swartz basement will create opportunities. This space will be used as a new entertainment spot that will promote a nonalcoholic setting.

"We are looking at some unique ways of using our resident halls to compliment the educational programs, as well as the social," he said.

New BSG officers set objectives for year

Only fifteen percent of students turn out to elect President Bouchoux, three officers

By Jennifer Jenchura

Four new eager Bucknell Student Government Executives were elected by their peers last Monday. Chris Bouchoux '01 was elected President, Marsha Lewis '02 was elected Vice-President for Operations, Nate Sorber '02 was elected Vice-President for Finance and Nina Calo '02 was elected Vice-President for Administration. They will hold their positions for the next calendar year.

As President, Bouchoux will not be taking over the Presidential Search Committee position held by former President Yoshi Maisami '01. Maisami has been serving since its inception. "I would never consider attempting to replace him," Bouchoux said.

Overall, the election was deemed a success. However, newly elected President Chris Bouchoux said that, "the biggest problem with the year's election was a lack of candidates." Although all candidates were all strong contenders, three positions ran unopposed. All the newly-elected officers believe that more candidates would have created a more publicized election. According to Bouchoux, the lack of competition probably contributed to a low voter turnout of just 15 percent. He did say, however, that "the turnout was not bad."

Assistant Dean of Students and BSG advisor Kari Conrad expressed disappointed in the voter participation, since BSG elections usually have at least a 25 percent voting rate. With just five candidates for four positions, voter turnout was at an all-time low.

A lack of competition leads to less campaigning, and perhaps that was one of the reasons for lower turnout. Calo, feels that a more publicized election would have brought more enthusiasm to the election. She would like to see these elections gain more publicity in the future.

Ballots were available over the web on Monday, Nov. 22, by logging onto the BSG homepage. The present voting system, done entirely over the Internet, is praised by many due to its simplicity and the fact that it has been run without any problems. The BSG even receives many requests from other colleges to replicate this voting system. Bouchoux said that the University's voting system is "one of the better systems of its type in the country."

So what is on the agenda for this year's BSG? According to Conrad, it is up to the officers to decide what direction they want to go. The newly elected see many tasks at hand for the upcoming year, namely to gear up student interest for the student government, and make students aware of its importance on campus. All candidates feel that their primary role is to address questions and concerns of the campus.

With a year of BSG experience behind him, former Vice-President of Operations Bouchoux says the goal setting for this year's BSG will be based on responding to the needs of the students.

Although new to BSG, Calo believes that she is "ready to delegate authority where the position demands." She recognizes the two controversial topics of parking and drinking on campus. Bouchoux agrees that the University alcohol policy, "seems to be the main area of discussion on almost all levels of the University, from the Board of Trustees on down."

Sorber said that he will "strive to manage the fiscal affairs of the BSG." His previous BSG experience, which includes activating the new Internal Affairs Committee, will carry over to his new position. He said that this will ensure that, "the actions of BSG...are operating to the highest quality standards at Bucknell." Sorber will also oversee the Appropriations Committee, which delegates funds to student organizations.

Lewis, veteran BSG member, wants to ensure that the BSG continues to be the voice of the students. As a team leader, she recognizes the importance of working together with the other Executives. However, she is most defiant in working towards building a stronger University community.

All newly elected BSG Executives are looking forward to serving the campus community and tackling many important student issues. However, they stress that students must realize the necessity of their involvement at all levels in the BSG.

When asked about running unopposed, Marsha Lewis was, "disappointed to see the lack of involvement...it makes one question whether or not the students care about what goes on in the Bucknell community, or if the students are satisfied with things as they are."

SHOOTING

from page 1

spot where the station wagon remained.

"There was nothing else out of the ordinary," Troisi said.

University spokeswoman Kathryn Dibell said that Loss has no other connection to the institution. "This was an apparent self-inflicted gun shot, with no one else involved," Dibell said.

"As was most people on campus, we were very shocked and saddened by the incident and we don't understand it," said Director of the Physical Plant Dennis Hawley. "We hope that something like this never happens again."

If any University member has any information regarding the circumstances of this incident, please contact The Bucknellian news office at 577-1520.

Jonah Hall—The Bucknellian

Steve Troisi '00 was interviewed by the local media after the Nov. 22 shooting. Troisi spoke with the victim earlier that morning.

NEWS BRIEFS

WTO has to delay opening ceremonies in Seattle

World Trade Organization officials said Tuesday the opening ceremonies for its international conference have been indefinitely postponed because of street protests that made it impossible for delegates to get to the theater where that event was planned.

Earlier, police in riot gear fired pepper spray to disperse protesters attempting to disrupt the opening session. Activists representing a rainbow of causes have vowed to shut down the city with acts of civil disobedience.

Police acted when they failed to persuade demonstrators to clear an intersection at Seattle's Union Square, near the Convention Center where trade delegates are meeting.

Police report one arrest but no serious injuries following the clash. The pepper spray succeeded in clearing the crowd, but other intersections around the city were still blocked by demonstrators trying to block access to the meeting's venue.

The mission of the WTO is to create a prospering global economy, increasing the flow of goods and services around the world. But critics argue most of the planet's population will not benefit from WTO actions and may, in fact, be harmed by them.

"The WTO is going to write the framework that will dictate how global commerce is done and our problem is that the vast majority of people in the world (have no representative to speak on their behalf at the Seattle conference)," said Chuck Collins, co-director of United for a Fair Economy.

The Boston-based group hopes its presence in Seattle will spotlight what it sees as the dangers of growing income, wage and wealth inequality in the United States.

Labor and environmental leaders who have been organizing the street protests for months have said they hoped to rouse tens of thousands of union members, environmentalists and human rights activists for a rally and march through downtown Seattle to coincide with the opening ceremony of the WTO meeting.

The disparate groups have a unified point — the WTO is not good for them or the world's population in general.

WTO General-Director Mike Moore appealed to activists to protest peacefully. "I believe a debate is good. I just hope it's peaceful," Moore said Monday. "It's difficult to maintain a dialogue if people do foolish things that disrupt the flow of information and advice."

Chuck Mack, the Western regional vice president of the Teamsters union, wants organized labor included at future international trade negotiations. "We ought to have a seat at the table so we can protect the interests of workers."

Clinton Confident that Panama can operate Canal

President Bill Clinton said Tuesday the Senate acted wisely in ratifying the Panama Canal treaties 21 years ago, and he expressed confidence that the waterway will be in good hands once Panama takes control a month from now.

Speaking to reporters before leaving on a trip to the West Coast, Clinton said former President Jimmy Carter and Secretary of State Madeleine Albright will represent him at a canal transition ceremony on December 14.

It was during Carter's presidency that the treaties were ratified, and Clinton said Carter "deserves enormous credit" for obtaining the approval of a reluctant Senate.

Clinton said the treaties were "very controversial, immensely unpopular. A lot of the members of the Senate ... had their seats put in peril over it."

He added that he was confident "that the new government of Panama is committed to maintaining the canal in an appropriate way and keeping it open and working with us to do so and having good relations."

The 1978 treaties require the United States to surrender control of the canal to Panama on Dec. 31 and to remove all U.S. military forces by that date. The drawdown of U.S. troops has been under way for some time, and only a small number remain.

Some members of Congress are worried that China is positioning itself to take over the canal through a Hong Kong-based company, Hutchison-Whampoa Ltd., which has been granted lease arrangements to operate ports at each end of the canal.

Clinton waives prohibition against U.S. aid to family planning groups

Within hours of signing the final budget bill of the year on Monday, President Bill Clinton waived a provision prohibiting U.S. assistance to any international family planning group that promotes abortion, the White House announced Tuesday.

The restriction was imposed as part of a compromise that the White House reached with conservative Republicans in Congress this year to pay off about $1 billion that the United States owed in U.N. dues.

A White House spokesman said the Republicans agreed the compromise in the knowledge that Clinton would take steps to lift the restriction. "We made it very clear at the time that the president was going to exercise the waiver," the spokesman said.

By signing the waiver on Monday, Clinton was in effect allowing most of the $385 million U.S. funds earmarked for international family planning groups to move forward, the White House said.

Under the compromise, the president accepted the legal prohibition on use of any U.S. tax dollars for any overseas group that promotes or performs abortion. In return, he negotiated the right to waiver the ban. By waiving it, the administration loses a small percentage of the overall budget for international family planning.

By exercising a blanket waiver, Clinton sent a reassuring message to family planning groups that the law will not disrupt the operation of any organization that receives U.S. aid.

The waiver "allows us to pay our U.N. dues finally, and fund international family planning at 97 percent until the new fiscal year," one administration official said.

The United States was in danger of losing its seat in the General Assembly if it did not pay the dues.

News Briefs Compiled By David Arnold from CNN Interactive

"Varsity sport of the mind" invades campus

By Rachel Laskow

Students were given the opportunity to exercise their brains on Nov. 20 as 16 teams, consisting of four members each, participated in the College Bowl Tournament dubbed "The Varsity Sport of the Mind."

The College Bowl is a 21 year old nationwide tradition and has been held periodically at the University for approximately 10 years. The tournament is sponsored by the Dean of Students Office, and, according to Associate Dean of Students Ruth Burnham, they have been trying in the last five or six years to hold the event more consistently.

Each year, the competition is open to all students and the cost to enter the tournament is $5 per team. The games are played in two seven-minute halves and it is a double-elimination tournament. The questions are composed by a the College Bowl company and are opened immediately before the competition. They cover various topics such as science, sports and history.

According to student coordinator John Roache '02, "I felt it went well. Last year it was smaller. This time we expanded it and let every team go twice."

The winning team of this year's tournament was the "Four Horsemen," which was comprised of seniors Mark Bremer, Ray Schwenk, Doug Yarosz and captain Brian Eyler.

"Even though the Apocalypse may still be a ways off depending on your calendar, the Four Horsemen emerged victorious last Saturday," Eyler said. "The four of us have stuck it out for the last four years at the College Bowl and finally brought the prize home. The competition was tough, and there were many heated moments during the game as many glares were exchanged between teams, but for Yarosz, Bremer, Schwenk, and Eyler, the day ended in sweet victory."

An All-Star team will be made up to compete in the Regional Tournament which will be held at Duquesne University in February. The All-Star team will be composed of the four best players from the whole tournament, not necessarily from the winning team.

Last year the University's All-Star team placed fourth at the Regional Tournament. They beat teams such as one from Georgetown University. According to Roache, this year's All-Star team has a good chance of placing well at the Regional Tournament. The winning team from that event will then go on to the National Tournament where it will compete against 15 other regions in the nation. Next year, the Regional Tournament will be hosted by the University.

"We're really pleased with the faculty and staff helpers that joined us. I'd like to thank Professor of French Allan Grundstrom, Associate Professor of Chemical Engineering Jeffrey Csernica and Head Mens Tennis Coach Bob Hammerlee," Burnham said.

"It is a good reflection on the school to let the best and brightest shine," Roache said.

Barb Wood—The Bucknellian

Members of "Kid Dynamite" Derek Triplett, Bret Willet, Ken Cutrell and Andrew Murrin debate during last week's College Bowl. Sixteen teams participated in the 10th annual Bucknell version of the Bowl.

FACULTY

from page 1

taken despite the fact that they were urged not to do so in a letter sent by Peeler on Nov. 11.

"It is not meant to be persuasive and inform everyone's view, and it was not intended to be the view of the whole campus," he said.

Schubauer and the board did, however, anticipate some difference in opinion with the rest of the University community upon the distribution of the document.

"If there have been any repercussions, we must remember that we all possess different perspectives," Schubauer said. "We are simply trying to tell people what we are thinking."

The faculty, in reply, intends to tell the Board of Trustees what they are thinking through a document of response produced by the Faculty Council. This group, chaired by Peeler, is composed of seven members including himself: Professor of Electrical Engineering Maurice Aburdene, Associate Professor of Economics Teresa Arnott, Associate Professor of English Cynthia Hogue, Assistant Professor of Economics Thomas Kinnaman, Associate Professor of Biology Sally Nyquist and Associate Professor of Spanish Alice Poust.

"My hope is that we can turn this into an opportunity for dialogue."
—John Peeler, chair of the faculty

The final response will draw upon ideas discussed in recent faculty meetings. A proposed version was released yesterday as an attachment to the agenda for Monday's faculty meeting. This draft, which acknowledged the receipt of the trustee document and stressed the need for a "mutual understanding" between the two parties, was divided into two sections. The first discusses the faculty's uneasiness with the process by which the trustees' tenets were produced. The second presents their difference of opinion on several aspects of the trustees' document. The response is subject to change according to the comments and opinions expressed by faculty members on Monday. At that time, members will discuss it, debate it and vote on it.

Peeler believes that his colleagues' dialogues at recent meetings have indicated that they are currently united in their feelings and reactions to the current situation.

"The faculty is quite unified on this matter" he said.

Payne also sees the faculty response to be a positive outcome of the trustees' recent document.

"The faculty discussions have been very energetic, very interesting, very thoughtful ... I think people's responses have been passionate yet controlled and reasonable," Payne said.

Presently, the outcome of the faculty's efforts is unclear and are solely speculated upon. For the time being, they may only envision appropriate and preferred ends to the opposition between the two parties.

"My hope," Peeler said, "is that we can turn this into an opportunity for dialogue."

"If there have been any repercussions, we must remember that we all possess different perspectives. We are simply trying to tell people what we are thinking."
—James Schubauer, chairman of the Board of Trustees

"Bucknell Brigade" intensifies fundraising efforts

By Jim Leahy

The Bucknell Brigade is back, and they are in the midst of a new fundraising campaign to fund some upcoming trips. Two groups–composed of students, faculty members and staff members–will travel to Nicaragua during the winter break and the spring break of 2000.

This past year, two groups of from the University began the Brigade by traveling to Nicaragua with the hopes of helping the country's residents recover from the devastation of Hurricane Mitch. Led by student Jamie Cistoldi '99 and Associate Professor of Latin American Studies LaVonne Poteet, the group brought more than 50 suitcases full of supplies and other forms of aid to the area.

Members of the Brigade built 15 shelters and provided a temporary medical clinic for over 300 residents of the "Nueva Vida" refugee camp. This camp had no electricity, no running water and no sewer service. Most of the residents lived in very small, shoddily built shacks. All of these individuals were unemployed and they could not help themselves.

Now, in the year 2000, the groups of students want to return to Nicaragua for another mission. Nueva Vida does not have any permanent medical facilities, and they are desperately needed. Two groups of 25 will go there with funds and supplies and will work to build a permanent structure for the residents.

The funds and supplies needed are numerous. Reverend Ian Oliver, chaplain of the University, is looking to raise over $30,000 to build the medical facility. He said that the students have been asking their hometown churches, schools and other organizations for help. They are also looking to the local area for donations. So far, the Girl Scouts and Buffalo Valley Branch of the Lutheran Brotherhood have given large gifts to the cause.

Oliver added that the group is looking to collect simple supplies for the trip. This list includes medical supplies (aspirin, vitamin C, cough syrup, ibuprofen, Pepto-Bismol, cold and allergy medicines, finger splints, crutches, stethoscopes, syringes, ace bandages, tongue depressors and thermometers) and hygiene supplies (toothbrushes, toothpaste, band-aids, cotton balls/swabs, hydrogen peroxide and antibacterial soap).

The group hopes that all University students and their student organizations will help in the fundraising effort to make this trip as successful as possible. Oliver is always willing to receive any type of aid from anyone who wishes to give it.

The "Brigade 2000" group is being led by Janice Butler, Director of the Women's Resource Center, and Dr. Donald Stechshulte, Director of the Student Health Center. Student directors for the trip are David Arnold '00, Maria Lopez '02 and Joell Molina '01. The University's R. L. Rooke Chapel Fund is creating scholarships for the students' travel to Nicaragua.

FORUM

EDITORIAL

A chance for dialogue

The University Board of Trustees recently released its *Guiding Strategic Tenets* outlining their perspective on the culture of the University. The document covered a wide-range of areas including curriculum and admissions.

The document seems good-intentioned, but contains some very controversial parts that have stirred emotions among the faculty.

Specifically, tenets in the document that refer to a commitment to "Judeo-Christian ethics" and which call for a heavier priority to out-of-classroom achievements when considering students for admission are points which have aroused considerable controversy. While it is certainly a stretch to say that the Board of Trustees is attempting to redefine the student body, it is safe to state that their views of what an "ideal" University clash with the principles of the faculty.

The Bucknellian does not believe, as some do, that the statement of the Trustees' represents a radical redefining of what Bucknell's goals should be, but many of the tenets in the document represent a more traditional view of the University than the on-campus zeitgeist. In short, the recommendations put forth by the Trustees seemed rather traditional in nature and certainly were not progressive. Many specifics therein have aroused a sweeping and large-scale reaction from faculty members. Many have been angered, feeling as though the Trustees are attempting to enact policy decisions without the faculty's input. Moreover, items such as the University curriculum have long been developed by the faculty on campus—those who are in direct contact with students and the classroom.

Some have suggested that the Trustee document simply serves as a way for Trustees to outline their version of Bucknell's principles in the next century, and carries no direct or implies policy implications.

Others feel that the document serves as a salvo over the heads of the faculty, attempting to preempt any policy initiatives that faculty might recommend. The truth of the intent likely lies somewhere in the middle of these perspectives, but the document does intensify the ideological clash between the Trustees and University faculty.

This initiative has resurrected long-standing tensions between the faculty and trustees. Whether it is the status of the Greek system, the composition of the Presidential search committee or other pressing University issues, these two groups consistently lock horns. Actually, maybe it is rather a locking of pens—in each of these instances, the respective group leaders seem to fire memo after memo back and forth. One wonders if representatives could sit down and discuss the options open to the institution.

Although both groups claim that they are speaking to its needs, one constituency seems to be left out of the ongoing clash between Trustees and Faculty: the student body. Students often get caught in the middle, between these two bodies—many have only heard of this document through discussions with faculty members. Often, the only information that students receive on these issues is through memos such as this or through whatever information is offered by the parties to the Bucknellian. Bucknell may be apathetic, but a lack of knowledge of issues can only lead to a further lack of interest.

Whatever the intention of the Trustees or the reaction of the faculty, though, the release of *Strategic Tenets* can be transformed into a positive if it results in more open campus dialogue. Tensions seem to have reached a point at which constituencies' "going behind each other's back" must stop. Ideological differences aside, both Trustees and faculty are obviously integral parts in determining the future of the University, and the action of each side to attempt to push their agendas on the other is ultimately counterproductive. *The Bucknellian* calls on John Peeler, James Schubauer and others to use the uproar over the faculty reaction as a forum for a more open discussion of the issues discussed in the Trustee document. And, just as importantly, we urge both groups to become more receptive to the needs and concerns of the student body in both discussion and policy.

Student opinion likely represents a position that falls between the traditional Trustee opinion and the progressive faculty, and may help facilitate compromise. If nothing else, though, student involvement in campus issues is integral in understanding the student perspective—a perspective that we hope both the faculty and trustees keep in mind when evaluating policy decisions.

Should we have cable in our rooms?

Of Course

By Rebecca Rowland

I have seen every movie I own a thousand—no—a million times. It is sad but true, when you are bored here at Bucknell, you are BORED! Except, of course, if you live in the Mods or a fraternity house. What makes those places different? One sweet little word...cable.

Bucknell University students are in the unfortunate position of attending a school surrounded by mountains so, the television reception is non-existent. There have been rumors that students in Roberts can get network t.v. with an extensive set of rabbit ears and a roll of duct tape but all in all, we are a boob-tube free campus. The only way for students to be able to pick up t.v. signals is for them to have cable.

So, why hasn't the physical plant installed cable? What reason could the school possibly have in denying 4,000 attention span-less kids from the very thing that defines their existence? Money? The distraction factor? For God's sake give us cable!

I am aware that each dorm has at least one lounge with cable in them. I am also aware of how difficult it is to get an entire dorm to agree on what to watch. Sports dominate everything followed closely by, but in particular order, 90210, Dawson's, Felicity, Party of Five, Ally McBeal, and NBC Must-See-TV. What if I wanted to watch something on TLC or The Discovery Channel? I'd get beat up. It only seems fair to give each student the opportunity to pursue his or her own t.v. habits in the safety of his or her own room.

Subscribe 1,500 rooms to cable? A little pricey, don't you think? News flash people, we pay $29,000 to go to this school and around $4,000 goes to pay for our room. Our furniture DOES NOT COST THAT MUCH! The administration should shell out some of our tuition and pay for basic cable! Why doesn't Bucknell set up an account with Lewisburg Cable? Some sort of discount should be given to the school for bringing in so much business.

Many people are afraid that, by introducing cable to the student body, we will all turn into unproductive zombies. That is completely untrue for three reasons: one, we all had cable, or at least t.v, at home and we all made it here. Two, programming on cable can actually be educational (i.e. C-SPAN, CNN, TLC, The History Channel). And three, instead of getting stoned or drunk and watching the river flow for entertainment, we can ditch the illegal substances and chill in front of the glowing screen.

OK, maybe that last one might not happen, but for the reasons listed above it is absolutely ridiculous that we are deprived of cable in our dorm rooms. The University can only do so much in protecting us from the outside and their funds from the big, bad bill collectors. Sometimes it is just time to jump into the mainstream, no matter what the cost.

Definitely

By Ryan Delahanty

Taking a Political Geography course with the omniscient Professor Peterec and hearing the words, "What's on the cover of today's New York Times?" I can only shrug my head and wonder. I check on the Internet as much as possible to see what is going on with the world today, but to be honest, more often than not I am in the dark. At least this year I am lucky enough to be in the Mods where there is cable.

It is truly astounding how little the majority of Bucknell students know about the events that are transpiring domestically, let alone internationally. I was discussing this with a roommate the other day and he told me that he never found out the we were bombing Afghanistan until he went home for the Christmas break. With the hectic schedule most students here endure, it is tough to take time to sit down and take a good look at a newspaper. And even if we get the chance to sit down and look at a paper it's either to see the front page, sports or business sections. There must be an alternative medium through which we can get information that is pertinent to our studies and more importantly our lives.

It's just a guess but I would say, taking into consideration fraternities, the gateways, off-campus housing, and the Mods, that about 25% of the campus have cable. That is an incredibly low amount! It seems to me that at most colleges, all the rooms come equipped with a cable hook up. Why do not we have cable? Everyone writes about the infamous "Bucknell Bubble" and still we do not try and find a solution. The Bubble is whined about by a freshman every year. Well, let's do something about it.

Once last year I had the audacity to ask why we did not have cable in our rooms. A Resident Assistant mumbled something about Bucknell not being able to get a good deal and also that it cost too much money. Are you kidding me? I do not know of any cable company that wouldn't want to install cable in approximately 1,500 rooms. What then is the real reason that we don't have cable? I surely don't know. I mean, television not only would help us to learn more about the world, even if we saw headlines or quick glimpses of cover stories.

We certainly deserve the right to unwind and relax watching some of our favorite primetime shows. I remember last year when I lived in Swartz trying to catch a show or see Monday night football only to discover that there were thirty people in the basement watching Friends or some other program. I think if I wanted to watch a show, I needed to get there half an hour early just to "reserve" my space.

For now, my best source on information about world events is still my Political Geography class. Hats off to you, Professor Peterec, for keeping the 35 or so of us in your intro class informed. Until the whole campus gets cable, I am going to suggest your class to them!

Breaking out of the 'Bucknell Bubble'

Students need more ways to keep informed of current world happenings

By Allyson Demerath

People like to talk, especially in small towns. Bucknell is no different. Being a small community in and of itself, news travels fast here on campus. However, somewhere between Hunt Hall and the library, the story tends to get a little distorted. What started out as a flood in the parking lot could be declared a natural disaster by the time the news hits the LC. There are several characteristics I have noticed on Bucknell's campus that lead to this rumor syndrome.

For starters, students are at an extreme disadvantage. It's hard to be well informed with the low accessibility we have to the few resources on campus. Dorm rooms are not equipped with cable, which means a quick glance at CNN requires a trip to the Bison or lounge.

While sitting down to watch the local news can be informative, it can also be time consuming. Newspapers and magazines are another way of catching up on current events, but they too can take quite a bit of time to read. After spending three hours in the library doing the required reading for classes, newspapers and magazines tend to loose their appeal. Consequently, most students fall into the "Bucknell Bubble," meaning they become more concerned about the events here on campus as opposed to those in the "real world."

This presents another problem all together. Students become engrossed in events on campus. Suddenly, everyone seems to know your business, or at least they think they do. This can cause quite a few problems for students who are not careful.

Rumors tend to fly faster at Bucknell than they did in high school. People are not really trying to be nosy, well some are. But for the most part, people are interested in juicy details, or making up juicy details.

Any event on campus grabs full attention of the students and faculty alike. For example, the shooting that recently occurred was the main topic of discussion on campus, but no one really knew the story. The local news even described the situation as "sketchy". Thus, by afternoon, ten different stories could be heard around campus, which all related to the same event. Most statements started out with, "Yeah but I heard..." To add to the confusion, the university did little to provide students with accurate information. Not that it was any of our business anyway, but if the events could in any way affect students on campus, we should be accurately informed.

All in all, Bucknell needs to create some more outlets to the real world. Cable in dorms, news briefs, and more accurate e-mails of events on campus would be a great place to start!

World Trade Organization meets to discuss improvements for globalization

Environmental issues need to be seriously considered in order to protect citizens

By Josh Guyan

Well Congress is out of session and the Presidential race is just dragging on, so what is there to talk about? Of course, the big news this week is the meeting of the World Trade Organization (WTO) in Seattle. The WTO regulates international trade and guards against things like "unfair barriers to trade" which can include high tariffs, quotas, and subsidies. Unfortunately it also sometimes lumps environmental protection agencies into this category and rules against them.

There are many good sides to having an organization to regulate and rule on trade disputes. Anyone who doesn't consider this new thing called globalization is missing the boat. This is probably the biggest issue facing the world today because it has a hand in everything. With the birth of e-commerce and Internet communication, the marketplace has gone global in a big hurry. In order to make sure this global trade is fair, legal, and regulated, we need an organization like the WTO. There is definitely a worldwide upside to regularized, free global trade. Whoever makes a certain product or service the best for the cheapest price wins.

There are, however, many downsides to both globalization and what the WTO does. Globalization greatly increases the power of the market, taking a great deal of sovereignty away from individual states and giving it to multinational corporations and international financial institutions and investors. While things like accounting standards and legal infrastructure must be homogenized so that everyone can transact with each other, it also leads to homogenization of cultures and sometimes forces practices on nations that don't want to homogenize. The WTO enforces this. They try to make things easier for globalization to occur, to speed up and improve global trade.

The major downside in my eyes is environmental. Globalization takes very little account of the environmental costs of free trade (of which there are many including deforestation, loss of biodiversity, and global warming) and the WTO is no different. If the United States wanted to pass a law banning certain products caught in the ocean using certain fishing techniques to protect sea turtles, the WTO does not consider the sea turtles, it only considers the ban on certain goods, which is technically a "barrier to trade."

There are much more serious environmental concerns involved than sea turtles. Nations are losing the right to protect their citizens and environments from unhealthy goods or services because of the rulings of the WTO.

Another major problem people have with the WTO is that its meeting take place in secret. Extremely important decisions involving billions of dollars and national sovereignty are taking place behind closed doors, which allows for little understanding of accountability for their decisions.

I believe the environmentalists in Seattle represented by both people in the meetings and protestors outside the meetings have a legitimate gripe. The WTO must make exceptions for environmental laws and considerations of the various nations. The protestors I do not agree with are those like the AFL-CIO, who are protesting the WTO meeting because it represents free trade and that means the possible loss of American manufacturing jobs.

I have news for those people. Globalization is here to stay, it is coming at us like a locomotive and there is nothing we can do to stop it. We can only steer it one way or another which is what I hope we can do regarding environmental concerns. Globalization is going to shake the system up. It is going to move industries around and shift jobs all over the world. The new manufacturing sectors are in Mexico and Asia. We have to let them go.

Our economy is changing to a service economy. We started the information revolution and right now we are at the head of the pack. We need to concentrate on retraining programs for our workers and education for our children to make sure we have the brainpower for the new economy.

What we should not be doing is subsidizing or protecting American manufacturing jobs against the will of the market because it is a losing battle. We can fight the environmental battle against globalization because we have to; the entire world has to. The loss of manufacturing jobs is simply a shift that doesn't affect the overall system. We can retrain workers, but the environmental consequences of globalization, enforced by the WTO are much more serious and urgent.

Bidding farewell to a cherished position

From the Editor's Desk

JARED SILLIKER

I'm not really sure what this is about—maybe nothing, but maybe everything at the same time.

By the time you read this, I will have published my last newspaper as Editor-in-Chief of *The Bucknellian*, ending a two-semester tenure alongside my partner Chris Ellis. In this, these words are in part a farewell, part a thank you, and part reflections on the experience and opportunities that have arisen through this position. I wasn't really thinking about saying goodbye to this position until just a couple of days ago when I realized that this was the last time I could really call this my paper. There's more to it than that, but you get the picture.

My first thought is that I would encourage anyone looking for some spice in their life to get involved in this organization. Many think of writing for *The Bucknellian* as just something for journalism wannabees, but there's a lot more to gain. For one, I've gained a tremendous understanding of the inner-workings of this University. I've met and dealt with some amazing people and then some not-so-amazing people. I've written on everything from women's tennis (my stepping stone freshman year) to parking plans. There's been more alcohol and Greek life discussions than Jeeps on this campus. And along the way, I've stumbled upon a Dave Matthews' concert review, a flood that wiped out all those precious BMWs and the ever-intriguing "shooting" this past week.

A lot of my friends have said from time to time, "Gosh, that's got to take a lot of time." Sure, sometimes I question my sanity at 2 a.m. in the office, but sleep is overrated anyway. I tend to think of the time commitment as more of a challenge—somebody's got to do it. And I suppose I developed this perspective, in part, from my predessors, Brett Tomlinson and E.J. Crawford. If you're from the camp that this is a quality publication, you can look to me and Chris, but we have merely followed the groundwork laid by these and other graduates.

Other individuals have helped guide me along to this point that deserve much thanks as well, especially Katherine Wheatcroft and James Lee, the two faculty advisers that I have had the pleasure of working with over the past three years. Each has their own unique philosophy, but both have been instrumental in my newspaper career.

Another thanks would go out to all the staff members that have worked for us. Without their hard work, this paper would not exist.

In addition to the connection to campus news and personalities, this position has given great insight to the complex intricacies of running an organization. There are many more facets to this position that you can imagine. You truly realize this when, in the same day, you write a news story, order office supplies, analyze the budget and drive the paper to be printed in Milton.

So after 24 issues as Editor-in-Chief, I have mixed feelings about stepping down. I do have confidence that the paper will be in good hands, however. Brian Watson '01 and Heather Napolitano '01 will take over the helm, and should carry on the tradition of quality journalism quite well.

It has been quite a year, and I wouldn't change much. A final thanks should be aimed at my talented partner Chris. Compromise and sharing duties has been essential, but above all, we've had a great time doing it all.

One of my favorite quotes is from Thoreau's Walden, wherein he encourages one to "live the life you imagine—to go confidently in the direction of one's dreams".

Well, I didn't imagine this and it wasn't really my dream.

If you had let me pick a college "career" three years ago, I would have chosen to be a starter on the varsity tennis team. That was my dream.

I *almost* got there. In fact, I'm undefeated (2-0) in Division I doubles play with Chris Cole '00 ... check the record books! At any rate, that plan didn't really pan out, so *The Bucknellian* took center stage—or should I say 'front page'.

This, of course, has no point other than to say—as my high school cross country coach used to preach—throw your heart into the run and your body will follow.

Fight censorship and voice your opinions!

By Maren Johnson

I recently received a letter in my mailbox concerning the article I wrote for the last issue of the *Bucknellian* on the prejudice and censorship at Skidmore College. Upon opening the letter, I wondered at its contents and was intrigued to see if I had made a fan or an enemy. However, it seems that my "friend" was ambiguous about his opinion of me. He wanted to alert me more to his opinion of Bucknell. In response to that letter, and in order to clear up my own opinion on the matter, I would like to discuss the topic of censorship in our schools.

The letter I received implied that there were various acts of "pre-censorship" that occur at this university, among others. My informant related to me an incident that occurred at the university, and was subsequently covered up by the university as well. While the incident was not of large consequence, my informant seemed agitated that all the Bucknellian seems to care about is underage drinking and alleged campus stalkers.

He seems to think that thanks to Bucknell's "pre-censorship," (and by this he meant that incidents are covered up before they can make it to print) the *Bucknellian* misses all the "good" stories. In response to this, I have a few points that I would like to make.

First of all, I was in no way implying that censorship does not occur here. I wrote about Skidmore because I thought it was a topic that needed to be brought to light. The same incident could have occurred anywhere, even here. This leads me to my second point. I have no desire to disparage Bucknell. I enjoy being a student here, and accept it as the privilege that it is, but it is in no way a perfect institution. Of course censorship occurs here on many levels.

Throughout history, censorship has been a fact of life. There will always be individuals or groups that feel the need to shield the rest of the world from what they feel is wrong or hurtful. Some people will join the crusade, and others will start their own in order to fight censorship.

This brings about my final point. If you feel that censorship is wrong and the public has a right to know the whole truth, then do something about it. Do not just write letters to me about it, write a letter to the whole school, publish it in the paper yourself and take action.

So, to my informant, I say to you, if this is really something that you are concerned about, go out there and tackle it. By being anonymous and keeping information to yourself, you are not helping censorship any more than the censors themselves. "One should learn to detect and watch that gleam of light which flashes across their mind from within, more than the lustre of the firmament of bards and sages." - Ralph Waldo Emerson

Thinking of those less fortunate at Christmas time

By Jim Leahy

In this season of lights, glitter, and happiness, we tend to forget what really matters. We go the shopping malls to find that perfect gift for someone we love or to look for things we really "need." But is this all that matters? Is this the right kind of holiday giving? Yes and no.

Yes, we want to buy things for our loved ones and friends to show them our love and gratitude. No, because we forget everyone else. We forget those who cannot go to the shopping malls or who don't have the money to buy even the simplest gifts. Giving takes on a new meaning when we think about it in this light.

When I talk about giving at Christmas in terms of charity work, I do not mean outright philanthropy. We do not have to part with exorbitant sums of money to make the holiday of everyone in sight better. All that is necessary is to give what you can. By making the holiday of just one person better, you have done your job. I have participated in these practices over the last four years, and let me tell you, it just feels good.

Toys for Tots, one of the charities that pops up at Christmas time to collect all sorts of children's toys is one of my favorites. When I was little, toys were my favorite gifts. They were fun and they could be used over and over again. My high school used to help with Toys for Tots and I loved it. To think that the toy I gave would be delivered to a child who was not going to get one otherwise was heart warming.

The Salvation Army is another charity that you might think of at this time of the year. You know them, they are the ones who stand on the street and ring bells to get you to put money in those little red kettles. Most people will walk by. Hey, they are not asking for much. Put your pocket change into the kettle, it might go a long way.

Here at Bucknell, there are a few things you can do to help out those who are less fortunate. First is the Giving Tree. Take a flake off the tree and buy the gift or item that is written on the back of the flake. But, to me, the better of the things is the Angel Tree in the Bookstore. What you are doing is buying books for children in local Head Start programs. There are many of these programs in this area and if you haven't heard of them, listen up. These are preschool children in underprivileged households or troubled households who just need more help than other children might. What can be better than giving a book to one of these children? You might be giving them their first new book in a long time. The gift of reading is special, more special than anything you can give. Stop by in the bookstore and do something for someone else.

My purpose in writing this was not to shame you into doing anything. Your money and what you do with it is not my problem. All I am asking is for you to think about someone besides yourself this holiday season when you are thinking what to buy everyone for Christmas. I guarantee, anything you do to help others will make you feel all the more happy and into the holiday spirit.

LETTER TO THE EDITOR

Senior nights are positive experiences

TO THE EDITOR:

This letter is in response to Jessica Jackley's letter in the Thursday, November 18 edition of the *Bucknellian*. The letter she wrote troubled me and brought forth several concerns. While there may be the need to address certain underlying issues to do with Senior Night, I am in full support of these Nights. I do not think that all these bad things (i.e. disrespectful behavior) happen at Senior Night.

As an attendee of Senior Nights, I felt what was represented in her letter was an exaggeration of the negative aspects of Senior Nights. I think the great majority of seniors involved there drink responsibly. As well, as the class cabinet, we cannot overwhelm ourselves by taking responsibility for each and every single senior's actions in attendance at Senior Night. People will still drink even if we do not have Senior Nights. It gives me comfort on these nights, however, that we give these individuals a safe ride home.

If individuals are involved in disrespectful behavior, they need to be made accountable for their actions. Why is it that people can't be made to apologize to establishments the next day if they are disrespectful? Why does this responsibility need to rely only the class president and/or senior class officers? Surely all of the responsibility does not. Alcohol does not cause disrespectful behavior, people do. We can not use alcohol as a scapegoat, especially when people know their limits on alcohol.

As well, I have not heard anyone say they are excluded (and believe me - the percentage is small anyhow of people under 21 in the Senior class) from Senior Nights. If they are concerned, they are not vocal enough and I don't think it is right to represent feelings we have not heard as a cabinet. People know Senior Nights are a tradition at Bucknell and most people will be 21 by second semester, if they are not now.

Lastly, I do not feel that everyone (although a great majority) goes there to drink or if they do drink, most people do not drink to the extremes. In the real world, drinking is just a way for many people to relax and in the stress of Bucknell, the same is true. From what I have seen, most people drink responsibly. Just because a few don't drink responsibly, they do not represent the whole class.

As a whole, Senior Nights provide a positive outlet of class cohesion and social activity. I think the best thing to do at this moment is to emphasize the non-alcoholic aspects (i.e. soda, pizza, dancing) of Senior Nights to the class. Maybe there is a way to have lip sync or dance contests? This would lessen the amount of alcohol consumed as well!! The more activity going on, the better.

I agree with Jessica in that I don't think Skip's was the best choice, but I also think that is a decision that must come from the majority of the class, not a single individual. I know that as a class cabinet, it was pretty unanimous that the cabinet wanted it at Skip's and that they felt this represented what the class would want.

I think Jessica does have every right to raise issues about Senior Nights, but I do not think Senior Nights are something that should be banned forever. Senior Nights do not promote irresponsible drinking. I do think any changes to Senior Nights must represent the MAJORITY. I think maybe the article Jessica wrote maybe could have been more "proactive" in the face of—"okay, folks let us have some control here and let's make people responsible for their individual actions"—because Senior Nights are here to stay.

I think as a leader we are dealt cards we don't want to deal with, but we have to find ways to make it better. Getting rid of something will not solve the problem! I think we need to find ways to build upon the good of Senior Nights and what it promotes.

Sincerely,
Samantha Jackson '00

Arts & Entertainment

Dance Company opens season with performances this weekend

By Krista McCabe

The Bucknell Dance Company opens its season Friday and Saturday, Dec. 3 and 4 in the Harvey M. Powers Theatre in Coleman Hall with a concert involving new faculty, student and commissioned choreography.

Sean Curran choreographed a commissioned piece. Curran is a graduate and guest faculty member of the New York University's Tisch School of the Arts and has been a member of the cast and percussion extravaganza *Stomp* for the past four years.

For this dance concert, Curran re-staged his "Folk Dance for the Future."

The Bucknell Student Government, Bucknell Focus Semester and the Bucknell Association for the Arts supported Curran's commissioned piece.

Danna Frangione, director of Dance, felt that this piece by Curran really tests the dancers skill. Not only does it combine the technical foot work of Irish step dancing, but it also uses upper-body movements challenging for the Dance Company to execute.

Allyson Green, an adjunct professor of dance at the University, combines humor and sensitive beauty in her choreographed dance "Elegy on Wind," a new work staged in collaboration with media artist Peter Terezakis.

"I was very pleased to hear that Ally Green was returning this semester to stage one of her pieces for the Company. Her multimedia showcases add a unique flair to our often traditional dance concerts," Leslie Shoemaker '00 said.

"For Ally's piece, we were asked to use our own personal experiences and feelings to create movement. I feel as though I can express myself both through her movement and my own," Kristy Kuhn '00 said.

Terezakis' designs evolved when he first moved to New York City and began incorporating technology into his creations. He also created a light installation called "Fireflies of Edo" in conjunction with the dance concert. The installations will be shown 5-8 p.m. on Dec. 1 in Freas Lawn, 5-8 p.m. on Dec. 2 in the Grove and 5-11 p.m. on Dec. 3-4 in the academic quad.

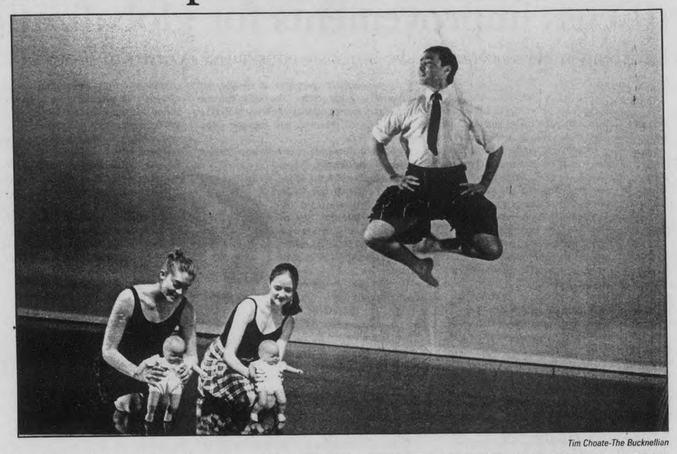
The performance will also offer a different look at Shakespeare's *Romeo and Juliet*. This performance combines both theater and dance with monologues as well as wonderful scenography by Elaine Williams.

Frangione said that this piece allows many dancers to explore their talents both as dancers and actors. Many of the dancers have also performed as actors in a number of shows at the University. The Dance Company uses many resources in the theatre and dance department.

The Department of Theatre and Dance is extremely excited to reveal the costumes designed by new faculty member Paula Davis-Larson and guest costume designers Amy Rinker and Pam Miller.

Student choreography will include the fantasy world of children in a new work by Jennifer Schmermund '00 and a challenging and highly technical ballet by Sarah Wagner '01.

"This fall's concert is particularly sentimental for myself and the other seniors in the Company as well. This, being our last fall concert, evokes much emotion. The concert this year is one of our most varied, offering something for everyone. Jen Schmermund's piece is a lovely journey into the imagination and fantasies of children," Kim Nastasi '00 said.



Tim Choate-The Bucknellian

Leaping through the air, Er-Dong Hu, professor of dance, choreograped for the concert and will also perform this weekend. The fall dance conceert will offer a wide variety of talent and dancing ranging from Irish folk to technical ballet.

The Fall Dance Concert combines talent, both in dance and theater and it ranges from Irish Folk to the technical ballet.

"I feel that this concert is very releasing to both the dancers involved as well as those receiving it in the audience. All of the pieces capture a different emotion which makes you feel you that you are on a journey though the endless possibilities of dance. Many of the dancers have assumed different roles than they are normally used to. Although this concert continues to challenge us, it gives us the special outlet that we all need in our lives," said Amy Brillinger '00. The Dance Company will perform at 8 p.m. this Friday and Saturday, Dec. 3 and 4, in the Powers theatre in Coleman Hall. Tickets are $5.00 for adults and $4.00 for children and senior citizens. Tickets are on sale at the LC Box Office or can be purchased the night of the concert at the door. For more information call the Department of Theatre and Dance at 577-1235.

Stephanie Metz-The Bucknellian

The University's art gallery will showcase pieces through the end of the semester with a new selection arriving after the winter break.

Courtesy of the Weis Center

Pianist, Emannuel Ax will perform works by Haydn, Corigliano, Debussy, and Chopin at 8 p.m. this Saturday, Dec. 4 in the Weis Center.

Dedicated students bring breakdancing group to campus

By Stacey Gawronski

A facet of the Hip-Hop dance group, Jelani, celebrated its official recognition by the University last month. Harlow Wetschler '02 began the group early in the semester as he started practicing on his own and soon interested John Ehlers '02. The duo have been practicing consistently since the beginning of the semester.

An email inviting students to join recruited fifteen students to the initial practice, taught by Wetschler and Ehlers. Practice is held on Wednesday and Saturday.

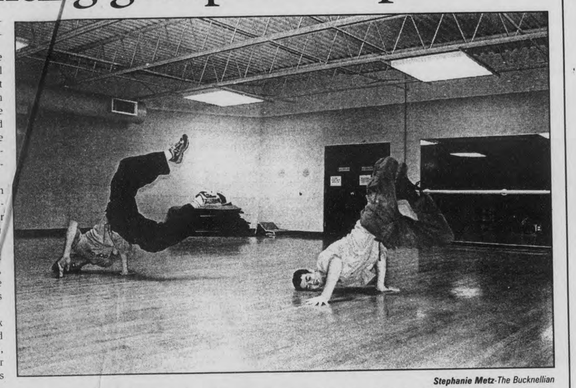
Though the group started out with just one avid breakdancer, plans for an expansion of Jelani are underway, including performances on campus next semester.

"We hope to find a group of six to ten really dedicated people and then train a little more intensively, around four times a week rather than just two," Wetschler and Ehlers said.

Eventually, the group hopes to perform on other campuses, participating in breakdancing contests with other schools.

"It will take at least two months to get to performance level. I recently started breakdancing and picked it up fairly quickly, but I'm still developing strength and technique," Wetschler said.

In the future, another facet of the Hip-Hop dance group may appear. Though not yet popular, popping, a "miming" style of dance, may be combined with breakdancing in the future if enough interest is shown.



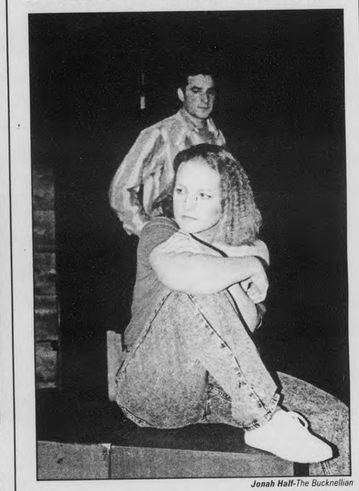
Stephanie Metz-The Bucknellian

John Elers '02 and Harlow Wetschler '02 have been practicing their breakdancing moves for several months.

Stephanie Metz-The Bucknellian

A new addition to the Hip-Hop crib, Jelani is a breakdancing group. Currently involving fifteen members, Jelani hope to perform after two months of intensive training. The group meets onWednesday and Sunday.

A scene from Cocktail Theatre...



Jonah Half-The Bucknellian

"Electric Roses," directed by Kate McDevitt '01 was performed last week as part of the Theatre 240 directing class's Cocktail Theatre. Above, Cassandra Pisieczko '00 and Theo Avgerinos '00 act out a scene from the play.

Symphonic Band performs fall concert

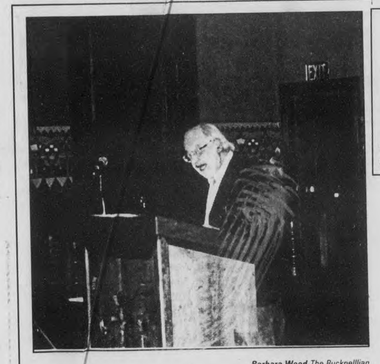
By Jolene Hart

The University's Symphonic band performed their fall concert before an approving audience Sunday, Nov. 14, in the Weis Center. The orchestra, consisting of nearly eighty students, is conducted by William Kenny, associate professor of music. This fall performance was the culmination of a semester of preparation for the band.

The highlight of this engaging program undoubtedly came during a piece called *Divine Comedy*, which combined the band's instruments with other objects to create unusual sound effects. Throughout the piece, the sounds of balcony brass, ringing wine glasses and rattling chains were heard, adding an exciting and interesting aspect to the entire concert.

"Each of the soloists did an excellent job," Neal Lutz '03 said. Lutz, is one of the five saxophonists in the band and he agreed that the second half of the program was the most spectacular.

"This performance was one of the best that I have seen throughout my career at Bucknell," Kenny said. The campus community can look forward to another two performances by the symphonic band during the spring semester.



Barbara Wood-The Bucknellian

The university's own Karl Patten gave a poetry reading this past Sunday at Bucknell Hall. Patten is a professor emeritus here at the University and has published two books of poetry, The Impossible Reaches and Touch:Poems. He is also the cofounder and coeditor of West Branch, a twice-yearly magazine of poetry and fiction.

Dance Company opens season with performances this weekend

By Krista McCabe

The Bucknell Dance Company opens its season Friday and Saturday, Dec. 3 and 4 in the Harvey M. Powers Theatre in Coleman Hall with a concert involving new faculty, student and commissioned choreography.

Sean Curran choreographed a commissioned piece. Curran is a graduate and guest faculty member of the New York University's Tisch School of the Arts and has been a member of the cast and percussion extravaganza *Stomp* for the past four years.

For this dance concert, Curran re-staged his "Folk Dance for the Future."

The Bucknell Student Government, Bucknell Focus Semester and the Bucknell Association for the Arts supported Curran's commissioned piece.

Danna Frangione, director of Dance, felt that this piece by Curran really tests the dancers skill. Not only does it combine the technical foot work of Irish step dancing, but it also uses upper-body movements challenging for the Dance Company to execute.

Allyson Green, an adjunct professor of dance at the University, combines humor and sensitive beauty in her choreographed dance "Elegy on Wind," a new work staged in collaboration with media artist Peter Terezakis.

"I was very pleased to hear that Ally Green was returning this semester to stage one of her pieces for the Company. Her multimedia showcases add a unique flair to our often traditional dance concerts," Leslie Shoemaker '00 said.

"For Ally's piece, we were asked to use our own personal experiences and feelings to create movement. I feel as though I can express myself both through her movement and my own," Kristy Kuhn '00 said.

Terezakis' designs evolved when he first moved to New York City and began incorporating technology into his creations. He also created a light installation called "Fireflies of Edo" in conjunction with the dance concert. The installations will be shown 5-8 p.m. on Dec. 1 in Freas Lawn, 5-8 p.m. on Dec. 2 in the Grove and 5-11 p.m. on Dec. 3-4 in the academic quad.

The performance will also offer a different look at Shakespeare's *Romeo and Juliet*. This performance combines both theater and dance with monologues as well as wonderful scenography by Elaine Williams.

Frangione said that this piece allows many dancers to explore their talents both as dancers and actors. Many of the dancers have also performed as actors in a number of shows at the University. The Dance Company uses many resources in the theatre and dance department.

The Department of Theatre and Dance is extremely excited to reveal the costumes designed by new faculty member Paula Davis-Larson and guest costume designers Amy Rinker and Pam Miller.

Student choreography will include the fantasy world of children in a new work by Jennifer Schmermund '00 and a challenging and highly technical ballet by Sarah Wagner '01.

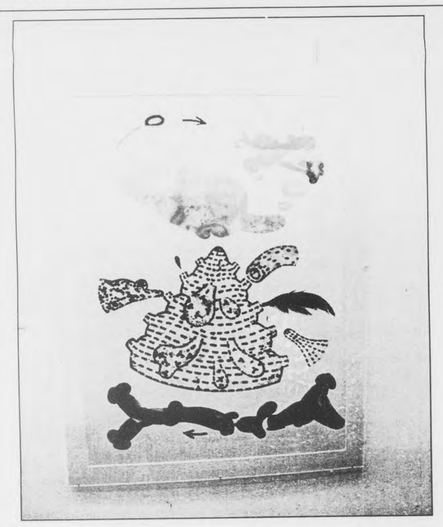
"This fall's concert is particularly sentimental for myself and the other seniors in the Company as well. This, being our last fall concert, evokes much emotion. The concert this year is one of our most varied, offering something for everyone. Jen Schmermund's piece is a lovely journey into the imagination and fantasies of children," Kim Nastasi '00 said.

Tim Choate-The Bucknellian

Leaping through the air, Er-Dong Hu, professor of dance, choreograped for the concert and will also perform this weekend. The fall dance conceert will offer a wide variety of talent and dancing ranging from Irish folk to technical ballet.

The Fall Dance Concert combines talent, both in dance and theater and it ranges from Irish Folk to the technical ballet.

"I feel that this concert is very releasing to both the dancers involved as well as those receiving it in the audience. All of the pieces capture a different emotion which makes you feel you that you are on a journey though the endless possibilities of dance. Many of the dancers have assumed different roles than they are normally used to. Although this concert continues to challenge us, it gives us the special outlet that we all need in our lives," said Amy Brillinger '00. The Dance Company will perform at 8 p.m. this Friday and Saturday, Dec. 3 and 4, in the Powers theatre in Coleman Hall. Tickets are $5.00 for adults and $4.00 for children and senior citizens. Tickets are on sale at the LC Box Office or can be purchased the night of the concert at the door. For more information call the Department of Theatre and Dance at 577-1235.



Stephanie Metz-The Bucknellian

The University's art gallery will showcase pieces through the end of the semester with a new selection arriving after the winter break.

Dedicated students bring breakdancing group to campus

By Stacey Gawronski

A facet of the Hip-Hop dance group, Jelani, celebrated its official recognition by the University last month. Harlow Wetschler '02 began the group early in the semester as he started practicing on his own and soon interested John Ehlers '02. The duo have been practicing consistently since the beginning of the semester.

An email inviting students to join recruited fifteen students to the initial practice, taught by Wetschler and Ehlers. Practice is held on Wednesday and Saturday.

Though the group started out with just one avid breakdancer, plans for an expansion of Jelani are underway, including performances on campus next semester.

"We hope to find a group of six to ten really dedicated people and then train a little more intensively, around four times a week rather than just two," Wetschler and Ehlers said.

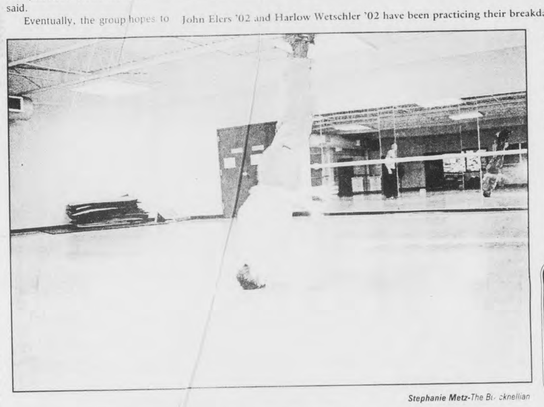
Stephanie Metz-The Bucknellian

John Elers '02 and Harlow Wetschler '02 have been practicing their breakdancing moves for several months.

Eventually, the group hopes to perform on other campuses, participating in breakdancing contests with other schools.

"It will take at least two months to get to performance level. I recently started breakdancing and picked it up fairly quickly, but I'm still developing strength and technique," Wetschler said.

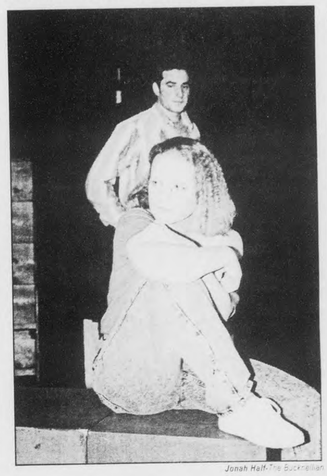
In the future, another facet of the Hip-Hop dance group may appear. Though not yet popular, popping, a "miming" style of dance, may be combined with breakdancing in the future if enough interest is shown.



Stephanie Metz-The Bucknellian

A new addition to the Hip-Hop cub, Jelani is a breakdancing group. Currently involving fifteen members, Jelani hope to perform after two months of intensive training. The group meets onWednesday and Sunday.

A scene from Cocktail Theatre...



Jonah Half-The Bucknellian

"Electric Roses," directed by Kate McDevitt '01 was performed last week as part of the Theatre 240 directing class's Cocktail Theatre. Above, Cassandra Pisieczko '00 and Theo Avgerinos '00 act out a scene from the play.

Symphonic Band performs fall concert

By Jolene Hart

The University's Symphonic band performed their fall concert before an approving audience Sunday, Nov. 14, in the Weis Center. The orchestra, consisting of nearly eighty students, is conducted by William Kenny, associate professor of music. This fall performance was the culmination of a semester of preparation for the band.

The highlight of this engaging program undoubtedly came during a piece called *Divine Comedy*, which combines the band's instruments with other objects to create unusual sound effects. Throughout the piece, the sounds of balcony brass, ringing wine glasses and rattling chains were heard, adding an exciting and interesting aspect to the entire concert.

"Each of the soloists did an excellent job," Neal Lutz '03 said. Lutz is one of the five saxophonists in the band and he agreed that the second half of the program was the most spectacular.

"This performance was one of the best that I have seen throughout my career at Bucknell," Kenny said. The campus community can look forward to another two performances by the symphonic band during the spring semester.

SCIENCE & TECHNOLOGY

Ohio's *The Wilds* animal preserve supports biological diversity and conservation through open-range habitat provision

Home to Asian, African and North American species, the Wilds facility is today directed by one of the University's alumni, Evan S. Blumer, V.M.D.

By Alex Piel and Kate Nowak

About an hour southeast of Columbus, Ohio lies an extraordinary preserve hidden behind old farms and grassy plains. There, isolated from all of the noises and troubles of the developing and modern American society, rests what appears at first as a small country protected by a wooden fence and rolling hills. You can't immigrate anytime you want, only half of the year, and you must have a love for what no machine can make, and for what no computer can calculate. You needn't make a reservation and you don't need a lot of money. What you do need is a love for nature, a passion for animals and an appreciation for the altruism on exhibit in central Ohio.

The facility was opened in 1994 to the public in Cumberland, Ohio. Unlike any other, it spans over 10,000 acres of reclaimed, surfaced-minded land and is entitled the Wilds, making itself accessible for all to see and feel. A generous gift from American Electric Power, its land is filled with over 150 lakes, rolling hills and exotic species of endangered animals from around the world. Thousands of acres have been divided to separate these animals that live naturally in Africa, Asia and North America; and who are permitted to roam freely confined only by fences which allow them abundant acres of grazing space.

Courtesy of Alex Piel

Alex Piel '01 (left), who made a visit to the Wilds over Thanksgiving break, and Cathie Kreager, member of the Wilds Animal Management and Health team, stand on the foreground of three Bactrian camels. Alex had the opportunity to accompany Cathie on her morning animal-feeding routine run.

Courtesy of Alex Piel

Not an animal lives in a cage or pen and not a predator lies in sight: these animals roam the lands that their other natural habitats can no longer provide. In many ways, the Wilds is ideally characteristic of the animals' natural milieu.

Open six months out of the year, from May 1 to October 31, the entire facility is handled by seven animal caretakers and two exotic animal veterinarians. One of those veterinarians is Evan Blumer, a former Bucknellian and graduate of the University of Pennsylvania Veterinary School. Evan's love for animals was evident while he studied at the University under Douglas Candland, professor of Animal Behavior and Psychology at the University. Blumer later worked for the Philadelphia Zoo and Fossil Rim in Texas, a facility similar to the Wilds. Specializing in rhinos, he was extended an invitation to Cumberland, Ohio to join a small staff in a growing sanctuary that needed his expertise and experience with exotic animals. Today, Blumer works as deputy director at the Wilds, his concentration still being on rhinos.

Unique about the Wilds is not only the thousands of untouched and undeveloped land, but the philosophy behind it. Touring visitors on old school buses throughout the summer, the staff there cares for the Wilds' animals like their own children. They emphasize the conservation issues facing these animals' survival and the environment they need to sustain for a content life. There is no artificial breeding done and human intervention between inter-species conflicts is rare. Like the primate lab here at the University, the Wilds strives to maintain a natural environment for the animals.

The Wilds provides more than just tour buses and lunches though. The goal of such a facility is to promote learning of these animals in hopes to gain a better understanding of not only their behavioral patterns, but also of ecological necessities and species-specific lifestyles. Projects that have been undertaken include research in anesthesia and pharmacology, aquatics (involving the use of the land's several lakes and ponds for research with endangered mussels), ecology (evaluating the nesting habits and reproductive success of grassland birds), and field conservation (an international multi-disciplinary effort to conserve remnant populations of wild Bactrian Camels). Studies on nutrition, parasite infection and reproductive physiology are also being conducted. All work is performed in collaboration with either other zoos, national parks, The OSU College of Veterinary Medicine or international conservation groups. Such attempts exemplify the type of cooperation needed to protect endangered species.

Courtesy of the Wilds

The Wilds 14 square mile facility is located on SR 146 between Chandlersville and Cumberland. A Visitor Center, gift shop, Overlook Cafe and Education Center are among the few attractions.

One of the most endangered of the 38 known deer species arrived at the Wilds from the Bronx Zoo in New York and the National Zoo in Washington D.C. These Burmese brow-antlered deer, called "Eld's Deer," inhabit areas in Myanmar (formerly Burma) and Indochina. Remaining are only a few thousand. Since 1969, the National Zoo has attempted to rescue Eld's Deer from extinction. The Wilds facility has contributed to this incredible effort by provision of premium habitat.

Filling only 10 percent of the available land with animals, the Wilds has ample space for 4 times what they have today. As this paradise continues to grow and develop, new programs and facilities are constantly being discussed and planned. Immediate plans include the completion of the third and fourth buildings of the Rhino Research and Breeding Complex. This complex hopes to house over forty rhinos and will consist of a lab, a mechanized handling system and a storage area for hay and feed. The Wilds also hopes to acquire additional North American species as they begin a prairie restoration project. Enhancing a large natural wetland with non-invasive trails, bird-watching opportunities, and educational graphics, the development of the first overnight lodging sites, and the construction of cabins alongside a lake in the park's remote locale will provide more possibilities for education and preservation.

The Wilds species list

Asia

Bactrian deer
Bactrian camel
Central Chinese goralonager (Persian wild ass)
Pere David's deer
Indochina sika deer
Przewalski's wild horse
Greater one-horned rhino

Fringe-eared Oryx
Common Eland
Reticulated Giraffe
Cuvier's Gazelle

North America

Trumpeter Swan
North American bison
Sandhill Crane

The inconsistent table of time

By Scott Hagadorn

It's December 31, 1999, 11:59 p.m., and you are participating in a New Year's Eve festivity that you will never forget. The turn of the century and transition into the third millennium is just seconds away, the moment all of us have been anticipating since the birth of the ubiquitous phrase, "Y2K." It is finally here. Isn't it?

I would have to agree with the latter part of the aforementioned statement. The number succeeding 1999 is in fact 2000, and all of us can, if we want, fear for the precious lives of our computers. However, a new century is much more than a few seconds away.

As you have most likely read, heard or even believed, the 21st century doesn't start for another year. You may consider it ludicrous for the media to refer to the Y2K glitch as the Millennium Bug. Well, you are in fact right.

Many initial epochs have been used to set the basis for determining the order of the present-day calendar. Frequently, years were counted from the ascension of a ruler. For a calendrical epoch to be useful, however, it must be tied to a sequence of recorded historical events. This is illustrated by the adoption of the birth of Christ as the initial epoch of the Julian and Gregorian calendars. Years of the Gregorian calendar, which is currently in use today, are counted from A.D. 1. Thus, the first century comprised the years A.D. 1 through A.D. 100. The second century began with A.D. 101 and continued through A.D. 200. By extrapolation we find that the 20th century comprises the years A.D. 1901-2000. Therefore, it is indisputable that the 21st century will begin with January 1st, 2001 and continue through December 31st, 2100. Similarly, the first millennium comprised the years A.D. 1-1000. The second millennium comprises the years A.D. 1001-2000. The third millennium will in fact begin with A.D. 2001 and continue through A.D. 3000.

The method of calendrical reasoning can be extremely confusing when considering the real birth of Christ. Although historians do not know the exact date, astronomers and even some biblical historians believe that Jesus died in 4 BC. If we find ourselves referring to the year 2000 as the number of years since Christ was born, we are subject to a misinterpretation of the real date.

What is going to happen, however, at the turn of this year is the ultimate end of the 1900s and the exciting venture into the 2000s. The Gregorian odometer will transform into three zeroes for only the second time ever, and we can all brag to be a part of it.

I can't guarantee, but rather offer you confidence that as we head into the spring semester of 2000, your credit cards will still have the full capacity to indebt you and that your Windows OS will still crash from bugs other than reading too many zeros. Most of all, you can head into the year 2000 looking forward to the exciting turn of the second millennium, only 365 days away.

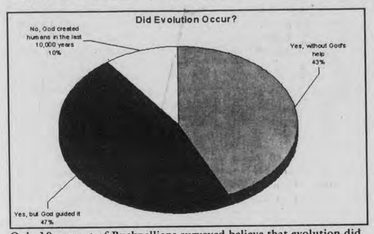
Campus evolution survey yields surprising results

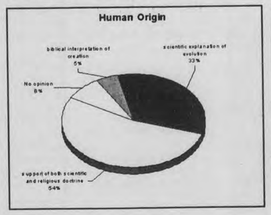
Did evolution occur with or without God's help or did God create humans in the last 10,000 years? Should Creationism or evolution be taught exclusively? How many believe in a biblical intrpretation of creation? See what a sample of your fellow University students said.

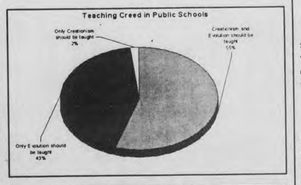
By Katherine Nowak and Matthew Trunnell

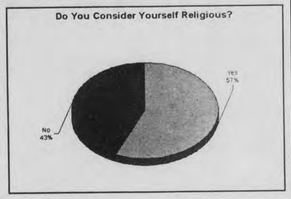
A survey conducted on campus from November 28 to December 2 chose sixty students at random, from a wide variety of academic concentrations, inquiring about their evolutionary belief, teaching creed and biblical interpretation. The survey also asked about the students' major of study and whether or not they considered themselves to be religious. Their responses are graphed below.



Only 10 percent of Bucknellians surveyed believe that evolution did not occur and that God created humans within the last 10,000 years. This contrasts with a national survey, where 44 percent of Americans believed the Creationist hypothesis.







Although 57 percent of the students surveyed profess to be religious, only 5% believe solely in a biblical intrepretation of creation, and even fewer believe that Creationism alone should be taught in public schools (2 percent). That contrasts strongly with the 43 percent of students who feel that evolution alone should be taught.

What about the American population? What are their sentiments, beliefs and values? Are pro-evolution actions representative of what the country believes? Are all in agreement against Kansas' new teaching standards? According to a recent ABC News report, 45 percent of the country's adults takes the Bible's story of creation literally. And only about 10 percent believe in a purely scientific explanation of human origin and evolution. 44 percent conceded with the assertion that "God created human beings pretty much in their present form at one time within the last 10,000 years or so."

"That's a lot of people," said George Bishop, a University of Cincinnati political science professor. "That's not some small minority position."

The percentages stem from a 1997 poll conducted by Gallup Organization that quizzed America about their views on human origin. It appears that another 39 percent of Americans, while not agreeing with the latter statement, believe in evolution, but as being guided by God.

George Bishop, conducting comparative studies of America and other countries, found that "Americans are almost five times as likely to take the Bible literally than are people in England." He feels that what has arisen in Kansas could have never occurred in Europe. Germany, Norway, Russia and the Netherlands, for example, have a miniscule percentage of adults who take the Bible literally.

Bishop thinks that our country may be more religious than most other developed countries due to its notion of religious freedom. "There's more active recruiting, proselytizing, and other forms of bringing people into their particular fold," he says. Religion has become an open market. Who would have thought that what America rests upon- freedom- would ever stand in the face of scientific progress?

Student Commentary

"I believe in God, but not in organized religion. To ignore the evolutionary influence of our development is ignorant, but to center on Creationism is controversial, to the point of neglect of other religious beliefs of creation."
-Psychology major

"There had to be something besides a "big bang" which started the whole thing, and although I don't claim to know what that is, I don't think it's an all-knowing God."
-Biology/Classics major

"As far as teaching goes, I believe Creationism is up to the church- an entirely separate institution from education. There are many choices in religion and people are free to decide. Evolutionary theory is a minority and its teaching should be protected."
-Undecided major

"Evolution, just like any other topic that is open to debate, should be taught from all sides, leaving it to the student to decide what they believe."
-Education/Russian major

"Religion is an institution created by societies to help mass numbers of people live together. It is essential to society, but is not related to or responsible for evolution."
-Biology major

"God created the Earth. No further comments."
-Biology major

"I feel that teaching creationism is not a problem. We teach the Odyssey, Huck Finn, and Newtonian Physics; the problem occurs when one religious creation story gains a monopoly. If multiple valid scientific explanations were available (natural selection, sexual selection) I would feel the same about them."
-Animal Behavior major

"I feel that more options should be provided in this survey in terms of evolutionary beliefs. While I don't believe that evolution occurred to the extent that is stated in Biology textbooks, I don't necessarily believe that God created humans in the last 10,000 years."
-IR/Economics major

Will the human body respond well to pig organ transplants?

About 4,000 people in the U.S. die each year while waiting for an organ. A program for xenotransplantation of pig organs could provide enough healthy organs for all of these patients.

By Debra Lowry

The shortage of donated organs has been an ongoing problem for thousands of people around the world. For the past century, doctors have been looking into the possibility of actually transplanting organs or tissues from an animal into humans. This process of transplanting between different species is called xenotransplantation. Pigs seem to be the preferred animal for use in xenotransplantation. The common pig has similar organs and metabolism to the human. There has already been much research into genetic engineering of pigs so that the organ of choice will hopefully be accepted by the human immune system.

Courtesy of BBC News

Xenotransplants taken from genetically engineered pigs could provide humans with the necessary organs, saving thousands of lives

One of the main reasons for intense debate, according to a recent BBC news report, is the possibility that an animal virus that does not normally infect people could do so when placed directly in a patient's body. Moreover, viruses could mutate or recombine with existing human viruses to form an entirely new pathogen. One example of this is the belief that HIV, one of the most feared of viruses today, jumped into humans from other primates.

Recently there has been research done on a newly discovered pig virus called Porcine Endogenous Retroviruses (PERV), reports BBC. This retrovirus is permanently embedded in the pig's DNA. This virus does not harm the pig, but noone knows if it would hurt humans. Researchers found that PERV is actually capable of infecting human cells in a test tube but there has been no reported cases in actual humans. This encouraged a new study that tested 160 people who have been exposed to living pig tissue in the past 12 years. Most of the patients had their blood filtered and recirculated through pig spleens, kidneys, livers, or devices made with pig liver cells. Some patients received skin grafts for burns. Others received injections of pig pancreas cells for diabetes. Samples of blood and saliva were taken from each patient. Three different tests were used to see whether there had been any infection by or transmission of PERV. In all of the patients, no evidence of PERV infection was detected. Some of these patients still had pig cells circulating even after 8 years, demonstrating that pig tissue can survive in the human body for long periods with no ill effects.

This evidence appears quite supportive that pig organ transplants would be safe. There are still many barriers to overcome before xenotransplantation will be possible. The main problem is to prevent the human body from rejecting the transplanted pig organ. Even if this obstacle is overcome there is still fear that other viruses could appear, especially since a whole organ provides a much larger reservoir for viruses.

There is no guarantee that pig transplants will be safe, but the evidence of these recent studies have given the go ahead for a few small pig-to-people experiments that are being well-monitored. The most important study currently in progress involves the implantation of fetal pig cells into Parkinson's disease patients' brains. The future looks promising.

The human genome project now one-third completed

By Brienne Terril

Government-supported scientists have sequenced one-third of the human genetic pattern and are on schedule to complete the biological blueprint by 2003, said officials on November 23.

According to ABC News, Dr. Francis Collins, head of the National Human Genome Research Institute, said that 1 billion of the 3 billion chemical base pairs in the human genetic pattern have been identified, sequenced and published on a public database. Ideally, by next spring a draft of the entire human genome will be completed, Collins added, saying that it will take an additional three years to verify the sequencing and produce a final result.

The human genetic pattern lays out the sequence of 3 billion pairs of chemicals that make up human DNA in every cell. The bases are composed of thymine and adenine or guanine and cytosine arranged in pairs along a coiled helix in each cell. The base pairs then form the 100,000 human genes by varying their sequence. Genes are the basis for the assembly of proteins and compounds that guide the form and function of cells.

By identifying each human gene and its effect researchers believe that new ways to treat or prevent birth defects and illnesses such as cancer and heart disease will soon be developed.

The Human Genome Project started its work about five years ago with approximately 85 percent of the work being conducted at the Whitehead Institute in Cambridge, Mass.; Washington University School of Medicine in St. Louis; Baylor College of Medicine in Houston; the Joint Genome Institute in Walnut Creek, Calif., and the Sanger Center in Cambridge, England. Private laboratories are also sequencing genes and have claimed up to a billion base pairs already, although experts say they are using a less-precise method, according to the Discovery Channel. The government-sponsored effort involves checking each sequence repeatedly by computer to ensure accuracy. The government-sponsored effort is also publishing completed sequences daily free of charge, whereas some of the private laboratories plan to patent sequences in order to develop commercial health products.

'Tis the season

The holidays hit New York City

By Eric Green

Ah yes, Thanksgiving break—the break we all wanted to come so desperately, but has now become a faint memory as final exams remain the only thing between us and a month of lazy winter days. If your break was anything like mine, you too suffered from a near-death experience on Black Friday as hoards of crazed holiday shoppers were trying desperately to grab the last Tickle-Me-Furby or whatever, as you, the only sane person within a four-mile radius, foolishly went to the mall in search of the latest issue of Sports Illustrated. But alas, Black Friday signals the start of another wonderful holiday season. And what is a holiday season without forty-three holiday specials in thirty-one days? Unrealistic. But unless you plan on watching a classic like "A Christmas Story," I suggest that you make the most of this holiday season by taking a trip to New York City to enjoy Christmas spirit at its best.

From the annual Christmas show at Radio City Music Hall to window shopping on Fifth Avenue, the city has tons to offer. Even if you seem to ice skate on your knees more than your feet, there is nothing like lacing up your skates for a few spins below the grand Christmas tree in Rockefeller Center. If Mother Nature cooperates, a walk through Central Park under a blanket of white just may be the most spectacular scene on a snowy winter evening.

"New York City becomes one of the most friendly and happy places during the Christmas season, bringing back the spirit of the holidays that is forgotten by many," said Laura Skibiski '02.

Here are some classic holiday suggestions for taking in the city this December:

(From December 1999 issue of *Town & Country*)

Rockefeller Center tree: 30,000 lights will shine after December 1st

Channel Gardens' Angels: located in Rockefeller Center

Radio City Christmas Spectacular: $70 million in restorations and Rockettes - why not?

City Lights: Take a walk along Park Avenue

Neapolitan Baroque Creche: 18th Century Nativity at the Metropolitan Museum of Art

Giant Snowflake: Located at 5th and 57th

Hanukkah Lights: 32-foot-high menorah located in Grand Army Plaza

"A Christmas Carol": Madison Square Garden theater

Winter Garden: Palm trees with 100,000 lights along the Hudson behind the WTC

Big Apple Circus: One-ring circus in Lincoln Center's Damrosch Park

Courtesy Town & Country Magazine

The traditional tree at Rockefeller Center has become a modern-day symbol of the holiday season.

Maybe this holiday season you can get your shopping done before the 24th—well, at least started. With such a great selection of unique shops and stores, you are bound to find the Red Ryder Carbine Action Two-Hundred Shot Lightning Leader Range Model Air Rifle for which you have been searching. But if you're going to shop, a trip to F.A.O. Schwarz is a must—just be prepared to fight all the little kids who will not share the fun of hopping across the giant piano. Regardless of what you do, walking among the crowds of holiday shoppers and beautiful Christmas sights is a event not to be missed this holiday season.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

I am writing out of concern for my girlfriend. We started dating last year, and one of the reasons I was so into her was because she was really laid back, just a nice girl in general. She had lots of friends and was the type of person that people just liked being around. However, a large majority of her friends last year were seniors who moved onto bigger and better things. Though she hasn't lost all contact with them they certainly are not around as much as last year. Therefore, this year my girlfriend had to go out and make some new friends.

Now I am not saying that making new friends is a bad thing. I think that you should always be friendly to people and try to make as many friends as possible. She went out and was able to make some new friends, but her new friends are not particularly like her. Her friends are what I would call of the alternative variety. You know, the kind of girls who mourned when Kurt Cobain died.

When I returned to school after Thanksgiving break, a surprise awaited me. It turns out that my girlfriend and her friends decided to have a makeover party. They all got new haircuts and painted their nails and stuff. My girlfriend got a haircut that now makes her look like a little boy, not to mention that it is now a completely different color. Her finger nails are now painted purple, or some freakish color that people don't even paint their houses, not to mention their hands.

I really like my girlfriend. I am not sure if I love her yet but, who knows, maybe I could in time. However, right now she looks like something out of a horror movie; it's not pretty. So, should I tell her how I feel about her new look and new group of friends, or should I just break the whole thing off if she is going to continue to do this?

Sincerely,

The Boy Of Frankenstein

Dear The Boy Of Frankenstein,

I know exactly what you are talking about with the whole vampire look, and I am not very into it either. For some reason, girls who look like they want to kill me or who are wearing a dog collar don't really do it for me. However, I guess that each person is entitled to their own look, even if it makes them look like someone parents warn their small children to stay far away from.

I think that you need to evaluate how much you really like this girl. If you feel as though she is the right person for you, I would say stick with her. However, understand that college is a time to just have fun, as well as find your place. There will be plenty of other girls, so don't feel as though you need to be tied down to this one, especially if you are having doubts about the whole thing. If I were dating Elvira I would consider ending the relationship as well.

Whether you are thinking about ending the relationship or not, I would definitely say something to her. She may understand what you are saying and realize that she is acting in a strange way. On the other hand you may just have to come to terms with the fact that the dark side may have gotten your girlfriend. I really think that talking to her would help though; it never hurts to say how you feel. Ask her why she is acting this way. Tell her you think it's a complete change from how she was acting before. As I said before, college is a time to find yourself, so maybe that is what she has done.

Another idea that you may want to consider is talking to your girlfriend's new friends. Ask them if they are pressuring her to do this stuff, or if they know why she is doing it in the first place. It seems odd to me that your girlfriend would go and do this drastic stuff to herself without even talking to you. That may also say something about the level of your relationship. If she doesn't even want to talk to you about her feelings and her present actions, maybe it just isn't worth it. Overall I would say to simply follow your instincts. I urge you to try to understand her reasoning. I think that you need to sit down and do some thinking before you act on any of your feelings. If you want to stay with her, I say go for it, more power to you. I think that they have some stylin' dog collars down at the pet store on Market Street. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry—all questions are confidential and answers are always thorough. However, please write questions that are decent because we cannot include material that is libelous or an invasion of privacy. The Spirit of Christmas

Charities aim to help the less fortunate this holiday season

By Kristen Jancuk

With Christmas rapidly approaching, it is easy to become wrapped up in the hustle and bustle of the season: baking, shopping, decorating and the many other things on your to-do list. Finding time for anything else seems like a miracle. However, it is this time of year when making time for the less fortunate is most important. Several nationally recognized organizations spend every holiday season collecting donations and helping the less fortunate.

Toys for Tots, sponsored by the U.S. Marine Corps, is one of the most well-known charitable organizations, and the Christmas season is its busiest time of year. Begun in 1947 by Major Bill Hendricks, Toys for Tots was adopted by the Marine Corps and expanded into a nationwide campaign in 1948. Since then it has distributed over 240,000,000 toys to needy children. In addition, the Marine Toys for Tots Foundation was established in September 1991 to raise funds to supplement their annual collection campaigns.

This year the Toys for Tots campaign began on October 1. The Marines will work to collect new toys from October to December and finish the project on Christmas Eve in their annual distribution. Last year the Marines distributed over 11,200,000 toys in their most successful campaign. This year they hope to surpass this number as well as increase the number of children they reach.

The American Lung Association runs its annual Christmas Seals sale to raise money for the fight against tuberculosis and other lung disorders. Begun in 1907 by American Red Cross member Emily Bissell, the campaign began as a local effort to help a faltering TB hospice in Delaware. In this first year the Christmas Seals raised $3,000 to help fight TB.

This year the American Lung Association is focusing its Christmas Seals campaign on the battle against asthma. Donations will help fund research and educate the public about asthma as well as other lung ailments.

A famous holiday sight in New York City are Sidewalk Santas, who ring their bells on street corners, collecting donations for the needy men, women and children of New York. This year is the 97th year for the program in New York. It is sponsored by the Volunteers of America, who donate to almost 7,000 needy New Yorkers every holiday season.

Their campaign begins the day after Thanksgiving, with a Santa Claus march through Manhattan. Though once seen nationwide, the official Sidewalk Santas are now only found on the streets of New York City. However, the Sidewalk Santa website allows people from all over the country to make donations.

The funds raised by the Sidewalk Santas in New York are given to the VOA's Hope and Hearth Holiday Food Voucher Program, which has been in existence for over 90 years. The less fortunate are, including children, single parents and people with AIDS, are given food coupons with which they can purchase food for the holidays.

Donations accumulated online go to support some of the other 160 programs run by the VOA—helping the homeless, the disabled, the elderly and needy children.

Of course, the University also seeks to aid the less fortunate during the holiday season. The brothers of Kappa Alpha Psi are currently collecting canned goods to donate to local food shelters during the Christmas season and have recently extended their drive until Dec. 15 in order to reach their goal of 10,000 cans. Collection boxes can be found in dorms around campus and in the LC.

The Junior Panhellenic Council is sponsoring a drive for used books and toys to donate to local organizations for the needy, including Haven Ministries, during the holiday season. Collection boxes can be found in the LC and other buildings around campus and the drive will run until Dec. 7.

The BSG is again sponsoring its annual Giving Tree. Gift requests are made and hung on the tree. Volunteers simply chose a flake and purchase the gift, which will be donated to someone less fortunate in the local community if returned to LC 207 by Dec. 8. In a similar vein, the bookstore is sponsoring a literacy tree. Volunteers purchase books for children and return to the bookstore by Dec. 8. The Bookstore will wrap the books and deliver them to a local Head Start Center.

Helping the less fortunate, though important year round, takes on a special meaning during the holiday season. Don't pass up the opportunity to ensure that someone less fortunate than yourself has a merry Christmas too.

Did you know...?

- The Puritans forbade the singing of Christmas carols
- Charles Dickens' initial choice for Scrooge's statement "Bah, humbug!" was "Bah, Christmas!"
- There are 364 gifts in the 12 Days of Christmas
- Artificial Christmas trees have outsold live ones since 1991.
- In "How the Grinch Stole Christmas" the Grinch cuts out a Santa beard, but he never wears it.
- The first Christmas was celebrated on Dec. 25, 336 A.D.
- Alabama was the first state to recognize Christmas as an official holiday.
- Nova Scotia leads the world in exporting Christmas trees.
- The year 2000 is not the true millenium. In the Bible it is written that King Herod searched for the baby Jesus to killhim. It has been historically proven that Herod died between 4 and 6 B.C. so Jesus had to have been born then and the true millenium was between four and six years ago.
- Rudolph was created by Robert May in 1939. He wrote the book and it was given away by the Montgomery-Wards store. It was made into a record in 1949 by Gene Autry.
- Electric Christmas tree lights were first used in 1895.
- Donder and Blitzen mean thunder and lightning.
- There is a city in Indiana named Santa Claus
- "Jesus Light of Nations" is the oldest Christmas carol.

Next Week:

There is no next week! Don't cry, we'll be back in January

THE BUCKNELLIAN Sports

Athlete of the Week

Lori Houck '00, *who led the women's basketball team to a 3-0 start and surpassed the 1,000 point plateau.*

Women finish 24th in Nation

By Rose Sedo

Most coaches can only dream to have the type of season that the Bucknell women's cross-country team has had this year.

Last Monday, Nov. 22 the team competed at the NCAA Championships in Bloomington, In. Having been chosen as one of the 13 at-large selections, Bucknell competed against some of the best Division I schools in the entire nation.

Courtesy of Athletics Communications

Bucknell's top three of Jen Hart '00, Marshall, and Andrea Beisser '03 (front to back).

Although they were the first Bison women's cross-country team ever to make it to Nationals, they did not disappoint. Out of 31 teams, the Bucknell women placed 24th.

Individually, Bucknell's first to cross the finish line, in a race of 250 women, was Becki Marshall '02 in 96th place with a time of 18:00.5.

Following her were teammates Andrea Beisser '03 in 126th place (18:10.70) and Teresa Dennis '03 in 143rd place (18:17.00).

Senior captains Jen Hart '00 and Carly Graytock '00 finished in 153rd place (18:20.40) and 181st place (18:32.70) respectively.

These impressive results make this women's cross-country team one of the best sports teams to ever be associated with Bucknell.

There are over 350 Division I colleges and universities in the United States, all of which are eligible for Nationals. Even though Bucknell does not grant athletic scholarships, the Bison managed to beat many teams that do offer scholarships to attract top recruits.

Because the magnitude of the accomplishment is so tremendous, some people may find the scope of their success difficult to grasp.

"I don't think most people really understand what these ladies did. For them to be ranked 24th in the entire nation is something that is so extraordinary, that it almost seems unreal. There were no 'what-ifs.' They didn't have one letdown all season," coach Art Gulden said.

Assistant coach Klim agrees. "Right from the second meet, I was telling people that we had a shot at Nationals. It was just that type of consistent team that got better and better with each passing week," Klim said.

From the runners' end, it was also an incredible experience.

"Everyone ran their hearts out, and it was a great team to be associated with as a senior," Hart said. "We couldn't have asked for anything more."

Courtesy of Athletics Communications

Becki Marshall '02 was the Bison's top runner at NCAAs, finishing in 96th place overall.

Bison capture Pepsi Classic to open '99

Bowen, Bailey lead inspired play as team starts 3-0 for the first time since 1983

By Chris Ellis

Jonah Half-The Bucknellian

Bryan Bailey '02 scored 14 points to lead Bucknell to a 65-62 victory over Robert Morris in its 1999 home opener.

For a low-level Division-I basketball team, especially one trying to find an identity after losing two top players to graduation and its most explosive player to injury, early-season games are generally a way to build experience and serve as an indicator of a team's progress and potential. But a balanced scoring attack and surprisingly good play from its point guard have given Bucknell the opportunity to take something else from early season games: wins.

The Bison, buoyed by strong rebounding and solid play from each of its starters, opened the season 3-0 after defeats of Maine, Marist and Robert Morris and earned a 58-53 win over St. Francis in last night's game. It took a miserable second-half shooting performance against Rider in the team's fourth game to keep Bucknell from opening the season 5-0. As it stands, Bucknell's 3-0 start is the team's best start since 1983.

The early-season success has come as the Bison have relied more on their starting five than in past years. Starters Valter Karavanic '00, Dan Bowen '00, Bryan Bailey '02 and Brian Muckle '00 have each seen at least 30 minutes of action in each of the Bison's first four games, and Dyrika Cameron '00 has played 30 minutes or more in all but one of the games. Guard Dan Blankenship '03, who has spelled Bailey at the point, and Shawn Asbury '00, who has evolved into a key varsity contributor after seeing most of his previous three years of action with the jayvee, are the only two players who have received significant minutes off the bench.

Perhaps the biggest surprise of the early-season for the Bison has been the play of Bailey, who was a backup to Willie Callahan '99 at the point last season and earned the starting job this year with strong exhibition and practice play. Bailey has contributed both as a playmaker and scorer, averaging 10.3 points per game—good for second on the team—and dishing out 10 assists in his first four games as a varsity starter. Bailey also leads the Bison with nine steals and has turned the ball over just 14 times. Bailey's play in the early-season has allowed Bucknell's top offensive threats—whom coach Pat Flannery wanted to get more deeply involved in the offense—to get more shot attempts. Bucknell's starters have spread the scoring around, and the balance has helped the team achieve rare early-season success.

The "new look" Bison saw their efforts rewarded in the season-opening Pepsi Classic in Poughkeepsie, New York. Bucknell defeated Maine, 79-69, and host Marist, 54-48, to claim the championship of an in-season tournament for the first time in 11 years.

The effort against Maine was keyed by Bowen. He scored 23 points on 8-for-11 shooting in the season opener, including eight point in an early second-half run that allowed Bucknell to build a 14-point lead, its largest of the game. Karavanic added 12 points and Cameron 10 for the Bison, who never trailed in the game.

Bowen went cold in the championship game against Marist, scoring just 11 points and making just four of 11 shots, but Karavanic and Asbury picked up the scoring slack in a game that fea

BEYOND THE BUBBLE

Packers Hand 49ers Seventh Straight Loss:

The San Francisco 49ers, one of the most dominant teams in the NFL for more than fifteen years, are being reminded of what it's like to lose a lot of football games. On Monday night, the Niners were routed by the Green Bay Packers, 20-3. It was the team's seventh consecutive loss and eighth overall this season.

The big problem for the 49ers (3-8) has been their offense. Quarterback Steve Young has not played since suffering a concussion September 27. He will certainly miss the remainder of this season, and it is speculated that he will be forced to retire before next year. Since his injury, the team has been forced to rely on two young quarterbacks, Steve Stenstrom and Jeff Garcia. The two have combined for 12 interceptions and just three touchdown passes so far this year. Monday night's game was the fourth time in the Niners' last 11 games that the offense has failed to produce a touchdown. Wade Richey's second-quarter field goal prevented San Francisco from being shut out for the first time in 22 years.

"Our offense is terrible. There's no other way to say it," lamented tight end Greg Clark after the game. Added wide receiver Jerry Rice, "I felt like we had some opportunities, but it just didn't happen." Rice actually provided the Niners' only offensive bright spot in the game. His four receptions for 63 yards boosted his career total to 18,025, making him the first receiver in NFL history to surpass 18,000 yards.

Green Bay quarterback Brett Favre completed 25 of 36 passes for 246 yards and two touchdowns, as the Packers (6-5) pulled to within one game of Tampa Bay, Detroit and Minnesota in the NFC Central. San Francisco, meanwhile, dropped six games behind the first-place St. Louis Rams in the NFC West. They also assured themselves of finishing with a non-winning record for the first time since 1982.

Sixers Roberts Expelled From NBA:

Stanley Roberts of the Philadelphia 76ers was kicked out of the NBA Wednesday after testing positive for a prohibited drug. Roberts, 29, a seven-foot center who was recently placed on the injured list, tested positive for an "amphetamine-based designer drug," which calls for immediate expulsion under league policy.

This is the first expulsion under the drug policy that was a big part of the collective bargaining agreement which ended the lockout in January. Veterans can be tested once a year — in training camp or within 15 days of signing with a team. Rookies can be tested up to four times. Roberts exercised his right to ask for a retest and failed it, NBA spokesman Chris Brienza said. He can apply for reinstatement in two years.

Said Sixers' president Pat Croce, "It's unfortunate that Stanley would jeopardize his career and possibly his life because he wanted to take a leisure drug. It bothers me that we would waste time and effort on rehabilitating him. But the NBA and the players association are sending a message."

Manchester United Claims World Club Cup:

Manchester United beat Palmeiras of Brazil 1-0 at Tokyo's National Stadium on Tuesday to become the first British club to win the World Club Cup. Roy Keane's goal in the 35th minute brought United their fourth major honor of the year after winning the European Cup, the English league championship and the F.A. Cup last season.

After a slow start, Palmeiras began to gain control as the first half progressed. But United striker Ryan Giggs outran defender Junior Baiano wide on the left in a counter-attack. Goalkeeper Marcos missed Giggs' cross, leaving Keane to sweep the ball into an empty net from just a few feet away. Palmeiras, bidding to become the first South American club to win the trophy since 1994, had several good scoring chances in the second half, but were never able to put the ball past United goalkeeper Mark Bosnich.

United manager Alex Ferguson said Palmeiras was the better team in the first half, but his team came back strongly after the break and deserved the victory. "Because of the way Palmeiras played, we had to take certain risks and they paid off," he said. "We treated this match very seriously and badly wanted to win it because no English team had won it before and it has made us world champions. Manchester United can be very proud of that."

Palmeiras coach Luis Felipe Scolari said he was proud of his players, but that they had failed to take their chances. "Manchester United proved tonight what a great team they are," he said. "We made enough chances to score, but United played very well and their goalkeeper pulled off three brilliant saves."

European teams have now won the World Club Cup 18 times compared to the 20 victories boasted by South American teams. Since the final moved to Tokyo in 1980, each continent has won it 10 times.

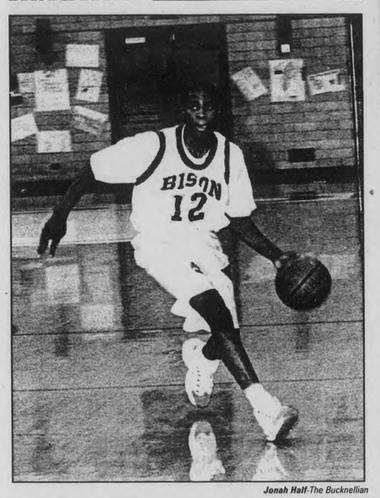
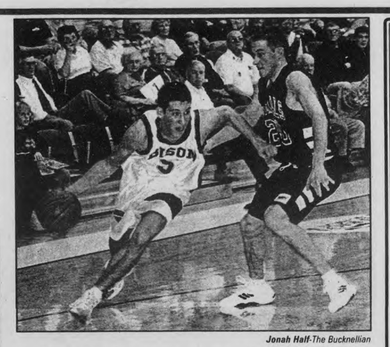
Bison go 4-1 with win over St. Francis

BASKETBALL From page 11



Jonah Hall-The Bucknellian

Bailey and the Bison defeated St. Francis 58-53 on the road this past Wednesday. They will travel to challenge Mount St. Mary's this Friday.



Jonah Hall-The Bucknellian

Dan Blankenship '03 drives baseline past a Robert Morris defender.

tured tough defense and poor shooting. Karavanic made three field goals—all 3-pointers—as part of a 13-point night and Asbury chipped in with 11 off the bench for the Bison. Bucknell shot just 38 percent from the floor in the game, but held Marist to 33 percent shooting and hit 16 of 18 free throws down the stretch to ice the game. Bowen, Karavanic and Bailey were each named to the Pepsi Classic's all-tournament team.

Four Bison players scored in double figures as the Bison won their home opener 65-62 in front of a sparse crowd of 476. Bowen led the Bison with 18 points and Cameron and Bailey each scored 14. Bailey—whose 14 points nearly doubled his previous career high—also had three assists, two steals and three rebounds.

Robert Morris rebounded from a five-point deficit to tie the game at 58-58 with 1:35 remaining, but Bowen scored four straight points to give Bucknell a 62-58 lead and the Bison hit five of six free throws in the game's final minute.

Rebounds and ball control were not an issue in the Bison's 54-42 loss to Rider in the team's fourth game. Bucknell outrebounded the Broncs 49-37 and fired nine more shots than Rider, but couldn't find the basket in a dismal second half stretch that saw Rider go on a 14-3 run that turned a 30-27 deficit to a 41-33 lead.

Bucknell, which led 22-16 at the half, re-opened a 28-25 lead after Karavanic hit a lay-up with 16:31 remaining in the second half. But Karavanic's field goal would be Bucknell's last for nearly 15 minutes, as the Bison missed 19 straight field goals. Bucknell shot under 25 percent for the game and just 16 percent in the second half. Karavanic (2-12), Muckle (2-10) and Bowen (3-14) were the main shooting culprits. Bailey led Bucknell with 12 points on 5-9 shooting.

The Bison jumped to 4-1 after their win over St. Francis on the road. In the game, Bucknell jumped out to a 38-28 halftime lead and extended their cushion to 11 points with 10 minutes remaining in the game, then held off the Red Flash's late rally. St. Francis cut the Bucknell lead to one with just under a minute remaining, but Valter Karavanic hit four free throws down the stretch to seal the win.

The Bison were led by Bowen, who rebounded from his miserable shooting night at Rider to hit eight of nine field goals and score 16 points. Karavanic and Cameron each chipped in with 13, and Muckle hit all three 3-pointers he attempted for a total of nine points.

Prince Ali's Football Picks

By Ali Ahmed

(5-6) Steelers 24 at (10-1) Jaguars 20

Have to go with the Steelers on this one. Jaguars always lose once a year to the them.

(6-5) Packers 31 at (5-7) Bears 24

Packers are on a roll. Favre will look to get his revenge on the Bears. The Bears have to take advantage of multiple receiver sets.

(3-8) 49ers 10 at (2-10) Bengals 34

The 49ers just stink. The Bengals stink too but have great weapons on offense. This game should help the 49ers get the first overall pick in next years draft.

(9-2) Colts 17 at (8-3) Dolphins 20

The Dolphins defense will win the game for them this week. Shutting down the Colts rookie running back Edgerrin James will be key.

(9-2) Titans 13 at (4-7) Ravens 17

Both the Titans and the Ravens have not played as their record indicate. There are still some concerns about Mcnair's ability at the QB position. Ravens get the upset of the week.

(6-5) Chiefs 13 at (4-7) Broncos 17

Broncos are still a solid team no matter what quarterback plays. Chiefs need more offensive production to win close games.

(8-3) Seahawks 30 at (5-6) Raiders 17

Holmgren will not let his team lose after their sorry performance last week. Woodson must dominate his side of the field to give the Raiders a chance.

(7-4) Vikings 34 at (7-4) Bucs 20

Jeff George is currently the best player at his position. The Bucs' defense will be a great test for the Vikings' offense. The player to watch will be Bucs free safety Lynch.

last issue's record: 4-4

season to date: 21-17

FOOTBALL From page 16

composed of Carson Book '02, Jon Churchill '02, Luman Bauta '03, Bill Jamieson '03, Garry Reynolds '02 and First Team All-Patriot League selection Lucas Carlaw '00, paved the way for an impressive Bison running attack that averaged nearly 200 yards a game.

"A lot of people started out thinking we wouldn't be a great unit because of our youth," Churchill said. "But as the season went along, we started getting used to playing with each other and got better game by game."

Next year's Bison squad looks to be very talented and exciting. Gadd noted that, because of injury, he only started one senior on defense against Fordham. Juniors Kevin Eiben, Ficca and Second-Team All-Patriot League selection Reed Tunison posted strong seasons for the Bison and will lead the unit next fall.

But Redd, a two-time First-Team All-Patriot League selection at linebacker, will be tough to replace. He led the team with 104 tackles in '99 and also registered five sacks, two interceptions and a safety.

In addition to the majority of the line, the offense returns an extremely talented backfield. Marrow scored 17 touchdowns in '99, giving him the highest point total by any Bison since 1929.

Powell, a Second-Team All-Patriot League pick, emerged at tailback in Bucknell's fifth game after opening the year as a wide receiver. He finished the year with 827 yards, and his 6 4 yards per carry average ranks second in school history.

The unit will surely miss the experience and leadership of McDowell, the squad's three-year starting quarterback. He ends his career as one of Bucknell's all-time greats, ranking third in attempts and total offense and fourth in both completions and passing yardage. Lucas Phillips '01, who led the Bison to a 32-21 win over Holy Cross, is the top candidate to be McDowell's successor.

"Our program is pretty solid. We're a good football team trying to get to the next level and become a great football team," Gadd said. "How we approach that hurdle will be the critical aspect of next season."

Spotlight on Club sports:

Seniors lead ice hockey to win over Shippensburg, 15-0

By Trip Sanders

Bucknell's club ice hockey team took on a revamped Shippensburg squad on Saturday, Nov. 20, in front of a boisterous crowd at the Sunbury Ice Arena. Unfortunately for Shippensburg, revamping was not enough, as the senior-led Bison trounced their opponents 15-0. The scoring came fast and furious, started by senior captain Jeff Werring. Capitalizing on his first shift, Werring notched his 2nd goal of the season. This was followed quickly by goals from fellow seniors Ted O'Donoghue, Trip Sanders and Alex Dixon. All of Bucknell's players got into the scoring column in the game, except for the goalies.

By the end of the first period, the score was 8-0. After playing a nearly flawless quarter offensively, the Bison defense took over in the second, led by seniors Rocco Russo and Ramsey "The Rammer" Wilcox. The Bison continued to shut down the Shippensburg attack throughout the game, limiting their opponents to five shots on goal. The two Bison goalies, Tim Sather '02 and Paul Van Dillen '01, combined for the shutout.

After reorganizing the game plan to pursue a more defensive strategy in the second period, Bucknell applied the pressure through punishing checks on Ship. Crowd favorite Nate "The Animal" Ledyard '02 caused several Ship players to leave the ice due to injury.

The physical play continued into the third period. With the game well in hand each team racked up penalty minutes. The Bison dominated their weaker opponent, with six players having three-point afternoons and nine others tallying two points.

Bucknell will try to carry over this momentum to its next game, scheduled for Saturday, Jan. 15 at 4:15 p.m. against Penn State at the Sunbury Ice Arena. The Bison then play on Saturday Jan. 22 at 4:15 p.m. at the Sunbury Ice Arena against arch-rival Dickinson.

Peace Frogs win Collegiate League Championship

By Katy Cagle and Sara Gifford

The Bucknell Women's Ultimate team has had a busy season this fall. Between winning the Costume Award and placing second at the Rochester Halloween Tournament and traveling far distances to play Collegiate Fall League games, the Peace Frogs improved with each tournament. The peak of their season was just a few weeks ago, when they entered the Fall Collegiate Championship Tournament seeded last, but yet managed to emerge as champions.

Courtesy of Katy Cagle

The Peace Frogs went 5-0 while in Richmond to capture the crown.

This tournament fell on the weekend of the Counting Crows concert. The Peace Frogs left Bucknell for Richmond, Va. at 2:45 a.m. with little or no sleep early that Saturday. Playing the top seed University of Virginia first, the Peace Frogs came out strong and took a commanding 7-1 lead into the half. Bucknell finished strong to win, 13 - 5.

Next up was Salisbury, who gave the Peace Frogs a spirited and competitive game. The final score was 14-12, a narrow victory for the Peace Frogs. Towson, a less experienced team, was the next victim for Bucknell in an incredibly spirited game. Richmond brought a powerful and intimidating sideline, but they were silenced by the half. Bucknell dominated 13 - 1.

This brought the undefeated Peace Frogs into the championship game against William & Mary, a team they had yet to beat this season. An intense first half left the two teams almost even, but Bucknell came back to sweep the second half, winning 13 - 5.

"We clicked from the beginning and maintained our high energy level to take William & Mary," Betsy Anderson '02 said.

Overall, it was a very successful season for the Bucknell women's ultimate team. They are a strong team but are always looking for new players.

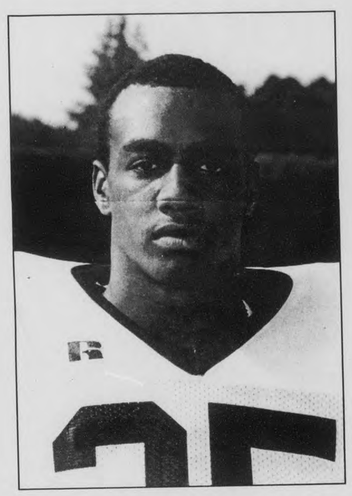
"We had an awesome season, I personally am proud to be a Peace Frog," Debra Lowry '02 said.

The Peace Frogs are hopeful for a successful spring season. A key factor will be the return of co-captain Kathy Kennedy '02 and spring player Michelle Lesh '00. Next semester will involve a lot of work for the Frogs in order to fulfill their dreams of qualifying for Nationals.

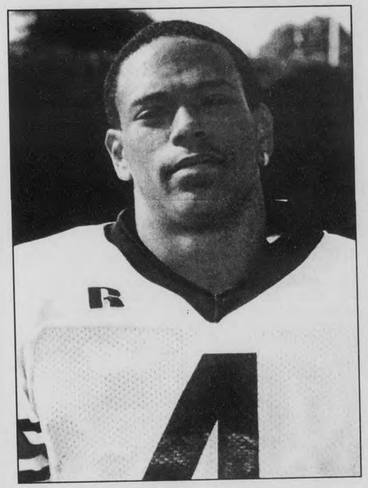
If interested in playing women's ultimate, contact Sara Gifford '02 (gifford@) or Katy Cagle '02 (cagle@).

Sports

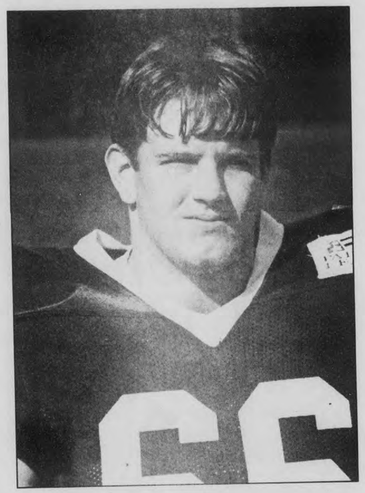
Six Bison named to All-League Teams



Redd '01: two-time first team selection led Bison with 110 tackles



Tunison '01: Bucknell's top cornerback in '99, registered 68 tackles.



Carlaw '00: Four-year starter anchored the Bison offensive line.

By Joshua Gish

Judging by their recent nominations to add six Bison to the All-Patriot League teams, the league's head coaches must have been impressed with the Bucknell football team's fifth straight winning season. At the end of their 7-4 season, three Bison players were named to the first team and three to the second team in recognition of their outstanding achievements on the field.

Senior offensive tackle Lucas Carlaw and senior linebacker Shawn Redd were repeat selections to the first team. Joining them is senior defensive end John Papadakis. Added to the second team's roster were senior tight end Corey Hurley, junior defensive back Reed Tunison, and sophomore running back Jabulani Powell.

The influence that these six players had on the team is highlighted by the achievements of the 1999 squad. The Bison were able to hand Colgate its only regular-season loss, tally a win at Penn for the first time in 22 years and rush for nearly 200 yards per game. Not since a six-season winning streak beginning in 1960 has the team been able to turn in a five-season winning streak, as it did this year. Carlaw, Redd, Papadakis and Hurley are all members of the Bison senior class that tied the school record with 29 wins.

Carlaw's experience and leadership forged the way for the young offensive line to tally more rushing yards per game than in any of the other four years under head coach Tom Gadd. Throughout his Bucknell career, Carlaw started 36 of his 41 games played and was voted the Patriot League's top lineman during his junior year. He is credited with taking tremendous leadership and teaching responsibilities on the field, and his work has shown to pay off through an increase in the team's per-game rushing yardage by nearly 100 yards since his freshman year.

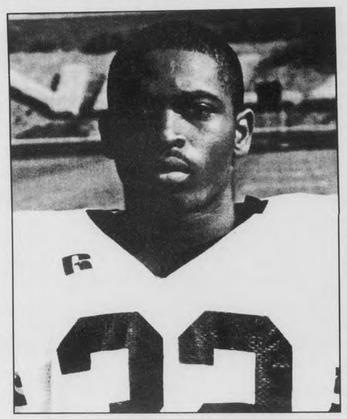
Redd's accumulation of 110 tackles in 1999 led the team and bested his total from last year by nearly 30. He was recognized for his hard-hitting play this year, registering five quarterback sacks for a loss of 28 yards, five pass breakups, two interceptions, two forced fumbles and one fumble recovery. After his transfer from Boston University in 1997, he was able to compile 192 tackles and 11 quarterback sacs, six of which were against Colgate and league MVP Ryan Vena.

Throughout his career as a Bison, Papadakis has been plagued with injury but he has been able to overcome and shine. He is one of the top defensive linemen in the conference and has started all 11 games this season. He was forced to miss the majority of his last game as a Bison when he injured his shoulder in the pre-game warm-ups prior to the contest against Fordham. His outstanding senior season gained him a fifth-place ranking on the team with 81 tackles and eight sacs for a loss of 46 yards.

Hurley fulfilled his duties of receiving and blocking at tight end with the utmost precision. He ranked third on the team by gaining 297 yards on 22 receptions. He started 10 of 11 games in the 1998 season and ended with 20 receptions for 265 yards and two touchdowns. Both Hurley and Papadakis were chosen as captains for the 1999 season.

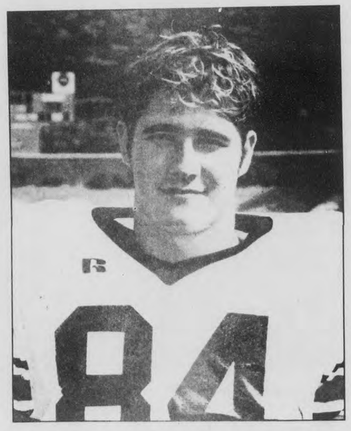
Tunison was down for the entire 1998 season due to a devastating knee injury, but he was able to recompose himself and become the most consistent player in the Bison secondary. Being matched up against the opponents' top receiver each time didn't stop Tunison, as he was able to record 68 tackles, 46 of which were solo. He recorded three tackles for loss, an interception, a QB sack, two pass breakups and a blocked kick in helping Bucknell to the best turnover ratio in the league. Tunison was awarded the Diversified Information Technologies Inc., Player of the Game against Lafayette.

After starting the season as wide reciever, Powell was called upon to fill in for the injured Dan Palko '00 and LaMario Bradwell '01 during the Penn game. He immediately stepped up and impressed, carrying the ball 12 times for 102 yards. He ended his 6.5 game season in the backfield with an astounding 827 yards on 129 attempts. He ranked third in the conference in rushing and kickoff returns, fourth in all-purpose yards and 12th in total offense. His two-year career totals have already reached 1,144 rushing yards and 2,140 all-purpose yards, making him an extremely influential player on the squad.



Powell '02: ran for 827 yards after moving to tailback against Penn.

Papadikas '00: overcame injuries to register 81 tackles and 8 sacks.



Hurley '00: named as one of squad's 1999 season tri-captians.

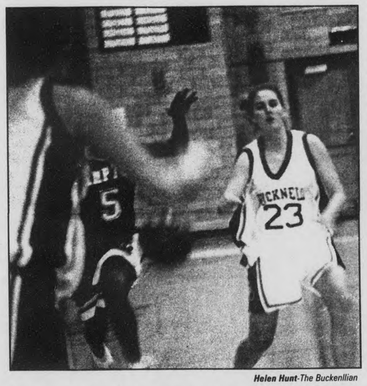
Strong scoring punch leads women to 3-0 start



Helen Hunt-The Buckenllian

Molly Creamer '03 looks for a teamate in Buckenll's 85-71 win over Hampotn. Creamer shot seven for 11 for a team-high 27 points.

By Jennifer Cruickshank

The Bucknell women's basketball squad has started its season off strong, picking up two victories on the road before returning to Davis Gym to win its home opener. After a preseason blowout against The Legacy, the Bison began their season with a 86-79 win at Delaware State, a close 77-76 overtime victory at Niagara and an 85-71 triumph over Hampton.

A number of different players, including both starters and bench players, contributed to the Bison's 3-0 start.

Against Delaware State, four different members of the Orange and Blue reached double figures, led by last season's Patriot League Rookie of the Year Vicki Quimby '02, who posted 20 points.

"The team has a lot of depth this year," Quimby said. "But our goal is to play as a unit rather than as a bunch of individuals."

In addition to Quimby's 20 points, senior Patriot League all-star Lori Houck posted 18 of her own, and she leads the Bison in scoring at this point in the season. Freshman Molly Creamer and senior Lyndsay Earhart netted 13 and 10 points off of the bench respectively. Creamer grabbed a team high five steals in the contest as well.

"Molly [Creamer] has been doing really well and is playing a lot," Quimby said. "She and Kate Franks '03 are getting a lot of minutes as freshman, and are really making an early impact."

After the comfortable 11-point win at Delaware State, the Niagara Purple Eagles tested the Bison last Tuesday. They tied the score at 69 to send the game into overtime. But Houck's 19 points led the Bison to their second straight victory, as they sneaked by the Purple Eagles, 77-76. Quimby and Creamer remained consistent offensive forces. Creamer found the net for 16 points, while Quimby sunk 13 of her own.

The down-to-the-wire win at Niagara served to boost the Bison's confidence and improve their record to 2-0, but the game also proved to be a special one for Houck as she reached the 1,000 career points mark.

"Lori (Houck) is a great player," Quimby said. "And 1,000 points is definitely an awesome accomplishment."

Houck and the Bison downed Hampton University 85-71 in their home opener this past Tuesday evening. Creamer led the team with 27 points, while Houck added 21.

The Bison will travel to Ithaca, New York this weekend for a multi-team tournament at Cornell.

They will remain very active over Christmas break, with their next home game falling on Friday, Dec. 17 at 6:00 p.m. against Coppin State.

We have an opening for a track and field writer next semester. Call Carmen @74667 if interested.

Helen Hunt-The Bucknellian

The Bucknell women will host Coppin State on Dec. 17 at 6:00 p.m.

Semi-finals football A SAE beat 3-Rainey & Co.

Volleyball A Phi Psi plays Sig Ep Gold for championship

Volleyball B Kappa Sigma wins championship

Yarnell wins football title

By Alex Piel

In an epic struggle for supremacy of intramural football, Team Yarnell defeated the Ricecakes Tuesday night and completed a perfect 8-0 season.

Despite temperatures in the teens, a sparse fan turn out and a hectic week of final exam preparation, both teams displayed resiliance, perserverence and tenacity as Team Yarnell posted a 29-28 win.

Down 15-0 early, Team Yarnell would not be denied. Dave Sobeck, after struggling early, found his touch hitting season MVP Mike French for an eight-yard touchdown. Another defensive stop and a score on the ensuing drive put Yarnell up 16-15 with two minutes left in the first half.

After a Yarnell defensive letdown, the Ricecakes roared into the lead with a flea-flicker pass that gave them a 21-16 lead going into the break.

The second half provided more melodrama for what was now only one fan, Lori Villani. Even with offensive stars Timmy "don't call me prof" Strein and Mike "self-induced injury" French sidelined with injuries, Sobeck hit Ryan Bonn for back-to-back scores to thrust Yarnell back into the lead.

A last-second drive by the Ricecakes nearly spelled victory but when a fourth down pass fell incomplete, Team Yarnell stormed the field for a victory celebration.

MARKING THE MILLENNIUM

TOP 10 REASONS
TO SAY "YES" TO THE
2000 SENIOR GIFT DRIVE

10. For less than the cost of a night at the bar, you can make a real difference - a $10 pledge will count you in, and will help make our Senior Gift Drive campaign a success!
9. Tuition only covers 80% of the cost of a Bucknell education - Bucknell relies on gifts like yours to make up the remaining 20%.
8. With a pledge of $25 or more you will receive a FREE, limited edition 2000 Senior Gift Drive T-shirt!
7. To make giving easier, your pledge can be made on your debit or credit card!
6. Your support will help strengthen your alma mater and enhance the value of your Bucknell degree - the better off Bucknell is in the future, the better off you are as a Bucknell graduate!
5. You can choose where your money is donated - select the area that has had the greatest impact on you!
4. Your support will immediately help strengthen the numerous programs paid for by Annual Giving.
3. For every pledge made, the Parent's Fund will give an additional $50, making your gift that much greater!
2. Your gift will be included in Bucknell's most successful campaign ever - The Bucknell Campaign.

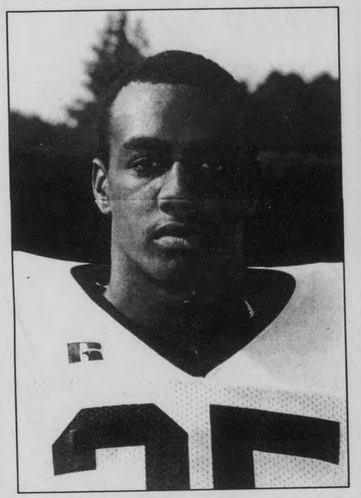
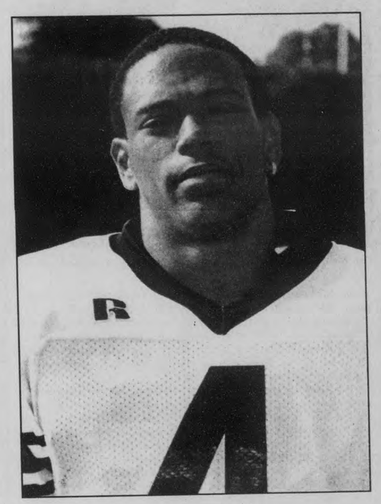
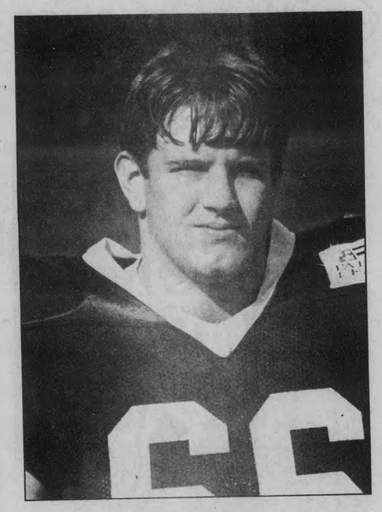
Six Bison named to All-League Teams



Redd '01: two-time first team selection led Bison with 110 tackles



Tunison '01: Bucknell's top cornerback in '99, registered 68 tackles.



Carlaw '00: Four-year starter anchored the Bison offensive line.

By Joshua Gish

Judging by their recent nominations to add six Bison to the All-Patriot League teams, the league's head coaches must have been impressed with the Bucknell football team's fifth straight winning season. At the end of their 7-4 season, three Bison players were named to the first team and three to the second team in recognition of their outstanding achievements on the field.

Senior offensive tackle Lucas Carlaw and senior linebacker Shawn Redd were repeat selections to the first team. Joining them is senior defensive end John Papadakis. Added to the second team's roster were senior tight end Corey Hurley, junior defensive back Reed Tunison, and sophomore running back Jabulani Powell.

The influence that these six players had on the team is highlighted by the achievements of the 1999 squad. The Bison were able to hand Colgate its only regular-season loss, tally a win at Penn for the first time in 22 years and rush for nearly 200 yards per game. Not since a six-season winning streak beginning in 1960 has the team been able to turn in a five-season winning streak, as it did this year. Carlaw, Redd, Papadakis and Hurley are all members of the Bison senior class that tied the school record with 29 wins.

Carlaw's experience and leadership forged the way for the young offensive line to tally more rushing yards per game than in any of the other four years under head coach Tom Gadd. Throughout his Bucknell career, Carlaw started 36 of his 41 games played and was voted the Patriot League's top lineman during his junior year. He is credited with taking tremendous leadership and teaching responsibilities on the field, and his work has shown to pay off through an increase in the team's per-game rushing yardage by nearly 100 yards since his freshman year.

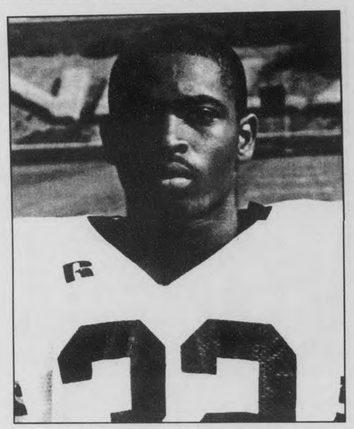
Redd's accumulation of 110 tackles in 1999 led the team and bested his total from last year by nearly 30. He was recognized for his hard-hitting play this year, registering five quarterback sacks for a loss of 28 yards, five pass breakups, two interceptions, two forced fumbles and one fumble recovery. After his transfer from Boston University in 1997, he was able to compile 192 tackles and 11 quarterback sacs, six of which were against Colgate and league MVP Ryan Vena.

Throughout his career as a Bison, Papadakis has been plagued with injury but he has been able to overcome and shine. He is one of the top defensive linemen in the conference and has started all 11 games this season. He was forced to miss the majority of his last game as a Bison when he injured his shoulder in the pre-game warm-ups prior to the contest against Fordham. His outstanding senior season gained him a fifth-place ranking on the team with 81 tackles and eight sacs for a loss of 46 yards.

Hurley fulfilled his duties of receiving and blocking at tight end with the utmost precision. He ranked third on the team by gaining 297 yards on 22 receptions. He started 10 of 11 games in the 1998 season and ended with 20 receptions for 265 yards and two touchdowns. Both Hurley and Papadakis were chosen as captains for the 1999 season.

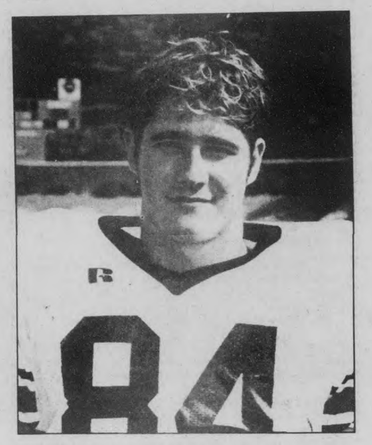
Tunison was down for the entire 1998 season due to a devastating knee injury, but he was able to recompose himself and become the most consistent player in the Bison secondary. Being matched up against the opponents' top receiver each time didn't stop Tunison, as he was able to record 68 tackles, 46 of which were solo. He recorded three tackles for loss, an interception, a QB sack, two pass breakups and a blocked kick in helping Bucknell to the best turnover ratio in the league. Tunison was awarded the Diversified Information Technologies Inc., Player of the Game against Lafayette.

After starting the season as wide reciever, Powell was called upon to fill in for the injured Dan Palko '00 and LaMario Bradwell '01 during the Penn game. He immediately stepped up and impressed, carrying the ball 12 times for 102 yards. He ended his 6.5 game season in the backfield with an astounding 827 yards on 129 attempts. He ranked third in the conference in rushing and kickoff returns, fourth in all-purpose yards and 12th in total offense. His two-year career totals have already reached 1,144 rushing yards and 2,140 all-purpose yards, making him an extremely influential player on the squad.



Powell '02: ran for 827 yards after moving to tailback against Penn.

Papadikas '00: overcame injuries to register 81 tackles and 8 sacks.



Hurley '00: named as one of squad's 1999 season tri-captians.

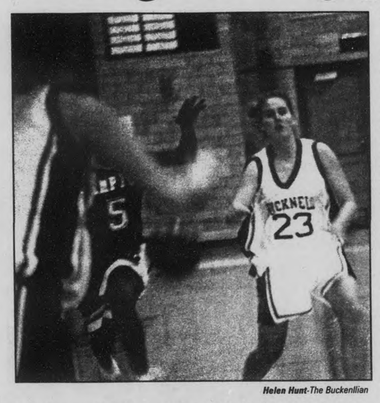
Strong scoring punch leads women to 3-0 start



Helen Hunt-The Buckenllian

Molly Creamer '03 looks for a teamate in Buckenll's 85-71 win over Hampotn. Creamer shot seven for 11 for a team-high 27 points.

By Jennifer Cruickshank

The Bucknell women's basketball squad has started its season off strong, picking up two victories on the road before returning to Davis Gym to win its home opener. After a preseason blowout against The Legacy, the Bison began their season with a 86-79 win at Delaware State, a close 77-76 overtime victory at Niagara and an 85-71 triumph over Hampton.

A number of different players, including both starters and bench players, contributed to the Bison's 3-0 start.

Against Delaware State, four different members of the Orange and Blue reached double figures, led by last season's Patriot League Rookie of the Year Vicki Quimby '02, who posted 20 points.

"The team has a lot of depth this year," Quimby said. "But our goal is to play as a unit rather than as a bunch of individuals."

In addition to Quimby's 20 points, senior Patriot League all-star Lori Houck posted 18 of her own, and she leads the Bison in scoring at this point in the season. Freshman Molly Creamer and senior Lyndsay Earhart netted 13 and 10 points off of the bench respectively. Creamer grabbed a team high five steals in the contest as well.

"Molly [Creamer] has been doing really well and is playing a lot," Quimby said. "She and Kate Franks '03 are getting a lot of minutes as freshman, and are really making an early impact."

After the comfortable 11-point win at Delaware State, the Niagara Purple Eagles tested the Bison last Tuesday. They tied the score at 69 to send the game into overtime. But Houck's 19 points led the Bison to their second straight victory, as they sneaked by the Purple Eagles, 77-76. Quimby and Creamer remained consistent offensive forces. Creamer found the net for 16 points, while Quimby sunk 13 of her own.

The down-to-the-wire win at Niagara served to boost the Bison's confidence and improve their record to 2-0, but the game also proved to be a special one for Houck as she reached the 1,000 career points mark.

"Lori (Houck) is a great player," Quimby said. "And 1,000 points is definitely an awesome accomplishment."

Houck and the Bison downed Hampton University 85-71 in their home opener this past Tuesday evening. Creamer led the team with 27 points, while Houck added 21.

The Bison will travel to Ithaca, New York this weekend for a multi-team tournament at Cornell.

They will remain very active over Christmas break, with their next home game falling on Friday, Dec. 17 at 6:00 p.m. against Coppin State.

We have an opening for a track and field writer next semester. Call Carmen @74667 if interested.

Helen Hunt-The Bucknellian

The Bucknell women will host Coppin State on Dec. 17 at 6:00 p.m.

Intramural Corner

Yarnell wins football title

By Alex Piel

Semi-finals football A FIJI beat Lambda Chi 35-28

Semi-finals football B Rice Cakes beat YoHoDicks 28-21

Semi-finals football B Team Yarnell beat Los Papagayos 33-28

Semi-finals football A SAE beat 3-Rainey & Co.

Volleyball A Phi Psi plays Sig Ep Gold for championship

Volleyball B Kappa Sigma wins championship

In an epic struggle for supremacy of intramural football, Team Yarnell defeated the Ricecakes Tuesday night and completed a perfect 8-0 season.

Despite temperatures in the teens, a sparse fan turn out and a hectic week of final exam preparation, both teams displayed resiliance, perserverence and tenacity as Team Yarnell posted a 29-28 win.

Down 15-0 early, Team Yarnell would not be denied. Dave Sobeck, after struggling early, found his touch hitting season MVP Mike French for an eight-yard touchdown. Another defensive stop and a score on the ensuing drive put Yarnell up 16-15 with two minutes left in the first half.

After a Yarnell defensive letdown, the Ricecakes roared into the lead with a flea-flicker pass that gave them a 21-16 lead going into the break.

The second half provided more melodrama for what was now only one fan, Lori Villani. Even with offensive stars Timmy "don't call me prof" Strein and Mike "self-induced injury" French sidelined with injuries, Sobeck hit Ryan Bonn for back-to-back scores to thrust Yarnell back into the lead.

A last-second drive by the Ricecakes nearly spelled victory but when a fourth down pass fell incomplete, Team Yarnell stormed the field for a victory celebration.

MARKING THE MILLENNIUM

TOP 10 REASONS
TO SAY "YES" TO THE
2000 SENIOR GIFT DRIVE

10. For less than the cost of a night at the bar, you can make a real difference - a $10 pledge will count you in, and will help make our Senior Gift Drive campaign a success!
9. Tuition only covers 80% of the cost of a Bucknell education - Bucknell relies on gifts like yours to make up the remaining 20%.
8. With a pledge of $25 or more you will receive a FREE, limited edition 2000 Senior Gift Drive T-shirt!
7. To make giving easier, your pledge can be made on your debit or credit card!
6. Your support will help strengthen your alma mater and enhance the value of your Bucknell degree - the better off Bucknell is in the future, the better off you are as a Bucknell graduate!
5. You can choose where your money is donated - select the area that has had the greatest impact on you!
4. Your support will immediately help strengthen the numerous programs paid for by Annual Giving.
3. For every pledge made, the Parent's Fund will give an additional $50, making your gift that much greater!
2. Your gift will be included in Bucknell's most successful campaign ever - The Bucknell Campaign.
1. IT'S THE RIGHT THING TO DO!!

Here are a few areas where your pledge can make a difference:

Academic Departments
Residential Colleges/Residential Life
Campus Activities and Programs
Varsity Sports Teams

Tradition leads to deaths, but should it be dead?

Commentary

Carmen Mauriello
Sports Editor

Eleven Texas A&M students and a recent graduate were killed and 28 more were injured on Thursday, Nov. 18 while preparing for the school's traditional bonfire before the Texas football game.

The bonfire has been an Aggie tradition since 1909. Students had been working round the clock since Nov. 6 to construct the 55-foot high structure by stacking 7,000 logs. At about 2:30 a.m. that Thursday morning, the structure collapsed in a matter of seconds, flinging some of the 70 students working on it while trapping others.

The tragedy brought the campus to a standstill, as rescue workers searched for survivors, investigators searched for a cause and students said goodbye to their classmates.

You would think that even the word "bonfire" would bring the people of Aggieland to tears, but many were hesitant to advocate the discontinuance of the 90-year tradition.

Kay Barrington, a 21-year-old A&M senior, still wanted the bonfire to be lit the following Thursday despite the tragedy, in remembrance of the victims. "You know they died to build it," Barrington said. "They wouldn't want it to just get put away. They'd want it to burn."

But A&M president Ray Bowen cancelled the bonfire for the second time in its history; the first being in 1963, after the assassination of John F. Kennedy. Asked about the future of the school's bonfire, Bowen said, "It's a very important tradition to us, but those decisions must be made at a calmer time."

Chad Hutchinson, an A&M student and bonfire crew chief who was among the injured, responded emotionally when he was told about the loss of life. "He shed a few tears," father Bill Hutchinson said, adding that his son remains committed to the bonfire tradition. "If they would release him (from the hospital) to build it, he would."

Others weren't quite so supportive. "It seems like this is the last straw," said Karyn Bayha, a 1999 A&M graduate who left work to watch the rescue. "Personally it would be hard for me to see the bonfire carried on after this."

The tragedy hit home all across America, since many schools carry similar traditions to that of A&M. Many college football players spoke out on ESPN.com about the importance of tradition, which in this case led to 12 deaths.

"I think tradition is the key factor in defining the character of a college, particularly when it comes to athletics," Colorado defensive back Ryan Chiaverini said. "Provided the circumstances, I definitely think (Texas A&M) should retire the ritual for now. Perhaps this tragedy will spark a new, much safer tradition that will bond students from Texas A&M and the University of Texas."

"At Navy, most of the 'traditional' activities occur in the week before we play Army," Navy center Terrence Anderson said. "In the past, it has been pretty wild, and some people have been hurt. However, I think that these traditions are an important part of the experience here. They should be, at most, modified slightly to keep with the spirit of the tradition."

"We do not have any established traditions at West Virginia like the bonfire, but I respect what that stands for, and the respect that an event like that shows to the alumni over the years," West Virginia quarterback Marc Bulger said. "The people involved this year were there because of their love for their school and school spirit. I think a bonfire should continue in future years (but maybe a smaller one) in memory of their spirit."

My sentiments exactly. I come from a football-crazy area. As far back as I can remember, my school always would have a big bonfire before our team's football game with our hated cross-river rival. Our superintendent would dress up like an Indian (our nickname was the Warriors), we'd throw a couple dummies wearing our rival's jerseys into the flame and we'd toast a couple marshmallows.

It was a good time. Everyone always went: high schoolers, townies, grandfolks and munchkins alike. It really brought the community together. Then about five years ago the tradition was discontinued for safety reasons. And though they tried to have pep rallies and marches in its place, school spirit just never was the same.

So I understand the importance of tradition. But come on—7,000 logs in a 55-foot high structure! Hundreds of students working round the clock for three weeks! Doesn't that seem a bit excessive?

I know my high school only had a couple hundred kids, and our idea of watching a bunch of branches burn might not enthuse 43,000 rabid A&M students. But can't we tone this down a bit?

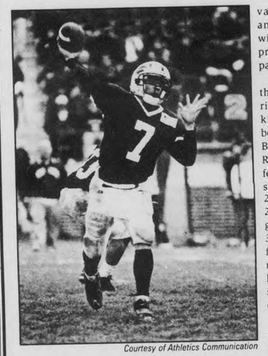
You know you have a problem when you have engineers designing the structure of your bonfire. A&M's bonfire seems like something that should be built by a highly trained construction company—not a bunch of students. It seems more like a tedious job than a good time.

I hate to say it, but it often takes a tragedy to get people to open their eyes and realize what's gone wrong. If the Texas A&M tragedy leads other schools to probe the safety of their traditions, then those twelve Aggies will not have died in vain.

Traditions are supposed to be fun. When we lose focus on that ultimate goal and turn them into something else, no good can come.

Bison down Fordham 45-15

7-4 finish places Gadd and senior class into Bison record books



Courtesy of Athletics Communication

Don McDowell '00 finished 18-9 as a starter.

By Carmen Mauriello

It's hard to get your team motivated to play an 0-10 team, especially when your postseason fate has already been sealed. But Bucknell head coach Tom Gadd had a wildcard in his hand when his team traveled to the Bronx to challenge winless Fordham on Nov. 10—revenge. The Bison had last year's devastating 20-17 home loss to the Rams fresh in their minds.

"It was a hard loss last year," Gadd said. "It really changed our season. We felt that we had to prove ourselves."

The Bison certainly did prove themselves, dominating the Rams 45-15 to finish the season 7-4. On a day when the class of '00 ended their Bucknell careers by tying a school record for wins by a class, the youthful squad gained valuable momentum and confidence that will carry them into a promising 2000 campaign.

The Bison started the game out on the right foot—freshman kicker Chris Lundberg's that is. After the Bison defense forced a Rams' punt and the offense drove the ball inside their opponents' 20, Lundberg booted a 29-yard field goal to give Bucknell an early 3-0 lead. It was the first field goal attempt made by the anemic Bison kicking game since the Penn game on Oct. 2.

The Bison defense stymied the Rams' attack in the first quarter, allowing zero first downs and just 12 total yards while forcing four punts. Bucknell's offense came alive late in the first, when Don McDowell '00 hit Corey Lundberg '00 for 11 yards and then scampered for 18 yards on the next play to move the ball into Rams' territory. Jabulani Powell '02 took it from there, jaunting 34 yards for a Bucknell touchdown. Lundberg's PAT extended the lead to 10-0.

"McDowell hit some real key completions that kept drives alive," Gadd said. "The success of the passing game opened it up, and we started wearing them down on the ground."

The Rams drove to Bucknell's 23 on their next possession, but Vince Ficca '01 appeared to end the threat with an interception. Bucknell's good fortune was short-lived, however, as Ficca fumbled the ball back to Fordham at its 42 during his return. The Rams pounded out three critical third down conversions to drive 58 yards on 11 plays and cut the Bucknell lead to 10-7.

The Bison countered with a 10-play, 72-yard drive of their own. Powell darted in from the 11, and Lundberg's PAT put the Bison up 17-7 going into the half.

The Bison capitalized on some Fordham mistakes to get rolling late in the third. Shawn Redd '01 recovered a fumble by Kendal Creer at Fordham's 26; four rushes later, Bucknell was into the endzone on junior fullback Jason Marrow's three-yard plunge.

Robert Davis fumbled the ensuing kickoff, and Dave Evans '01 recovered on Fordham's 16. McDowell needed just one play to hit paydirt on a 16-yard scramble. Lundberg's PAT put the Bison firmly ahead, 31-7.

Powell then raced 66 yards for a score, and Marrow closed the day's scoring by crossing the goaline from the four.

The win improved Bucknell's Patriot League record to 3-3, placing it in fourth place. The 7-4 overall finish was the team's fifth straight winning season under Gadd-the first time the Bison have achieved this feat since the 60s. Gadd set a school record for wins during a five-year stretch with 36.

Bucknell's 21 seniors tied the class of '98 for the school record of wins by a class with 29. The experienced group provided leadership and poise at critical moments throughout the 1999 campaign; members Corey Hurley, Dan Palko and John Papadakis were named season captains.

"It's a tight-knit group and a great bunch of guys," senior Justin Lustig said of his classmates. "It's sad that it has to end, but some good memories came out of this season."

The 7-4 finish was disappointing, especially after the Bison knocked off eventual Patriot League champion Colgate in their second game. An inability to finish strong led to a series of heartbreaking defeats, as the Bison lost to Towson, Columbia and Lafayette by a total of 11 points.

A bright spot was the play of the offense line, tabbed as a "concern position" in the preseason. The unit,

Jabulani Powell '02 ran for 158 yards and three touchdowns against Fordham.

Inexperienced Bison struggle in '99

By Justin White

The Bucknell wrestling squad had its hands full the last couple weeks with two tough dual meets and the Mat-Town Tournament.

The team struggled in the dual meets, losing to Lycoming, 25-9, and to Shippensburg in a squeaker, 21-19. Then, the team finished eighth out of nine teams at the highly competitive Mat-Town Tournament.

Bucknell traveled to Shippensburg on Nov. 21 to open its dual meet season against Lycoming and Shippensburg. Lycoming proved to be a worthy opponent as it captured seven out of the ten matches. The Bison fell behind early and were not able to regain their footing. Tommy Doerr '02, Ryan Fasnacht '00 and Gbenga Akinnagbe '00 each defeated their Lycoming opponent.

Shippensburg narrowly defeated Bucknell 21-19. The Bison were down as much as 15-0 before mounting a comeback that brought the score back to 19-18. But the last match went to Lycoming and subsequently the meet.

"We underestimated them and wrestled down to their ability," coach John Hangey said.

The Bison did have some outstanding performances, including a 21-9 win by co-captain Rashaan Williams '00. Ben Chunko '01 and Carl Perrone '03 each won by forfeit. Sophomore Brian Neuman won 11-6 in the 197-pound weight class.

The team had an opportunity to improve on this performance at Lock Haven for the Mat-Town Tournament. The Bison competed hard, despite the loss of four of its starters.

The tournament featured five of the top 25 ranked teams in the country: Cornell, Penn State, Pittsburgh, Lock Haven and Rider. The Bison's top performers were Akinnagbe and freshman Mike Moore, who both went 3-2 to finish in fifth place.

The team also picked up two sixth, two seventh and one eighth-place finish. Bucknell finished with 27.5 points on the day, 128 points behind first place Cornell.

"We wrestled pretty well but couldn't get over the hump," Hangey said. "Our team just needs some more match experience."

The Bison will get plenty of experience while in action this Saturday at the Lehigh Sheridan Tournament. This contest will likely be just as difficult as the Mat-Town Tournament, as it also boasts five teams ranked in the top 25.

THE BUCKNELL CENTURY

A special supplement to the December 2, 1999 issue of THE BUCKNELLIAN

A NOTE FROM THE EDITORS:

What exists on the following pages is an attempt to capture the essence of Bucknell's rich and intriguing past 100 years. Bucknell is an institution founded on change, and the differences that exist across the decades are numerous and diverse. But perhaps the most intriguing aspect of Bucknell history is that much of it has not changed. The University has a rich history of traditions, many of which—with modifications—still exist today.

This chronicle examines some of those changes and traditions that have helped to shape the University as it enters the 21st century. This history is not a comprehensive history of Bucknell, nor is it intended to be. Rather, it is simply a sampling of the events and personalities that have made Bucknell such a special place. We hope that you enjoy this collection as much as we enjoyed compiling it.

—Chris Ellis and Jared Silliker
Co-editors-in-chief, 1999

Lewisburg area murder case goes to court

Edward Arnold, charged with the murder of William Denton, has preliminary trial hearing

October 1, 1901

The preliminary hearing of Edward Arnold, charged with the murder of Wm. Denton, took place before Squire Nesbit this morning at 10 o'clock. District Attorney Glover was assisted by W.R. Follmer, and Mr. Wilkinson acted as counsel for the defense. It appears that both these parties had been traveling with a show owned by Mr. Weslake until Saturday previous to the murder, when they were discharged. They happened to be in Lewisburg on account of the fair here. The first witness called was Dr. Frank Catherman. The doctor was coming down Market Street at about 11:45 p.m. when he saw two colored men and one white man coming down the street quarreling.

At first the quarrel was about a hat, then later about a knife, witness passed them and went on about 75 or 100 feet, when he heard a noise, and looking back to men fighting. He ran back, but the two men had fallen before he reached them. Witness did not know by the wrist but it was slippery, and the witness could not hold him. After the witness pulled one off the other they got up and struck several blows at each other when the colored man fell dead. Arnold then begged the witness to send for a doctor, but on being informed that he was talking to a doctor he was anxious to know if the man was dead, lamented and wished himself dead. Witness took part in the post-mortem examination. He said several wounds were found upon the body, but the one that caused his death, was in the left side. The knife had penetrated the pericardium and entered the right ventricle of the heart.

Dr. T.C. Thornton was then called. He testified as to the condition of the body, and gave the same testimony concerning it as Dr. Catherman had given. Mr. Westlake was the third witness called. He identified the prisoner as the man whom he had employed.

Albert Watt was next called. He was the man who was with Arnold and Denton on the evening of the murder. He testified as to the places where they had been that evening but knew very little of the murder.

Irene Orndorf was called last. She had been awakened by the noise in the street, and looking out of the window saw the colored man had a brick but dropped it. He struck the man, knocking him down. Witness was sure that Denton was the aggressor.

The prisoner was committed to jail to await trial, and the witnesses gave bail for their appearance.

Bucknell announces creation of wrestling team

January 29, 1906

The efforts of Coach Hoskins to introduce wrestling among the students at Bucknell last year met with success has led to the University to take up the training in wrestling as the establishment of this form of athletics in 1906.

With the opening of the winter term the Tustin gymnasium begins to be used by the majority of the men in college, and especially by the members of the two under-classes.

Basketball receives the greatest amount of attention but there has been a growing interest among the student body for yet another exilerating sport. Bucknell was forced to decline an invitation to participate in a dual meeting at the University of Pennsylvania for the reason that there was no team to send. The material for a good team is here; all that is needed is its proper development.

A call for candidates was issued recently by Coach Hoskins. He wishes to develop men in the 105, 115, 125, 135, 155 and 185 pound classes. The contest will be held in connection with the annual Indoor Meet on March 6th. Coach Hoskins is well fitted to train such a team, since he held the National Amateur Champinonship of the A.A.W. at the Metropolitan Opera House in New York City during 1890.

"The senior class out sleighing"

February 11, 1902

Wednesday evening seems to have been the time selected by the fates as the most important one of the season. While the wily sophomores were enjoying their annual banquet, and the verdant freshmen looking on from a distance with longing eyes, the *real event* of the evening was happening *elsewhere*.

Two large sleds heavily loaded with young folks left the Seminary about seven o'clock that evening. There is something fascinating and so delightful in a sleigh ride of this kind, that it defies all efforts to describe it. The merry songs and hearty laughter heard amidst the noise of bells, indeed, gives one exquisite pleasure; but the *real importance* of this event is disclosed only when you listen to the words they shouted, now and then:

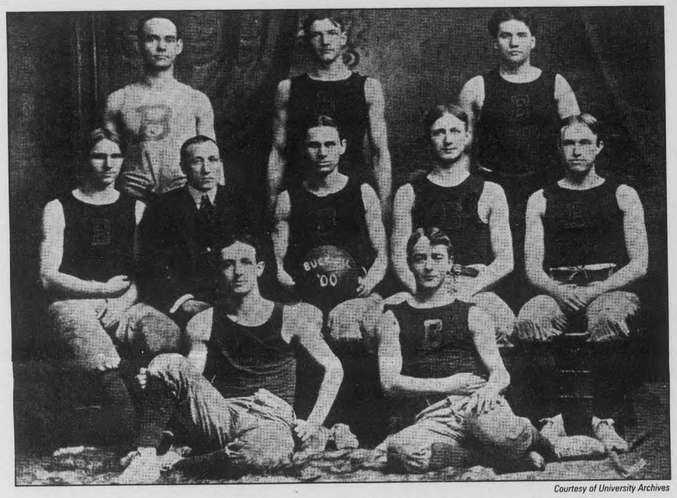
Who Ra! Who Ra! Who Ra! Who!
Boomerang! Boomerang! Boomerang! Boo!
Bucknell! Bucknell! 1902!

The destination is Watsontown, and it is reached all too soon. What a good time they had on the way we will leave to you to imagine. Suffice it to say that the chaperon was Mr. Bell, of the Academy.

One of the finest oyster suppers ever offered to a sleighing party was now enjoyed. Do not think that, because there never is a program prepared for occasions of this sort, we had no entertainment. It was decided to have some extemporaneous toasts, and the variety of subjects assigned on the spur of the moment, and the manner in which they were handled would lead one to believe that all had been prearranged.

Mr. Ulner and Mr. Reilly in turn discussed the subject, "Sleigh Rides and their Consequences." It was suggested by one of the speakers that sleigh rides sometimes result in a stronger bond of union than life-long friendship. Since our friend Mr. Heckert evidently has enjoyed one of *these* sleigh rides we assigned him the subject: "The Ups and Downs of Life." Mr. Kyle followed with "Fond Anticipation." Other topics were assigned to other members of the class, to which they all responded in a pleasing and entertaining manner.

From the dining room to the parlor they went to enjoy charades, games, etc., until late in the night then the sleds were again packed and another enjoyable ride back to Lewisburg was begun. They soon arrived again at the Seminary where they parted, agreeing that the evening had been well spent.



Courtesy of University Archives

The "class of '00" showed their colors as Bucknell's athletic program entered a new century of action. The 1900 basketball team was highlighted by the presence of Christy Mathewson (top center). For more on Mathewson's acheivements, see page 12.

Growing enrollment necessitates "cottage" for women

September 25, 1905

On September the twenty-first Bucknell opened upon what promises to be one of the most successful years of her existence. Many of the old graduates are back to spend a few days on the scenes of their college days, and to these the success of the institution seems wonderful. This year sees the dedication of a new building-The Cottage for Women.

This is one of the best equipped buildings on campus, and one of the neatest dormitories in Pennsylvania. It is a building, well designed, and of a masterly appearance. The increase in the number of students in the Women's Department made the erection of this dormitory extremely necessary. Last year many were turned away because of the lack of proper accommodation in the college buildings, and this year an unusually large number is in attendance.

The dining-room for the Seminary is also being enlarged in order to make room for a larger number of students. This reminds one of the dining-rooms in some of the large mountain resorts, open as it is on three sides, and shaded by the tall oak trees. It is being decorated by J.R. Hazlett of Williamsport, and when finished will add much to the comfort and beauty of the place. Every year brings new improvements and Bucknell seems to be fully sustaining her reputation as a growing, energetic college.

Dr. Emory W. Hunt named as new President

"Comes to Bucknell with the highest praise to be given to any man who is to step into an important position"

February 18, 1919

The following article was written by Prof. C.L. Williams, L.H.D., a life-long and intimate friend of Dr. Emory W. Hunt, at the time Dr. Hunt was President of Denison University. It was first printed in the Chicago Standard and later in the Denisonian, the official college paper of Denison University.

A more concise and correctly written article could not be found, and it gives a true appreciation of the man who is to be our new President.

The article, in part, follows:

"Almost anybody seeing or meeting Emory William Hunt for the first time would take him to be a wholesome man, a likable person, a good fellow of robust physique, cheery in disposition, and with a virile enjoyment of the good things in life he is just the kind of a man one would like to pass an odd hour with or take as a companion with whom to spend a vacation camping, fishing, or in travel. Along with his genial rotundity of aspect, however, and along with his radiant good fellowing he has a directness of character, a sagacity, an engaging candor an executive force that make him trusted as a leader and that fit him for achieving important results.

Perhaps there is nothing more noteworthy in Doctor Hunt than his poise. He is too healthy in body and mind to be either a cynic or a sentimentalist. His risible faculties are alert and have always been exercised enough to keep them healthy. He is so human that he can derive as much pleasure as President Taft from witnessing a good game of football or baseball, yet he is not flippant. His reverence for all that is sacred is ingrained and controlling. He does not tuckle to anybody; on the other hand, he is not at all imperious. He is shrewd as his eye indicates, but ne never casts the shadow of a hint that he is tricky in any way. His frankness, which is marked, is such as to win respect for his discretion, which is equally market. He is sensitive, but he always has himself so well in hand that he is one of the least complaining and most forbearing men. Though with a fine sense of the fitness of things, he is entirely without priggishness, intellectual, moral, or religious. He is energetic, but not tumultous. He has an air of easy and unobtrusive sel-confidence and always makes an impression, that he knows just what he is about, et he is never precipitate and never gives away to the protuberant cocksureness which often renders it awkward for a man to retreat when he has to do so. Dr. Hunt is strikingly free from obsessions and crotchots. He is a man of goodly avoidupois and also of impressive equipose.

Students to aid war prisoners

Movement organizes to support those imprisoned in European camps

October 23, 1916

Bucknell always falls in line with the big movements among American colleges. When an appeal for help towards the relief work in European prison camps was made through the Y.M.C.A. last week, the students were quick to show a desire to help share the burdens of the great world war. To date over $350 has been subscribed and these figures will be enlarged before another week is over.

There are in the prison camps of Europe today over six million prisoners of war, a large percentage of them students of European universities. American students, engrossed in their own college work and social activities, lose interest in the background of this great world conflict as presented in the prison camps. The various governments feed first of all their own soldiers and the present lack of food in Europe casts its misery back on the prisoners of war, and those war prisoners are suffering under conditions terrible to relate.

The curtain of fire on the war front hides from view these suffering men, fed on nothing but weak coffee and thin gruel soup with two slices of bread a day, and bordering on the awful insanity that attends solitude. The active solider, just in from the extra excitement of trench warfare, is thrown into such solitude as people in America cannot know or understand.

In view of these appalling conditions human sympathy calls upon Americans to help in some way to alleviate the sufferings of these men by providing necessary nourishing food and means of occupation for these students and their comrades whose daily routine is eating–with nothing to eat–and sleeping, with no work to make them tired. Until the success of Mr. Dan Hart's efforts of organized help could gain access to these suffering millions; but now the governments have given this privilege exclusively to the Y.M.C.A. workers.

Accordingly, forty three American Y.M.C.A. secretaries have gone over and are busy at work among these men. But forty-three men cannot hope to reach six million and the need is urgent for more men to total at least one hundred. The opportunity of sending the required number is now in the hands of the students of America, who now confront not only a duty but a unique privilege of doing something for these fellow students of theirs.

Not only will such help sent to them be a blessing to them, but it will bring our America student body into a closer bond with those of common interests and ambitions with ourselves. Moreover, we at Bucknell are not so closely allied as we should be with the rest of American college students, and here in this movement lies the link to connect us up with all American students.

The movement at Bucknell was begun during the visit of Miller and Ehlers, the former an international and the latter a state secretary of the Y.M.C.A. Some of the faculty and the large party of the student body have been reached and have pledged up to the present time, over $250.

The students of the Women's College are contributing about one hundred dollars. The Y.M.C.A. plans during this week to reach the remaining members of the faculty and student body and a hearty response is looked for: one that will entail sacrifice so as to help us share with our fellow students the wonderful service they are cheerfully giving to the causes they love.

Students receive call to military service

May 14, 1917

The past week with its war developments has taken a number of fellow student from our midst. Just as many of our present alumni in the Civil and Spanish American Wars, deemed it their duty to lay down the pen and take up the sword in defense of their country, so the Bucknell student body, in the present crisis has responded to the national call in a manner that speaks well for the college. It might be interesting to note, that only twenty-five would be demanded in the first draft from a college of our size. Several times that number have volunteered up to this time.

The seniors who have left school for military service will be graduated with their class. Others, however, will receive credit only for work done up to date, although Freshmen, whose work has been up to the standard may be admitted to fraternities.

Some of the men have declared their intention of enlisting for service at Fort Slocum but it is quite probably that they would not be accepted as there will be another call for officers in August.

Many students are leaving today for Philadelphia and other places where they will take examinations for various branches of the service.

"Orange and Blue" changes its name to *The Bucknellian*

November 1, 1915

"The Bucknellian" beginning with the next issue will become the name of Bucknell's weekly publication, which has heretofore been published as "The Orange and Blue." This decision was reached when the fellows returned an overwhelming majority for the name–which is to be–on Friday evening in the mass meeting at the gym, and when the girls at their luncheon hour on Saturday cast a decisive vote for the "Bucknellian."

Last spring, in the issue just preceding the assumption of the task of publishing Bucknell's weekly by the present staff, a communication from 1912 appeared which started the agitation which as finally consummated in the changing of the name. In this expression of 1912's views, it was brought to Bucknell minds that "The Orange and Blue" was an inadequate and too indefinite a name for the college paper. The fact that an alumnus who has been separated from Bucknell activities for many years would not know, upon being asked, what "The Orange and Blue" meant, was also used as a strong proof for 1912's reasons that the present name should not stand.

The movement to change the name was first started with a little plan to have the students make known whether or not they wished to see the present appleation appendaged to their paper, and although a heavy vote was not cast it was so decidedly in favor of a change that the committee in charge felt encouragement to go on.

When the five names, The Bucknell Weekly, The Bucknellian, The Bucknell Mirror, The Bucknell Spirit and The Bucknell Breezes, which seemed to be the most appropriate and expressive of those suggested were posted; then a student vote solicited. At the mass meeting of Friday evening slips were passed among the fellows who wrote down their favorite following which they were collected. On Saturday Miss Haslam carried thru a scheme whereby the Sem sentiment was learned at the luncheon hour on Saturday. The result of the united vote is as follows:

The Bucknellian–215
The Bucknell Weekly–21
The Bucknell Mirror–15
Bucknell Breezes–45
Bucknell Spirit–16
The Orange and Blue–11

Work begins on construction of new football stadium

February 6, 1922

The decision to provide adequate athletic equipment has been awaited for years by those Bucknellians who recognized this long-standing need. A great wave of approbation will greet the announcement, that the Athletic Council, in conjunction with a committee of Trustees, has approved general plans for the erection of a fine stadium and a new gymnasium in the near future.

These improvements will be located on Seventh Street, between the Lewisburg Cemetery and the back road. The plans call for football and baseball fields, a twenty foot track with a two-twenty yard straightaway and tennis courts for Intercollegiate contests, stands with seating capacity to meet our present needs, and ample provision for our future growth. Dressing rooms, showers, an indoor track, baseball cage, and other modern facilities are also included in the scheme. The entire structure will be of reinforced concrete.

Carrere and Hastings Architects are now working on several modifications and additions to the proposals, and the final plans will be read for consideration in the near future.

A considerable portion of the necessary funds are now available through the generosity of several individuals who were present at the conference, and the work of grading the new field will be started as soon as arrangements can be made.

As soon as all of the plans are approved and accepted a prospectus will be published, setting forth the details of the plan.

Women's dorm nearing completion

Facility, which will reside on Loomis Street, to house 170 women

February 16, 1928

The new women's dormitory, now fast nearing completion, is undoubtedly a valuable addition to the Bucknell campus. On April 1, it has been announced, the building will be open for public inspection.

The large structure fronts on Loomis Street; with which it is to be connected by a curved drive. A long porch, supported by gray stone pillars, forms an attractive entrance at the front of the building. The other side of the dormitory forms, along with the other buildings on the women's campus, a quadrangle, in the center of which are tennis courts.

The general style of architecture of the building is similar to that of the other buildings on the campus. It is four stories in height, and is constructed of red brick.

The structure will accommodate 170 women when it is completed. At the present time there are 142 living there. The wings, which are still in the process of construction, will accommodate respectively thirteen and sixteen women. The Alpha Chi Omega sorority is the only one occupying a chapter room in the new building now. Students are living in the other chapter rooms.

One element if special attraction is the fact that each floor will be provided with a kitchenette and equipment for laundry work.

With the library, living room, cloakroom, and attractions already listed, the new dormitory will no doubt provide a popular place of residence for coeds.

Katherine Larison, first woman to receive Bucknell degree, dies

January 27, 1926

Mrs. Katherine Brown Larison is dead. The first woman to whom Bucknell University ever gave an honorary degree, the woman who served as principal of the Institute longer than any other person, the big-hearted teacher who did so much to help struggling girls towards an education, has passed away. She died on Monday night January 25, about midnight, at the residence of Professor William Gundy Owens, with whom she had made her home in recent years. She was 86.

Memorial services were held in the Baptist church on the afternoon of Wednesday, January 27. The Rev. Dr. R. M. West, Mrs. Larison's pastor, and her former pastor, the Rev. Dr. J. T. Judd, both spoke feelingly of Mrs. Larison's years of service. A quartet sang some of Mrs. Larison's favorite old hymns.

The burial is scheduled for Thursday, January 28, and the body will be interred at Sandy Ridge Cemetery, near Stockton, NJ. Here lies the body of Dr. Larison, and it was Mrs. Larison's wish that she might be buried beside him. Dr. Judd and Professor Owens will accompany the body to the grave and there hold a very brief ceremony.

Bucknell football routs Miami, 26-0, in first-ever Orange Bowl

January 10, 1935

Miami's much publicized heat, instead of throwing the Bisons for a loss, seemed to goad them to even greater heights New Year's Day, when they romped all over the men from the University of Miami, scoring four touchdowns and two extra points and holding their opponents scoreless in the Orange Bowl game.

Aided, no doubt, by a goodly consignment of Lewisburg water which they carried with them, the Mylinmen apparently benefitted from the change of climate and piled up their highest score since Bucknell beat Washington and Jefferson in 1933. A disappointingly small crowd, estimated at 5,000 watched the contest.

In every respect the Bisons lived up to their reputation. Wilkinson scored first on a pass from Jenkins. Stuart Smith scored on a 20-year run. Phil Miller added another touchdown on a line smash, and Joe Roznichak sneaked around end for the final score.

Miami was clearly outclassed. Gaining but three first downs, the only bright aspect of the Hurricanes' play was a series of determined stands in the shadows of their own goal posts. The Bison line threw back almost every Miami running play, and the Bucknell secondary defense completely throttled the southerners' belated passing attack. Five Miami passes were intercepted, and about a half dozen others were batted down. Not once did Miami, threaten to score.

Although it had previously been Bucknell policy not to send its teams on long trips, Professor B.W. Griffith, Graduate Manager of Athletics, stated that because of this year's good record, because so many of the team are seniors, and because of the honor attached, the invitation was accepted to play Miami.

Marty Ovick '39, while not a member of Bucknell's Orange Bowl team, played three seasons with the Bison.

President Rainey argues against athletic scholarships

December 6, 1934

Bucknell cannot and will not go back to subsidizing athletics, President Rainey said yesterday.

"In order to maintain the integrity of Bucknell University, we cannot restore athletic scholarships," President Rainey told *The Bucknellian*.

As members of the Association of Colleges and Secondary Schools at the Middle Atlantic States, Bucknell must either continue its present plan of unsubsidized athletics, or become an outlaw institution, Dr. Rainey said.

Recent unfortunate rumors that Bucknell would re-establish athletic scholarships, and unfounded stories appearing in the press to that effect, lead to *The Bucknellian's* investigating a question which, as far as the university is concerned, was closed last year.

As an outlaw institution, Bucknell students attempting to transfer to other colleges would find their credits unacceptable. The violate the rules of the Association, Bucknell would have to accept the penalty of becoming a non-entity, as far as the Association and other institutions are concerned.

"No one is more in favor of athletics, or of football, than myself," President Rainey said. "I am a friend of athletics in any form, and I am just an anxious as anyone to keep up Bucknell's fine athletic standards."

"Bucknell will play its opponents under any set of rules we all agree upon," President Rainey said.

To the maintenance of the academic and athletic integrity, Bucknell's president is unequivocably committed.

IFC men may suggest social policy changes

May modify "Hell Week" procedures

March 11, 1937

The Interfraternity Council voted unanimously, at a special meeting Monday evening, to introduce legislation in Congress that may bring about dating in fraternity houses, without chaperones and without the necessity of acquiring "open house" permissions.

As phrased by the Council, the suggestion is "that dating shall be permitted in any fraternity house on Wednesday, Friday, and Saturday evenings and Sunday from ten in the morning on through the day, when two or more couples are present in the house at the time of dating." The proposal will be presented to the Congress for its consideration at next week's meeting. If approved, in whole or in part, each fraternity is to be allowed the right to decide to what extent it will participate.

This action came as a result of continued discussion within the separate fraternity groups, and also in answer to the current plea for more adequate dating facilities being registered by organizations in the Women's College.

John Raker '37 introduced the problem of possible modification of Hell Week procedures among the Bucknellian fraternities. After considerable discussion of possible interfraternity agreement upon desirable changes, the matter was postponed for further consideration following the spring vacation.

The Council had planned to discuss Social Security legislation as it affects social fraternities, but due to the unavoidable absence of the federal advisor only a brief review of fraternity liability was possible. Fraternities were instructed to apply to local authorities for administration rulings.

Dean of Students outlines hazing policies for incoming freshmen

September 22, 1938

Black ties, dinks, and black hose were donned by the male members of the class of '42 early yesterday when the "mourning" ruels of the colleg went into effect.

Advised by Dr. Page (Dean of Students) in their last meeting of Freshman Week, the first-year men are also prohibited to "cut campus," to walk on "Senior Path" (the well-trodden way back of Taylor Hall to the Literature Building path).

In addition to these "don'ts," neophytes are not to date at any varsity contests but must sit in a compact body and serve as the nucleus for the cheering section.

For a brief time, all members of the Freshman class are required to exhibit a large placard on their backs, identifying themselves and giving their college addresses. This will assist them in becoming better known to upperclassmen.

These rules will be enforced by the powerful Senior Tribunal which meets every Monday evening at ninee, beginning the first week of October. Incidentally, all first year men must be in their rooms at this time.

All freshman rules are subject to revocation by the Senior Tribunal at such a time that the organization deems advisable and permissible.

Two rules that are never changed however, are the "friendliness" and "loyalty" regulations greeting everyone on the campus with a pleasant word and complete knowledge of all three stanzas of the Alma Mater.

President Marts backs full support of British war effort

Declares that American best interests are in "giving" Britain war materials

January 9, 1941

Declaring himself wholeheartedly in favor of "giving (not selling) England every resource she needs to save herself as a means for America's protection of her own peace," Bucknell's President, Arnaud C. Marts, in a chapel address to the student body this morning, pleaded for national unity, calling Americans' greatest priviledge and duty at the present moment self-discipline in following the leader whom they themselves have chosen in the recent election.

"The time has come for vigorous and united thought and action," said Dr. Marts. "If we have good sense, we will now, all of us, bring our different viewpoints voluntarily under the unifying direction of the lead our president has given us. The time for barbershop quarterbacking is over!"

Bucknell's President opened this morning's address with the question, "What does America expect of us Bucknellians in the months that lie ahead of us?" He then enumerated four major attitudes which he recommended as integral in any American citizen's philosophy during the present trying times:

1. "I suggest that as our slogan of 1941: Don't pity us; envy us our priviledge of living in such a fateful hour...This is a timefor new zest and enthusiasm and energy stepped up in size and intensity to meet the new problems."

2. "Keep America at Peace by making Britain strong."

3. "My third suggestion is that you as college students keep at your studies and redouble your efforts for your education. National unity does not call for individuals jumping out of one category into another in a mistaken endeavor to make themselves more useful to the nation."

4. "Finally, America expects that we use our brains and energy to help create a better world after this war, which will be founded on justice, peace, and cooperation."

Tuition to rise to $450 per year

Tuition at Bucknell University will be increased from $400 to $450 a year, effective next September, to meet in part the increased costs of operation and maintenance, President Herbert L. Spencer announced today.

May 23, 1946

Board rates for both men and women students will also be advanced $50 a year, beginning with the September term.

Higher operating costs, due mainly to the increased costs of fuel, food, and other materials, as well as the greater cost of service, have necessitated these advances, President Spencer said.

He pointed out that many of the country's leading colleges and universities have already announced similar or greater increases in tuition and board rates.

In order that the new rates may not work a hardship upon the students already enrolled, the University plans to make additional student aid available for those who need it.

$1 million given for endowment

Anonymous donation is the largest in University history

December 12, 1946

An alumnus of Bucknell, stipulating that his name should not be revealed, offered one million dollars for endowment to the University's Board of Trustees at the semi-annualmeeting of the Board held in Philadelphia Saturday.

President H.L. Spencer, who announced the acceptance of the offer by the trustees, pointed out that it is the largest single contribution in the history of the University.

The alumnus desires his gift to stimulate other gifts to Bucknell's endowment and stated that he would make payments to the University in $100,000 which other friends would contribute to the endowment.

No limitation of time was placed upon the offer, but the donor voiced the hope that the endowment fund would be enlarged as promptly as possible. He expressed the wish that Bucknell should continue as a small college and not undertake a wider variety of educational offerings.

President Spencer also announced the receipt of other gifts totalling $339,000 received by the University and its Junior College at Wilkes-Barre during the year.

In addition to these monetary gifts, the University also received a library and works of art, valued at more than $100,000 from Rush H. Kress of New York City, a prominent alumnus of the class of 1900, and for may years a member of the Board of Trustees. The library and art works will be placed in the college's new library upon its completion.

University establishes "Civil Defense" Program

January 15, 1942

In an effort to give the student body concrete opportunities to take hold in the Bucknell Defense Program, the Council here has issued their three-fold plan of Civil Defense for the University and the students. The program is aimed at training which the students can carry back to the home community.

The three aspects are: Plant Protection, Training and Services..

Under Plant Protection, Dean Page has received instruction in Harrisburg for his work at Deputy Air Raid Warden, and has worked out a plan for assistant wardens in all the 30 residences of the University.

Also in the Plant Protection is the placing of the Hill telephone service on a 24-hour basis, and the employment of special police covering the campus at night. A new system of signal lights has been installed for summoning the watchmen. If anyone sights a fire or wishes to report any other disturbance on the grounds, he should call the Bucknell switchboard operator, who will then snap on the signal lights for the watchmen.

Among the numerous training courses soon to be offered include: Nurses Aide and Home Nursing under the direction of a newly formed chapter in Women's College of the Red Cross. Right now 30 members of the faculty are taking a special course for training First Aid Instructors.

A service that will soon be proposed is the Emergency Medical Service.

Photo by Donald H. Ross

Burda Murphy and Hope Wohners, who at the time were rare women in the Bucknell engineering department, work at Dana Engineering.

Library cornerstone ceremony set for February

Preseident Horace Hildreth to dedicate $750,000 project to be named after Ellen Bertrand

February 15, 1951

Laying of the cornerstone of the new library by President Horace Hildreth will take place next Saturday, February 24, at noon. Dr. Norman Stewart, chairman of the library committee of the University Faculty, is in charge of planning the brief ceremony in front of the Bertrand Library. Although the $750,000 building has had several contributors, Mrs. Bertrand has been the chief donor.

The student body is invited to attend the ceremony in which representatives of the board of trustees, the faculty, the library, and students will participate. The ceremony is being held outdoors at the site of the front door. Dr. Stewart, professor of zoology, will give the invocation, which precedes short speeches to be made by Dr. Mary Wolfe, chairman of the buildings and grounds committee of the board of trustees; Harold W. Hayden, librarian; and John T. Maeby, president of Student-Faculty Congress. Dr. Hildreth will then lay the cornerstone and give a few remarks to be followed by the pronouncement of the benediction by Dr. Charles M. Bond, professor of religion.

In the cornerstone a copper box, 18x4x9 inches will be sealed for posterity. Documents of historical interest to the University and the community such as the Centennial History of Bucknell University, Inauguration of Horace A. Hildreth, The Bucknell Alumnus, reports of the president, treasurer, and librarian, Bucknell Bulletins, survey and pictorial maps, wire recordings of the Centennial Commencement and schedules of athletic games will be placed in the box. Also contained in the box will group photographs of the fraternities, sororities, and BISA with appended lists of members.

Standing on the most commanding site on the campus, the Bertrand Library will have two stories and a 40-foot tower with a clock. The library will be the center point of the campus, being able to be seen from distant points. Besides a large reading room and periodical room there will also be an art gallery, a browsing room, a rare book room (in these rooms it will be possible to hold receptions with the use of the proposed kitchen), a music listening room, seminar rooms for the various departments, faculty study rooms and a visual aids library with a projection room that can seat 100, an office and storage space. The office will be for Mr. Walter Holter, head of the visual aids department. The new projection room will enable the faculty to take their classes there to see movies. In the Bertrand Library 400,000 volumes can be accommodated in six stack levels in the central part of the building; the Carnegie library now has 120,000 volumes.

The 1950's was the decade where much of what is modern-day Bucknell campus began to take shape. Several building projects, including the dedication of the Bertrand Library, took place in the 1950s.

Foundation grants $900,000 for Science Building

January 21, 1954

Two thousand people with 2,000 rumors followed their curiosity Friday at 2:30 when they crowded into Davis Gymnasium and anxiously awaited the reason for the call of the special convocation.

Suspense mounted as the audience of faculty members, students, and friends scanned their programs for a hint of a meaning. Through the National Anthem, Invocation, and a hymn, eyes were centered on the next event "The Purpose' to be given by Dr. William H. Coleman.

In his introduction, Dean Coleman stated that this was a new era in the life of Bucknell, and built in the minds of his listeners a strong feeling of the work Bucknell has done in the past and a vivid outlook on its achievements in the future. Dr. Coleman then paid a fitting tribute to the Olin Foundation by explaining its significance and introducing its president, Dr. Charles L. Horn, who brought first awe and then a mighty applause as he told the congregation of the work of the Olin Foundation and its decision to grant Bucknell University $900,000 for the building and equipping of the new F. W. Olin Science Building.

The gift of $900,000, largest ever given to Bucknell, will be used for the construction of the new building and the purchase of new equipment to supplement that which the departments already possess and will use $125,000 of the money for this equipment.

The new science building will house the chemistry, physics, and mathematics departments. It will be built of brick, four stories high, and will include an auditorium to seat 212 students, laboratories, workshops, classrooms, and offices. The building will stand opposite the engineering building.

Dayton L. Ranck announced that plans have already been made with J. Frederick Larson, college architect for the construction to begin early in the spring and the new science building to be completed for use early in 1955.

The purpose of the Olin Foundation is to spend its non-taxable interest on its capital to further higher education. One of its largest projects, prior to the grant to Bucknell, was approximately one and a half million dollars to Cornell University for its medical school dormitory.

Ground breaking set for Coleman Hall

October 10, 1957

Dr. Charles L. Horn, of Minneapolis, president of the F. W. Olin Foundation, will be one of the featured speakers at the groundbreaking ceremony for Coleman Hall at 11 o'clock Saturday morning. Dr. Horn will speak on behalf of the Olin Foundation, which has granted the university the gift of $1,475,000 for construction of the new classroom building.

Students are urged to attend the ceremony. To make their attendance possible, classes will end at 10:45 Saturday morning. There will be no 11 o'clock classes.

Also featured in the groundbreaking ceremonies will be Bucknell's 80-piece Bison Band.

Coleman Hall will provide 35 classroom units, 45 academic offices, and a Little Theatre when completed in November 1958. It will be air conditioned and wired for TV education. The building will be named Coleman Hall in tribute to Dr. Coleman.

Franklin W. Olin, noted industrialist who established the Olin Foundation in 1938, was born in Woodford, Vermont, in 1860. After working his way through Cornell University, where he graduated at the age of 16, he established the chemical-manufacturing firm, which has since developed into the highly successful Olin Industries, Inc. Determined to use his wealth to train men for 'useful living,' he created the philanthropic organization, which has made large grants to a number of colleges and universities, including $900,000 to build and equip the F. W. Olin Science Building on this campus. (The building was opened during the winter break of 1958 and 1959).

In 1958, renowned artist Louis Armstrong and Velma Middleton entertained the campus with a classy performance.

President resigns to serve as U.S. Ambassador to Pakistan

May 14, 1953

Flash!!!!!

President Horace Hildreth has been officially confirmed by the Senate as Ambassador to Pakistan. He was confirmed yesterday and will be sworn in this afternoon. President Hildreth will then leave for New York where he will meet his wife. They will then take the 40-hour plane ride to Karachi, the capital of Pakistan.

As of late Wednesday afternoon, President Hildreth was awaiting action in Washington by the Senate concerning his confirmation as Ambassador to Pakistan. President Hildreth has already been approved by the Foreign Relations Committee and was momentarily awaiting the confirmation of the Senate which is due to act either this afternoon or possibly tomorrow.

Horace A. Hildreth has resigned as President of Bucknell to make himself available for the ambassadorship to Pakistan. He appeared before a Senate committee in Washington on Tuesday morning, May 12. This committee is considering his nomination for the diplomatic post in Pakistan.

Hildreth's resignation was submitted to the Board of Trustees at their meeting last Saturday, May 9. The Board took no action but decided to meet again at commencement time in June.

The resignation is to be effective at 'the pleasure of the Board.' In his letter of resignation, Hildreth said, "I shall always be a loyal Bucknellian, and it is with a very heavy heart that I send you this resignation to make myself available for, in the words of the Secretary of State, an assignment of duty on behalf of my country."

Hildreth was nominated for Ambassador to Pakistan by President Eisenhower on April 30. The Administration would like to have an Ambassador in Pakistan by May 20, when John Foster Dulles, Secretary of State, will be there for a two-day visit. If Hildreth is confirmed by the Senate by this time, he will go there for about a week and then return for the commencement program. He and his family will then return to Pakistan.

Fire destroys Library clock tower

Although the Christmas Eve fire which destroyed the central roof and clock tower of the Bertrand Library caused some inconvenience for returning Bucknellians, things seemed to be returning to normal by the end of this week.

Drafts or cold spots in the unheated section of the building, water-stained walls and the lingering odor of charred wood were the only grim reminders of the fire found in the interior of the Library.

A different story was found on the outside, however, where a temporary roof of plywood and roofing paper replaced the sections of roof destroyed and the clock tower was nothing but a blackened skeleton.

That a significant change had taken place during the holidays was apparent as Bucknellians neared the campus. Everyone had received President Odgers' letter concerning the fire, but it wasn't until students failed to see the fa-

January 6, 1961

miliar clock tower that the full impact of his message became a reality.

Since there are still those who do not know all of the details concerning the fire, The Bucknellian has gathered the following story of what happened.

A routine check of the Library was made by a University watchman around nine o'clock Christmas Eve morning and there was no evidence of fire at that time. Shortly after 11 a.m. several people noticed smoke pouring out of the south end of the Library roof; however, it was generally dismissed as the burning of trash in an incinerator. A few minutes later, Sgt. Francis R. Pleagle of the R.O.T.C. department called the University switchboard from the basement of the building and said he believed it to be on fire.

Within minutes the William Cameron Engine Company of Lewisburg was on the scene. But the fire already had a head start and the tower was ablaze.

During the height of the blaze, faculty members, areas high school students and citizen volunteers went into the building and moved books, papers and works of art out of danger as water seeped into the structure.

The fire was brought under control at approximately 1:30 p.m. Except for a few soaked volumes, the 1,850,000 books were undamaged and safe. A concrete slab separating the third floor roof and the attic had successfully retained the flames and prevented water from pouring through the ceiling onto the stacks.

After inspecting the area, John F. Zeller, Vice President of the University, estimated the dameage to be between $250,000 to $300,000.

Buckey, Drinnon open Vietnam Peace Rally

Student-faculty demonstration uses religion, history to argue for peace in Vietnam

"A modern college ... sort of jolts you." This was among the various comments heard at last Friday's peace rally in conjuction with events in Vietnam Week.

Held at the Lewisburg Post Office, the rally featured Chaplain Donald R. Buckey, who gave the clergyman's appeal; and Professor Richard Drinnon, chairman of the history department, who spoke from a historical angle.

Chaplain Buckey began the program, speaking "as a minister as well as an individual." Admitting that "we are not popular

April 20, 1967

when we attack the sacred institutions of our country," he declared that in this conflict we must, from a religious point of view, pledge our primary allegiance to God over that of our country. We assert only our democratic privilege in making a responsible expression of dissent.

Acknowledging the problems faced by his position, the chaplain maintained that we must try to attain new answers, for the old are no longer satisfactory. The end is not in sight, for the war has, so far, gone on longer than World War II. So despite the fact that we sympathize with the dilemma facing our president and congress, we must not compound the mistakes by continuing in the same course.

"The possibility for the future lies in seeking to offer a helping hand of reconciliation," Chaplain Buckey concluded. "We must seek to undo the wrong. As we walk the long road, God will be with us." At this conclusion there was mild booing intermixed with the applause.

The main speaker for the evening was Dr. Drinnon. "I wonder what's on your minds tonight?" he pondered, and "What do you expect me to say to you?" Dismissing the usual arguments of morality, cost, and legality of our position, Dr. Drinnon explained, "I hate to repeat myself, and anyway you would dismiss me as a Communist or at least pro-Communist." Instead he began with a historical viewpoint.

"The past become the present," Dr. Drinnon said. He cited two examples to illustrate the truth of this statement. He referred to incidents which occurred in Burma several years ago, when, from 1956 to 1961, we poured aid into the elements of National Chinese who were active there. The greatest successes however did not occur until after we had pulled out. U Thant, Secretary General of the United Nations and native of Burma, believes that open help would have divided the nation in half or worse."

Photo by Ron Karr '70

Bucknell University Chaplain Donald Buckey headed a peace rally orchestrated by students and faculty in conjuection with the efforts of "Vietnam Week." Professor Richard Drinnon, also a key speaker at the rally, addressed the Vietnam issues through a historical perspective.

Administration bans use and possession of drugs and narcotics

By R. E. Feir

The administration has outlawed possession and use of drugs and narcotics on campus.

In a letter to students dated yesterday, John C. Hayward, dean of student affairs, indicated the end of the University's laissez-faire policy.

Dismissal from the University is the most severe penalty which may be imposed for violation of the new regulation.

In an interview this week, the dean indicated that administrative personnel had been working on a policy statement long before two recent incidents brought the problem to light here. One was the Oct. 10 death of Joseph Ahearn, junior, caused by inhaling freon. The other was the arrest the next day of Roy McCloskey, a senior, for possession of marijuana.

November 9, 1967

The policy statement issued yesterday will be distributed to parents as well as students. It was written by Hayward at the request of President Charles H. Watts.

State and federal laws already prohibit the possession, use, or sale of such substances as marijuana. The University statement, which includes mention of LSD, relates, "like anyone else, Bucknell students involved in any of these activities are liable to legal prosecution with all the consequences thereof."

Hayward has indicated that the University will not interfere with civil authorities, which have the right to search University property such as dormitory rooms, with a search warrant.

According to the statement: "despite conflicting opinion of medical authorities, there is increasing evidence of possible serious harm to individuals who engage in unsupervised use of or experimentation with drugs and chemicals. Possession and sale of marijuana and other drugs violate both federal and state laws, and penalties in most cases are so severe as to affect the individual through his life.

"The University, therefore, takes the position that the use or possession of such drugs is so extremely unwise, ill-advised, and dangerous to student life generally as to justify serious University action including the possibility of dismissal."

No set method of enoforcement has been worked out, according to Hayward. He plans to treat each case individually on its own merits, he said. He did not discount any possible penalities up to and including dismissal or any method of imposing punishments.

Early a.m. blaze destroys Sig Ep house

Fire, of unknown origin, destroyed the Sigma Phi Epsilon fraternity house at 1 University Ave. early this morning. Eighteen of the nineteen boys housed there escaped without injury; Dick Hartman, a junior, suffered smoke inhalation. One fireman received a cut on the face, another dislocated his knee, and four others incurred minor injuries, according to Donald E. Wlaters, Lewisburg Fire Chief. Damage, estimated to be in excess of $50,000, was confined to the SPE house.

The first of several alarms was received about 4 a.m. from Mike Trager at the neighboring Sigma Alpha Mu house. While

April 21, 1961

awaiting the arrival of the Lewisburg Fire Company, students living in the SAM house helped those who were able to get out of the burning building to fight the fire with garden hoses and fire extinguishers. Even after the firemen arrived, students continued to help with ladders and hoses.

Several students, trapped on the front porch roof, were rescued by police before the Fire Company arrived. Steve Sugar, a member of SAM, later used one of the Fire Company's ladders to help another trapped student down from the roof. The fire was extinguished by 3:45 a.m. An investigation into the cause of the blaze was postponed because of the amount of smoke and water still in the building.

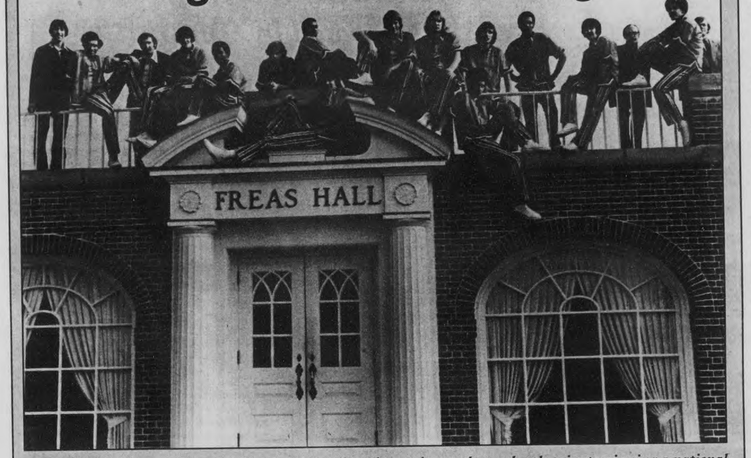
1970-1979 • 1970-1979 • 1970-1979

A legend in the making?



Before becoming one of the NCAA's most respected coaches, and more than a decade prior to winning a national championship at North Carolina State, Jim Valvano began his Division One basketball coaching career in Lewisburg. Valvano, who even wrote a weekly column for the* Bucknellian *for a short time, saw his 1974 Bison (above) finish their season with a 14-11 record. Valvano (far left) coached Bucknell for less than three years before moving on.

Trustees approve co-ed living plans

Co-residential living, off-campus women's housing, and non-obligatory board plans for women students will become a reality as the University beginning September 1970.

In a five-page statement issued to The Bucknellian on Tuesday, John Dunlop, dean of student affairs, revealed that University approval had been granted to changes that will update student housing and board plans.

Dunlop's office received notification this week that the executive committee of the Board of Trustees concurred with the recommendations for changes in residential living, which had been submitted to President Charles H. Watts II by the Committee to Study Co-residential Living.

A poll of students taken last fall by the co-residential living group, chaired by Pete Holmes i72, indicated preference for the plan which has received University sanction and which provides for a freshman quadrangle and two co-educational upperclass complexes.

March 19, 1970

Issued simultaneously with the co-ed living decision are the changes in student housing and board requirements which will allow upperclass women over 21 and those under 21 with parental approval to live in off-campus dwellings.

All upperclass women students may elect to take their meals outside the University cafeterias, according to the statement.

Wing-by-wing integration will allow upperclass men to reside in Larison Hall, the two west wings of New Dorm, A and D wings of Swartz Hall, Edwards House, and Carey House annex.

Upperclass women will be housed in Hunt Hall, the two east wings of New Dorm, B and C wings of Swartz Hall, the main section of Carey House, and the remaining small houses on campus.

Public facilities of New Dorm and Swartz Hall will be shared by men and women residents.

A freshman quadrangle will be formed with freshmen women living in Old Main and Harris Hall and freshman men living in Trax and Kress Halls.

While no major building renovations are planned for the fall according to John Zeller, president of business and finance, several minor changes should help render living areas more comfortable.

Gerald Ford visit to be tightly controlled

Former President Gerald R. Ford will teach and lecture at Bucknell next Friday.

Ford will present one major lecture entitled 'The Role of the President Today' in Rooke Chapel at 12:15 p.m. and two smaller classroom sessions in the Forum and Vaughn Literature Auditorium at 10:00 a.m. and 2:45 p.m. respectively.

April 21, 1978

Seating for all three events will be completely reserved and tightly controlled in accordance with Fordis wish that his appearances be educational and meet Secret Service requirements.

Security arrangements are being made by the Secret Service's 'advance man' who arrived at Bucknell yesterday. Certain procedures have already been established to control entrance to the appearances and provide for Ford's safety. All tickets will have the bearer's name printed on them and must be presented with Bucknell identification cards at the door. Security regulations also require that there be no one standing in the audience.

In the early portion of his presidency, Ford's protection was much more loose and informal. Protective measures were tightened after two attempts were made at his life while he was still in office.

The former president will have a tight schedule while he is at Bucknell. He will arrive at 8:45 a.m. and have breakfast with President Dennis OiBrien, the department chairpersons, the heads of the Bucknellian and WVBU, ABS officers, and members of the committee for his visit.

He will lecture at 10 a.m., have an hour for rest and preparation, lecture at 12:15 p.m., and then eat lunch with members of the Board of Trustees and invited guests at 1:30 p.m. Ford's last lecture will be at 2:45 p.m. and he will depart at 4:00. Ford may use part of his rest time to walk around the campus.

Ford appears as a courtesy of the American Enterprise Institute, which is described by some critics as a conservative version of the Bucknell will donate as much as $2500 to the AEI in return for Ford's visit, according to William Weist, Assistant to President O'Brien.

Former President Gerald Ford lectured to a select and carfeully contolled group of University students in April 1978.

University receives second largest gift

$2.25 million donation will be used to fund construction of Vedder Hall

Bucknell recently received a gift of $2.25 million, the second largest in its history. The donation was received from the Lee N. and Grace Q. Vedder Foundation of Fultonville, NY. All of the assets of this small private foundation are being transferred to the University and in honor of this gift, New Dorm will be renamed Vedder Hall.

The money will become the Lee N. and Grace Q. Vedder Endowment Fund at Bucknell, which will be used almost exclusively for scholarships. This contribution raises the endowment of the University from $28 million to over $30 million. The only larger gift received was one of $6.5 million from Ellen Clarke Bertrand for the construction of the library and a fund for its support.

"Endowment is a very important resource to a university," said President Dennis O'Brien. "It's like having a savings account. Endowment is very hard to come by, though. We are under endowed, but so are most colleges and universities. Our endowment should be three times its present amount."

November 3, 1978

Bucknell's endowment is presently $30 million and O'Brien feels it should be closer to $90 million. The University is, however, ranked sixtieth in the nation in terms of its endowment size, out of more than 3,000 colleges and universities.

Robert L. Cooley, a 1936 Bucknell graduate and a member of the University's Board of Trustees, was largely responsible for the University receiving this gift. Upon graduation, he went to work for the White Mop Wringer Company in Fultonville, NY, of which Vedder was then president. Cooley succeeded Vedder as president of the company, and the two of them began the Vedder Foundation in 1959. Upon Vedderís death, Cooley became president of the foundation.

Ronald J. Pedrick, director of university relations, worked very closely with Cooley on the transaction. He said that, "this gift is a true expression of confidence in Bucknell and a complement to the students that attend the school."

The Lee N. and Grace Q. Vedder Foundation raised more than $2 million to fund the completion of Vedder Hall in 1978. This picture shows the early stages of the construction of Vedder.

THE BUCKNELL CENTURY

1980-1989 • 1980-1989 • 1980-1989

Going dancing...

Bucknell's basketball team visited the NCAA tournament for the last time in 1989. The Bison finished the 1988-89 season with a 23-7 record and, as champions of the ECAC Conference, advanced to the NCAA Subregional round in Dallas, Texas. Bucknell ran into nationl power Syracuse, though, and fell, 104-81 in Round One. Bucknell players Greg Leggett (left) and Ted Aceto helped the Bison to the Championship game in '89. In the background (#20) is Syracuse All-American Sherman Douglas. Bucknell has advanced to three league championships since 1988-89, but has not made it back to the Big Dance.

Residential College System proposed by Committee

By David Grossman

September 16, 1983

The implementation of a residential college system, incorporating programming and faculty-in-residence into the residential campus was proposed by the ad hoc committee to plan residence halls.

The committee, formed in January, "was charged with the task of developing recommendations for the design and location of one or more new residence halls." Comprised of 15 members from the faculty, administration and student body, the committee filed its 29-page report with President O'Brien in early June.

The report proposes that the University's residence facilities be divided into four "colleges" located in what are now the freshman quad, Swartz Hall, Bucknell West and the downhill quad. The colleges would incorporate more co-curricular activities and promote interaction amongst students, faculty and administration, according to the report.

Offices, classrooms and lunges would be built into the colleges. Also, one or more faculty members would live in homes or apartments on the grounds of the colleges. This would be done "to encourage the intermingling of faculty, staff and students on a variety of formal and informal levels.

Although a part of the University, each college would be free to sponsor its own events "limited only by the allotted funds and the imaginations of those involved."

The report mentions a separate freshman college, situation in what are now Vedder, Harris, Larison and Hunt halls.

The committee also discussed the social ramifications of the residential college system. It is hoped that the system would be conducive to social events within the college, further enhancing the social life that students already have at the University. And, ultimately, that this residential system would aid the community in striking a social and cultural balance.

The report will be given to both the University and Trustee Committees on Complementary activities for review. These committees will report their findings to the University board of Trustees in November.

Both O'Brien and Nancy Caine, assistant professor of Psychology and chair of the Committee to Plan Residence Halls, stressed that the proposal was not final. The proposal constituted a response to the need for new housing as well as what is perceived to be a need for a residential campus to further enhance the development of students.

"The integration between the senior administration and faculty and student communities is highly desirable," O'Brien said.

Caine added, "it is important to propose the alternatives available and to open doors by which we may enhance the residential campus."

Anti-apartheid demonstration held

By Nyka Jasper

April 26, 1995

There is a latent power at Bucknell. This demonstration proved that," said David Rapkin '84.

Inspired by a charge given to Washington D.C. protesters last week by Jesse Jackson, the Students and Faculty Against Apartheid group organized a vigil held Wednesday. In his speech, Reverend Jackson charged college campuses to join National Solidarity Day, protesting apartheid policies in South Africa.

On Wednesday, approximately 300 students, faculty and administrators joined hands, forming a human chain from the uphill UC entrance to Dent Drive along both sidewalks. As participants stood for over and hour, some wore signs with slogans advocating the abolition of apartheid and University divestment in South Africa.

The United States and many private institutions, including Bucknell, have investments in South Africa. The protesters sought to raise awareness of many aspects of the South African situation, especially the practice of institutionalized racism subsidized by American investments.

Although some passers-by quipped lines of sarcasm when beckoned to join the chain, many accepted international flyers and pledged their support with their colleagues. Laura Cowles '85 said, "This is the least I can do to show my concern."

A spokesperson for the Students and Faculty against Apartheid group stated that the purpose of this vigil was to activate the campus and increase awareness on the subjects of racism and apartheid in South Africa. Associate Professor of economics Charles Sackrey said "I'm glad that people turned out. I had figured that there would be only 50. I'm very pleased.

The protest concluded at 1:00 p.m. with some of the demonstrators singing choruses of "We Shall Overcome" and raising their hands in unison. The excitement and pride of the group was demonstrated by the applause they gave each other cementing their solidarity. Alan Cherry '86 echoed this feeling by saying, "It was awesome and unexpected. It was great. It had the 'who's who' of socially concerned people at Bucknell."

Beer will again flow at Greek Week

...but no longer on University land

By Mark Elliott

Beer will flow at Greek Week activities again this year, but consumption will no longer be allowed on University property, according to Gerald Commerford, associate director of Residential Life.

Steve Kohn, IFC president, said that beer will be dispensed on Phi Kappa Psi fraternity property. Students who bring alcoholic beverages out of doors on campus will be in violation of both University rules and local ordinances, however. Fraternities which are privately owned are exempt from these rules.

In a clarification of the University's Policy on alcoholic beverages, Dean of Students John Dunlop explained in an administrative notice that "except for special events sanctioned by the University, serving or consuming alcoholic beverages prohibited in non-residential University buildings, in the main rooms or similar common areas of residential facilities, and out-of-doors on campus.

September 19, 1980

This qualification which exempts events "sanctioned by the University" is the loophole through which graduation is permitted to be served at the annual graduation tent party.

Greek Week is "not a University sanctioned event," Commerford said, and therefore alcoholic consumption is restricted to the properties of privately-owned fraternities.

The University's stricter enforcement of its alcohol consumption policy is seen as an effect to promote responsible drinking while reducing University liability.

The adaptation of this policy is in part a direct result of a $1.4 million lawsuit filed in 1979 against Delaware Valley College.

Delaware Valley was found liable and negligent in the injury and subsequent quadriplegic paralysis of a student which occurred after a school-sponsored picnic.

The court decision prompted many Pennsylvania colleges, including Bucknell, to reassess their drinking policies, Commerford said.

"Up until last year, we felt it was an adequate policy," Commerford said. "but after our talks of last year and the Delaware Valley incident, we felt it was imperative that we make some change in our stance."

FIJIs storm DU; assault brotherhood

By Steven Hoerter

May 12, 1989

Approximately 22 Phi Gamma Delta brothers and pledges were involved in an altercation with members of Delta Upsilon fraternity early Sunday morning. Some witnesses have called the incident a "brutal and savage attack." The incident occurred at approximately 1:07 a.m. in the Delta Upsilon house, and was broken up by Bucknell Security with back up from four local police units. More than 40 students were involved.

Because an investigation has not yet been completed and criminal charges have not yet been filed against any involved parties, the precise cause of the altercation has not yet been confirmed by the University or the East Buffalo Township Police Department.

According to a source at the East Buffalo Township Police Department, potential criminal charges brought against individuals by the police could include criminal conspiracy, crimnal attempt, recklessly endangering another person, terroristic threats, criminal trespass, disrupting meetings/processions, inciiting riot, disorderly conduct, simple assault, aggravated assault and harassment. The source said that it is possible that not all of these charges will be filed and that charges will vary from individual to individual. More than 40 videotaped statements are involved in the case with more expected as more details are uncovered.

Charlotte Jacobsen, vice provost for student life, said that "Bucknell is conducting a complete investigation ..." As of Monday, 22 members of the Phi Gamma Delta fraternity were placed under temporary protective suspension. Temporary protective suspensions were invoked, according to Jacobsen, because "there is reason to believe that they engaged in an act of violence which in endangering to the life and well-being of other members of the academic community." The nature of the suspensions did not allow any of the 22 students on University property, including residence halls.

The suspensions were recommended by Jacobsen and Dean of Students, John Dunlop, to President Sojka. Members of Delta Upsilon have not been placed on any type of suspension or been charged by the University. Dunlop declined comment on the situation citing the necessity to retain confidentiality for those involved. Sojka was unavailable for comment Thursday.

Jacobsen said that the other incidents include charges of public lewdness by the Lewisburg Police, and possible charges from the Pennsylvania state police due to an alleged theft of medical records from Evangelical Hospital by Phi Gamma Delta brothers.

IFC President Chris Daniels '91 said, "We consider this a very serious incident. The IFC is going to take some sort of action against Phi Gamma Delta."

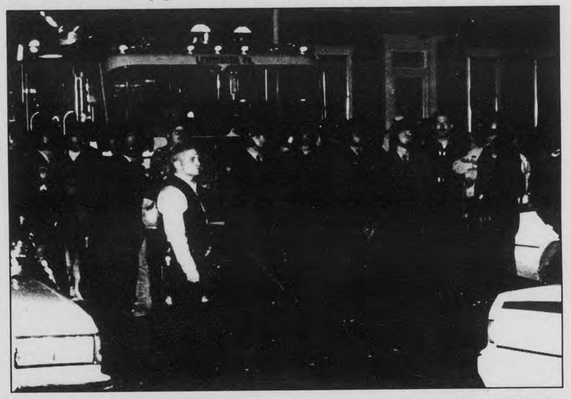
THE BUCKNELL CENTURY

1990-1999 • 1900-1999 • 1990-1999

Tensions spill over as riot nearly erupts

Students erupt on 7th street as drinking policies are protested; Sojka addresses crowd

By Bob Ritter and David Murray



Colin Bridgewater—The Bucknellian

Nearly 200 uniformed personnell readied themselves for action on Halloween night, 1990, as student concers over the University's drinking enforcement practices spilled over into a riot on South Seventh Street. After the crowd dispersed, President Gary Sojka addressed student concerns.

November 2, 1990

The 200 block of Seventh Street was the scene of a near-riot by approximately 900 to 1000 Bucknell students late Wednesday night and early Thursday morning. According to the Lewisburg Police Department and Dean of Students John Dunlop, only one student was detained but was later released.

The incident began around 10:30 on Wednesday night, when members of the Lewisburg Police Department responded to a call from the Union County Dispatch; a resident of St. Catherine Street had reported a loud party in progress at the rear of 208 S. 7th street, with about 200-300 students. Two officers responded to the call, one of whom was Lieutenant Leo Yount. He explained that "one officer came from the intersection. There were four houses, just full of students...There was no question, it was definitely a situation which had to be dispersed. For whatever reason, a selected few stuck around."

Yount said that when he arrived, one student gave Yount his identification and explained that the party had gotten out of control. After the officers told the crowd to disperse, another students, Scott McAfee '92, asked if he could take Yount's photograph. According to Yount, "I told him to disperse, and he stuck around. I told him again to disperse, and he took the picture and ran." Yount caught McAfee, who was detained in a police car and later released. According to several other students present, the detention of McAfee sparked demonstration by students who decided to stay until McAfee was released.

According to Yount, the first call for additional help was issued approximately 20 to 30 minutes after the first call was received at around 11:00 p.m. A call for mutual aid from all police departments near Lewisburg was issued. The call, which is analogous to a general alarm by a fire department, brought units from nearly every municipality within a 20-mile radius. Press accounts have placed the total number of uniformed personnel between 180 and 190. The contingent included five canine unite from the areas, as well as two fire engines and one medical unit from the William Cameron Engine Company. The fire units had hoses connected ready to use on the students, if necessary.

The United States Federal Penitentiary in Lewisburg responded with three buses and 40 staff members, including a SWAT team..

President Gary Sojka quickly arrived on the scene and began speaking to students in an effort to convince them to disperse. According to Garrett Austin '94, "Basically, Sojka did a good job. He honestly listened to us and said 'I'm trying to change things, just give me a chance.'"

By around 11:30, Sojka had agreed to address students at the downhill entrance to the LC, and said that no one would be arrested if they moved up to the L.C.

After the students involved moved to the downhill side of the L.C., a portable microphone system was set up and Sojka, along with other administrators, addressed the crowd. Sojka began by discussing student concerns and the department of security and safety. "It's a whole question of enforcement. It's a very difficult area. You've got security officers who know what the law is and what they're supposed to do. You've got students saying that 'if you do that, it makes it unbearable and we're paying customers and you're driving us away.' You've got me leaning on security saying 'folks, we've got to be somewhat sensitive to the students. They're trying to find their way, and they're not perfect people.

Sojka also addressed the issues of underage drinking. "I'm telling you, I thought that we were a little overzealous earlier in the year; not because we weren't doing the law right: the law is very clear. Our problem was that we may have been overzealous just trying to catch people rather than use due diligence and making sure that we were doing a reasonable job of discouraging underage drinking on campus."

Bro Adams Transitions to life as University President

By Nicole Cobban

March 30, 1995

During this Spring Break, new President William Adams did something that few Bucknellians ever would: homework.

Adams, who assumed office on March 12, spent his vacation "reading important documents, studying some issues, ad meeting with senior administrative colleagues to figure out both short- and long-term objectives."

The transition from Wesleyan University to Bucknell has been "wonderful," Adams claims. Most of his time has been spent "getting brought up to speed on a lot of complexities and practices of the institution."

For Adams, the Presidency demands more of his time than his position as secretary at Wesleyan ever did. The pace since students and faculty have returned from spring break have given Adams more of a workout than any of his jogs around campus. Adams is optimistic, however. "One way or another, I'll keep the pace up."

One of the inevitable problems with inheriting a time-consuming job such as a college presidency is striking a balance between professional responsibilities and private life.

So far, though, Adams, his wife Cathy and son Sean have adjusted to Lewisburg without much problem. Adams says that they are "enjoying" living in the President's house, and that Sean, in addition to being enrolled in Lewisburg's elementary school, has definitively staked out his territory in the Presidental yard.

"We've created a small amusement park in the backyard with the trampoline and swing set/tree for which is now sort of buried in the trees, and we've put up some ropes on the trees. So he's out there swinging around like one of the snow monkeys at the animal behavior facility.

For now, Adams has his hands full getting his feet wet. He is also looking forward to addressing issues of diversity and multiculturalism, issues that he feels should be a priority.

Already, Adams has begun introducing himself to the campus. In addition to meeting with several faculty members to discuss Bucknell's academic environment, Adams has spoken with the executive committee of Bucknell's student government and a handful of students who have stopped into his office. "But," Adams says with a smile, I know that there will be more."

Accidental fire guts Sigma Phi Eplison house

By Tara Gilligan

February 15, 1990

Colin Bridgewater—The Bucknellian

A fire which was attributed to a fallen candle gutted the Sigma Phi Epsilon Chapter house. All but four of the house's residents were able to move back in for the start of Spring Semester 1990.

Students returned to the neatly repaired Sigma Phi Epsilon fraternity house following the Dec. 13 fire which caused $263,000 in damage. All 24 residents have returned to the house, although four students whose rooms were destroyed are living with friends until contractors complete repairs.

By the start of the spring semester, the house was essentially ready for its occupants. "All the students were able to move into the house and their rooms except four students who lived on the first floor. Those four weren't allowed to do so because the tile had not been laid in their rooms," said Gerry Commerford, assistant dean for housing.

Individuals in the upstairs rooms, hit hardest by the fire, lost all of their personal belongings. According to John Ambrose '93, who occupied the room where the fire originated, seven students "lost everything" in the fire.

Fire engines arrived at the scene at 8:35 a.m. on December 13 after a smoke detector in the hallway of SPE was activated and alterted dispatchers at the security office. The fire, which destroyed many of the upstairs rooms, began as a smoldering mattress. The fire report attributed the start to a fallen candle.

Tim Peterson, one of several residents who smelled smoke an hour before the arrival of the fire engines, discovered the smoldering mattress and attempted to extinguish it. "I went upstairs and the whole hallway was just filled with smoke, and I went up in the loft where the mattress was. I poured a pitcher of water over it and just thought it would be fine because all the embers and any kind of sparks were out," Peterson said.

According to one firefighter on the scene, a mattress can smolder for a long time without actually igniting. The fire destroyed the contents of five rooms on the second floor of the house and three other rooms suffered major smoke damage. Losses of first floor contents came in the form of water damage.

The fact that SPE is not a University-owned fraternity house did not keep faculty and staff from assisting students living in the house.

"The connecting thread is that they're our students, regardless of where they live. We think of our obligation as one to people and to students, and not to where they live," said John Dunlop, Dean of Students.

Other fraternities helped the SPE students find places to live and eat.

Questions shot at "Firing Line" Debate

By Tracy Thiffault

October 24, 1996

Both the Democratic and Republican panels successfully defended their positions in the "Firing Line" debate last Sunday, despite previous predictions of Republicans winning by a landslide.

As a whole, the debate, which featured eight prominent politicians and speakers, was a proud moment for the University and an excellent way for the community to gain first-hand knowledge of the upcoming Presidential election. Senator Kay Hutchinson, R-Texas, Speaker of the House Newt Gingrich, R-GA, and Congressman Rob Andrews D-NJ, were among the panelists who fought it out, debating topics ranging from education to abortion. The panelists formed persuasive arguments which produced an important discussion influential to voters.

Other speakers included former Democratic Presidential Candidate George McGovern, former Secretary of State Henry Kissinger, Democratic political consultant Bob Scrum, historian Arthur Schlesinger, and William F. Buckley, Jr.

President William Adams gave a short speech introducing the debate. He said that he hoped that the debate would help students, faculty and alumni be better informed for the election.

The debate, which was aired live on PBS from the Weis Center, was another event in celebration of the University's sesquicentennial year. Twice a year, PBS runs a debate on a political topic connected to "Firing Line."

Alumnus Ben Eliot and members of the sesquicentennial steering committee, Public Relations Director Sharon Polf and Weis Center Operation Manager Nancy Cook were responsible for arranging the event.

Special thanks goes to the Office of Athletic Communications and the University Archives forassisting in this special insert

BUCKNELLIAN TIMELINE

THE BUCKNELL CENTURY

Christy Mathewson

Mathewson, one of the nation's most admired figures, dies

"Big Six," the man who revolutionized baseball, dies an early death of turbeculosis; burial ceremony to be held in Lewisburg

'Big Six' is dead. The man who revolutionized baseball has passed on. He died on Wednesday night at Saranac, New York, where he has been most of the time since last Easter, when he suffered a relapse, after apparently having won his fight against tuberculosis. With his passing, professional sport, and especially baseball, has lost a commanding figure. But though 'Matty' has gone, his fame will remain as long as baseball endures.

No other player ever won the affection of baseball lovers to as great a degree as Christy Mathewson did. He was the premier figure in the baseball world.

But it was not alone because of his skill as a pitcher, great though that was, that Matty was known and loved so widely. It was because of what he was, rather than because of what he did, that Christy Mathewson became the idol of the entire baseball word. It was because of his qualities of heart and mind, rather than his skill of arm and fingers, that he won the affection of Americans, young and old. It was because of his genuine sportsmanship, his integrity, his cleanness of life, his high ideals, that baseball was made over, and raised to a cleaner, higher level.

In all history ,there is perhaps no more striking case of the force of a good example. When Mathewson entered baseball, the sport was somewhat drab in reputation. Disgraceful brawls and ungentlemanly conduct on the field were common enough. Mathewson was a new type of player. He was first of all a gentleman. He was a college man—something rare, indeed, in baseball. He never quarreled with other players. He did not dispute deci- sions by the umpire. He would not play ball on Sunday. Yet he was no goody goody, and his ability was second to no man's.

Indeed, it was his remarkable skill that first made him the popular idol. It was his integrity that held his admirers year after year, until the baseball populace of America worshiped the 'old master' as no other athlete has been worshiped before or since. He became the standard by which other players were judged—with the remarkable result that baseball was elevated unbelievably in tone.

Editor's note: This article is an except from the story that appeared in the October 7, 1925 Bucknellian, the week after Mathewson's death

Certainly no other baseball player ever achieved such wide popularity. His fame was worldwide. Wherever baseball is played, the name of Mathewson is known and revered. When the New York Giants landed in Japan, during their tour of the world a dozen years ago, they found that almost every inhabitant of the Island Kingdom could speak three words of English. They were: "Where Mr. Masson?" (Mathewson)

In the light of this wide popularity, and the effect his life has had in helping young America toward clean living, it is interesting to know that his mother planned for him a career as a minister. His mother revealed that fact herself in an interview years ago with a representative of The Delineator.

"Yes, that is what I planned that Christy should be," she said. "But things are not always as we would have them. I suppose it was just not to be. Yet sometimes I find consolation in the thought that perhaps he is a preacher. His work has brought him before the multitude in a kindly manner; his example is a clean one. He reaches the masses in his own way and he must give them something through his character."

Character was the secret of all Mathewson's success: character backed by headwork. Those of us who were in college with him will never forget how he spent hours and hours alone on Loomis Field, kicking a football, until Walter Camp rated him as the greatest drop-kicker in America—as he probably was. And during his summer vacations he carried a football with him and kicked it in season and out, developing a skill with a football that was quite the equal of his remarkable ability with a baseball. It was strength of character that held him to the task, hour after hour, day after day.

He began to practice with a baseball when he was ten years old. It was then that he learned to throw a curve. At the age of twelve, he could throw both 'ins' and 'outs.' He was allowed to play on a regular team of boys a little older than himself. Writing in the St. Nicholas Magazine, Christy himself told something of those early days.

"When I was fourteen years old, the pitcher on the Factoryville team was taken ill one day, just before a game with a nine from a town a few miles away, and the contest was regarded as important in both villages. Our second pitcher was away on a visit and so Factoryville was 'up against it' for a twirler. You must remember that all the players on this team were grown men—several of them with whiskers on their faces—and I had always looked up to them as idols. When the team could find no pitcher, someone remarked to the captain, 'that Mathewson kid can pitch pretty well.' But the backers of the team and the other players were skeptical, and, like men who come from Missouri, 'wanted to be shown.' So they told me to come down on the Main Street in Factoryville the next morning, which was Saturday, the day of the game, and take a try-out. The captain was there. 'We want to see what youíve got,' he said."

"Most of the baseball population of the town gathered to see me get my try-out, and I pitched for two hours, while the critics stood around and watched me closely, to discover what I could do. They sent their best batters up to face the curves I was throwing. I was putting everything I had on the ball. After a full hour's dress rehearsal, and when, I fanned out the captain of the team, he came up, slapped me on the back, and said, 'You'll do. We want you to pitch this afternoon.'"

That day, according to Matty, was the proudest day of his life. The team drove ten miles to the opponentís town, and all the other boys watched him leave with the men. "And you can imagine my pride," said Christy. "While I watched THEM, as they stood on one foot and then the other, nudging one another and then saying, 'Husk' is going to play with the men.' They called me 'Husk' in those days."

"It was a big jump upward for me and I would hardly look at the other youngsters as I climbed into the carriage with the captain. If the truth were told, however, I felt almost 'all in' after the hard session I had been through in the morning."

Happily, Factoryville won—for no man ever heard him boast. "Our team gained the victory by the count of 19-17, and largely by a bit of good luck that befell me. With my hands crossed on the bat, as usual, I just happened to swing where the ball was coming once, when the bases were full, and I knocked it over the left fielder's head. That hit won the game; and that was really my start in baseball."

Mathewson's record of thirteen seasons in the big leagues is one that probably will never be equaled. Aside from his work in helping to win four pennants for the Giants, Mathewson took part in three World Series'.

Then, what appeared to be a stubborn cold was suddenly discovered to be tuberculosis, and he case far advanced. Mathewson went at once to Saranac, and there for months lay on his back, at the point of death, yet fighting with all the skill and determination of his nature. When he went there, he was given six months to live. It was likely that he would never have lived, even that brief span had it not been for Mrs. Mathewson, who was Jane Stoughton, of Lewisburg. She was with him day and night, looking after his every need, protecting and saving him in every way, cheering him up, and standing shoulder to shoulder with him in the long struggle. Together they fought it out. And together they apparently won. For the day came when the doctors said Mathewson might leave Saranac and go back to an active life.

He did leave Saranac, but for only a short time. He became president of the Boston Braves and returned to baseball once again.

But now he is gone. He suffered a sudden relapse last Easter and hurried back to Saranac. There he and Mrs. Mathewson have been waging the fight over again. But this time it was a losing fight. The world has lost one of its finest sportsmen, and Bucknell one of her most illustrious sons.

Mathewson's Body, Tenderly Borne, is Laid to Rest

October 14, 1925

Christopher Mathewson, for many years the outstanding figure in the baseball world and the most noted athlete ever produced by Bucknell University, was laid to rest here last Saturday.

The loss of so great a character as his has made itself felt almost instantly around the world in which he was accustomed to move. After apparently having won his long fight against tuberculosis, Christy suffered a relapse last Easter that forced him to return to the sanatorium at Saranac Lake, NY. Here, after a long brave fight, he died.

His body was laid to rest here at the Lewisburg Cemetery by many of the people who loved him for his baseball as well as for the person he was.

Fatal fire strikes Seton Hall dorm

Could such a tragedy happen here?

By Peter Van Emburgh

Many of the 640 residents of Boland Hall rolled over to go back to sleep when they heard the alarm around 4:30 a.m., thinking it was another in a string of 18 false alarms set off in the six-floor building since September. Many soon heard screams for help, smelled the smoke and saw flames creep under doors, sending terrified students crawling in pajamas through choking smoke into the freezing cold outside.

By mid-day last Wednesday, Jan. 19, Seton Hall officials announced that the tragic fire took the lives of three freshmen males and sent more than 58 to nearby hospitals for treatment.

The apathy witnessed toward fire alarms at Boland Hall is experienced in nearly all residence halls across America. Ignorance led to an enormous tragedy at Seton Hall; a tragedy that could easily occur at this University.

Although the fire was largely confined to the third-floor lounge, many students were burned from the shear heat of the air on the hallway or suffered from smoke inhalation. Many students assisted firefighers in carrying ladders to the windows to rescue trapped students. Several resident assistants risked their own lives to go back into the building to alert and rescue the students.

"It was panic. Everybody was just, "Go! Go! Go!" Nicole McFarlane, 19, told *The Bergen Record*. At least one student jumped from his third-story window, suffering a broken wrist and sprained ankle.

The 48-year old building was equipped with smoke alarms and extinguishers but did not have a sprinkler system because it was built before they were required. New Jersey Governor Christie Whitman recently announced that she planned to push to require that all state colleges have sprinkler systems installed in the residence halls.

In response to the fire at Seton Hall, New York University recently announced that University officials are considering installing sprinkler systems in residence halls that do not currently have them. According to NYU, the majority of the residence halls are not equipped with sprinklers. "Trust me when I tell you that the tragic fire at Seton Hall is the kind of event that makes every administrator at every college across the country look at his or her facilities and operations with an eye towards preventing the repeat of that ghastly episode. This is as true at NYU as it is elsewhere," NYU spokesman John Beckman said.

Vincent DeCerchio, Director of Public Safety, pointed out that sprinklers are designed to protect the structure of the building. "A lot of people will be effected by smoke long before a sprinkler head goes off," DeCerchio commented in a recent University report.

Structures made from combustible construction parts (such as wood) are required to be equipped with sprinkler systems by the insurance industry. According to DeCerchio, 20 residences on campus have sprinkler systems, whereas the remaining 12 are made from non-combustible construction parts (such as steel) and are not equipped with sprinklers.

However, all residence halls are properly equipped with smoke/fire detectors and fire extinguishers. The smoke and fire detector equipment is regularly inspected and tested all year round by both Public Safety and Physical Plant.

As statistics show, most false alarms on campus the past year and a half have been unintentional. Roberts Hall leads the residence halls (besides the Gateways and Bucknell West) with the most false alarms. Of the 197 alarms sounded, 140 have been negligent (burnt popcorn, unattended candles). DeCerchio affirms that the number one cause of fire concern on this campus has been unattended and illegal

Police program raises concerns

Police chief, borough council claim students are not "targets" of new operation

By Brian Watson

In response to a growing number of complaints by Borough residents, the Lewisburg Police Department has developed a new program that will target numerous problems in the surrounding neighborhoods.

Project SCAT (Specific Crimes and Tactics) will utilize police officers in conjunction with several local offices, including the probation office, liquor control board and housing authority, to reduce various problems, including code violations, traffic offenses, vandalism and parties. Both the acting Chief of Police, William R. Neitz, Jr. and Borough Council members stress that this program is not targeted at University students, but at maintaining the highest level of safety throughout Lewisburg.

"This new program is aimed at all aspects of the community that are unsafe, not just against Bucknell students," said Borough Council member Judith Wagner. "We're trying to build bridges in the community and with students. They deserve to be just as safe as any other Borough residents."

The SCAT program will be active during random times, sometimes lasting only a few hours but may run for 24 hours at a time.

SCAT will focus on alleviating problems caused in several areas of Lewisburg, aimed mainly on Market, South Seventh, South Sixth, Fourth, and Brown Streets, where the police department has received "a number of complaints that are serious in nature," according to Neitz.

Many of these complaints evolved from excessive noise coming from downtown parties. Residents of Market and South Seventh Streets have complained about volume, vandalism, fights and a growing number of open containers emerging from these functions.

"These complaints have forced us to form this program," Neitz said. "We're not going to eliminate every complaint. It's just not going to happen."

The department has received permission from local residents to use their homes for surveillance to monitor and reduce property destruction, theft, and out-of-control parties.

Other areas of concern involve housing code and traffic violations. The operation will work with various authorities to inspect and ensure all housing and fire codes are met, as well as participate in roving DWI and speeding checks on several different streets.

The officers will also work in collaboration with the liquor control board to cut down on underage consumption, placing officers in local distributors and the "Cops in Shops" program.

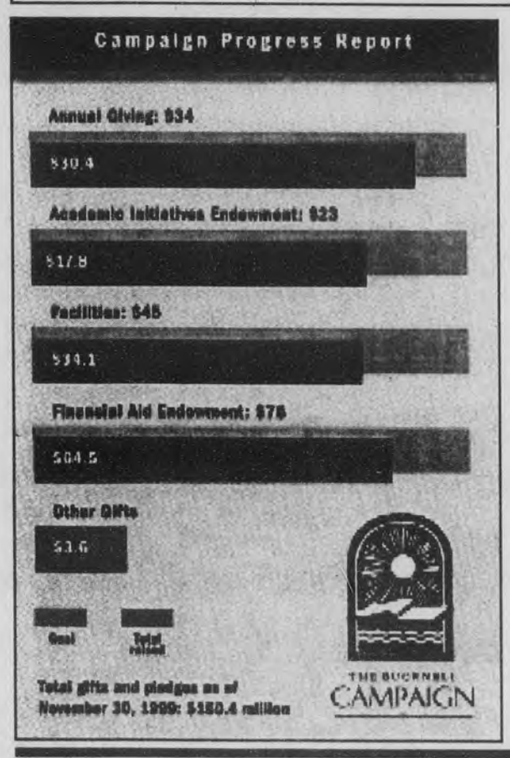
Neitz, who took over the role of department chief last September, informed residents that he would give them four months to try to correct these problems, and introduced SCAT to work to eliminate the growing number of complaints sent to the department.

"Our target is to take the pressure off the residents," Neitz said. "We will get citations, but this program is not aimed at Bucknell students. We have to bring this to a peaceful conclusion."

Wagner hopes that through the program, more dialogue between the Borough and the University will develop. She worries about the growing number of families considering moving out of Lewisburg because of the increased problems.

"Everybody's safety is this town is concerned," Wagner said. "Even though it's only a small number of people who are causing these problems, it only takes a little bit of effort to fix this."

Scott Solomon—The Bucknellian



Capital Campaign reaches goal one year early

By Jim Leahy

In November of 1996, President Adams announced the launch of an unprecedented long-term comprehensive campaign, The Bucknell Campaign: Preparing for the Next Century, whose goal was to raise $150 million destined for improvements to the University both physical and financial. With just under one year remaining until the conclusion of the campaign, the University recently announced that the campaign has already reached its original goal. Now, the University seeks an extended goal of $180 million to fully meet all of the campaign objectives it had originally set.

When The Bucknell Campaign was launched in 1996, three main objectives were cited: the improvement of financial aid availability and a stronger overall endowment, increased annual giving and new physical facilities for the University community. Although the University has raised significant funds to meet the important needs of the financial aid endowment and increased annual giving, significant funds are still needed to fund 'strategic academic initiatives' and new facilities. Currently, according to the Development Office, as of December 31, 1999, the grand total was up to $159.1 million, up from November's figure of $150.4 million.

When the original goal was reached, Arthur D. Kinney, Jr., class of '56, chairman of the campaign and a member of the Board of Trustees said that, "Our people have committed $93 million to the endowment, more than $26 million has been raised for the construction of new facilities, and almost $31 million in annual gifts has been tallied."

"It's a remarkable achievement for Bucknell, and we are most grateful to the alumni, parents, and friends who have made it possible," Kinney added. "The magnitude of generosity and involvement displayed in this effort has been very impressive and most gratifying."

The results of this enormous undertaking will be felt for many years to come. As of September 30, the University's endowment had grown to well over $400 million, its highest levels in the school's history. This allows the University to keep year-to-year tuition increases at a minimum and invest in new academic programs to enrich its already vast group of study areas. More than 200 endowed scholarships have been added within the past three years and new facilities are also taking shape.

Under construction right now, in the former Weis Center for the Performing Arts parking lot is the $7 million Sigmund Weis Music Building. Slated for completion in the fall of this year, the building will move the music department out of its cramped quarters in the 110 year old Art and Music Building that floods every spring and is too small for the two departments. Three other projects are also planned. The O'Leary Center for Psychology and Geology will be built in the space behind Rooke Chemistry, next to Olin Science.That building will move the Geology Department out of the Carnegie Building and the Psychology Department from its many locations on campus. An art building is also planned for future construction. Most importantly in the minds of students, however, is that the planning for a new athletic facility is well underway thanks to an $11 million donation from Ken and Elaine Langone and the generosity of many others.

Although President Adams will not be able to witness the close of the campaign he kicked off, the University is grateful to his skills as fundraiser.

Public Safety Log

January 18, 2000

INFORMATION/MINOR VEHICLE ACCIDENT - Public Safety responded to Olin-Dana Drive for the report of a minor vehicle accident involving two cars operated by University students. There were no injuries and insurance information was exchanged.

INFORMATION/MISSING PROPERTY - A student reported to Public Safety that personal property was damaged and one item missing from a room in Harris Hall.

The incident is under investigation.

January 19, 2000

MEDICAL ASSIST - Public Safety responded to Smith Hall for the report of a student with a foot injury. The individual was transported by a Student Health Service driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION - Public Safety responded to St. George St. for the report of road signs in a vehicle. East Buffalo Township Police responded to assist with the investigation.

INFORMATION/POSSIBLE ILLEGAL DRUGS - Public Safety responded to a Smith Hall common room for the report of illegal substances stored there. Public Safety Officers conducted a search of all common rooms and removed two beer kegs from one of the rooms.

January 20, 2000

MEDICAL TRANSPORT - A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency room for treatment of flu symptoms. The individual was transported by a Student Health Service driver and later returned to campus.

MISSING PROPERTY - Public Safety responded to Hunt Hall for the report of a composite picture taken from a sorority. The incident is under investigation.

INFORMATION/MINOR VEHICLE ACCIDENT - An individual reported to Public Safety that a vehicle had been bumped while parked in the Moore Ave. Lot causing a minor injury to the passenger in the parked car. The student and employee who operated the vehicles exchanged information and East Buffalo Township Police was notified.

HARASSMENT BY COMMUNICATION - Public Safety responded to Hulley House for a student's report of harassment by communication. The incident is under investigation.

HARASSMENT BY COMMUNICATION - Public Safety responded to Gateway Roser for a student's report of harassment by communication. The incident is under investigation.

INFORMATION/HIT AND RUN ACCIDENT - Union County Communications notified Public Safety that a student's vehicle, parked on Brown St., was struck by another vehicle that did not stop at the scene of the accident. The incident is under investigation by Lewisburg Police.

MISSING PROPERTY - Public Safety responded to Hunt Hall for the report of a composite picture missing from a sorority suite. The incident is under investigation.

January 21, 2000

INFORMATION - A student reported to Public Safety that she had fallen on the exterior steps between Roberts and the Gateway complex. The individual was being treated for minor injuries.

HARASSMENT BY COMMUNICATION - Public Safety responded to Vedder Hall for a student's report of harassment by communication. The incident is under investigation.

Medical TRANSPORT - Public Safety responded to Roberts Hall for the report of a student with a chin laceration. The individual was transported by Student Health Services to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION - Public Safety responded to a Bucknell West for a fire alarm activation and found evidence of tampering with the door lock. The alarm was a false alarm. The incident is under investigation.

January 22, 2000

THEFT - Public Safety responded to Davis Gym for the report of missing clothing. The incident is under investigation.

ACT 64 VIOLATION - Public Safety responded to Smith Hall for the report of illegal drugs in a room. Drugs and offensive weapons were seized, in an authorized search by Public Safety and Lewisburg Police. Charges are pending.

UNDERAGE CONSUMPTION - While on routine patrol outside the Uptown , Public Safety cited an intoxicated student for underage consumption.

January 23, 2000

INFORMATION - Public Safety responded to Vedder Hall for the report of a possible assault. Alleged victim would not provide Public Safety with any information or if an incident occurred. The report was classified as unfounded. Lewisburg Police notified.

January 24, 2000

INFORMATION/MINOR VEHICLE ACCIDENT - Public Safety responded to Lit Road for the report of a parked vehicle struck during snow removal. The information will be provided to the University insurance carrier.

CRIMINAL MISCHIEF - Public Safety responded to Vedder Hall for the report of damage to a parked vehicle. Lewisburg Police was notified and the incident is under investigation.

Rebecca Sheinfeld—The Bucknellian

The new residence hall is scheduled for completion and occupation next semester.

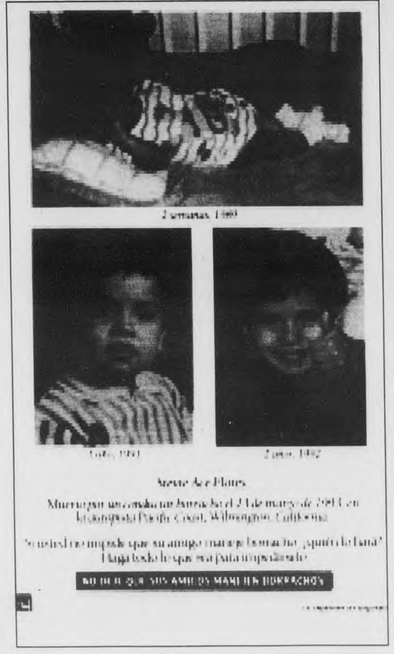
Under Construction

The Weis Music Center, also opening Fall 2000, sits adjacent to Swartz Hall.

Rebecca Sheinfeld—The Bucknellian

CAMPAIGN From page 1.

Without him, many of the things happening around us today would not have been possible. Also, the members of the Board of Trustees have to be thanked. Recently, the total sum they have given so far to The Bucknell Campaign is approximately $60 million. The alumni, not to be forgotten, have kicked in a sizeable sum of money too. The percentage of alumni giving hit an all time high of over 40 percent. Finally, Bucknell's parents should be thanked for their generous donations.



This week in Bucknellian Headline History

Basketball Team Looses a Close Game with the Clover Wheelmen and was Outclassed by Camden - Better than Yale Did
January 18, 1898

The Philadelphia trip taken by the basketball team during the latter part of the past week was successful in every particular except the winning of the two games played.

Saturday morning's Philadelphia Record says that the reason Bucknell failed to win from the Clover Wheelmen was because the floor in the Girard Ave. Hall is so slippery that any visiting team can hardly keep their feet. Yale was recently defeated in the same hall, 17 to 5, and the Clover Wheelmen said that the Bucknell team played a better game than the New Haven men. The Friday evening game was a close one, 10 to 6. The first half ended 2 to 0 in favor of the Wheelmen.

It is likely that Bucknell will play the strong Milton YMCA team here on either Thursday or Saturday evening of this week. Milton has been practicing and should give an interesting contest. Bucknell's next scheduled game in January 29 at Williamsport.

New Victory Ship to Honor Bucknell: Official Designation 'SS Bucknell Victory'
February 1, 1945

The SS Bucknell Victory will sail the seas sometime during 1945, President Arnaud C. Marts announced today.

President Marts, in his statement, revealed the intention of the United States Maritime Commission to name one of the new Victory ships in honor of Bucknell University.

The ship will be launched February 16, in the shipyard in Richmond, California, and will be put into service sometime this year.

The SS Bucknell University, in the larger and faster Victory type now taking the place of the former Liberty vessels, will measure 455 feet in length and will displace 10,800 tons. She is to be used as a cargo vessel.

Trackmen Head for the Garden
January 30, 1076

This Saturday the steadily improving Bucknell track team competes in the Milrose Games at New York's Madison Square Garden. Possibly the most prestigious indoor meet in the country, Bucknell for the first time will have entrants in the fastest section.

In view of the up and coming track season, coach Gulden exclaimed, "This year's team is so far ahead of last year's team that it will make last year's team look like a JV team."

In action during the month of January, Bison runners handled some stiff competition with a touch of class that proves they should be a part of the Milrose Games.

Faculty Approves Fall Break for 1981
February 13, 1981

The University faculty approved a motion December 15, to include the Fall Break in next year's calendar after a debate which lasted through the two days in the body's four day meeting.

The faculty meeting opened with the consideration of an amendment proposed by Professor of Chemistry Hans Veening, which called for adding two days elsewhere in the term to make for the time lost due to the break. University Committee on Instruction Chairman Joseph LaBarge said opening the semester two days early would cause other serious difficulties, and that adding the days at the end of the term would virtually abolish the reading period.

After discussing the possibility of making up the lost days on weekends, the faculty defeated Veening's amendment.

When the faculty originally voted in November 1979 to schedule a mid-term recess, certain conditions were set for its continuation. These include "normal" class attendance by students and faculty members on the days immediately preceding and following the break.

Arson Hits Phi Psi
January 17, 1992

An intentionally set fire caused only minimal damage to the unoccupied Phi Kappa Psi fraternity house last week, but Public Safety Director Vince DeCerchio said quick action prevented serious damage to the structure.

The state police fire marshal has ruled the blaze an arson. Safety Manager Jim McCormick said lumber and construction debris had been piled in the foyer and set ablaze. East Buffalo Township police are continuing the investigation, but DeCerchio said this week there are no new leads and "we may not have enough evidence to go further."

The fire was discovered at 2:30 a.m. on Tuesday, January 7, when the building's smoke detection system sounded an automatic alarm. Public Safety officer Sharon McCrum and Sgt.

Jeffery Baird arrived to encounter a wall of flame inside the front door; using fire extinguishers they were able to knock down the fire and control it until firemen arrived.

NEWS BRIEFS

Nuclear Weapons Inspection Team Satisfied with Iraqi Cooperation

A five-member team of International Atomic Energy Agency inspectors (IAEA) have ended a check of nuclear material in Iraq, and the team leader said that he was satisfied with Iraqi cooperation.

The IAEA team, which left Tuesday, had no connection with a suspended

U.N. arms verification program in Iraq. Iraq had allowed the IAEA inspections under the terms of a 1968 nuclear nonproliferation treaty, of which it is a signatory. The team's objective was to verify that the nuclear stocks are not being used for military purposes.

"It went well, and we had good collaboration with our (Iraqi) counterparts," said team leader Ahmad Abu-Zahra as the group prepared to leave Baghdad after completing its task. The inspectors began their work Friday.

IAEA and Iraqi officials repeatedly stressed that Abu-Zahra's task was not part of the stringent inspections that finally broke down and led to U.S.-British airstrikes in December 1998.

Baghdad has since refused to allow the arms inspectors to return and last month rejected a U.N. Security Council resolution calling for new inspections in return for easing sanctions imposed after Iraq's 1990 invasion of Kuwait. Those inspections are designed to assure that Iraq has no weapons of mass destruction.

Ecuador's New President Faces A Tough Task

New President Gustavo Noboa faces an uphill task to win the trust of Equador's military, that brought him to power last week.

The 62-year-old former vice president assumed the civilian leadership of Ecuador on Saturday when the armed forces overthrew unpopular President Jamil Mahuad. The ouster came after protests from impoverished highland Indians spiraled into a brief military rebellion.

Young military officers supported the Indian's protests against Mahuad because Army officers resent the rampant corruption that characterizes Ecuador's political class. Recently, the government mismanagement has led to officer's salaries being eaten up by inflation and devaluation. A colonel's pay has dropped from the equivalent of $1,000 a month (U.S.) to $250.

The military is one of the few public institutions that enjoys widespread support in Ecuador. It is known for honesty, compassion and providing health services and education to impoverished communities long ignored by the government.

"We can't say there won't be another coup if we continue with the very grave economic and social difficulties," said Luis Eladio Proano, a civilian adviser to the armed forces.

Hundreds of Hostages Freed In Commando Raid on Hospital

Thai government and military authorities said Tuesday that all ten of the Myanmar Karen guerrillas who held hundreds hostage in a hospital had been killed by commandos.

After a 22-hour standoff, about 30 Thai commandos on Tuesday stormed a provincial hospital that had been held by a group of Karen guerrillas from neighboring Myanmar. Sporadic gunfire and explosions could be heard for about an hour after the raid began.

"We were able to save all the hostages, and only one of our officers was injured by gunshot on the shoulder," said Lt. Gen. Thaweep Suwannasingha, the regional Thai army commander.

Of the 10 hostage-takers, nine had died at the hospital complex, and the another was killed in a gun battle while fleeing, according to Thai army Lt. Gen. Anant Heamathanong.

The gunmen, believed to be from the insurgent group known as God's Army, swept into the hospital in downtown Ratchaburi, about 95 kilometers (60 miles) west of Bangkok, early Monday morning. They have released several elderly hostages, a schoolboy, a pregnant woman and a man and a boy who were carried from the hospital on stretchers.

God's Army, led by 12-year-old twin brothers Johnny and Luther Htoo, is a band of about 100 Christian fighters based just inside Myanmar. The group broke away from the mainstream Karen National Union guerrillas who have been fighting for greater autonomy from the Myanmar central government for more than 50 years.

NASA, Stanford Wait for Mars Lander to Phone Home

After determining that a weak radio signal could have come from the Mars Polar Lander, scientists with NASA and Stanford University will listen Wednesday for signs that the wayward spacecraft might somehow be alive and operating.

Mission managers at NASA's Jet Propulsion Laboratory in Pasadena instructed the lander to send a signal to an antenna at Stanford University at about 1 p.m. (4 p.m. EST).

NASA scientists last week officially abandoned their efforts to locate the ill fated $165 million lander, which disappeared on December 3 as it started its descent to the surface of the red planet.

After weeks of fruitless attempts to raise the lander by radio, JPL mission controllers appeared resigned to their second major failure on a Mars mission in three months following the September loss of the Mars Climate Observer. But they experienced renewed hopes this week after scientists at Stanford University's 150 foot (45 meter) antenna reported that a review of data revealed what might have been an extremely weak signal from Mars during tests on December 18 and January 4.

"The signal that the Stanford team detected is definitely artificial, but there are any one of a

number of places it could have originated on or near Earth," Cook said in a statement released by NASA. "Still, we need to conduct this test to rule out the possibility that the signal could be coming from Polar Lander."

The transmission is extremely weak, which would indicate a failure in the lander's primary transmitter. It is unlikely that the problem could be corrected or that data could be returned.

"However, it would give the team a few more clues in trying to eliminate possible failure modes," the NASA statement said.

Bookstore vs. Varsity Books

See who really has the lowest prices on your favorite academic books

By Peter Van Emburgh

As students returned to campus for the start of the new semester, many rushed to the University Bookstore to gather the books necessary for their new course schedule. The lines are shorter this year because an increasing amount of students are discovering an alternative called VarsityBooks.com.

When inside the Bookstore, it is not uncommon for one to encounter students who are unhappy about the total cost of their shopping trip, wondering where their hard-earned winter break earnings have gone. Due to a large marketing blitz coordinated by Chuck Williams '00, VarsityBooks.com is experiencing an influx of Bucknell students ordering their textbooks via the Internet.

"Sales have more than doubled this semester in comparison to Fall 1999," Williams said.

VarsityBooks.com is the leading college web site that offers an affordable alternative to ordering new college textbooks. VarsityBooks.com was the most visited web site by college students during the Fall 1999 season, according to the Student Monitor, which polls college students nationwide.

According to VarsityBooks.com, the retailer offers discounts up to 40%, a flat-rate shipping fee regardless of the size of the order, and guaranteed delivery within one to three business days. Beginning this semester, VarsityBooks.com now offers additional services. A student that orders from VarsityBooks.com is qualified to win over $1 million in prizes and scholarships, a free e-mail account and access to a career center from the online site.

"It's really a no-brainer as I see it," Williams said. "With VarsityBooks.com, there are no lines to wait on, the website never closes, the delivery is speedy and the money that students are saving is outstanding!"

"I thought VarsityBooks.com was very efficient, and the delivery arrived on time," said Lala Musayev. "I saved about $25 so I'll definitely continue using VarsityBooks.com in the future."

According to Vicki Benion, acting director of the University Bookstore, college bookstores across the country have seen the impact of online textbook sales. "We are certainly doing things to keep bringing students to the Bookstore to purchase their books," Benion said. "We have made a commitment to the students to get a higher percentage of used books on the shelves as these books are less expensive than those purchased online."

"When it comes to buying new textbooks in bulk via VarsityBooks.com, a student may save about $20 or so," Joshua Gish '02 commented. "But the used book prices offered by the Bookstore beat out even the best prices online."

Public Safety informs on fire safety

To the Bucknell Community:

The recent dormitory fire at Seton Hall University alerts us to the serious dangers associated with unsafe living practices in a college residence hall and the importance of observing established fire safety/fire evacuation procedures at all costs.

Let me share some facts with you:

1. The United States has the highest incidence of fire deaths in the world, a significant number of these on college campuses. Fires on college campuses are a reality. They occur often enough and most of the time are due to the negligence of residents.

2. Most deaths associated with fires resulted from either a failure of the early warning system (smoke detectors/alarms) or a failure of residents to heed the early warnings system and evacuate a building immediately.

3. A fire can spread and inundate an entire hallway or floor with smoke within 3-5 minutes of its inception.

4. Residents of a apartment of living complex who succumb to fires, die of smoke inhalation long before the actual fire reaches them.

5. When you hear a fire alarm you must evacuate a building immediately as you do not know if the alarm is real and how far along a fire has progressed, or how much smoke there is. You only have a short time (3-5 minutes) to evacuate a building before being cut off from exiting by smoke.

6. If you ignore an early warning system (alarm) and wait until you see a fire, learn there is a fire, or someone comes to advise you to leave, it is too late. Residents who remain in their rooms or are too slow to evacuate a building during a real fire face a high probability of becoming a casualty.

7. No college or university has the staff or capability to visit every room in a residence hall and tell every occupant to evacuate within a 3-5 minute period after a fire alarm.

8. Residents who cause false alarms to occur in residence halls, not only endanger all residents of their building, but demonstrate a callous and reckless disregard for the rights and safety of others.

If a campus experiences fire alarms 100 times in a year and 99 of these alarms are false, but no one is a real fire, are you willing to gamble with your life on these odds? When you do not evacuate a building during a fire alarm, you are gambling with you life. Think about it.

Vincent N. DeCerchio, Director
Department of Public Safety

Phi Kappa Psi is on temporary suspension for alleged hazing acts.

Phi Kappa Psi investigated for hazing

By Laura Cardinal

The University's strict policy against hazing by fraternities and sororities is known throughout campus. Despite this, many were saddened to learn that the Bucknell chapter of Phi Kappa Psi, winner of numerous awards in 1999, including Most Outstanding Chapter and Most Outstanding Risk Management, was placed under temporary suspension early last week pending the investigation of an alleged hazing.

The terms of their suspension, which will remain in effect until the end of the investigation, prevent Phi Psi from performing the majority of their chapter activities. They are prohibited from holding chapter meetings without prior permission, engaging in or hosting any social events, performing ritual ceremonies, or attending events as a chapter. In addition, the chapter's new member class is prohibited from visiting the chapter house or having any contact with the chapter. Finally, the chapter is temporarily disallowed representation or voting privileges at Interfraternity Executive meetings.

Phi Kappa Psi's Interfraternity Council representative, Brian Blue, declined to comment on the situation involving his fraternity, feeling that it would be inappropriate to do so during the investigation. Dean of Greek Life, Roy Baker, also declined to comment. However, he did say that he thought the matter would be solved quickly. Public Safety and East Buffalo Township police are heading the investigation.

FIRE From Page 1

use of candles.

"The detectors on campus are surveyed, checked, inspected and cleaned," said Dan Remley, Director of Housing and Residential Life. "I'm very comfortable with our system."

The initial attitude of students at the Seton Hall incident, in ignoring the fire alarm, is common among students in several of the residence halls on campus.

"We're sick of all the false alarms," Sarah Given '02, resident of Roberts Hall said. "If the University does not correct this problem, they'll be faced with the same attitude among residents that occurred during Seton Hall's fire"

"Students become reluctant to leave their residence halls by 'normalizing' the alarms and do not treat them as they should" Remley said. "Students should take all alarms seriously."

As DeCerchio stated in his letter to the University community, he explains that if a student ignores an alarm and waits till he/she sees a fire, it is often too late. These residents "face a high probability of becoming a casualty," DeCerchio said.

The Seton Hall fire injured many and hurt many more emotionally. This event has impacted colleges and universities across the country to examine their fire prevention systems. Hopefully students will realize that this event could have happened anywhere, even at Bucknell.

Uptown offers fresh alternative

Night spot draws rave reviews from students, administration

By Laura Day

With lines out the door and students anxious to get a peek at their newest nightspot, Uptown was a huge success.

Located in the basement of Swartz Hall, the non-alcoholic nightclub was packed Saturday night with students who enjoyed the many facets the club has to offer. A variety of bands performed, including featured performer Jimmie's Chicken Shack. Students crowded the dance floor, equipped with a coordinated light and sound system. Uptown is also complete with an adjoining game room containing pool tables and television sets. This sports bar-like atmosphere was replete with photos of Bison athletes, past and present, and other sports memorabilia. Students thoroughly enjoyed the evening, and welcomed the alternative to the typical "downtown" party scene. Swartz Hall resident John Frazier '03 said, "I had a great time! The dancing was fun, the food was cheap and I didn't even have to go outside to get there!"

Uptown was the result of a long-term effort by a dedicated committee chaired by Assistant Dean of Students Kari Conrad. "For a long time students have been asking for a place like this," Conrad said. "It's exciting that this is finally happening."

John Frazier—The Bucknellian

Sumac was one of the bands that highlighted the Uptown opening.

The student board of managers for the social space selected the club's name and recommended club policies and activities for the club. "It's a place where students will go to dance, hang out, get snacks and socially interact with other people," Conrad said. "There will be nights when students can't get in because of the crowd."

She was certainly correct. With a capacity of 300 students, Uptown was jammed with students, while others waited in line to get inside and join the festivities.

The sports bar offers a menu with a variety of features, including draft root beer, mocktails (such as virgin margaritas and pina coladas), other soft drinks, hot wings, stuffed pitas, French fries, nachos, hot dogs and quesadillas. Darrell Perry '03 commented, "The food was great and a nice alternative to the Bison."

Undoubtedly, Uptown has shown potential for great success with its tremendous showing this past Saturday. Uptown will be open to University students every Friday and Saturday night from 9 p.m. to 3 a.m., and each student is allowed to bring one guest.

Dean's office announces parental notification of alcohol violation

To: Bucknell students

From: Allen Schweinsberg, Interim Dean of Students

In October 1998, Congress passed a law permitting colleges and universities to disclose to a student's parents or guardians violations of a school's disciplinary Code by that student involving use or possession of controlled substances or alcohol.

In April 1999, the University Committee on Complementary Activities (CCA) approved a policy whereby the parents or guardians of a student who is found responsible by the University for use or possession of a controlled substance or for an alcohol violation under certain circumstances will be notified.

Consequently, beginning of this semester, if a student is found to have violated the Student Code of Conduct relating to the use or possession of a controlled substance, the student's parents or guardians will be immediately notified. Parents or guardians will also be notified of a student's second violation of the University's alcohol policy, regardless of the level of the offense, and may be notified after a first offense, if the Dean of Students believes it sufficiently serious.

Students are also reminded that violations of the University Alcohol Policy are cumulative over their enrollment at the University, so that a second violation of the alcohol policy during any time of a student's attendance will result in parental notification.

If you or your parents have any questions about the new policy, please contact Dean Schweinsberg or Dean Commerford.

Cars impeding snow removal will be towed

All Community Members,

"Lewisburg Borough Advisory"

Notice:

Students and employees should observe the "No Parking" limits posted on each street in the Borough of Lewisburg. The Borough will tow cars parked on those streets. We need the street clear for snow removal and construction projects which are scheduled on the day parking is prohibited.

We regret that it was necessary to tow more than 30 cars for street cleaning on Wednesday, but that is our policy. Thank you for your cooperation.

Nada Gray, Borough Manager
Borough of Lewisburg

The Bucknellian editorial staff welcomes back familiar faces

After some last-minute staff realignment, *The Bucknellian* is prepared for the spring semester. The paper will benefit from the return of several editors and loses only a few key contributors.

Brian Watson '01 returns from a semester abroad to take over as editor-in-chief, taking over for Chris Ellis '00 and Jared Silliker '00, who will stay on as senior editors.

Matt Albert '01 also returns from a fall semester abroad to serve as managing editor. Tim Scheu '01, another returnee, will help out as a contributing editor.

Carolyn Moser '01 will succeed Justin White '00 as the paper's new business manager.

Pete Van Emburgh '02 stays on as news editor following the departure of Heather Napolitano '01 and will be assisted by Jim Leahy '03.

Kristen Jancuk '02 moves over from features to become opinions editor with new staff member Maren Johnson '02. Maureen Fick '02 also moves over from features layout to handle opinions design.

Rebecca Rowland '02 will take over as features editor after a year as opinions editor. Alison Karbonik '02 will take over layout duties for the features section.

Jen Scheerer '02 joins the staff as arts & entertainment editor, taking over for Courtenay Mastain '02. Lindsay Gash '00 will return for her second semester as arts & entertainment layout editor.

Matt Trunnell '01 moves from science & technology layout editor to become the section's assigning editor. He will be joined by Monica Montgomery '02, who will handle layout responsibilities.

Carmen Mauriello '02 is back as sports editor, as is Adam Haas '01, who will handle sports layout for the second straight semester.

Paige Cull '01 returns as photo editor, and Jonah Half '00 will remain on as darkroom manager.

Gretchen Flack '01 and Tim Choate '01 will serve as national advertising representatives, while Kassy Bernard '03, Daniel Mazmanian '03 and Luke Morris '03 will work as local advertising representatives.

Kim Luedee '01 takes over for Debbie Ruggerio '01 as head copy editor.

Mark Langer '02 is on board for his third semester as production manager.

James Lee returns for his fourth semester as adviser to *The Bucknellian*.

EDITORIAL

Fire safety must be a greater consideration

Following the tragic fire that took three lives and injured dozens more last week at Seton Hall University, college campuses across the country are beginning to reevaluate their fire safety standards. They must also cope with the disturbing fact that what happened at Seton Hall could just as easily have happened on their own campus.

Fires are a rare event on our campus, but this does not mean that the University can ignore the threat. The general apathy of the student body toward dormitory fire alarms and the lack of fire safety education on campus makes this threat all the more real.

Students housed in various residence halls have complained about the excessive amount of fire alarms that go off in their buildings. As semesters draw longer, these students tend to ignore the signals, dismissing them for another test or malfunction. Others are reluctant to exit their buildings on cold or inclement nights. Although most dormitory alarms are clearly audible, some occupants of split rooms claim that they cannot hear the blaring horns from their back rooms. Many never even question whether their building is really on fire.

Many dormitory residents believe that someone, namely a resident assistant or fire fighter, will alert them in the case of an actual blaze. The unfortunate truth is that no building on campus is equipped with either a sufficient number of RA's to properly inform each resident or with any sort of fire fighting experts. In a recently released University report, Public Safety Director Vince DeCerchio noted that fires spread quickly across hallways, filling the corridors with smoke within a matter of minutes. The physical problems that may be caused by burns and smoke inhalation are difficult to avoid due to their rapid spreads through living quarters. If students believe that they will be notified of a fire with ample time to escape, they may be toying with their lives.

Lax attitudes toward fire alarms are unfortunate, but in many cases are caused by frustration over faulty detection systems. In the period between Nov. 1,1998—Jan. 25, 2000, Roberts Hall had 197 fire alarm activations, 140 of which were negligent.

Public Safety and the Physical Plant ensure that all smoke detectors, alarms and fire extinguishers are constantly inspected. Early warning systems like these are crucial to the safety of all residents and must be followed at all times, but the amount of false alarms is simply too high. Glitches in the system must always be expected, but problems like these must be more seriously addressed. Any corrections or upgrades made to this system must be promptly publicized throughout campus so that the level of laziness toward alarms may be more easily eliminated.

The University's safety manager reports that the overall amount of fires on campus is down, directly attributable to students' increasing compliance with Housing and Residential Life restrictions. Also decreased is the number of alarms maliciously pulled by students.

Steps have been taken to increase awareness, but more needs to be done. No concrete system of fire safety education currently exists on campus. Hallway seminars may be provided by the safety manager upon request but are in no way mandatory. Perhaps the University should make such informational sessions compulsory or integrate such a program into first-year orientation to maximize students' knowledge of fire safety procedures.

Twenty residence halls on campus are equipped with sprinkler systems, but the remaining 12, made of non-combustible material, do not have sprinklers. Public Safety's report claims that sprinklers serve to preserve the structure and not lives, but an efficient sprinkler system can in fact be a live-saving instrument. Numerous universities, including New York University, are taking new steps to install new sprinkler systems in their dormitories. This sort of initiative should be considered at our University to ensure the highest-level of fire safety in residence halls.

Luckily enough, we live on a campus that has been virtually fire-free. Students have done their part to help cut down the possible causes, but the amount of apathy regarding fire alarms must be alleviated. All residents must understand how easily a fire can be started and how quickly it can burn through a living space. Though the University has taken many necessary precautions to protect its students from any potential blaze, it can never ignore the enormous threat that does exist.

Should Bucknell notify parents about alcohol policy violations?

Yes

By Rebecca Rowland

On their war against underage drinking, the University has come up with what they hope to be a deadly weapon—snitching! That's right boys and girls, someone told on you and it wasn't your little sister. The administration will now be informing parents when students are written up for violating the alcohol policy. Now on top of fines, losses of room pick and sanctions from the deans, students are going to have to deal with their parents too? Geez, it's enough to make a kid want to stop drinking. Hey, wait a minute ...

Once again, the University has trumped the student body. And while the under-21 year-olds are going to raise holy hell about this, it's only going to be background noise. By levying this new sanction the school is still well within its rights.

I've said it before and I will say it again, no matter what anyone says it is illegal to drink under the age of 21. Bucknell is not some kind of drinker's paradise; we are not in Mexico people, we are in Pennsylvania! Sure the school cannot release personal information about us to anyone, not even Mom and Dad, but Age of Majority and all of its subsequent privileges cover legal actions only.

There is a law in many states called "Megan's Law" that says every resident must be notified when a convicted sex-offender moves into the neighborhood. Does it make things difficult for the offender? You bet. Is it unfair? Absolutely not. The offender committed an illegal act; they should have worried about their image before they raped someone. This also serves a preventative purpose—if everyone you ever met found out you were a convicted sex-offender, wouldn't you think twice about committing a sex-crime?

I hope the parallel between "Megan's Law" and our new alcohol policy is clear. Sure informing our parents of our alcohol-related mistakes makes things difficult for us but we broke not only a school law, but a federal law as well and we deserve the difficulty. The University's new policy also serves a preventative purpose; if there was the possibility of Mom and Dad finding out you drank half a handle of rum and then verbally assaulted an R.A., would you?

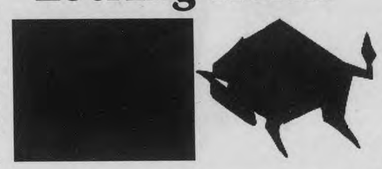
I know the feeling of freedom that comes with entering college. You feel like you are on your own, responsible for your actions, ready to make your own decisions. College is the beginning of your adult life (it's true) and from here on out you are in control of your own life. But just because you are in control doesn't mean that you are the only one your decisions affect.

As depressing as this may sound, you will always be accountable to someone else. It may be in a professional sense (e.g. your boss) or in a personal sense (e.g. your boy/girlfriend) but unless you live on your own in a forest, someone will hold you accountable for your behavior. It is in everyone's best interest that you act in a socially acceptable and desirable way.

College teaches you many lessons. Some are academic and others and life lessons. The new alcohol sanction will teach life lessons. If the prospect of your parents finding out you drink underage even remotely upsets you, congratulations—you are a good kid who doesn't want to upset Mom and Dad. If you figure out how to drink responsibly without causing such a ruckus as to get caught, congratulations—you just learned the value of moderation.

Think of this new policy as practice. Yes you are on your own and will be making decisions for yourself, but now those decisions have to be responsible ones. Welcome to the real adult world.

Locking Horns



No

By Ryan Delahanty

As we begin a new semester, an important change is occurring that will surely affect the lives of many students. This change is the new policy of alerting students' parents when they violate the University's alcohol policy. Instead of just having to deal with an always comical write up and an irritating fine, now students will have to explain to their parents why they were drinking and why they got caught. I believe that the university has absolutely no right to implement this plan.

Having said that, I would like to say why I think the university is implementing this plan. It seems to me that the administration assumes, quite correctly, that if parents are notified of their children's indiscretion with alcohol, then perhaps underage drinking at Bucknell can be curbed. To continue further with this logic, if parents see that their child has gotten themselves into trouble, then the parents can deal with the discipline aspect at home.

But will this new alcohol plan be effective? The administration seems to think so and I do too.

Before this policy was started, a student could be written up and only have to talk to one of the deans and shell out an U.S. certified Ulysses S Grant. The strategy was simple: come up with your best story, a nice set of clothes and, at least for the girls, shed a tear or two.

Now the administration realizes that they need to become much stricter if they want to continue the trend among colleges these days and work to severely limit binge drinking. What Bucknell does not seem to grasp is that by sending notification of alcohol violations to parents they will be infringing upon our rights.

Any student who has ever needed a copy of their grades sent to their parents knows the story. In order for the school to mail your parents your grades you need to sign a waiver guaranteeing that you will not sue the University for talking to your parents about your academic affairs. You cannot even give verbal permission, rather you have to march down to Marts to read and then sign a document waving your rights about academic information in the future. So, after all this, why is the school allowed to send home our drinking reports?

When we received our grades a few weeks ago, was the letter from the Registrar's office addressed to our parents? Of course it wasn't. By the time students arrive at freshman orientation most are 18, the national Age of Majority. It is then that we are given certain rights like the right to vote, to buy tobacco products and most importantly to be legally in charge of our own affairs. Therefore, our academic information is nobodies business but our own and, if we would like to, we can share it with our parents.

Now I know someone will say "But the legal drinking age is 21, so therefore even if you are 18 and considered an adult, you still can't legally drink." And, while this is true, the administration still doesn't need to contact students' parents. They can enforce the policy on underage drinking by fining students and restricting their privileges like losing room picks, having a car on campus and a myriad of other things.

In reality the University will not retract its new policy on notifying parents about their children's adventures with alcohol. Still, Bucknell should not be allowed to violate our rights like they will be doing weekly, probably even daily, with this new plan. Personally, I have always liked reading the R.A.'s captivating tale about a few beer cans and, at least last year, an unhappy Kermit.

The question is, will my parents?

No one here gets out alive: Making it through Jimmie's Chicken Shack

by Kristen Jancuk

The opening of Uptown this weekend was one of the more highly anticipated events on campus for the past few months. Finally, a place for students to hang out that did not involve alcohol or the threat of getting written-up, yet again, by your RA or public safety. While originally I wasn't overly enthusiastic about the whole idea, my attitude did a complete 180 when I heard that Jimmie's Chicken Shack would be playing opening night. While many of you have probably never even heard of Jimmie's Chicken Shack, those of us from Maryland have been hearing about them for years, and some of us even got to see them at the HFStival last year. Needless to say, my friends and I were pretty excited at the prospect of seeing them up close, on campus and for FREE. We were obviously delusional.

Not knowing how the turnout for Uptown's first night would be, we stood in line outside for 45 minutes to make sure we could get in. Finally, just as we were sure some of our appendages were going to freeze and fall off, we were let in. While it wasn't extremely crowded at first, as the opening bands played, Uptown started to fill rapidly. Everyone crowded onto the dance floor in front of the stage and I found myself surrounded by ten or 12 rather large gentlemen.

Finally, after what seemed like hours, Jimmie's Chicken Shack took the stage. While I couldn't really see much of anything thanks to the 7'8" tall guy standing directly in front of me I was still pretty excited for the music to begin. What was I thinking?

As soon as the first guitar riff sounded, the seemingly normal crowd of people underwent some apparent random schizophrenia. Suddenly people were pushing and shoving, jumping around, trampling on people and engaging in other forms of violent behavior. I found myself sliding back and forth across the

dance floor, with some guy's elbow firmly embedded in my stomach. I saw my life flash before my eyes as I went reeling toward the floor before one of my friends, who was being shoved back in my direction, grabbed my arm and hauled me back into a standing position (Thank you, Kim, you saved my life more than once).

I moved to the back of the dance floor, where I could see absolutely nothing up front, unless some poor person was taken out, in which case I could occasionally see Jimmie's hair. About every three songs, Jimmie would stop and ask everyone to stop pushing and behave in a more human-fashion. I love that man. However, no one paid much attention. Then, just as I thought things couldn't get any worse, some ingenious people decided that crowd surfing was the way to go. So now, not only was I fearing getting stepped on by the violent mob but I also had to keep looking up to make sure that no one was going to be dropped on my head.

I understand that everyone wants to have a good time, although I'm not sure how anyone can truly take pleasure in "moshing." However, as students at a University sponsored event, I would hope that we could be more considerate of other people. It doesn't take a genius to figure out that little people like myself don't relish being stomped on by people three times our size. In addition, while I would hate to have seen the concert shut down, perhaps more strict guidelines concerning behavior should be enforced at Uptown. Whatever the solution, I must conclude by saying that you know there's a problem when the audience is being reprimanded by the lead singer of an alternative band.

Students forced to brave the blizzard

A desperate plea for good ol' fashioned snow days

By Maren Johnson

Well folks, it seems as though winter has finally come to visit dear old Lewisburg. We're sure that our little town is in here somewhere, but we can't seem to find it under all the snow. It seems to be the pattern in these Pennsylvania winters to get slammed by one big snowstorm every winter when we are least expecting it. However, once it hits, there are a few items that we can expect: schools will close, businesses will close, roads will be slippery and dangerous and those of us without four-wheel drive vehicles (which, with our fondness for jeeps here, may be a minimal number) will be stuck in parking spots until the spring thaw. Oh, and there's one more thing we can count on; Bucknell will be open and ready for classes. As we've all realized by now (with the exception of the first-years who can learn this hard lesson now) Bucknell is like the US Postal system; we don't stop for rain, snow, sleet, or hail. Come to think of it, we don't even stop for natural disasters (i.e. the "great flood" of '99). Of course, that's beside the point since any flood now would be frozen in its tracks. The real point of my ranting is to see if anyone knows WHY Bucknell refuses to give us a break when the weather gets ugly. Yesterday, Lewisburg and surrounding areas were dumped on by 8-10" of snow. The school-closing list flashed on the TV screen for almost half of "Who Wants to be a Millionaire?" last night. Bucknell was definitely not among the numerous businesses and schools that were closed Tuesday and yesterday. I would think that the danger to students and staff would be enough to give us a day off. As hard as the plows may have worked yesterday, I know that I was not the only one to slide out of control on the road. Not to mention that there are professors here who have school-aged children that got the day off. Who's going to take care of them? I'm sure that administrators will feel that I'm just looking for a good ol' day off. My answer to that is simply, why the heck not?

LETTERS TO THE EDITOR

Students question Downtown theft

St. Catherine's Street. The name alone conjures up a picture in any Bucknellian's mind: music blasting, laughter and shouting all around, droves of partygoers milling about in search of the next keg. We all know how it goes—amidst the all-consuming search for the evening's amusement it is bound to happen that some will stumble into the wrong house.

The porch light was on. The door unlocked. But is this enough reason to walk into someone's home, to freely explore the contents of the refrigerator? If yes, does this give an intruder the right to walk off with cases of beer and numerous bottles of wine?

Losing the flag, missing the wind chimes and lamenting over disappearing Christmas decorations can be understood as casualties of a college party night. But waking up to find our loveseat missing from the porch was harder to believe. I can only imagine two or three drunks stumbling down the street with our hideous blue velour couch on their shoulders and nobody batting an eyelash! Really, where are the limits? Because we are college students do normal societal rules not apply? Since this incident, every time something goes missing, we wonder if that too had been taken. Every time the cat goes down the stairs we think there is a stranger in the house. We question every shadow that cuts through our backyard on its way home at night. Over the past three and half years here we have never questioned our safety whetiher it be leaving personal items unattended in the library, walking home alone at night or smiling at and greeting passers-by in the street. But now we begin to wonder at our little bubble!

Our home, our personal space and sentimental items have been violated. This can't be measured in dollars. Nothing of much value was stolen. My car keys, camera, wallet, stereo, laptop and CDs were all sitting in plain view while our intruders made a bee-line for the Harps, Otter Creeks, and Coronas! Even the Meisterbrau! How low can you go—the Meisterbrau before the TV? It is obvious that they were lost drunken Bucknell students. It is not a bunch of delinquents doing this, but a group of students who represent the 'best' of society. We are writing in response to a series of events. We feel this last incident was over the line! It is not funny anymore! The next time you are in the neighborhood at least give us the opportunity to first offer you a drink! I am told I make a killer Martini!

Anne Putnam, Ellen Rizzi, Elizabeth Barrows and Ilene Sorblum

Boro Council member addresses students

An Open Letter to Bucknell Students

Dear Bucknellians,

Over the years Bucknell students have contributed much to the Boro of Lewisburg. Students have been involved in many community service activities. Bucknell students are especially active with programs involving kids. Projects like the Listening Post in the schools and the efforts of athletics against drug and alcohol abuse are terrific. These programs help us live together as a community.

However, some areas of concern need attention. First, residents of South Seventh Street and Market Street are being harassed by late night activities. Many families who live in this area are awakened by with the noise that occurs when parties and other activities break up and people are going home. Kids are frightened by the loud voices. They hear language they should not hear. Homes are being vandalized. Private property is being destroyed. These activities need to stop or many families will move from the Boro of Lewisburg.

Secondly, please be aware that kids play and walk to bus stops in off-campus living areas. Open containers of alcohol (like half-filled plastic cups or bottles) should not be left on the streets. Sidewalks and streets filled with broken bottles are dangerous. Remember that kids also live in our community.

As the new year begins, I would ask that all of you make a special effort to be considerate to all members of this community. We need your help to make Lewisburg a place where we can all live together.

Sincerely,
Judy Wagner
Lewisburg Boro Council Member

The Bison conspiracy: Freshman meal plans

By Jennifer Hoek '03

Your typical freshman wakes up about 45 minutes before their first class in time to shower, dress and jet across campus every morning without the slightest thought of grabbing something quick to eat on the way. I am no exception. But the one day that I decide to answer my stomach and stop by the Bison quickly for a hearty egg and cheese sandwich and coffee, I am brutally rebuffed by the cashier who is telling me I am too early for meal credit! Too early?

Now, I understand that sometimes there is a shortage of employees in the Bison and that they can't be open all the time, but don't you all agree that 9:00 is a little late? As freshmen, we receive three meal credits each weekday, and the ones that aren't used, are lost. So if I have class from 9AM to 12PM, I am basically getting cheated out of my breakfast meal credit.

True, I can always go to the cafeteria, but I can't take the tray of food, glass plate and silverware with me to my nine o'clock French composition class. In addition, I have probably been up to all hours of the night doing homework so there is no way I'm going to make it in time to actually have a sit down meal at the Bostwick!

Lunch is another story. Meal credit used to start at noon and end at four o'clock. However, in order to be able to handle the mass crowds of students, they pushed the time back to 12:15. The only thing this has proved is that most students will wait until 12:15 causing the herd to rush both the cafeteria and Bison 15 minutes later. However, like most people, I have class again at one and if I wait till 12:15, then hit the lines, then try to inhale my food and run to class, I am usually too late. Granted, there probably is no solution to handling the lunchtime madness, but I think that pushing back the time has only made it worse.

Now say you just skip lunch and plan on eating after your afternoon classes. Last semester I had class until four o'clock and again at 5, so I missed lunch and was forced to dine late at night. But that wasn't too bad! I don't mean to sound fussy or corny, but if I am paying for these meals shouldn't I at least have the convenience to eat during the only time I can? Supposedly freshman get the mandatory meal plan because they want to make sure we are eating well and adjusting to campus life easier. Yet I am losing a meal credit everyday because I study hard at night and have an early class every morning.

The final issue I want to address is the amount of food we can buy in the Bison. We can go to the cafeteria and for one meal credit eat as much as our stomachs can hold or, in my friends' cases, as much as their stomachs hold and hands can carry on the way out the door. Yet at the Bison, we only have enough credit for a small sandwich and a small soda. For your typical college guy this is nothing. Some end up using their entire declining account just to pay for the overage on their meals at the Bison. Whereas they would like to be able to use it in the C-Store like those students who don't eat large meals and enjoying buying midnight snacks for late night study breaks.

We are but broke college students and would only like to take advantage of the few things our parents will still pay for. All I am saying is that I think something should be done to make college dining more convenient, straight and simple.

Election 2000

A review of Tuesday's Iowa caucuses

By Josh Guyan

The numbers are in on the Iowa Caucus, but I don't think they actually tell us that much about the election in general. On the Democratic side Al Gore won handily 63% to Bradley's 35%—really no big surprise. On the Republican side, George W. Bush won with 41%, Steve Forbes made a strong showing with 30% and surprisingly Alan Keyes picked up 16%. John McCain didn't campaign in the state; while Gary Bauer and Orrin Hatch finished with percentages not even worth reporting. Orrin Hatch will probably do tomorrow what he should have done a long time ago and drop out.

I'm sure the Gore camp is ecstatic about their big victory, but if Gore hadn't done this well it would have been seen as a loss. Gore was expected to do this well in Iowa for many reasons. The vice-president controls the ground in Iowa. He has the unions, the local politicians and every other party apparatus working for him there. He has the best organization and that's what it takes to get votes in Iowa. Iowa is not a densely populated state; it takes some effort to get to the caucus location so only the party faithful end up voting. Gore seems to have the party faithful.

This victory for Mr. Gore wasn't all organization and circumstance. He played the state beautifully in the debates and election rhetoric. He kissed up to the Iowa farmers when it came to ethanol subsidies. He criticized Bradley for being weak on agriculture policy, leaving his opponent speechless. All of these reasons helped to make Iowa a steal for Gore. We should be paying attention to the New Hampshire primary coming up. The race is tighter there and there are a lot of independents that right now are leaning towards Bill Bradley. Bradley needs to win or do extremely well in New Hampshire to stay in the race, but there is no reason why he should dwell on Iowa.

On the Republican side, this Caucus basically showed how out of tune Iowa is with the rest of the country. Iowa is conservative in regards to the rest of the nation, exemplified by the strong showing of Forbes and the surprising showing from Keyes. Forbes will not do as well anywhere else and remember that the Republican race is really a two man race between Bush and McCain. McCain is doing extremely well in New Hampshire, but I don't think he'll be around much after that primary. He would have to win New Hampshire by a decent margin to get the momentum that could put him over Bush in the subsequent primaries.

What really surprised me was Alan Keyes. Keyes is extremely unorthodox but he got 16% of the vote in Iowa. While we must remember Iowa is a religious and generally conservative state and the people who voted were mostly the more extreme right wingers, this is still an unbelievable finish for Keyes.

Keyes is an extreme religious conservative who believes we should eliminate the income tax and go back to the original Constitutional tax system which allows the federal government to raise money only through tariffs and excise taxes. He also mentions a national sales tax. He likens the tax system to enslaving us all much like his people were enslaved (he is an African American, but doesn't believe in Affirmative Action).

My favorite Alan Keyes moment was when, in one of the debates, instead of giving his closing remarks he turned to the audience and said something along the lines of, "I'm not going to address you all as if you were God," and then went into a prayer instead of summing up his political platform.

FEATURES

Polite leads campus in Martin Luther King commemoration

University events promote awareness of the history of civil rights activism

By Tim Scheu

Karen Dawes—The Bucknellian

Several hundred marchers, representing many student organizations, participated in Monday's march. The walk around campus celebrated the life and ideals of Dr. Martin Luther King Jr.

In an era of relative stability, the Bucknell community paused to pay respect to a man and movement that changed the climate of our nation. In commemoration of Dr. Martin Luther King's birthday, the University's Multicultural Center (MCC) has organized a week's worth of activities to celebrate the spirit of his teachings.

"We are trying to promote the movement and Dr. King's philosophy beyond the 'I have a Dream' speech," said Eric Polite, head of the MCC and a 1997 Bucknell graduate. "We need to have students understand how they have and still be involved in the twentieth century reform movement."

The MCC is trying to build on the foundation of activism that reverberated throughout the University's campus during the fifties and sixties. Retired Professor Doug Stern was teaching at the time and reflected upon the tumultuous era. "As a result of Dr. King's teachings, there was a growing segment of students who became engaged in fighting racism in the south."

He suggested that there was a much higher degree of participation among faculty members, but that did not make the students contribution any less significant.

However, prejudice and racism did not end with the sixties. It is still widespread today, and that is precisely why Polite decided to return to Lewisburg. "I had a unique experience at Bucknell with some good and bad times. This position gave me an opportunity to focus on the bad points."

Polite stressed that Dr. King's teachings are just as important now as they were 30 years ago. "We need to be honest in the face of adversity, and fight prejudice," he said. "Even if it is on a small scale, it is a good place for students to start speaking out."

The commemoration festivities kicked off on Monday with the 'We Are on the Move' March. It rested on the footsteps of last year's event, which drew over 300 marchers, and involved nearly all sectors of the Bucknell community.

This was followed by a series of other events including a discussion of the landmark civil rights case, Brown versus the Board of Education. In this forum students and faculty reflected upon the progress the movement has made, and the challenges it faces in the future.

And on Wednesday night there was a poetry reading entitled 'Spoken Wordz.' It emphasized the relationship between language and politics, and celebrated landmark poets, Amiri Baraka, and Claude McKay among others.

It is through these activities, which the MCC hopes to spread awareness and tolerance among our student body. Among other things, it will attempt to focus on the fact that the problems, to which King devoted his life fighting, still exist today.

"MLK led the struggle against what he called the triple evils: racism, poverty and militarism," Stern said. "We have not conquered these evils in a way in which we should. And until Dr. King's dream of the beloved community is realized, we have not yet taken democracy seriously."

The activities will continue throughout the week, including a screening of the documentary "At the River I Stand" in the Gallery Theater tonight at seven, and a memorial dinner tomorrow night in the Terrace Room.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

Let me start off by saying that I am not the greatest athlete. While I did play sports in high school, and I still try to keep in shape to wow the boys, I am no Keri Strugg. I am currently dating someone who I really like, and I am hopeful that things will work out between us. However, there has been one little problem in our relationship so far that I fear could turn into a heated issue between the two of us. You see my boyfriend really likes to participate in sports, he is basically a sports nut, but there is a glitch in all this. He stinks. I mean he is awful in about every sport imaginable, and the sad thing is that he really still likes to participate in them. Therefore, quite often the two of us end up going to the gym to play basketball, or we will play golf, whatever. I mean its really fun when the two of us are playing, but then when it comes time to name a winner and a loser, I am always the winner. I can't help it that I win, I guess I am just better than him at most things. However, this is where the problem really starts, even though he's just terrible, he is really competitive and so when he loses he gets insanely mad. He wont talk to me, he'll curse at himself, and the sad thing is it was all in fun. Therefore, when this happens we end up getting in some huge argument that totally ruins the whole time that we spent together. I mean I didn't start dating him because of his athletic ability, which is almost non existent, but rather because of the nice person that he is. I just don't know if I shouldn't play any sports with him, or if I should let him win. I am also afraid that this is some kind of a sign telling me that he may not be the right one for me. So I leave it to you, how can I work this out and still save his manhood?

Sincerely,
Playing With The Boys

Dear Playing With The Boys,

I think that you shouldn't take this to the extreme by saying that your boyfriend's lack of athletic talent is a precursor to your break up, or by saying that it is some kind of sign from the heavens. So the kid isn't any good at sports, there are plenty of people that aren't athletically gifted but still enjoy sports. Some people are just more competitive than others and place winning as the most important thing, over fun in many cases. Perhaps this is how your boyfriend is. It doesn't necessarily mean that he hates you after you win, he just places a high value on winning, so no matter who he loses to he will always be upset with himself.

I really don't think that not playing sports with him is the answer, that will just inhibit the two of you to do something that you both enjoy. I also think that letting him win is a very bad idea. If he ever found out that you let him win I am sure that he would be furious, and yes he probably would feel as though he has lost any manhood he has left.

I really think you should just sit him down and tell it to him how it is, you won't lose on purpose so he can't get mad at you if you win. If you just talk with him about it for a while perhaps you could find out why he gets so upset, this would also foster communication between the two of you which will provide growth for your relationship.

Even though I can't imagine how bad your boyfriend is that he would lose to you in every sport, don't forget why you started dating him. Although it may be easy to see who wears the pants in your relationship, don't go and break up with him because he is not athletic. That is such drastic thing to do and I can guarantee you that you will regret it later. Arguments between people occur—there is no way around it. Your relationship wouldn't be healthy if you didn't ever fight, you just have to learn how to work it out.

In addition to sitting down and talking with your boyfriend why don't you try and give your boyfriend some kind of incentive towards winning. For example, a night alone with you if he wins. If you were to propose an idea such as this I am sure that he will work a lot harder to win. You could also suggest engaging in a sport where the two of you could compete on the same team. Suggest playing against another couple you know, essentially anything that will take the pressure off of winning or losing, and additionally creating a separation between the two of you. In any relationship I can guarantee you that there will be good times and bad times, but if you don't stick around and try and work through it you could regret it for the rest of your life, always thinking what could have been. I am reminded of an old saying by Tupac Shakur, "What you won't do for love, you've tried everything but you don't get enough."

In conclusion though some people may be a little more academically oriented rather than physically gifted, everyone deserves a chance. It's all a matter of how you were brought up, and in my case mama raised a hell raiser. Until next time relax, have fun, and let Winks wisdom be your guide.

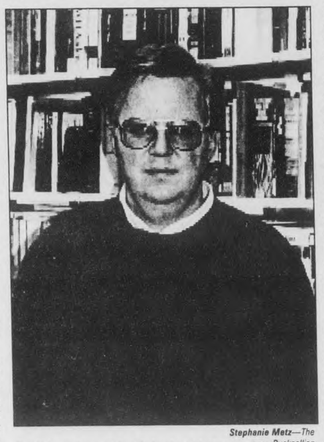
If you are interested in writing to Wink there is no need to worry- all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy.

Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling

Rickard chosen to bring expertise to prominent Irish literature program

By Ryan Delahanty



Stephanie Metz—The Bucknellian

English professor John Rickard will lecture on Ulysses, the subject of his latest book, at University College Dublin.

Professor John Rickard, Chair of the English Department, was recently invited to lecture at the prestigious James Joyce Summer School in Dublin, Ireland. This program is held annually at University College Dublin and is widely attended by "Joyceans," those scholars who devote time and study to examine the author's works.

"It is an unexpected honor to be able to discuss some of my favorite literary topics with peers coming from a variety of backgrounds," said Rickard upon hearing that he was asked to talk at the prominent gathering. "It is nice to see that Joyce is receiving endorsement from Dublin and that he is such a popular figure there today."

Held at UCD, the James Joyce program runs for two weeks. Each guest lecturer, chosen internationally from a highly competitive pool, gives a one-hour speech followed by an hour allotted for discussion of the speaker's argument.

Rickard's speech is entitled "An Evolutionary Reading of Ulysses," and delves deeper into the issues brought to light in his book, *Joyce's Book of Memory: The Mnemotechnic of Ulysses*. The focus of both Rickard's speech and book deals with how Joyce viewed science and also how memory was an important function for Joyce and the ways in which it affected his writings.

The University is the same college that Joyce attended over a century ago. Perhaps even more exciting is the fact that building Rickard will lecture in, the Newman House, is used as a setting for part of Joyce's *A Portrait of the Artist As A Young Man*.

On campus, Professor Rickard teaches primarily Irish studies covering various genres including poetry, fiction, and drama. He tends to focus on W.B. Yeats and James Joyce, two of the most important literary figures in both Irish history and the twentieth century.

It was at the University of North Carolina at Chapel Hill that Rickard came to embrace both Irish literature and eventually Joyce. He recalls an influential English teacher instructing him in an Irish literature course. "That had such a positive effect on me that I decided to follow up the course with a class wholly devoted to James Joyce," Rickard said. Ever since those few classes from graduate school, the complexities and intricacies that make up Joyce's works have fascinated Rickard.

Last year, Random House's "The Modern Library" published the 100 best novels of the twentieth century. Topping the list was Joyce's *Ulysses* while his other well-known novel, *A Portrait of the Artist As A Young Man*, ranked third. Interestingly enough, the Irish shunned Joyce in the beginning of this century because of his criticism of Irish life, religion, and search for their identity.

Yet, in recent years, the Irish have embraced Joyce, lauding him as one of their greatest "offspring." This change in attitude has pleased Joyceans including Rickard: "Joyce's recognition and popularity today makes the experience of lecturing in Dublin all the more rewarding."

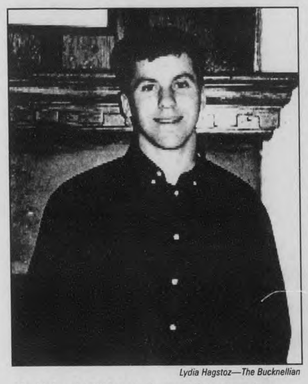
Bucknell Brigade brings a sense of reality to Arnold



Lydia Hagstoz—The Bucknellian

David Arnold '00 led the Bucknell Brigade on its recent trip to Nueva Vida, Nicaragua.

By Katie Hays

David Arnold has left the proverbial "Bucknell Bubble," and he's not the only one.

Arnold, a senior international relations and economics major here at Bucknell recently traveled to Nueva Vida, Nicaragua with the rest of the Bucknell Brigade.

Three Bucknell faculty members and twenty students went on the January 2000 trip and saw what the majority of us watch on a small, square box from the comfort of our couches. In the dusty landscape of Nueva Vida, the Brigade witnessed some of the lingering results of November 1998's Hurricane Mitch.

"We dug latrines," Arnold remembers. "Most families don't have running water; four houses share one spigot. We worked on eleven latrines for eleven different homes in Nueva Vida."

The work and the working conditions were both less than ideal. "Two students worked on each latrine," Arnold said. "One, in the hole, would chop with a tool called a koba—a flat blade on a handle—to loosen the dirt, and then would scoop the dirt into a bucket attached to a rope. The other student, waiting on the ground above, would pull the rope and bucket up to ground-level, dump out the dirt, and send it back down."

Besides digging latrines for the people of Nueva Vida, Arnold and the rest of the Brigade rented a small building to use as a temporary health clinic. Ultimately, the Brigade plans to build a permanent Bucknell student-founded clinic there, employing Nicaraguan doctors and visiting when possible.

"A Nicaraguan doctor worked in the rented clinic, and Dr. Stechsculte worked there in the mornings and afternoons," Arnold said. "Students also acted as translators. They weighed, spoke with, and took the temperatures of those who came to the clinic for help."

"You'd be surprised," Arnold admits when recalling the most common medical requests. "More often than not people have colds, aches and pains. Most of the time, what they need most, we can give them."

Although the satisfaction of helping others was a pervasive feeling among the students, there were some events that brought sadness as well.

"A fire started one night while we were there," Arnold said "we went outside in the dark, formed a line, and threw buckets of water over the fire."

"It was a supply trailer." Arnold recalls disappointedly. "We lost many of the medical supplies that we had stored there"

Still, those moments of satisfaction were not completely overshadowed.

"We can help people in little ways no matter where we go so not only do I want to work there because it's a wonderful opportunity to help where people need it, but also because it gives us a glimpse of different conditions than those that we know well," Arnold said.

"We learn about real poverty and we see a place where food is not so easily available, where, when you are sick, you can't simply swallow medicine or unwrap a cough drop. You see how people live, and you do what you can to help where they want it."

The Brigade's first trip to Nicaragua was in January, 1999. David also traveled to Nueva Vida on his own last summer; during this trip, he worked with Jubilee House, the group that is joining Bucknell students and faculty in their efforts to help those affected by the Hurricane.

The Brigade is already planning more trips—Joell Molina '01 will head the spring 2000 trip, and next year the Brigade plans to visit Nueva Vida at least twice. The Brigade's greatest plan to help where people need it, of course, is to establish a permanent health clinic in Nueva Vida. To achieve this goal, the Brigade met with the mayor during their trip to Managua, the Nicaraguan capital.

In order for the clinic to be built, the Brigade needs to raise $30,000.

"We have $7,000 right now, and if all 3,000 Bucknell students gave $10,we'd have the $30,000. The clinic depends on those little donations."

Little donations, small steps and simple help all seem to be the key to the Bucknell Brigade and David's goal.

"It's not the life and death situations that we see so much," Arnold said, "but the simpler problems. It's the little things that we do that seem to make the biggest difference."

Arnold, most definitely, speaks from experience.

If you'd like to join the Bucknell Brigade in its efforts to build a Bucknell student and faculty- founded health clinic, please send $10 (or any contribution) and your name to the Bucknell Brigade, Rooke Chapel, Bucknell University, Lewisburg, PA 17837.

Stop sneezing: Hints for surviving cold, flu season

By Rebecca Rowland

Feeling achy and tired? Have a fever and a cough? Well, you're not alone; it's that time of the year again—the cold and flu season. Each year 35-50 million people suffer from a cold or flu, and that time is now upon us.

Running from late-fall to spring, the cold and flu season is the time of year when people traditionally come down with the two illnesses. One reason for this is simply that in the cold weather, people are more likely to congregate in close quarters, making the spread of diseases much easier. Another reason, says Dr. Stechschulte of the University's Health Center, is central heating.

"Humans need to breathe 100% humidified air and when central heat is on, the amount of moisture in the air falls dramatically. In order to combat this, our upper airways secrete fluids to make breathing easier and it is these fluids that cause head colds and stuffiness," Stechschulte said.

Stechschulte recommends a cool-mist humidifier to add moisture to the air in rooms and lessen your body's need to produce fluids.

As any doctor is quick to point out, a cold and flu are drastically different sicknesses. While the term "cold" is a generic term for any kind of head or chest discomfort, a "flu" is actually the "influenza," a specific viral disease.

A cold is characterized by stuffiness, sneezing and a sore throat. Body aches, exhaustion and coughs are common but moderate and fevers are rare. A cold can last from one week to several, never increasing in its intensity.

Influenza cannot easily be confused with a cold. Although many of the symptoms are similar, those that accompany the flu are more severe. Fevers are generally over 103 degrees, sore throats don't just hurt when the sufferer swallows but all of the time, severe exhaustion and body ache, and violent chills and cold sweats are common.

A nasal swab culture is used to test whether a patient has influenza. This swab can be done at the Student Health Center, which will then send the cultures to the hospital to be examined. If a student sees a doctor before noon, the result will return to campus later the same day.

Students and others who live communally are at a high risk for a cold or flu. Sharing bathrooms, bedrooms, dishes and even the air they breathe puts them in harms way more often than if they did not live in a dorm. But communal living is not the only factor that contributes to students' high risk of catching a cold or flu.

"Students' lifestyles affect their chances of becoming sick," Dr. Stechchulte said. "Drinking, smoking and lack of sleep all weaken the immune system. Anything that places a stress on a student's body and mind will have an adverse affect, even school work."

So what is a student to do? Annually, the flu claims 20,000 deaths and over $4.5 billion is spent trying to cure colds and flus. In light of those statistics, the best method is prevention. Washing hands often, sneezing and coughing into tissues and getting flu shots in October are some of the best ways to stay healthy.

If a student does get sick, the Bookstore and the C-Store carry cold medicine and the Health Center can run a flu culture. Two new, more effective medicines—Relenza, an inhalant, and Tamilflu, a pill—are on the market and can be prescribed for flu sufferers by the Health Center staff. They are between $50 and $70, however, so trying to stay healthy is still the best bet.

"Just do what your grandmother always told you to do," advises Stechschulte. "Eat right, sleep enough and exercise. Do what you like to do to de-stress and keep your mind and body in balance."

Everyone is going Uptown, the new alcohol-free nightclub

An A&E Commentary

By Campbell Gerrish

Scott Solomon-*The Bucknellian*

Everyone enjoys opening night of Uptown, especially on the dancefloor to the sounds of Sumack, JoyDrop, and Jimmie's Chicken Shack.

Uptown, the new alcohol-free nightclub, located in the basement of Swartz Hall, had its long awaited opening this past Saturday night. Three bands were scheduled to play, one of which was Jimmie's Chicken Shack. I ventured uphill to Uptown around 8:30 that night, eager to get inside for the opening event and get a glimpse of the action. When I got there a half an hour before the doors were opening, the line was already very long, which was exciting. When I finally got inside I was very impressed to say the least. Before me was a large room with pool tables, a snack bar with interesting fruity concoctions, hot wings and various other munchies and a pretty substantial dance floor.

Before the flood of eager Bucknellians swamped the place, I perused the premises myself to get a feel for it. The first person I talked to was nearby Mifflinburg native, Jim Hoch, the manager of Uptown. "I'm really excited about this," Hoch said. "Uptown provides a safe, non-alcohol event, with food, drinks, music and games. It's just a great place to have on a college campus." Hoch was enthusiastic about the night ahead of him and was racing around getting his staff psyched up. Jim also informed me that all his event staff employees are student volunteers. However, for the opening night there were some exceptions to the all-student-employee idea. While sampling some of the fruit drinks, I made conversation with the bartender who happened to be Dean Roy Baker, dean of Greek life.

Dean Baker was very enthusiastic about the opening. He made it clear that having a nightclub on campus was a vision of Richard Chapman's, the former dean of students.

"Dean Chapman had always wanted to create a night club on campus where kids could comfortably spend an evening in a non-alcohol environment and here it is," Baker said.

Dean Kari Conrad, another participant in the organization of Uptown, commented, "the feedback was great right from the getgo. At our sneak preview of the club (last Friday), everyone was thoroughly impressed with the place and lots of kids were really psyched about a fun, non-alcohol event". Dean Conrad conversed with students and enjoyed the music—she even made herself part of a human-barricade formed by the event staff when Jimmie's Chicken Shack caused the crowd to go into a violent frenzy!

When the doors opened at 9:00 there was a huge applause from everyone in line and Uptown began to fill up rapidly. Kids were all over the place and as I scanned the crowd from my perch at the bar I suddenly noticed a Public Safety officer. I approached him, curious as to what his duty was, as I thought that Uptown's purpose was to provide a safe atmosphere. Officer Weaver assured me that he was there "just in case, and maybe just for this first night". Supposedly his job was just to hang back and take care of any serious problems such as fights and to evaluate what type of security would be necessary for Uptown in the future.

Finally, the evening's entertainment began with Sumack, a Los Angeles-based band. Sumack filled the crowded room with a loud, funky, rock and roll sound that got the audience up and dancing right away. Sumack formed in L.A. but its members originated from North Carolina, Connecticut, New Hampshire and Texas. The guitarist, bassist, and percussionist were eclectic performers and led the show. The bassist and lead vocalist for Sumack told me that he would have liked to play a bigger facility, or that "actually it wasn't so much the size, but [he] couldn't see any of the crowd beyond the first row of people which was a shame." They all agreed that the staff created a somewhat of a barrier.

The next band, JoyDrop, eventually started, offering a different sound, "darker, more like the band Garbage," according to Sumack keyboard player, Rod. Their sound was excellent though. For the concert-goer who likes to grit their teeth and flail their arms around to hard rock and roll, JoyDrop was a perfect band. The lead singer had a great voice and a gothic look, and she didn't hesitate to swing her hair around and head-bang just like any other rocker.

The band was formed in Toronto and they described themselves as "a musical collection of thoughts and ideas they had been working on together for three years." For those who are interested in hearing more of JoyDrop, they just released a single called "Spiders" from their new album, so keep your ears open.

Finally, after a rather long equipment change, it was Jimmie's Chicken Shack's turn. When dreadlocked Jimmie and his band came out, the crowd went wild. When they began their first song, the crowd became even more excited, and I understood why public safety officers were necessary. Jimmie's Chicken Shack was real hard, loud, catchy and fashionable rock and roll. They had a unique sound, blending funky, deep bass with crunchy, distortion guitar. They played for a fairly long time and as they music went on, the crowd became even more rowdy, forcing he event staff to form a human wall. Jimmie's Chicken Shack put on a great show and ended the night with a bang, hopefully satisfying everyone.

It was quite an opening night for Uptown. There was a line out the door, three awesome bands, great refreshments and an insane audience. The club has already scheduled other entertainers for the future, such as the Pat McGee Band. The opening of Swartz's new nightclub was definitely a success.

New hip-hop dance team, Jelani breaks onto campus

By Elisabeth Hulette

This year Bucknell has witnessed the appearance of a new performing arts group -Jelani, a hip-hop dance team begun during the fall semester by Cheri Skipworth, '00. Jelani is divided into a step team, a dance team, and a breakdancing group, each of which perform numbers choreographed to upbeat, modern music. After just a few months of rehearsals and group experience, Jelani is off to a great start with several performances lined up for the coming semester.

Skipworth began Jelani after performing with a step team in high school. Bucknell did not have a similar dance group, so Cheri started the new team. So far there are nearly twenty girls on the step team, eighteen on the dance team, and an even larger, co-ed group signed up for the breakdancing team.

Cheri supervises and organizes Jelani, and Nadra Nash is the official treasurer for the group. There is a core choreographer that runs each individual team: Kellen Smith,'03 is working with the step team, Carol Hairston,'01 is working with the dance team, and Matt Wetschler, '02 is choreographing for the breakdancing group.

Last semester the group performed at Minority Prospective Weekend in November, an event which offers minority high school students a chance to come and visit Bucknell's campus. They also danced a hip-hop number at a women's basketball game on November 30.

This semester, Jelani will be performing on February 26 in a talent showcase, featuring the three Jelani groups as well as several invited outside performers, including Kappa Alpha Psi's dance team and the Bison Girls. The showcase is being hosted in honor of Black History Month. The other performance lined up for this semester will be held on Hip-Hop Weekend, when Rennie Harris comes for a guest performance. Harris leads a group of hip-hop dancers that will perform at the Weis Center on March 23. The performances will be danced to music such as "The Show," sung by Debbie Fresh and Slick Rick, "She's A ..." by Missy Elliot, and "The Rockwilder" by Red Man and Method Man.

Jelani began with an interest meeting rather than an audition, so everyone who came out was accepted onto the team. However, they are still recruiting members, and anyone who is interested is welcome to come to the Fieldhouse Dance Studio on Saturday at 4:30 or on Tuesday at 5:00 to meet with the dance team.

Art Gallery features renowned local and visiting artists' exhibits this month

By Jennie Scheerer

There will be three exhibits at the Bucknell Art Gallery from Jan 17-Feb 18."Animal Magnetism" may be viewed in the gallery, "Jessica Stockholder:Photography" is staged in the project room; and "Kate McCullough:Wood Carivings" may be viewed in the gallery showcase. An opening reception for the exhibits was held in the gallery on Friday Jan 21.

"Animal Magnetism" brings together ten artists whose work offers the animal as subject in diverse examinations of form, instinct, behavior, hunting, taxidermy, preservation, politics and categorization. Bucknell Art Gallery director, Stuart Horodner discusses part of the exhibit: "Using painting, Joe Andoe studies the iconic presence of horses and Deborah Brown documents the depencies that exist between humans and dogs."

The second exhibit examines the work of Jessica Stockholder, an international artist who uses commercial products such as lumber, rugs, furniture and garden equipment. She combines these objects with hand made gestures such as weaving, painting and drawing to create works that unite painting, sculpture andarchitecture. Stockholder, who emerged as a major force in the installation art of the 1990s, creates discreet drawings, prints, photographs and object sculptures as well as site specific environments which incorporate the viewer in a constantly shifting stage. "This project room exhibition examines her use of photography as 'visual thinking' while making prints, drawings, hybrid wall works and book or magazine projects," Horodner said.

The gallery showcase features the wood carvings of Lewisburg resident Kate McCullough. A self-taught artist, McCullough is inspired by the local squirrels and backyard environment around her home. Having created Spike and Fred, two squirrel characters with distinct personalities, McCullough creates sculptural tableaus which involve the pair's dramatic attempts to get food, entertain themselves, and interact with humans.

The Bucknell Art Gallery is located on the third floor of the Langone Center. The Gallery is open to the public without charge weekdays 11am-5pmand weekends 1-4pm. For more information, call 570-577-3792.

Olde Friends kicks off Grace Notes! series this semester

By Jennifer Johnson

Last Friday, January 21, was the first performance of the semester in the Grace Notes! Series at the Weis Center. The musical group Olde Friends performed a variety of French Baroque music, most of which was composed by Marin Marais. Marais (1656-1728) was a virtuoso violist da gamba (similar to the modern cello) and a celebrated composer of his time.

The group Olde Friends consists of five musicians including the founder, artistic director and viola dagamba player Ann Marie Morgan, the violin and viola player Allison Edberg, the theorbo player William Simms, a soprano Sandra Simon and another viola da gamba player Daniel R. Rippe.

Several changes were made on the instruments used in the concert in order to have them resemble instruments of Baroque times. One such change is the use of sheep gut strings instead of the modern day-synthetic strings. The overall effect of"Baroque-ing" the instruments is a softer, more subtle sound.

The soprano singer discussed the difficulties she has with trying to match the sound quantity of Baroque instruments. Her largest problem is trying not to overpower them with her voice that has been trained to "fill" concert halls. The theorbo, a somewhat oversized guitar, seemed to interest the audience with its sheer size and uniqueness. The theorbo consists of a set of shorter strings similar to that of a guitar and a set of very long strings used for deep bass notes. Much of William Simms performance on the theorbo is continuous realization, which requires amazing improvisational skills and musicality.

A variety of French Baroque pieces were performed using different combinations of the five musicians of Olde Friends. One of the most interesting pieces "The Story of the Operation for a Kidney Stone" was a firsthand account of Marais' operation. Phrases such as "strapping down the body between the arms and legs"and "introduction of the forceps" give us a rare look into the use of surgical instruments from several hundred years ago.

Olde Friends have toured throughout the United States and include educational programs along the way.

The concert concluded with an informal question and answer period where the audience was welcomed to view the instruments close up and ask the musicians about their performance.

"Cyberspace's Most Wanted" released from jail after 5 yrs

By Monica Montgomery

Kevin Mitnick, one of the nation's most notorious hackers, was released this past Friday after spending five years at the Federal Correctional Institute in Lompoc, Calif.

Mitnick, 36, has been in prison, on parole or on the run for over 11 years. But his crime spree began even earlier.

When Mitnick was only 17 years old, he was caught stealing computer manuals and served six months in jail. He was jailed for another six months one year later when he was caught hacking into computers at the University of Southern California.

In 1988, Kevin served one year in a federal prison. His lawyer convinced the judge that he suffered from a problem similar to a drug or gambling addiction.

When Mitnick was released from jail, he was ordered not to come into contact with computers and underwent a 12-step treatment program to combat his addiction.

However, he violated his parole, and in 1992 went into hiding.

Three years later, Mitnick was tracked down and arrested in Raleigh, NC. He had hacked into Motorola, Novell, Nokia, Sun Microsystems and the University of Southern California, stealing software and source code.

For these crimes, he was sentenced to five years in federal prison.

Mitnick became an icon to many aspiring hackers. Grassroots support grew up around his martyr-like status on the Web, including several web sites like FreeKevin.com.

"The Official Kevin Mitnick Site" is where loyal supporters share news and information about their symbolic and formerly incarcerated leader.

Now free from prison, Mitnick wants to go back to college and study computer technology. It's obvious that Mitnick is very skilled and would have no problem entering a computer science program. However, it would be a violation of his parole. Terms of Mitnick's probation require that he keep his hands off all computers, software, modems and cell phones for the next three years.

Courtesy of ABCnews.com

"My case is a case of curiosity -- I wanted to know as much as I could find out about how phone networks worked, and the 'ins' and 'outs' of computer security."

"In this day and age, walking out of his house would be a technological violation," said Mitnick's defense attorney, Donald Randolph, in an ABC interview.

If his probation is taken to the extreme, Mitnick wouldn't be able to get a job at McDonald's since the cash registers are run by computers.

Many debates have arisen from Mitnick's incarceration: Should he have been placed in jail in the first place? Did Mitnick deserve five years? Did the media create more hype about the case?

Mitnick certainly thinks so. He blames every one of his convictions on the hype the media has created around his case. In a statement read Friday, Jan. 21, Mitnick placed the onus squarely on the shoulders of John Markoff, a *New York Times* reporter who covered his story rather sensationally.

"Mr. Markoff labeled me, without justification, reason, or supporting evidence, as 'cyberspace's most wanted,' and as 'one of the nation's most wanted computer criminals,'" Mitnick said. In Mitnick's view, the hype surrounding his crimes were the motivation for his long prison sentences.

"My crimes were simple crimes of trespass," Mitnick said.

Randolph agrees with Mitnick that his crimes were blown out of proportion. They are convinced that since he didn't profit from the information he took, his sentence should not have been as serious.

"It's like he snuck behind some guards, took a car for a spin, left it back where it was with a picture of himself smoking a cigar ... he didn't sell the picture," Randolph said.

Chris Painter, one of the prosecutors that convicted Mitnick, isn't as convinced.

"He repeatedly came in and caused all sorts of problems... he wasn't trying to help these companies out," Painter said.

"The approach that people like Mitnick are taking is that information should be free, and that by placing it on the Internet, which is a public system, you give up your right to privacy, and it's the owner's fault for putting such vital information on a public system," Jason Goldschmidt '00 said.

The issue is far from over. While Mitnick and his attorney promise litigation against both Markoff and Painter, this case has brought to light issues that — if you know it or not — affects everyone's rights online.

On a national effort, President Clinton recently pledged $2.268 billion in the upcoming 2001 budget for Information Technology Research & Development, mainly in security and encryption.

Three Gorges Dam lends itself towards environmental tragedy

By Matt Markl

One of the biggest projects ever undertaken by the human race is occurring as you read this article. The project on the third longest river in the world, the Yangtze in China, is a dam of monumental proportions. The dam itself has been titled the Three Gorges Dam after the area on the Yangtze where it is located and has been on the drawing board for the past fifty years.

When this dam is finished it will be by far the largest ever built. It will measure 1.4 miles wide and 60 stories high. The lake, which will eventually form behind it, will be one of the largest in the world, having a length greater than that of Lake Superior. The dam will house 26 giant water turbines which in total will produce 18,200 megawatts of electricity, equal to the power output of about 18 average sized nuclear power plants.

The reason for building this structure is not at all clear. The Chinese government claims that it wishes to create a large, clean and reliable source of energy for its growing economy. However, all of these grandiose numbers come with an equally massive monetary, social and environmental price tag. It is estimated that upon completion the dam will have cost the Chinese people $27 billion U.S. Nonetheless, the price tag is not the dam's real downfall.

Tragically, over 370 miles of the Yangtze river-valley will be submerged under water, destroying everything in it. The Yangtze valley in particular has been a hearth of Chinese history and culture. Hundreds of towns, villages and important historical and geographic sights will lie in the path of the rising water. Many groups around the globe have stressed to the Chinese government that the economic and environmental costs far outweigh the benefits that the dam will provide upon completion.

Courtesy of Jim Williams/ Archaeology.com

The third longest river in the world, the Yangtze over which the Three Gorges Dam has been built

Unfortunately, the Chinese have not learned from the mistake made by the United States back in the twilight of the 20th century. The U.S. made a policy that built large dams along its rivers during the Great Depression, not knowing the environmental or economic drawbacks. One example of this, the Hoover Dam, was completed in 1935. At first it was hailed as a triumph of man over nature.

Now the dam is looked on as a problem. First, large amounts of silt are gradually building up behind it. If enough silt is allowed to accumulate, the integrity of the dam would be compromised and it could burst. To prevent this from occurring, Lake Mead, which was created by the damming of the Colorado by the Hoover Dam, must be dredged every few years. Second, the Colorado River has been forever altered. Downstream from the Hoover Dam, the once sandy beaches of the Grand Canyon have been almost completely eroded away because silt being carried by the Colorado River is trapped. Behind the Hoover Dam some of the most beautiful and unique box canyons in the world were long ago lost. Environmental damage like this is still being discovered and most likely will continue to be discovered in the decades to come.

The impact that the Hoover had and continues to have on the environment should be a warning to China. The Three Gorges Dam, which is expected to be completed in 2009, will extract an even higher toll. When it is completed there is little doubt that it will be dubbed one of the greatest engineering feats ever accomplished by man, but, it may not be worth the price.

Replicating monkeys raises ethical questions among scientists

By Alex Piel

A female monkey leaps from a bar and lands awkwardly on the marble floor in her new, freshly washed cage. To any scientist, laymen or other monkey, there are no obvious signs of uniqueness when watching her. Like the others, she plays, eats and sleeps like any normal caged animal. But her pen-mates, like passing observers, aren't looking closely enough; deeply embedded within the genes of this rhesus monkey (Macaca mulatta) lies the DNA of 3 other monkeys, and no, they are not quadruplets.

In a recently publicized experiment, Professor Gerald Schatten and his colleagues at the Oregon Health Sciences University generated monkey embryos by artificially combining sperm and egg. When the developing embryos grew to an eight-cell stage, they were each divided into four fragments, each containing two cells. These two-cell fragments eventually grew into new embryos. Actually, Schatten says, the single embryo became four embryos, all genetically identical. The new embryos were then implanted into the uteri of different mothers. This technique does not produce a genetic replica of a mature monkey, like in the cloning method used to create the sheep Dolly. Instead, explains Schatten, the technique clones genetically identical newborns that developed from the same embryo.

As a result of this complicated process, only one of the four embryo monkeys survived, appropriately named Tetra. Such a scientific accomplishment enables seemingly infinite opportunities for further genetic research, but also demands ethical reflection on our current biomedical practices and decisions. One of the many reasons this type of research using embryonic cells has become controversial is because to produce the new cells requires the death of an embryo. Many also question the applicability and ethical implications of such experimentation.

Schatten claims such results are a breakthrough and allow experiments such as producing new organs from stem cells to be later tested on monkeys and not mice. The genetic similarity between monkeys and humans allows for more accurate biological comparisons. Consequently, scientists tend to think monkeys serve as reliable human models. But do they? He goes on to say that the goal of the experiment was to "produce identical monkeys that could be used to perfect new therapies for human disease." Research on stem cells promises the growth of new organs in hopes of successfully replacing nonfunctioning kidneys, collapsed lungs or afflicted hearts. "For example," Schatten said, "genetically-matched stem cells could be used to grow insulin-producing organs that could then be transplanted into the live monkeys to test a promising technique for curing diabetes."

Courtesy of henge.com

It's hard to believe scientists are genetically creating duplicates of a monkey like this one for human medical research.

The Physicians Committee for Responsible Medicine strictly opposes this technique, claiming that monkeys gratuitously suffer in research labs. "Making one monkey more similar to another does not make them any more like humans," said Dr. Neal D. Barnard, the group's president. He disputes Schatten's claim that these animals, and animals in general, serve as relevant models for humans. "They are not good models for human health problems. In fact, animal experimentation does a terrible disservice to people with chronic disease," Dr. Barnar said.

Here on campus, Karin Robertson '02, a member of Animal Defense League, agrees. "The act of cloning animals, and the later assumption that they are somehow less worthy of consideration, is a startling reality. To think that this train of thought won't eventually make it's way into the lessening of certain humans' rights, whether they are mentally disabled or genetically prone to some type of illness, is naïve," Robertson said. "The thought of diminishing an individual to the point that they become a mere science project is pathological to say the least. No good can come from such a lack of respect for natural variability and individual rights ... whether they be human rights or animal rights."

The majority of medical therapies are presently first tested on rodents before monkeys and other primates. In using the latter, we have found a way to appreciate the genetic similarities between monkeys and ourselves while simultaneously ignoring the social and intellectual ones. Schatten, though, has more pressing issues to consider, "It is a huge leap from a mouse to a patient," he claims. "The monkeys could fill that scientific gap. Medical research needs to have healthy, genetically-identical animals so cures can be perfected before they are tested on humans." Perhaps this is true, but medical research also needs to have ethical, responsible and accountable researchers conducting experiments. Whereas Schatten has taken strides towards mastery in the field of genetic research advancement, he has neglected his responsibility as a moral agent.

The issue of human obligations in scientific experimentation, both psychological and biomedical, is anything but unfamiliar to present day ethicists and animal rights activists. Research "accomplishments" such as these often compromise our morals while advancing our knowledge. At what point does the latter no longer outweigh the former? We don't know. What we do know is that until we reach that point, if it exists, such experimentation continues at the expense of our fellow animals and our ethical responsibility.

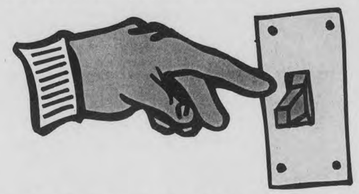
Science & Technology

Gene 'toggleswitch' promises new cures

By Brienne Terril

Scientists revealed in the Jan. 18 edition of the journal *Nature* that they have engineered what they call the first genetic "toggle switch," a development that could alter gene therapy. MSNBC said the scientists believe the technique could pave the way for custom-made cells that could automatically give diabetics a shot of insulin when needed or start making chemotherapy drugs if a cancerous cell is detected.



Researchers have already found gene circuits that turn on or off in the presence of certain chemicals. This new development, however, is a more general technique that makes it possible to develop genes that can be switched on or off as a result of a stimulus.

MSNBC said the most important aspect of the new technique is that it can be used in a wide variety of circumstances. The genetic toggle switch "can be generalized to a variety of genes in many different organisms, including human cells," said James Collins, a co-author and director of Boston University's Center for BioDynamics.

The scientists built the toggle switch out of genetic material from the bacteria Escherichia coli. Repressors and promoters of two pairs of complementary genes were stacked in such a way that only one of the promoter genes could be active. The external influence or stimulus was either a chemical, a synthetic analog of sugar, tetracycline or a 10-degree change in temperature. The researchers then built in a jellyfish gene that produces green fluorescent protein so a green glow would indicate that the switch was on. They found that with the right combination of genetic material the switch worked as hoped. The flips were stable, even after the effects of the stimuli weakened.

The next step, according to Boston University's Timothy Gardner, chief author of the study, is to extend the technique to produce "a genetic sensor with an adjustable threshold, a system in which genes are activated or repressed when a specific threshold is reached."

MSNBC said researchers are already developing a sensor for glucose that could be used in the treatment of diabetes. The sensor is expected to be able to turn a patch of skin a different color when the blood glucose reached a certain level thus warning patients to take their insulin.

MSNBC and Collins said the technology could eventually lead to the development of an artificial pancreas, a package of cells that would secrete insulin automatically in response to sensor readings.

AOL and Time Warner merge, creating a new brand of monopoly

By Matthew Trunnell

Are huge media corporations good for consumers? That is the subject of a national debate, as the country's most popular dial-up service, America Online, bids over $160 billion for the world's largest media company, Time Warner.

The Jan. 10 announcement was surprising even to industry insiders. The new conglomerate changes the rules for Internet content as well as service providers.

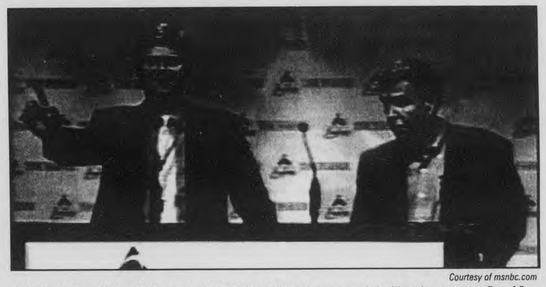
While financial analysts might love the potential for profit in the new market created by a company that owns both the content and the means to distribute it, this is a real tragedy for any of their customers.

AOL as a media company

AOL's new President will be Bob Pittman, who hails from AOL's board of directors even though his career lies solely in the marketing industry. Pittman was even involved in the original merger of Time and Warner ten years ago. I question what a marketing goon is doing leading an Internet company — but then again, AOL is no longer an Internet company.

In fact, AOL never was an Internet company. From its inception, it was an online community of users isolated from the Internet. AOL's technology was inferior, from inadequate bandwidth to a "dumbed-down" user interface.

The winning strategy of America Online is a perfect example of the Betamax syndrome. Do you remember when Beta was competing with VHS for the standard in video recording? Sony's Beta format had better picture quality, but VHS eventually won the battle. AOL is no better than any other Internet service provider, and in many respects, is far worse. Yet AOL is the number one provider. Bad technology often undermines better technology in the consumer market.



Courtesy of msnbc.com

AOL CEO Steve Case and Time Warner CEO Gerald Levin announced the historic merger on Jan. 10

So a giant distribution company with an inferior product will soon own the content as well. But that's not all. They will also own other news services: *Time* magazine, CNN and *Sports Illustrated*, to name a few. This is Pittman's favorite part; in a conference call to Wall Street analysts last week, he was talking about "maximum promotion of our combined products," and "multiple revenue streams" from every household. You could end up paying one company for your Internet access, cable subscription, movies, magazines and music — especially considering Time Warner's recent purchase of EMI music, a giant UK-based record label.

Vertical integration funnels content

A few days after the merger was announced, AOL shares fell as Time Warner stock rose. Aol.com even reported a link to a news service article entitled, "America Online Falls Amid Concern About Slower Growth." The next day, the same link read, "America Online Falls Amid Concern About Growth," omitting the word "slower." If you did not see the first article, what would you think about the growth? Are people concerned about long term growth? Or is there simply no growth? Now this editing job may be a small point, but it is illustrative of the alteration possible when there is only one source of content.

Imagine a worst case scenario: What if cable service provided by Time Warner required a cable box that was manufactured in a developing country in a sweatshop? If any news service runs the story, do you think AOL will post the story to for its millions of subscribers to read? Probably not.

Market control equals profit

Selling advertising on the Internet, on cable, and in print is the purpose of AOL/Time Warner. Not to provide excellent news coverage, nor to provide efficient Internet access. Advertising is where the profits are. And no one is positioned like this new conglomerate to be the ultimate advertising service.

Some have called AOL/Time Warner a monopoly. But the market is new to the Federal Trade Commission (FTC), according to the ex-FTC commissioner, the odds are good that the government will keep its hands off. "I'd be smiling like the Cheshire Cat, fading into background to let this new market flourish," said the ex-commissioner on CNBC.

Is the Superbowl on its way to becoming the E-Bowl?

By Scott Hagadorn

Matthew Trunnell — The Bucknellian

Step over Budweiser frogs, the next revolution in Super Bowl advertising is about to take center screen. On Jan. 30, more than a dozen Internet companies will drop nearly $50 million on advertising in the hopes of reaping the benefits of entertaining an audience of over 135 million viewers.

For you inquisitive business thinkers, you may be wondering how companies with literally no revenue can compete with the likes of Daimler/Chrysler and Budweiser spending millions of dollars on thirty-second stints in the hopes of making a profit? Well, the answer is simple. Successful public offerings mean large dividends and therefore ample amounts of resource capital for large advertising schemes. According to pathfinder.com, the second quarter of last year revealed venture capitalist's investing nearly $7 billion in dot-com companies.

Online car retailer Autobytel.com was the first Internet company to run an ad during the Super Bowl three years ago. During last year's big game, HotJobs.com and Monster.com were the only two online businesses to set foot in the million-dollar limelight. This time around, more than a dozen Internet companies are playing the game. Extremely small start-up companies such as Ourbeginning.com, a producer of wedding invitations and other stationary, plans to dig deep for the $3 million needed for a few pre-game slots and 30 seconds in the third quarter. According to Medialink, Internet start-up Computer.com is spending $3 million of the $5.8 million it raised during its public offering on Super Bowl ads. Analysts expect more than one million people to flock to its site within 24 hours of the big game.

What types of commercials will these newcomers be airing? Internet companies like ecampus.com and Outpost.com have recently become models for a new wave of risqué dot-com advertising, a theme that is likely to take hold this Sunday. This past summer, Outpost aired two questionably tasteless commercials, one featuring gerbils fired from canons while another filmed a pack of ravenous wolves attacking a high school marching band. At the same time, ecampus was airing an ad featuring a college student who recites the entire alphabet while belching. The ad industry itself may be upset, but these commercials are clearly getting results. According to Wired magazine, within two months of ecampus.com's debut advertisement, brand awareness among college students rose to 60 percent, a remarkable increase in the marketing world. Likewise, HotJobs.com increased revenues nearly 10 million the first nine months after advertisements on Super Bowl Sunday.

For large revenue companies such as Pepsi-Cola and Federal Express, advertising during this year's Super Sunday ad-fest will be another chance to extend name brand recognition. However, for the dot-comers, this upcoming Sunday will give upstart companies a chance to literally "play with the big boys" and show the world once again that the Internet is an unprecedented medium for big time gambling.

How much do you know about meningitis?

By Debra Lowry

Thursday, January 20, 2000 was Bucknell's day of meningitis immunizations. Sponsored by the University Health Service, students were allowed to walk-in to the Lagone Center to receive their meningitis vaccination for a bargain price of $75.

Meningitis is caused by the bacteria called meningococci and is an extremely rapid and harmful disease. Reported by the *Washington Post*, approximately 3,000 cases of meningitis are reported each year in the United States, about 20 to 25 percent of the patients died due to meningococcemia. Of those who survive, an additional 10 percent have severe aftereffects from the disease, including mental retardation, hearing loss and loss of limbs.

According to the Center for Disease Control (CDC), it has been shown that college freshman that are living in dormitories are over six times more likely to develop meningitis than college students overall. Over the past decade, the CDC has seen a gradual increase in frequency of outbreaks among college students. These are alarming statistics that have initiated a number of organizations into action. The American College Health Association (ACHA), which represents about one-half of colleges with health services in the United States, issued a statement saying that they want colleges to alert students and parents of the dangers of meningitis.

Similar to college dormitories, military barracks which have also been known to have increased outbreaks of meningitis in the past. Since they have had mandatory vaccinations given to all recruits, there has been a 90 percent decrease in the number of reported cases.

Meningitis is caused by either bacteria or a virus, but the bacteria is the more common and harmful type. The bacteria is actually quite common and is harbored in the nasal passage and throats without effect by 10 percent of the population. It only causes problems when the bacteria gets into the bloodstream and moves into the brain. Meningococci can cause two types of illness: Meningitis, which is an inflammation of the meninges — the lining of the brain — and Septicemia which occurs when the bacteria enters the bloodstream and causes blood poisoning. Either kind is extremely lethal.

Meningococcal meningitis has several strains — A, B, C, Y, and W135. There is only a vaccine that protects against A, C, Y, and W135. Therefore, a vaccination does not totally eliminate risk of the disease caused by the B strain of the bacteria. A vaccine for strain B is being developed at this time. In the last year strains C and Y caused 70% of the cases among college students. The vaccine greatly diminishes the chances of contracting meningitis.

There are several symptoms of meningitis that everyone should be aware of. These include vomiting, headache, drowsiness, seizures, high temperature, joint aching and pain, stiff neck, and dislike of light. These symptoms can develop over several hours, or they may take one to two days. Septicemia produces a rash very quickly where the spots do not turn white when pressed.

Bacterial meningitis can be treated, if caught early enough, by a number of effective antibiotics. That is why it is important to be aware of the symptoms. Also, meningitis is contagious, but not as contagious as things like the common cold or the flu. If it is known that you have been in excessive contact with someone that has come down with the disease, you should get tested by your doctor.

If you suspect that you have the illness, it is vital that you contact a hospital right away and get it checked out. The disease acts quickly, and the earlier the diagnosis and treatment, the better the outcome. Should you get the meningitis vaccine? Paying $75 to possibly save your life seems worth it.

Women's B-ball tops Patriot League

Overcome discouraging road trip to go undefeated in first four league games

By Andrew Bevan

The Bucknell women's basketball team endured a tough stretch of non-conference matches during winter break. But they used their experiences in these games to build their confidence and have caught on fire, jumping out to a 4-0 start in the Patriot League.

"A long road trip can be the best thing in your season if you keep it in perspective," head coach Kathy Fedorjaka said.

The Bison started out well in their first match since the end of final exams, Dec. 17 at home against Coppin State. At the end of the first half, Bucknell held a nine-point lead behind 40% shooting from the floor and a 15-point effort from freshman guard Molly Creamer.

In a tough second half in which the lead changed five times, the Bison succumbed due to a stifling press from the Eagles and their own mistakes, including 13 turnovers, falling 85-77. Creamer led all scorers with 25 points, senior tri-captain Jen Winhofer added 13 and sophomore Vicki Quimby added 12 in the losing effort.

The Bison continued their homestand against Saint Francis that Sunday in a non-conference matchup. Bucknell was only down eight at the half and cut the lead to two with 12 minutes left to play in the game. However, Saint Francis went on a 23-7 run and the Bison were never able to recover, falling 99-82.

"In our last two games, we've scored 77 and 82 points and still lost," Fedorjaka said. "Our Achilles' heal is that we don't get the stops on defense. In our three losses this season, we put points on the board to win, but we couldn't get the stops we needed."

Creamer had another strong performance with 19 points and senior tri-captain Lori Houck and Quimby both added 17 points. Freshman Kate Franks scored a career-high 15 points.

The Bison rebounded with a win the following Tuesday in their last game of the homestand against Sacred Heart. Bucknell took an early lead with about 14 minutes left in the second half and never lost it, withstanding two strong second half runs by the Lady Pioneers, prevailing 70-60. Creamer continued her streak of good play, scoring 20 points, and Quimby reached double figures as well, scoring 13 and hauling down a career-high 16 rebounds.

After a week off for the Christmas holiday, the Bison hit the court again in Ohio, traveling to Cleveland State on Dec. 28 and losing the close non-conference matchup, 66-64. Quimby turned in her second consecutive double-double, scoring 25 points and pulling down 13 rebounds.

Two days later the Bison en

Time Choate—The Bucknellian

Senior captain Lori Houck leads the Bison on a fast break in an early season victory.

Pitzer back; sets new BU pin record

By Chuck Vicente

No one likes seeing an injury. especially when the injury comes to one of Bucknell's premier wrestlers, 165-pounder Brian Pitzer '00.

Pitzer was ranked 11th in the nation by *USA Wrestling* and 12th by *Amateur Wrestling News* prior to the start of the 1999/2000 season and was looking to pick up from his stellar junior year season. However, an unfortunate foot injury benched the Bucknell grappler through much of November and all of December.

Wrestling is a highly demanding and competitive sport in which most would have a tough time recovering from a early season injury.

Despite the fact, Pitzer has returned from injury to notch four more wins to his impressive 7-1 season record. Two of the wins were by fall.

Pitzer's style of wrestling is unique and extremely effective. He has great balance and strength on the mat. His achievements have earned him All-American Farm Team honors, an award sponsored by Dodge and *Successful Farming magazine* honoring collegiate athletes who call a farm or ranch home.

And on Jan. 8th, he added yet another impressive accomplishment to his list. He notched his 47th career pin, a new Bucknell record.

Pitzer is now 90-35 overall; he moved into third place on Bucknell's career wins list with his 90th victory last Saturday against Drexel. And with half the season left, Pitzer can also obtain 100 wins, an impressive feat for any collegiate wrestler.

But even more inspiring is Pitzer's character. Coach John Hangey describes him as a "silent leader," who "keeps his mouth shut and does what he's told." Pitzer's teammate Ryan Fasnacht '01 says he "works hard but also has his fun," in the practice room. A bit soft spoken, Pitzer has an ease about him. He always seems to have control and a calm about him throughout his matches.

According to Hangey, Pitzer's injury could have been "a blessing in disguise." A long season tends to wear most wrestlers down.

Although he still needs some conditioning work, Pitzer has adjusted to the late start and is right on track towards his biggest goal: the NCAA Division I Tournament. Last year he was the lone representative of Bucknell at the tournament.

"I want to go to nationals again," Pitzer said. "And I'd also like to make it to the All-American Rounds." With the drive and determination he has, Pitzer will hopefully be an All-American contender.

Center Dan Bowen '00 goes up strong against Princeton

Bison find a way to win

By Chris Ellis

It wasn't dominating. It wasn't particularly easy. And it certainly wasn't pretty. But it was a victory.

Winning in whatever way possible has become commonplace for the Bucknell basketball team, who defeated Colgate at home, 62-45, in front of 1819 last night. After dropping their first Patriot League contest to Navy, the Bison have won five straight games—including four league contests—to improve to 12-7 overall and 4-1 in the Patriot League. The hot streak couldn't have come at a better time for the Bison, as the team will not endure a week layoff before travelling to rival and Patriot League leader Lafayette next Saturday.

The win against Colgate typified the way in which Bucknell has slugged through its early-season Patriot League schedule. The Bison offense suffered through horrid shooting in the first half and watched as Colgate put together a pair of mini-runs in the second-half, but the Bison jumped out early and remained in control throughout. Bucknell didn't dominate the

See MENS , page 12

BEYOND THE BUBBLE

Belichick talking with Pats:

The New York Jets on Thursday gave the New England Patriots permission to talk to Bill Belichick about their coaching job. Patriots spokesman Stacey James confirmed that the teams reached agreement on compensation should the Patriots hire Belichick, who resigned as Jets coach one day after being elevated to the position. "We did receive permission to speak to Belichick," James said.

The announcement means an end could be in sight for one of the NFL's strangest soap operas. But it's not there yet: The Patriots still have to decide if they want Belichick, who was their defensive coordinator when they went to the 1997 Super Bowl but left with head coach Bill Parcells for the Jets.

Belichick's contract made him heir to the New York head coaching job when Parcells stepped down. But when Parcells retired after this season, Belichick decided he didn't want the job after all.

In a bizarre news conference, he resigned, just a day after being given the job. He filed a grievance with NFL commissioner Paul Tagliabue trying to break free from his contract and, when that didn't work, he filed a federal lawsuit. But Belichick was rebuffed on both fronts.

Agassi on to Ausie Finals:

Andre Agassi hammered winners through the few openings Pete Sampras left him Thursday night to advance to his fourth consecutive Grand Slam tournament final.

The 6-4, 3-6, 6-7 (0), 7-6 (5), 6-1 victory sent Agassi into the Australian Open title match against the winner of Friday's semifinal between defending champion Yevgeny Kafelnikov and No. 12 Magnus Norman.

Sampras, serving at up to 206 kph (129 mph), hit 37 aces and played a perfect tiebreaker in the third set, but Agassi bounced back with pesky returns and winners crosscourt, down the line or into Sampras' body.

Agassi is the first player since Rod Laver in 1969 to reach four consecutive Grand Slam finals. He won the French and U.S. Opens last year, in between losing the Wimbledon final to Sampras, whom he replaced later as No. 1.

Sampras, who skipped the Australian Open last year because of fatigue and missed the U.S. Open with a back injury, was seeking to finally break Roy Emerson's record of 12 Grand Slam titles.

In his first loss in nine five-set matches at the Australian Open, Sampras looked in a strong position when he scored a minibreak with a forehand cross-court passing shot for a 4-3 lead in the fourth-set tiebreaker.

"I felt like that was my chance. I let it slip away in the tiebreaker and I just got a little down on myself," Sampras said.

Campo the new man in the Big D:

Dave Campo walked the Dallas Cowboys sideline for 11 years before owner Jerry Jones realized he could be a good head coach. On Wednesday, Jones made Campo the coach of one of the high-profile teams in sports, the Dallas Cowboys.

Campo, who has been with the team since Jones bought it in 1989, was ready for the job even before it was offered Wednesday morning. He's been ready practically since predecessor Chan Gailey was fired Jan. 11.

"Dave came within 24-36 hours and had a very detailed plan of how he would run the team," Jones said. "I knew we were on the same page."

Campo is the fifth coach the Cowboys have had and, like the other four, he's a first-time NFL head coach. Gailey, though, is the only one who didn't win a Super Bowl. Campo, 52, was given a five-year contract worth $800,000 to $1 million per season. That's the same length as Gailey's deal, but for more money. Campo understands the demands of the job because he's worked for Gailey, Barry Switzer and Jimmy Johnson. Campo was among the group of assistants Johnson brought with him from the University of Miami.

"I believe I have an advantage because I was here when we were 1-15 and I was here when we were Super Bowl champions," Campo said. "I want to bring back that championship attitude."

Athlete of the Week:
Abby Weaver '02, whose five individual victories led the women's swimming team to two important Patriot League wins.

Women's B-ball tops Patriot League

Overcome discouraging road trip to go undefeated in first four league games

By Andrew Bevan

The Bucknell women's basketball team endured a tough stretch of non-conference matches during winter break. But they used their experiences in these games to build their confidence and have caught on fire, jumping out to a 4-0 start in the Patriot League.

"A long road trip can be the best thing in your season if you keep it in perspective," head coach Kathy Fedorjaka said.

The Bison started out well in their first match since the end of final exams, Dec. 17 at home against Coppin State. At the end of the first half, Bucknell held a nine-point lead behind 40% shooting from the floor and a 15-point effort from freshman guard Molly Creamer.

In a tough second half in which the lead changed five times, the Bison succumbed due to a stifling press from the Eagles and their own mistakes, including 13 turnovers, falling 85-77. Creamer led all scorers with 25 points, senior tri-captain Jen Winhofer added 13 and sophomore Vicki Quimby added 12 in the losing effort.

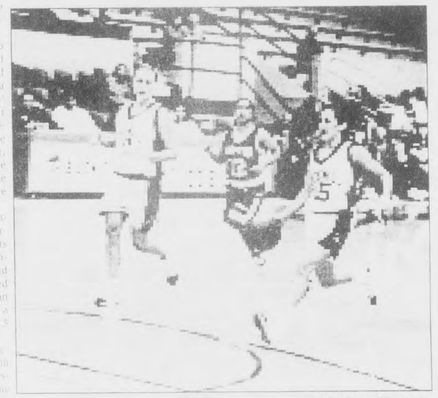
The Bison continued their homestand against Saint Francis that Sunday in a non-conference matchup. Bucknell was only down eight at the half and cut the lead to two with 12 minutes left to play in the game. However, Saint Francis went on a 23-7 run and the Bison were never able to recover, falling 99-82.

"In our last two games, we've scored 77 and 82 points and still lost," Fedorjaka said. "Our Achilles heal is that we don't get the stops on defense. In our three losses this season, we put points on the board to win, but we couldn't get the stops we needed."

Creamer had another strong performance with 19 points and senior tri-captain Lori Houck and Quimby both added 17 points. Freshman Kate Franks scored a career-high 13 points.

The Bison are bounded with a win the following Tuesday in their last game of the homestand against Sacred Heart. Bucknell took an early lead with about 14 minutes left in the second half and never lost it, withstanding two strong second half runs by the Lady Pioneers, prevailing 70-60. Creamer continued her streak of good play, scoring 20 points, and Quimby reached double figures as well, scoring 13 and grabbing nine. Houck chipped in with 12 points and 5 steals.

After a week off for the Martin Luther King holiday, the Bison hit the road again on Monday, traveling to Saint Louis on Thursday and Dayton on Saturday. The Bison return to action on Feb. 2 at home against Holy Cross.



Time Choate—The Bucknellian
Senior captain Lori Houck leads the Bison on a fast break in an early season victory.

Pitzer back; sets new BU pin record

By Chuck Vicente

No one likes seeing an injury, especially when the injury comes to one of Bucknell's premier wrestlers, 165 pounder Brian Pitzer '00.

Pitzer was ranked 11th in the nation by *USA Wrestling* and 12th by *Amateur Wrestling News* prior to the start of the 1999-2000 season and was looking to pick up from his stellar junior year season. However, an unfortunate foot injury benched the Bucknell grappler through much of November and all of December.

Wrestling is a highly demanding and competitive sport in which most would have a tough time recovering from a early season injury.

Despite the fact, Pitzer has returned from injury to notch four more wins to his impressive 7-1 season record. Two of the wins were by fall.

Pitzer's style of wrestling is unique and extremely effective. He has great balance and strength on the mat. His achievements have earned him All-American, Team honors, an award sponsored by Dodge and Successful Farming magazine honoring collegiate athletes who call a farm or ranch home.

And on Jan. 8th he added yet another impressive accomplishment to his list. He notched his 87th career pin, a new Bucknell record.

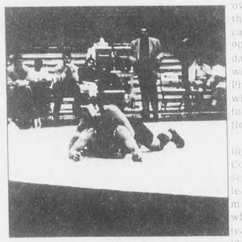
Pitzer is now 90-33 overall; he moved into third place on Bucknell's career wins list with his 90th victory last Saturday against Drexel. And with half the season left, Pitzer can also obtain 100 wins, an impressive feat for any collegiate wrestler.

But even more inspiring is Pitzer's character. Coach John Hangey describes him as a "silent leader," who "keeps his mouth shut and does what he's told." Pitzer's teammate Ryan Fasnacht '01 says he "works hard but also has his fun" in the practice room. A bit soft spoken, Pitzer has an ease about him. He always seems to have control and a calm about him throughout his matches.

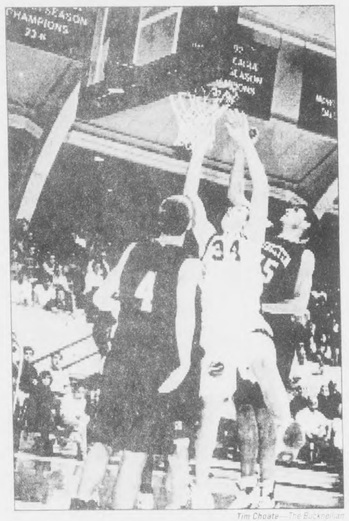
According to Hangey, Pitzer's injury could have been a blessing in disguise. "A long season tends to wear most wrestlers down.

Although he still needs some conditioning work, Pitzer has adjusted to the late start and is right on track towards his biggest goal, the NCAA Division I Tournament. Last year he was the lone representative at Bucknell at the tournament.

"I want to go to nationals again," Pitzer said. "And I'd also like to make it to the All-American Rounds." With the drive and determination he has, Pitzer will hopefully be an All-American contender.



Karen Dawes—The Bucknellian
Brian Pitzer '00 registers his 90th victory.



Tim Choate—The Bucknellian
Center Dan Bowen '00 goes up strong against Princeton

Bison find a way to win

By Chris Ellis

It is not beginning to warm outside quite yet. And it certainly wasn't pretty. But it was a win.

Winning in unsightly ways seemed to become commonplace for the packed basketball table. Bucknell escaped Colgate at home on Jan. 26 in front of 850 fans right after dropping their first Patriot League contest to Navy. The Bison have won five consecutive games, including four league contests, to improve to 12-7 overall and 4-1 in the Patriot League. The five streak remained intact even in a game where, for the most part, the Bison will not produce a very solid performance on the way to a 4-0 start in Patriot League play.

The win against Colgate continued a trend in which Bucknell has struggled through its early season Patriot League schedule. The Bison offense suffered through a lack of scoring in the first half, but the Bison bullpen, that came into the game with the second most saves in Division I basketball, did come up with enough defensive stops to help Bucknell dominate the

See MENS, page 12

Beyond the Bubble

Belichick talking with Pats:

The New York Jets on Thursday gave the New England Patriots permission to talk to Bill Belichick about their coaching job. Patriots spokesman Stanley James confirmed the two teams reached agreement on compensation to enable the former Jets Belichick, who resigned as Jets coach one day after being introduced to the position. "We did receive permission to speak to Bill," Stanley James said.

The announcement means an end to one of the strangest soap operas in the NFL's strangest soap operas. But it is not over yet. The Pats still have to decide if they want Belichick, who was their defensive coordinator when they went to the 1997 Super Bowl, to fill left with head coach Bill Parcells for the last.

Belichick's contract made him bait for the New York head coaching job when Parcells stepped down. But when Parcells retired after this season, Belichick decided he didn't want the job after all.

In a bizarre news conference, he resigned, just a day after being given the job. He filed a grievance with NFL Commissioner Paul Tagliabue trying to break free from his contract and, when that didn't work, he filed a federal lawsuit. But Belichick was frustrated on both fronts.

Agassi on to Ausie Finals:

Andre Agassi hammered whether through the now opening Pete Sampras left from Thursday night to advance to the fourth consecutive Grand Slam tournament final.

The 6-4, 5-6, 6-7 (6), 7-6 (2), 6-4 victory sent Agassi into the Australian Open title match against the winner of Friday's semifinal between defending champion Yevgeni Kafelnikov and No. 12 Magnus Norman.

Sampras, serving at up to 206 mph (129 mph) hit 47 aces and played a perfect tiebreaker in the third set, but Agassi stormed back with pesky returns and winners crosscourt down the line to win Sampras' body.

Agassi is the last player to have lost Laver in 1969 to reach four consecutive Grand Slam finals. He won the French and U.S. Opens last year, in between losing the Wimbledon final to Sampras, whom he replaced later as No. 1.

Sampras, who skipped the Australian Open last year because of fatigue and missed the U.S. Open with a back injury, was seeking to finally break Roy Emerson's record of 12 Grand Slam titles.

In his first loss in nine five-set matches at the Australian Open, Sampras showed in a crying gesture when he screwed a passing with a forehand down-the-line passing shot for a set and to the fourth-set tiebreaker.

"I felt like that was my chance. I let it slip away in the tiebreaker and I just got a little down on myself," Sampras said.

Campo the new man in the Big D:

Dave Campo walked the Dallas Cowboys sideline for 5 years before owner Jerry Jones realized he could be a good head coach. On Wednesday, Jones made Campo the coach of one of the most prolific teams in sports, the Dallas Cowboys.

Campo, who has been with the team since Jimmy Johnson's days in 1989, was ready for the job even before it was offered Wednesday morning. He's been really impressed with every predecessor Chan Gailey was fired last 11.

Dave came within inches away and has a very detailed plan of how he would run the team, Jones said. "I knew we were on the same page."

Campo is the fifth coach the Cowboys have had since like the other four, he is a first time NFL head coach. Gailey, though, is the only one who didn't win a Super Bowl. Campo, 52, was given a two-year contract worth $600,000 a million per season. That is the same wage as Gailey's last year more money. Campo understands it doesn't guarantee success, he's worked for Gailey, Barry Switzer and Jimmy Johnson. Campo was among the group of assistants Johnson brought with him from the University of Miami.

"I believe I have an advantage because I was here when we were 1-15 and I was here when we were Super Bowl champions," Campo said. "I want to bring back that championship mindset."

Sports

Off his Rocker?

Pitcher's actions yet to be punished

By Brian Watson

When Atlanta Braves closer John Rocker made his viciously racist statements to *Sports Illustrated* reporter Jeff Pearlman in the magazine's Dec. 27 issue, he gave new meaning to hate. The loud-mouthed fireballer took his shots at everyone, from teenage mothers to gays to the homeless to immigrants, and even his own teammates. His disdain for New Yorkers, especially Mets fans, was raised to astronomical proportions. After his cocky display in the National League Championship Series, which included everything from spitting to giving New Yorkers the finger, Rocker elevated his controversial reputation to a new extreme and showed the country that his fastball speed is much higher than his IQ.

And you would have thought that getting bottles and batteries thrown at him by New York loyals would have taught him a lesson.

"I talked about what degenerates they [Mets fans] were, and they proved me right. Just by saying something, I could make them mad enough to go home and slap their moms," Rocker said in his interview with Pearlman.

> *"I'm not a racist or prejudiced person. But certain people bother me."*
> *—John Rocker*

We've all heard Rocker's comments, but unfortunately we had to listen. By turning his moronic such a lashing into we effectively media circus, fied a virtually unproven pitcher had to listen. into one of the most recognizable figures in the sports world—and everyone's hit list. While Commissioner Bud Selig has been criticized by civil rights activists and baseball legends alike, the Braves decided to force Rocker into psychiatric evaluation. The doctors are going to find out one of two things: either Rocker is a dimwit who makes such bold statements to up his publicity, or that he truly is a brutal racist.

He has apologized for his outburst, but there is no way he's been forgiven. Teammate Brian Jordan, probably not the player Rocker referred to as "a fat monkey," immediately tagged the pitcher as a marked man. Although many Braves' executives are willing to work with the obviously troubled pitcher, his teammates might not be so understanding. The first time Rocker enters the Braves clubhouse, he will be face to face with stars like Jordan, Andres Galarraga, Javier Lopez, and Andruw Jones. After taking his potshots at various ethnic groups which these players belong to, Rocker will realize that his words hit a little closer to home than he could have ever imagined. The minute he notices the darting stares, he'll probably wish he never opened his mouth.

Pearlman should have known from the first second he got into Rocker's car that he was in for a wild ride. And while Pearlman was only doing his job, his irresponsible and most likely badgering interview led to the unleashing of some of the most hateful comments ever rendered by a sports figure. His article begins with Rocker criticizing Asian women's driving abilities and later spitting on a slow tollbooth. In a perfect world, Pearlman would have never given him the chance to utter a word.

But he did, and there's nothing anyone can do to change that. The Braves and Major League Baseball can fine or suspend Rocker, but the damage is already done. He isn't left with too many options: no owner or general manager in their right mind would want to take on such a loose cannon, and playing in Japan is clearly out of the question.

Rocker's opinions will be put to the test when he has to face his team. He'll be reminded of them when Mets fans pelt him with dangerous objects. He'll think twice before he shoots his mouth off to reporters.

But hopefully they'll think twice before they ever give him the Chance to again.

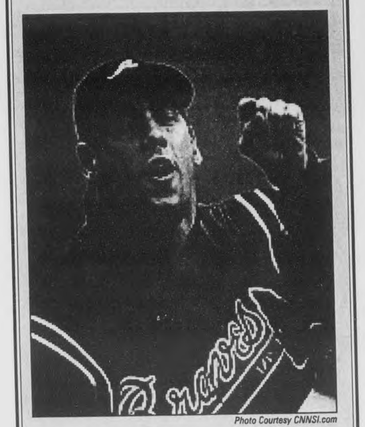

Photo Courtesy CNNSI.com

The Braves' reliever rocked the country with his comments.

Improve to 4-1 in Patriot League

MEN'S from page 11

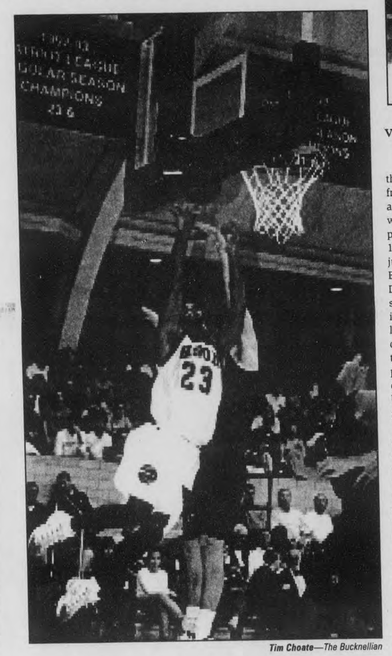
undersized Red Raiders, but put together enough streaks to earn a crucial win.

"This game was important to us," head coach Pat Flannery said. "They are certainly a capable team and have a couple of really good players. If you want to win in this league, you have to come to play every night."

Many nights, the Bison have not brought their "A" game to play, but after a 77-70 setback to Navy—the team's fifth loss in seven games—to open their Patriot League schedule, Bucknell has done what was necessary to get back to the Patriot League's first division. Against Holy Cross, it took a 19-0 run to open the game. Against Lehigh, it was clutch foul shooting down the stretch. Against Army, it was fighting off surges by an undermanned but hungry Cadet team. But in each case, the Bison have fought out wins, making next Wednesday's matchup against Lafayette once again a battle of the Patriot League's top teams.

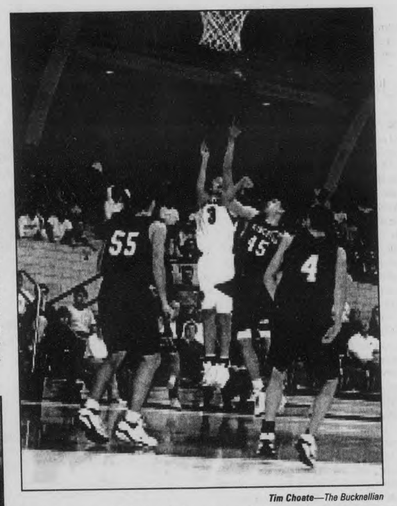
"We've done nothing but prepare to win this league—that's been our focus ever since we left that floor (following the Bison's loss to Lafayette in last year's Patriot League championship game,)" Flannery said. "We have a lot of confidence in ourselves going down there. It will be a great game."

The Bison survived their last test before facing the Leopards by playing tough early defense and shutting down Colgate's top players for much of the game. The Bison missed nine of their first 11 shots to open the game, but rallied around their defense, forcing six Colgate turnovers in the game's first seven minutes and holding the Red Raiders to just three points in the first ten minutes of play.



Tim Choate—The Bucknellian

Shawn Asbury '00 goes to the basket. The Bison will travel to Lafayette on Wednesday to challenge last year's Patriot League champions.



Tim Choate—The Bucknellian

Valter Karavanic '00 shoots the jumper over three Princeton defenders.

Colgate, without a starter taller than 6-6, needed big performances from leading scorers Jordan Harris and Pat Campolietta to hang close with the Bison. Harris averaged 16 points per game and Campolietta 14.1 ppg, but the duo combined for just two points in the first half as Brian Werner '03, Dan Bowen '00, Dy Cameron '00 and others played solid defense in the paint. Harris finished with six points and Campolietta led Colgate with 12, but many of those buckets were scored after the outcome was secure. Bowen played Campolietta tough for most of the first half, but credited his backup for helping to take the Colgate star out of the game.

"The biggest thing that happened for us was when Brian Werner came in and took that charge at the 15 minute mark," Bowen said, referring to the play that gave Campolietta his second personal and sent him to the bench scoreless. "That took him out of the game for the rest of the half."

Colgate was held to just 15 points in the first half and shot 26 percent (6-23) from the floor as the Bison raced to a 15-point halftime lead.

"They just took it to us," Colgate coach Emmett Davis said. "We were waiting around, waiting for our shots to start falling and, of course, they never did. That's a credit to Bucknell."

The Bison fought our their own sluggishness and better shooting by Colgate in the second half, never letting the Red Raiders make a significant run at the lead. Colgate got as close as 50-40 with 5:50 to play, but the Bison scored the game's next eight points over the next three minutes to ice the game.

Bowen led the Bison with 18 points and collected 12 rebounds to post his fourth double-double of the season. Point guard Bryan Bailey '02 continued his strong play, scoring 12 points, dishing six assists and committing just one turnover. Bucknell turned the ball over just three times in the first half.

Valter Karavanic '00 also tallied in double figures for the Bison, scoring 10 points.

The win, which followed a 69-44 victory over Holy Cross, a 73-67 nonleague win over Iona, a 52-49 win over Army and a 67-57 win at Lehigh, moved Bucknell into sole possession of second place in the Patriot League, one-half game behind undefeated Lafayette. Bucknell lost to Lafayette in all three of their meetings last season—including the League championship game—by a total of 14 points.

"We're not going to take this week (before playing at Lafayette) and throw in three new wrinkles and two new offenses or anything like that," Flannery said. "We're going to go down there with what we have and our guns ready. Our guys have wanted to play this game forever."

Ice Hockey continues unbeaten '99-00 season

By Trip Sanders

Since coming back from winter break the Bison hockey team, led by senior captains Jeff Werring and Rocco Russo, kept on the winning path with victories over Penn State and Dickinson.

Before a sparse crowd on January 15th, diehard fans witnessed the Bison take control early of a good Penn State team with goals from Jeff Werring '00, Nate "The Animal" Ledyard '00 and Chris Newhouse '01.

After the 1st period, the game was already well in hand. Midway through the 2nd period, freshmen defenseman Nate Streets put a crushing, yet legal hit on a Nittany Lion player, dislocating his shoulder and forcing a 10 minute stoppage of play. The Penn State coach and captain Werring shared verbal exchange over the check, ending with a brief exit by the whole Penn State team. After the Nittany Lions skated back onto the ice and continued play the game took a turn for the worse. With a 6-1 lead, Penn State attempted to punish the Bison for its rough checking style, only to receive further insult and injury from Bucknell's dump-and-forecheck strategy. This change helped Bucknell increase its already insurmountable lead with tallies from Dixon '00, Trip Sanders '00, Steve Trempe '01 and assists from venerable defensemen Ramsey "The Rammer" Wilcox '00 and Ted O'Donoghue '00. As always the Bison received solid goaltending from Tim Sather '02 and Chris Ellis '00, who combined on allowing only one goal on 24 shots. The Bison looked especially dominant in the third period due to rotating four sets of forward lines, whose forechecking wore down the visiting Nittany Lions. The final score accurately showed the game won convincingly by Bucknell, 8-1.

Last Saturday, the team went into action against an improved Dickinson squad in front of the biggest crowd ever at Sunbury Ice Arena. Just like the Bucknell basketball team has its "sixth man," the rowdy crowd helped spur the Bison on to victory.

Dickinson started the game at a disadvantage with a reduced squad— only 13 skaters compared to Bucknell's full bench of 17. The Bison took advantage of this and utilized its dump and forecheck strategy and four forward line rotation to jump to an early lead. Sophomore Mike Bronowicz opened the scoring off a feed from sophomore Mike Fusarelli. That goal was quickly followed by tallies from Werring, Newhouse, and freshman Eric Silvestri.

Although taking a 4-0 lead into the second period, the Bison were not in control of the game due to sloppy play in the defensive zone, nearly resulting in Dickinson goals. Only solid goaltending again, from junior Paul Van Dillen and senior Chris Ellis kept the Dickinson team from scoring. After a bad give-away goal from the Bison, Bucknell put the game away with goals from Silvestri, Bronowicz, Streets, capped off with a breakaway goal by Sanders '00, fed by Brian Hnetenka '01. Bucknell again proved a four line rotation pays off in the third period, punishing Dickinson shift after shift and check after check. Coupled with few penalties, this game turned into a crowd pleaser including exciting goals, bone-crushing checks and up-tempo skating by Bison. This team is gearing up for a playoff run in late February with away games against Penn State, Dickinson and Shippensburg, culminating with its final game at home against George Washington at Sunbury Ice Arena Saturday, February 19th at 4:15pm.

Thank you to all the fans that came out to the Dickinson game and please come back on the 19th to see seniors Werring, Dixon, Ellis, Sanders, O'Donoghue, Wilcox and Russo play their final game in Bucknell uniform. The team promises to put on an entertaining show.

Sports

WOMEN from page 11

countered a tough Kent team, falling 103-61. Houck and Creamer turned in strong performances with 13 and 16 points respectively.

In its first game of 2000, Bucknell started out strong and headed into the locker room at halftime with a one-point lead. However, the Bison were not able to hold on in the second half and lost 92-73.

Next, the Bison traveled south to Florida for games against non-conference foes Florida International and Florida Southern. On Jan. 5, the Bison got off to a slow start against Florida International, trailing by 22 at the half. They never recovered from this deficit and fell 77-49. Unfortunately, the Bison's woes continued in their next game two days later against Florida Southern, when they played tough but lost 85-63.

After a long and tough road trip the Bison returned home for their first conference game of the year against Navy on Jan. 12. Bucknell started out slow, not registering its first basket until almost three minutes had been played.

However, the Bison went on a 15-5 run with just under six minutes left in the first half and went to the locker room with an 11-point advantage. After Navy battled back in the second half to take the lead, Bucknell responded by staying close and took the lead for good with about two minutes left in the contest.

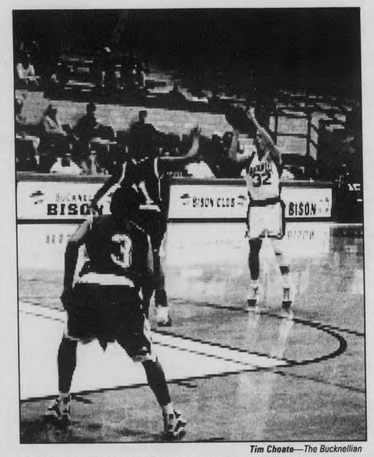
In the 64-58 victory, Creamer tossed in 15 points for the Bison, adding five assists, which was her career-high. Houck led the Bison with 18 points, and Quimby and Franks both had 10. Bucknell's pressure defense created 16 turnovers by the Midshipmen.

"Kate Franks and Molly Creamer are both giving solid guard play in big games, " Fedorjaka said.

"Our game plan was to pressure Navy, and I think we did that well. We're a good ball club and we just wanted to get back to playing well, the way we know how. This win was crucial."

The Bison continued their winning ways that Saturday with another conference win against Holy Cross, the preseason pick to top the Patriot League. This win gave the Bison a lot of confidence. "Our kids were excited. It was a tough game played between two good teams," Fedorjaka said.

All of Bucknell starters were in double figures as the Bison were victorious, 88-74. Houck led all scorers with 26 points. "Lori is having a strong season. She has stepped up her game," Fedorjaka said. Currently, Houck is averaging 15 points a game and 19 in conference play.



Tim Choate—The Bucknellian

Kate Franks '03 spots up for a three-pointer. She and the Bison will travel to Lafayette this Wednesday for a key Patriot League matchup.

"We really took it to them early and controlled a lot of the ball game. Our seniors have been instrumental in leadership. They really showed their experience today and their confidence just spread to the other players," Fedorjaka said.

On the first day of classes, the Bison encountered their first road test of the conference season as they traveled to Army. Bucknell held a nine-point lead at halftime and outscored its opponent by nine in the second half to win, 73-55, and give Fedorjaka her 100th career coaching victory.

The Bison had four players in double figures, including Houck with 14 and Creamer with 15. Franks added 18 and Quimby tossed in 11 to go with her 11 rebounds. "Vicki Quimby continues to be a force. She has come on even stronger in conference play," Fedorjaka said.

The Bison continued their conference winning streak with a victory this past Saturday at Lehigh. Bucknell had a 14-point lead at halftime and held on for the 70-54 victory. Houck and Creamer continued their strong play with 19 and 12 points respectively. Quimby added 15 and sophomore Kate Rounsley put in 14 points off the bench. "The bench is really helping out and it is a different kid each night," Fedorjaka said.

The Bison suffered their first setback in five games when they were defeated by SUNY Stony Brook, 65-44, this past Monday. Sophomore Monique LeBlanc led the Bison with 11 points off the bench.

Despite this most recent loss, Coach Fedorjaka says that the team is starting to gel and has made a lot of improvement in conference play. Fedorjaka is instructing her squad to "take it one game at a time," and "ride the momentum". Her message to her team throughout the year has been that we need to "play well and the results will take care of themselves."

The Bison defeated Patriot League foe Colgate, 59-57, this past Wednesday at Davis Gym. They will travel to Easton to challenge Lafayette this Wednesday.

Bison capture "7-Way Meet"

By Sean Houston

Cold. . . freezing cold and a bitter wind are my strongest recollections of Saturday the 22nd. This was the sort of morning where people stay inside, order pizza and never worry about making up the bed.

But the men and women of the indoor track team were busy running circles around their competition at Bucknell's "7-Way Meet". The walls around the track might seem a weak barrier to those freezing winds, but the adrenaline of competition provided ample warmth for the athletes involved. The meet featured (true to its name) seven teams: Bucknell, Delaware, St. Francis-PA, Mt. St.Mary's, Towson, American, and Wagner.

The men outlasted runner-up Delaware by 25 points with key performances coming from junior Matt Murdock (1st place high jump - 6'5"), sophomore Dave Gabriel (1st place 55m - dash 6.57), junior James Hollins (1st place long jump - 22'3.5"), junior Brad Wertz (1st place mile - 4:13.79), and freshman James Johnson (1st place triple jump - 46'1.5"). The 4x800 relay team was also victorious in a time of 7:52.71.

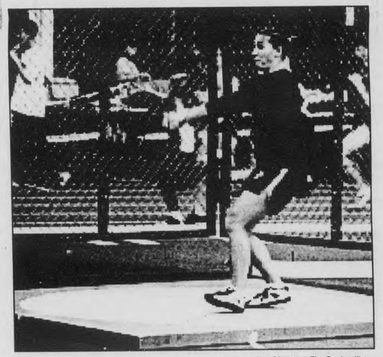
The women's squad easily handled their opposition and outscored runner-up Mt. St. Mary's by 164 points. Among the many outstanding performers were senior Yetunde Daniels (winner in the 55m, 200m, and 400m - 7.38, 25.6, and 58.43 seconds respectively), senior Kim Mcgrath (winner in the long jump and triple jump - 18'1/2" and 37'7.25"), sophomore Andrea Nyce (1st place pole vault - 10'6" tying the school indoor record), sophomore Becki Marshall (1st place mile - 5:10.13), senior Lori Allen (1st place shot put - 42'10.75), sophomore Stephanie Bango (1st place 800m - 2:16.18), sophomore LaTonya McSwain (1st place 500m - 1:17.70), sophomore Christina Crowe (1st place 3000m - 10:47.15). The 4x400m and 4x800m relay teams won their events with times of 3:57.87 and 9:50.20.

The high achievement of the Bison men and women on Saturday is even more impressive when considering the injuries that have taken their toll on many of the upperclassmen.

James Hollins '01 among others was unable to take part in the Hershey Relays, but rebounded very nicely at the "7-Way Meet". He feels that "if the team can get healthy and continue to receive clutch performances from the first-years and sophomores, then we can win the Patriot League Championship." He is "very upbeat" about the Bison men and women's chances at their next meet, this Saturday's Bucknell Open. The action will at 11:00 a.m. at the Fieldhouse.

Time Choate—The Bucknellian

The Bison raced their way to a first place finish at their "7-Way Meet."



Tim Choate—The Bucknellian

The Bison will host the Bucknell Open this Saturday, Jan. 29.

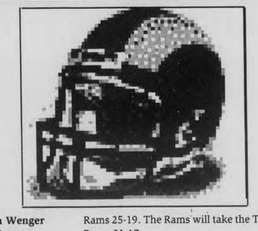
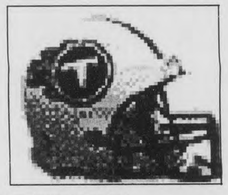
THE PEOPLE'S PICKS

I believe St. Louis will win 24-17. Tennessee will play good defense initially, but will not be able to stop the St. Louis offense when it counts.
—President Adams



Mike Harakal Rams 31-21. They have pretty colors.
Aaron Hassinger Rams. Half the team is headed to the Pro Bowl - too many good players to lose.
Justin Miller THE RAMS "OF COURSE!"
Adrian Thompson I predict that St. Louis will win because the NFC has a stronger and more organized group of teams and talented players. Though credit is due to the Titans for their efforts, the relationships the NFC teams have with each other build the tools necessary to win games such as the Super Bowl.
Mike Hock Rams 24-21. I believe that the Rams will show that their regular-season loss to the Titans was a fluke. Warner, Faulk and Bruce will be too much for Kearse and the Titan defense to handle.
Pete Tulaney Rams 24-10. A defensive battle between the super powers of the NFL. Special teams will score for St. Louis. McNair and George might stir something up, but they're no match for St. Louis' D. Warner's team leadership will be eminent in a few fourth quarter scores.
Beth Slaby I'm going for the Rams because according to Meril Hoge, "The Rams' receivers are so good at running with the football after the catch, they should have enough [offense]." It should be interesting to see, though ... Personally, I just like the commercials.
Ryan Neenan Rams 24-19. The Rams beat the best defense in the league, they are ready for a fight. Tennessee's tired defense will not be able to contain Faulk and Warner.
Pat Hart Rams 33- 17. Obviously you gotta go with Warner. He's the MVP and Arena football rules!
Philip Gaucher Rams 27-13
Rob McGarvey Rams 35-14. When the Rams win, we can all then see that the Eagles are the best team in the NFL, because they beat the Rams.
Professor Hiller Rams 24-21. I pick the Rams over the Titans in a close game, no more than a seven-point spread. Since Tennessee's best receiver suffered a broken toe on Sunday, that limits their passing game. Add that to their starting safety's broken ankle, and I think the advantage goes to the Rams. Plus, who can resist Kurt Warner's Cinderella story?
Scott McElhone Rams 27-21. My roommate is a Rams fan.
Patrick Flannery I actually like the Titans' team, but my nephew (on the IR) plays for the Rams and I must go with blood. Warner's a cool customer, so I say 31-28 in a good one.
Nat Arlander I mean come on, Tennessee Titans versus the St. Louis Rams. Who cares, if this is really the beginning of the end for all of us. I guess we have to look forward to that Twins/Brewers World Series next October.
Gene Depew I'm predicting the Rams because Dick Vermeil will keep them from being satisfied and will drive them to win one more time.
Trip Sanders Rams 34-17. Warner will justify why he is the League's MVP with a four-touchdown performance.
Nick DeLuca Rams 28-20. I feel St. Louis will have an easier time scoring against the slightly porous Titans than they did against Tampa Bay. But the young Titans and McNair will give them a great game. Tennessee is not a fluke and will contend for years to come. This will probably go down as one of the best Super Bowls in recent years.
Brandi Porter I think that the Rams will win by a touchdown because that's what my dad told me.
Cindy Opalski I'll take the Rams. Vermeil's one of the few guys who can cry in public, and get away with it.
Louis Blau It is a local tie that chooses my Super Bowl victor: Dick Vermeil. I rather he won it in 1980-81 with my home team, the Eagles. But after 19 years of living with that, he won't commit the same mistakes and lose to another wild-card team.
Scott Sehon With all due respect to mini-Ditka, I predict the Rams will prevail 4-2.
John Martin Rams 34-21. McNair's a nobody.
Justin White Rams 24-17. Rams too explosive. The Titans blitzing make them vulnerable.
Mark Poston Rams 4-2. Defensive battle decided by safeties.
Adam Feldman Rams 28-20. Canadiens always win (Kurt Warner).
Chris Balogach Rams 35-24. Talented Rams will bounce back from a lucky win.
Chris Beers Rams 31-28. Offense wins this game.
Susan Wenger Rams 25-19. The Rams will take the Titans down.
Tim Spann Rams 31-17.
Tim Henry Rams 36-14.
Father Marty Moran Rams 28-7. Answer from a higher power.
Nicole Thompson Rams 28-14. St. Louis rocks!
Sharon "salad lady" Rams 36-17. They are a very good team.
Brian Reppert Rams 27-13. High-powered offense.
L. Scott House Rams 35-21. From St. Louis.
Alex Davydov Rams 2-1. Because they are my favorite hockey team.
Pete Klucscrits Rams. Two words: Kurt Warner.
Rich Iskandor Rams. Speed kills.
Eric Dorval Rams. Warner, Faulk, Bruce, Hakim.
Joseph Cherubim Rams 34-24.
Grancis Santana Rams 27-14. The Rams' offense is too multifaceted to be stopped.
Brian Missick Rams. Their unstoppable offense.
Dena Ebert Rams. Tennessee has too many miracles.
Oz Faliks Rams. Because Goldberg used to play for them.
Alex Russell Rams. I don't like Eddie George.
Chad Holden Rams. Unbelievable season offensively.
Jenni Leong Rams. Because I like Missouri.
Dan Palko Rams. I put $100 on them.
Kevin White Rams. I put $100 on them, too.
Sonja Wettergreen Rams. Steve McNair stinks.
Bryan Bailey Rams. They have the #1 offense in the league.
Amy Marvel Rams. They've got a great rushing defense.
Matt Herbert Rams 27-14. My picture should be in here.



Titans 30-21. Tennessee is 5-0 versus the top three teams in the NFL (Jacksonville, Indianapolis, and St.Louis)....enough said!
—Stephen Williamson

Andrew Baumberger Titans 34-31.
Mike Arrison Titans 17-10. It's gonna be defense, defense, defense.
David Drevno Titans 8-6. McNair hits a game winning two-run home run off of Faulk.
Eric Snyder Titans 24-21. Rams have all the offensive threats, but the Titans are tougher. Don't underestimate the value of George and McNair. They are difference-makers.
Dhaval Vyas Titans. If you can beat the Buffalo Bills, you are worthy of winning a Super Bowl!!!
Karla Trude Titans 34-17. The Titans so far have shown that they are an excellent team and can overcome all opponents. The team's motivation and drive is seen in the second half when the Titans usually come from behind and win the game, not to mention that the Titans took the long way to the Super Bowl.
Greg Krohn Titans. Their defense swarmed all over Jacksonville, and I expect them to do the same to the Rams.
David Kleinman Titans 30-17. The Titans will defeat the Rams despite the Rams' high-powered offense. Tennessee has more talent, superior special teams and a better defense. Everyone knows defense wins championships. George will run the ball effectively and McNair will get out of the pocket and make plays.
Tim Donohue Titans 24-17. You can't stop E-George.
Kim Zimbal Titans because McNair is one of the best running quarterbacks in the NFL.
Kenneth Emeson Titans by not more than a touchdown.
Ryan Weidner Titans 30-10. The Rams proved last week they can't play against a good defense, and this week the Titans will score - unlike the Bucs.
Brad Tufts Titans 16-14. They've come this far, why not all the way?
Kevin Abt Titans 29-17. The Titans will prove that defense wins games no matter how many offensive weapons a team may have.
Dana Denick Titans 35-21.
Adam Johnson Titans 24-17. Tampa Bay should've been here.
Jen Hildenbrand Titans 14-7. Titans are a better team!
Mike Konnick Titans 24-21. Damn Rams beat my 49ers.
Jon Richer Titans 27-21. The voices told me.
Eric Snyder Titans 21-14. Because "salad lady" picked the Rams.
Kelly Burrows Titans 17-14.
Ken Taga Titans 30-20. Rams held to one TD by Bucs.
Matt Granger Titans. Cause it's meant to be.
Sarah Antonich Titans. Rams colors are abrasive.
Mike Fowler Titans. Beginner's luck, and momentum.
Scott Portroy Titans. They used to be from Texas.
Richard Stoll Titans. Defense wins championships.
Megan Atanasio Titans. They deserve it!
Kipp Vermelen Titans. I like them more.
Mike Zarzecki Titans. Eddie George and "Air" McNair.
Drew Nadler Titans. 'Cause they beat the Bills.
Todd Newcomb Titans 24-23. I think the momentum built by the Tennessee squad—one which has never been in the Super Bowl before—and destiny (should they still be around?) will put the Titans over the top.
Matt Fisher Titans 27-21. The Titans are on a streak of beating the other three best teams in the AFC, their defense will slow the Rams' offensive attack almost as well as the Bucs did and McNair will add a new element that the Rams' defense will not be prepared for without the extra week.
Justin McCarthy Afetr a lengthy analysis, my pick is the Tennessee Titans by a score of 34-20 over the St. Louis Rams.
Megan Atanasio Titans. They deserve it!
Mike Zarzecki Titans. Eddie George and "Air" McNair.
Drew Nadler Titans. 'Cause they beat the Bills.
Kipp Vermeulen Titans. I like them more.
Mark Breon Titans 31-27.
Brian Lowe Titans 35-20.
Mark Popielarski Titans 10-7.

And now to *The Bucknellian* experts...

By Tim Scheu

If Eddie George holds onto the football, the Rams won't be able to stop the Titan offense. But what about the Rams prolific record setting attack? Two words: Jevon Kearse. Even when he doesn't get three sacks, he is a force to be reckoned with. Ask Peyton Manning. Kurt Warner won't be able to maintain his composure in the biggest game of his life. And besides, even if the Titans are about to lose the game, the refs will deliver where their team doesn't. Bitterness? You betcha. It is the most apparent characteristic of any Bills' fan.

Bottom Line: Eddie George will rush for 200 and the Titans will roll. Tennessee, 42-24. Oh, and for any St. Louis quarterbacks that might be interested, Weis needs some help bagging groceries next fall.

By Chris Ellis

A game between two teams in small markets with a recent history of failure, with little tradition or appeal to speak of, and not exactly a historical rivalry (both have been in their current locations for less than a decade). This is what we are rewarded with in the new parity-filled NFL?

But there are stories to enjoy. A battle of two quarterbacks emerging from football purgatory, for instance (Steve McNair from Alcorn State, Kurt Warner from NFL Europe). Tennessee's Bruce Matthews, who finally made it to a Super Bowl after 17 seasons. The Rams' Ricky Proehl, who only enters the game when big plays are needed, but somehow always manages to make them. Maybe the spectacle is worth watching after all. Oh, the game? Warner will be effective, but St. Louis will ride Marshall Faulk and its running game to victory. Rams, 31-21.

By Carmen Mauriello

Speaking as a football fanatic, I'm really anticipating this Sunday's Super Bowl matchup. It's a battle of two young, exciting, and talented teams of the present and the future.

On paper, both teams match up well, with the advantage seeming to lie in the Rams' high-scoring attack in comparison to the Titans' blue-collar scheme. But football is a game of momentum and the momentum lies with the Titans. Their defense has shut down three of the league's best teams in consecutive weeks, and their offense takes advantage of the opportunities it's presented. So it's going to be close, but I've got to go with the Titans, 28-24.

By Robert Schmicker

On any other day, I would go with Kurt Warner and the Rams, but after seeing them get held to 11 points by Tampa Bay last week, I don't think that have much momentum. Tennessee started the playoffs off with that miraculous lateral to beat Buffalo and have been rolling ever since. They never make it look pretty, but somehow George and McNair find a way to win.

I'm a believer in destiny, and who's gonna argue that the Titans aren't a team of destiny? Tennessee creates a late game turnover and somehow finds a way to win, 35-31.

By Ali Ahmed

St. Louis' defense is not as good as its numbers, and it has a suspect secondary. Also, they are small and Tennessee will give George the ball at least 25 times. McNair should also have a big day scrambling.

Tennessee will need to play a very disciplined game defensively to stop the big play offense of St. Louis. Kearse should rebound and have a big day since Miller is no Leon Searcy. At the end it comes down to the running game of McNair and George, which will propell the Titans to a 31-21 victory.

By Adam Haas

The Super Bowl. The big game. This hallowed event marks is one of the most important days of the year, not only for sports fans, but for all freedom-loving, red-blooded Americans. I don't mean to ignore the millions of people in other countries who tune in, but I have doubts that the experience is the same for them. Just like when I watch the World Cup, it's fun and all, but I really don't care very much. The Super Bowl isn't just a game. In fact, the game isn't even the best part. They're rarely close, or even remotely close. Rather, it is the whole experience of the Super Bowl. What makes the Super Bowl so integral to our culture is that when watching, you experience the embodiment of true American spirit as you sit on a couch with friends, laugh at Bud commercials, and imbibe copious amounts of ... pretzels. By the way, Rams 31-20.

Bowl Extravaganza

Offense:

Spotlight on George and Warner

By Tim Scheu

Tennessee:
Key Player: Eddie George.

It won't be pretty early. You will most likely see the Rams defense key in on George early, and force Steve McNair to beat them. While this sounds like a tall order for most quarterbacks, McNair is the most athletic quarterback in the league. He has the size and speed to scramble for most first downs, and enough composure to stay in the pocket and take the hit. Critics have said that he is not all that great at throwing the ball down field, but with Frank Wychek and George coming out of the backfield he doesn't need to.

If McNair can establish himself in the first half, the Rams defense is going to be hurting. George is the biggest back in the league, and he is at his best in the fourth quarter.

What were 2 and three yard gains in the first half will turn into eight and nine yard darts when the game is on the line. Add that to the fact that he always falls forward when he is tackled, and you have a team that can pound away at the opposition and the clock.

St. Louis:
Key player: Kurt Warner
Say whatever you want about their offensive performance a week ago, but they still won the game. Sure, Warner had about the biggest drop in QB rating one could ever imagine, but he still threaded the needle to his receiver with the game on the line. Until last week, the Rams were a team that never had to worry about a close game. Their offense was so explosive that they never had to worry about a late fourth quarter drive with the game on the line. Now they know what it takes to dig in and win the close ones.

Everyone knows the starring cast. In their backfield they have the NFL offensive player of the year, and the league MVP. They have one of the premier tight ends in the game, and lightning quick receivers.

The Rams can score 50 points on any team, and blow them out in a matter on minutes as they did against the Vikings. Ultimately though, it all comes down to the ability of Warner to make plays. He can relish in the story of grocery boy who became an NFL hero, or he can play with the same hunger that allowed him to have one of the most prolific seasons in league history. If he can't make the plays in the first quarter, expect a blowout.

Special Teams

By Ali Ahmed

Special Teams:
The St. Louis Rams probably have the best returning duo in the league in

Horne and Hakim. Both are capable of making great returns at any time. However, their play is somewhat negated by question marks in the kicking game. Jeff Wilkins can't be counted to make any crucial field goals so the punting game will be very important to keep Tennessee in bad field position.

Even though Horan is experienced at punter, he has not done a great job. Both teams' coverage have been average. Although the return game of Tennessee has not been as good as St. Louis, their coverage players on special teams are very disciplined and their kicking game is extremely good. Even throwing out the "Music City Miracle," Tennessee has the advantage in special teams.

Coaching:
Even though I have a personal bias against any coach that's in the AFC Central (except Pittsburgh), the Tennessee coaching staff has kept the Titans very well motivated and, most of all, very well disciplined. Tennessee comes in with a good game plan and the players are disciplined enough to follow it. On offense, they keep it simple and hand the ball to Eddie George most of the time. Defensively is where the Titans' coaching is most impressive.

They have managed to stymie three good offensive teams in the playoffs by creating schemes to control the opposition's best players and not give up big plays. Little moves like rotating defensive linemen have also payed dividends for Tennessee. Best of all, Tennessee has made great moves at halftime, as shown by the Jacksonville game.

The strength of the St. Louis coaches is that they try and utilize their best players to their utmost potential - especially on defense, where their undersized players keep making big plays again and again. However, St. Louis goes into each game with the same game plan and, regardless of the situation, sticks with it throughout the entire game.

The advantage has to go to Tennessee, especially since their coaching staff seems to get its players better prepared - contrary to the St. Louis team who went in underestimating the Buccaneers.

Defense:

Titans have momentum on their side

By Rob Schmicker

The battle of the defenses is a close one, as shown in last weeks title games, where the Titans and Rams gave up 14 and 6 points respectively. St Louis put up the better regular season numbers of the two, but the regular season is nothing but the past.

Minnesota scored 37 against St. Louis and giving up six points to Tampa Bay's offense isn't that great of an achievement. Tennessee, on the other hand, has held Buffalo, Indianapolis and Jacksonvilie to an average of 15 points in the playoffs.

The Rams' line is led by the NFL's leading sacker, Kevin Carter, Pro Bowler D'Marco Farr and Grant Wistrom, who creates problems with his speed on the outside.

The linebackers aren't that special and the secondary is above average with Pro Bowler Todd Lyght as the anchor. They were stingy against the run in the regular season, giving up 74 yards a game.

George and McNair will test the league's top-rated rushing defense and could wear them down late in the game. If the Rams stop the run, then McNair will have to throw the ball - giving St. Louis an advantage.

The Titans didn't put up exceptional numbers during the regular season, allowing 20.3 points and 231 passing yards per game. In the playoffs, they've given up an average of 50 yards less against the pass and created six turnovers last week alone. Strong safety Blane Bishop has taken the secondary on his shoulders and provided the defense with emotion.

The linebackers are average, like the Rams, and the line is led by NFL Defensive Rookie of the Year Jevon Kearse. If Kearse can get past the Rams' offensive line, he will undoubtedly put a lot of pressure on Warner, causing him to rush his throws. Only then must they worry about the run.

Looking at regular season numbers is fine, but when gametime comes, you can throw out all of the statistics and go with the hotter unit.

St Louis has more talent than Tennessee on both sides of the ball, but the Titans seem to be the team of destiny. They are going to be tested all game long, but I think they have the mental edge. They're playing with a lot of emotion and creating lots of turnovers.

1999-2000 TITANS SCHEDULE

Sunday	September 12	Cincinnati	W 36-35
Sunday	September 19	Cleveland	W 26-9
Sunday	September 26	@Jacksonville	W 20-19
Sunday	October 3	@San Francisco	L 22-24
Sunday	October 10	Baltimore	W 14-11
Sunday	October 17	@New Orleans	W 24-21
Sunday	October 31	St. Louis	W 24-21
Sunday	November 7	@Miami	L 0-17
Sunday	November 14	@Cincinnati	W 24-14
Sunday	November 21	Pittsburgh	W 16-10
Sunday	November 28	@Cleveland	W 33-21
Sunday	December 5	@Baltimore	L 14-41

Sports

Sports Illustrated's shameful error

January 1st has passed. The Sports lists of the millenium, century, decade, and year are now finished. The ballots have been counted, the winners honored, and the awards comp...

No. Wait. They're not.

Sports Illustrated, Where's Lance Armstrong? You've heard of him, right? The 1999 Tour De France Winner, Lance Armstrong? Surely, somebody must be kidding.

It's not like I agreed with many of the all-everythings in the myriad of lists. But I bit my lip when ESPN deemed six men of the 20th Century to be better athletes than Native American superman Jim Thorpe. I wondered silently how USA Today could recognize someone other than baseball revolutionary Jackie Robinson as the most influential Sportsman of the century.

Commentary

Chris Ellis
Senior Editor

But when Sports Illustrated named the 1999 Women's World Cup Soccer Team the Sportswomen of the Year, something finally had to be said.

This was not a judgement call by SI. It was not a misinformed decision. It was not even a joke. It was a disgrace.

Sports Illustrated, I'm sure, had more than their share of reasons for naming the soccer team over Armstrong.

Was it because SI wanted to capitalize on the United States' latest fad sport?

Was it because SI wanted to add to its audience base by naming a group of women to the honor?

Was it because SI wanted to lure in a sector of crazed men who wanted to see Brandi Chastain in a sports bra one more time before she faded into obscurity forever?

Was it because SI needed to squeeze a few more sales out of the "feel-good" story of a summer with no real American sports events?

Call it what you want, Sports Illustrated. Call it demographics. Call it marketing. Just don't call it rational. And please don't call it fair.

The Sportsman of the Year award, by SI's own admission, is intended to go to the athlete or group of athletes who display exceptional athletic skills, but also perform with an extraordinary amount of courage, who use superior will to overcome adversity, whose determination should serve as an inspiration to others.

You want adversity, courage, will, and determination? Try to beat this.

American cyclist Lance Armstrong was the 1999 Tour De France Champion. That fact alone can and should be recognized as a serious athletic achievement-the Tour de France, after all, is one of the most grueling endurance-based competitions in any sport, and its upper echelon has rarely included American riders. But Armstrong's victory in the race is only icing in the cake. You see, Armstrong's victory which occurred before the race was substantially more meaningful.

Two years before winning the Tour de France, American cyclist Lance Armstrong lay unconscious in a hospital bad. He had been told that he had an advanced form of testicular cancer, a cancer found so late in its growth process that it already had spread to his lungs and brain. At the time of diagnosis, his doctors made the situation gravely clear: there was, at best, a 50-50 chance that Armstrong would ever be cancer free. At the age of 25, death was of greater likelihood than life.

There were several times when Armstrong, bald, emaciated and nauseated from his chemotherapy-the most aggressive form available-was not expected to live through the night. Would he live to see the next Tour de France? Possibly not. Would he be strong enough to walk again? Don't be funny. Would he ever cycle competitively again? Well, some things aren't even worth discussing.

But Armstrong battled. Like the champion he had been, he battled. To hear Armstrong tell the story, "Hope is what mattered. I knew that if I could get up for one more treatment, endure one more test, I had a better chance of making it out alive. It ironic. I used to ride my bike to make a living. Now I want to live so that I can just ride."

Armstrong made it back. He made it all the way back. On July 25, he completed his return, winning the Tour de France by more than seven minutes.

"I'm in shock. I'm in shock. I'm in shock," were Lance's words at the finish. "If there's one thing I say to those who use me as their example, it's that if you ever get a second chance in life, you've got to go all the way."

Think about the events surrounding Armstrong's return. This isn't the stock story of an athlete returning to the apex of his sport after a torn ACL, or a series of concussions, or even a battle with alcoholism or depression. Cancer had spread to his brain. Think about it. You want adversity and determination?

But even his incredible return wasn't enough. Even after he tested clean of all drugs in his post-race testing, there were still those who doubted. The steroids Armstrong was prescribed during his cancer treatments, some people-even some competitors-said, gave him an unfair advantage in training for the race. Fine. Ask one athlete anywhere if he'd trade the agony of brain cancer for a few performance-enhancing pills. Steroids didn't help him train. Steroids helped him stay alive.

Armstrong could have rebutted, of course, but he took the high road. Aside from his popular "What I am on?" Nike commercial, the issue was rarely addressed or dignified publicly by Armstrong. After exchanging business cards with death, what did the comments of an ignorant few mean?

Armstrong's chances to win the Sportsman of the Year award were obviously hurt by his sport. Cycling is not fast-paced, it's not full contact, and its personalities generally aren't that colorful. Cycling will never be a high profile American sport, and maybe its marginalization is justified (although my attempt at this summer's World Cup taught me that I would rather watch five hours of cycling before you could force-feed me five minutes of women's soccer). But none of that should matter. The award should have been won on merit.

In its Year-in-Review issue, Sports Illustrated noted that the ultimate intent of sport, the apex of the game, is to inspire. There is, of course, nothing wrong with that statement. What is ironic is that it was written in an article that failed to honor one of sport's most inspirational figures since Robinson's integration age.

Did Armstrong inspire people to become better athletes? Probably, but so did hundreds of others. Did Armstrong serve as an inspiration for some to live to be better people? Probably, but so did dozens of others. But what Armstrong did-what nobody else did-was give some the inspiration, the light, the hope, to simply live, to go on. To many, Armstrong was the reassurance that a normal life-no matter how far away it hid-could go on. After returning from cancer, Armstrong knew his role. It wasn't simply to be one of the world's best cyclers. It wasn't simply to be a Nike marketing tool. It was, first and foremost, to be a message of hope, a message that a normal life wasn't an unreachable dream.

"This isn't Hollywood, this isn't Disneyland," Armstrong would say to those in hospitals and to those who paid to hear him speak on behalf of the Lance Armstrong Foundation, which raises money for cancer awareness. "This is real. Life, even in its worst hour, can go on."

For Armstrong, who described his experience with cancer as a "special wake-up call," life has gone on-it ways it never did before. He not only rose to the pinnacle of his profession, but also became a husband and a father-all since being diagnosed with cancer that, statistically, should have taken his life. "I used to have either good days or bad days," Armstrong is fond of saying. "Now, I either have good days or great days." Inspiration? A message of hope?

To some cancer survivors, Armstrong was a ray of light-he provided the inspiration to endure another excruciating treatment, to face another painful and terrifying day knowing that hope, somehow, somewhere, could still live. Chemotherapy could kill every living cell in your body, but it couldn't kill spirit-not if you didn't let it. Sports Illustrated could have conveyed Armstrong's powerful message to millions of its readers. It could have. It should have. It didn't.

Lance Armstrong, Tour de France winner. Lance Armstrong, cancer survivor. Lance Armstrong, inspiration. You've heard of him, right? Sports illustrated did. They followed him enough to understand that he was head and shoulders above any other for Sports Figure of the year. They had to understand that, too.

But in a sad rush to sell more magazines, Sports Illustrated ignored one of the most inspirational-and most deserving-candidates in decades. Shame on you, SI.

Bison jump to 3-1 start in EIWA

By Justin White

The Bucknell wrestling team has come a long way in the early part of this '99-'00 season. Strong individual and team performances have jumpstarted the team, leading the Bison to a 3-1 EIWA (Eastern Intercollegiate Wrestling Association) record after a couple of tough early non-conference losses.

Inexperience represented one early problem area for the Bison. However, the team has now competed in a number of large tournaments and dual meets, emerging from these trials as a tournament-tough squad confident in its abilities.

The Bison traveled to Northwestern for the Midlands Millennium Championships over winter break. The open tournament featured competition on the same par with Nationals, boasting some World Team members and Olympians.

Exposure to such opposition served as excellent practice for big matches later in the season. Three wrestlers won a match: Carl Perrone '03, Adam Webb '00, and co-captain Rashaan Williams '00.

Following this tournament, the team resumed its dual meet schedule against the Diplomats of Franklin and Marshall. Perrone and sophomore Brian Neuman opened and closed the match respectively by pinning their opponents, as Bucknell topped F&M 27-15. This match also marked the return of Brian Pitzer '00, who won by forfeit, from foot surgery.

Karen Dawes—The Bucknellian

The Bison have two key EIWA home matches this weekend.

The following day Bucknell hosted East Stroudsburg, narrowly defeating the previously undefeated team. One pivotal performance came from Tommy Doerr '02 in the 133-lb. weight class.

In an effort to gain more points, ESU moved Jeremy Sluyter up a weight class, sacrificing a would-be forfeit by the Bison. Sluyter, ranked as high as 15th in the nation this season, fell to Doerr 6-5 in a gutsy match from the sophomore.

Doerr credited his teammates' hard work for the important victory, stating that the team has shown "lots of improvement in the past month as everyone's stepped up the intensity."

The Bison built upon their winning ways with a 36-9 victory over EIWA opponent Syracuse. Co-captain Ryan Fasnacht '01, Gbenga Akinnagbe '00, and Pitzer each got pins en route to the victory over the Orangemen.

The team's latest match came this past Saturday in Davis Gym against Drexel. The Orange and Blue were handed their first conference loss, losing 27-10, bringing their overall record to 3-3. "On paper it should've been a toss-up but we lost three or four key close ones," assistant coach Solomon Webb said.

One bright spot on the day was Pitzer, who earned his 90th career win with a 8-0 decision. This win moves him into third place on Bucknell's all-time career wins list. Freshman Brock Hostetter and Akinnagbe also wrestled well in winning performances.

Bucknell next faces American University in another EIWA match at home on Jan. 29. The following day Maryland comes to town for a 2:00 p.m. showdown.

"The next couple matches are going to be close and we need to win the close matches," Webb said.

Swimmers ride wave of momentum

By Carmen Mauriello

Ten days at warm and sunny Coral Springs, Florida. The many Bucknellians who spent winter break in the cold, dark and depressing Northeast are probably envious of the Bison swim teams' annual retreat to paradise.

But few would be jealous of the swimmers' itinerary during their vacation. Wake up at 7:00 a.m., practice two hours (a total of 7000 yards), followed by an hour of weight training. Then the Bison would get a few hours to eat and recuperate before swimming for another two hours (6000-8000 yards). Then they'd eat and go to sleep and start the whole thing again the next morning. Sounds just like the brosures you get from the travel agency.

The benefits of the teams' hard work were apparent upon their return to Lewisburg. The men's and women's teams swept a pair of important Patriot League matches against Lafayette, 197-101 and 183-111 respectively, and Colgate, 143-95 and 137.5-105.5 respectively, in Freas-Rooke Pool the past two weekends.

While in Florida, the Bison excelled in the non-scoring Coral Springs College Classic. The men captured two of the five events. Jeff Sharpe '01 won the 50-yard free and Stelios Saffos '03 captured the 100-yard breaststroke. The women swept all five events, led by double-winner Abby Weaver '02 in the 50- and 100- yard free.

"It's intense training where all we focus on is swimming for 10 days straight," Sharpe said of the Coral Springs trip. "It prepares us for the tough dual matches and the Patriot League Championships in the second half of our season."

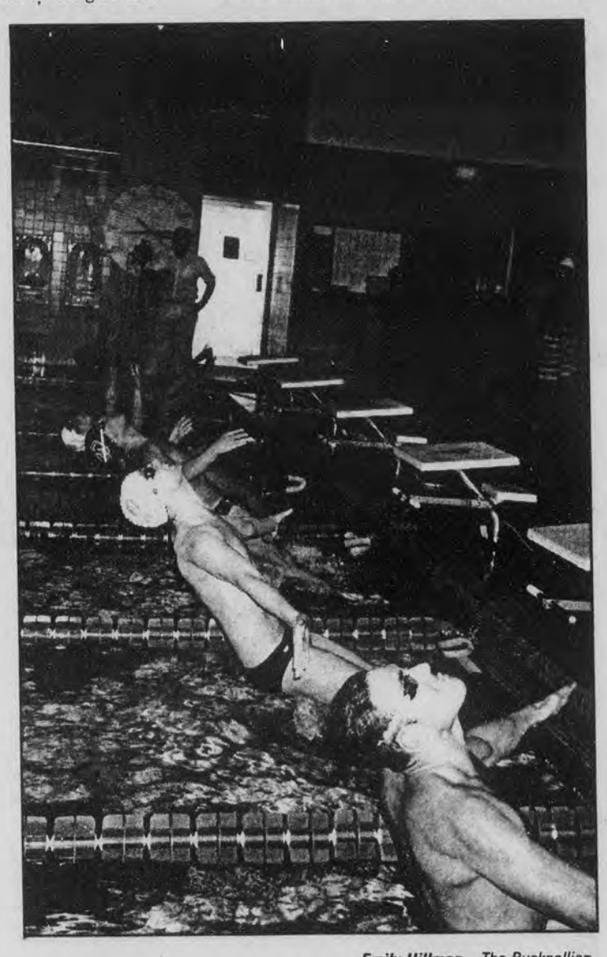
The Orange and Blue dominated Lafayette on Jan. 15, with the men capturing 12 of 16 events and the women winning 10 of 16. Tyler Wynn '02 became the men's first three event winner this season, capturing the 100- and 200-yard free and the 200-yard Individual Medley. Darby Golino '03 and Weaver each recorded three victories to lead the women.

A sweep of highly touted league foe Colgate followed this past Saturday. On the men's side, 10 different Bison registered victories, led by double-winner Chris Neary '02 in the 50-yard free and as part of the 400-yard Medley Relay.

"The biggest difference between the '98-99 guys and the '99-00 guys is that this year we're able to put up three people strong," head coach Jerry Foley said. "We have pretty good balance and depth."

The women earned a hard-fought victory by capturing nine of 13 events, led by Weaver's three victories in the 50- and 100- yard free and in the 400-yard free relay.

"It was huge for our momentum for the rest of the season," double-winner Kelly Wilson '00 said of the victory. "Colgate said that they're the team to beat in the Patriot League, and we showed them that that's not true."



Emily Hillman—The Bucknellian

The Bison challenge league foes Army and Lehigh Saturday.

Weaver, Golino and junior Molly Lowe have emerged as consistent winners for the Bison. "They're right now pretty near the top of their events in the Patriot League and will contend for individual titles," Foley said of the three.

The Bison continue with their Patriot League schedule this Saturday when they travel to West Point, NY to challenge Army and Lehigh.

Dean of students search advances

By Brian Watson

Following last spring, the University community learned that two of its top administrators would be leaving campus to take up positions at other universities. While a search committee works to find a replacement for President William D. Adams, who will depart at the end of the semester to become president of Colby College, the group charged with selecting a new dean of students has narrowed its applicant pool down to five finalists.

Associate Dean of Students Gerald Commerford has been selected as one of the finalists to fill the void left by former Dean of Students Richard Chapman, who left the University last July to become Vice President for Student Affairs at the University of Maine.

Commerford declined to comment on the search because the other candidates were not able to be reached.

The committee first met in late September 1999 and promptly drafted an advertisement for the job opening. The ad appeared in *The Chronicle for Higher Education* as well as web sites and newsletters of various national associations of student affairs professionals.

After the committee received over sixty responses, its members began holding phone interviews and application reviews, and "struggled" to winnow the list down to five finalists, according to Peggy Plympton, vice president for finance and chair of the search committee. The finalists were then invited to campus to make presentations to various student groups and committees.

Members of the search group believe that their eventual choice will be a welcomed addition to the University. "We wanted an advocate for the students," said committee member Supriya Joshi '00. "We wanted someone who would get out there and interact with students outside of normal responsibilities."

The five finalists come from a broad range of backgrounds and experiences, giving the committee confidence for their impending decision. "From my point of view, there's no reason to think that we don't have an outstanding dean of students within this pool," Plympton said. "We had not only a large pool, but a strong pool."

The committee was concerned with finding an able candidate who would be a visible entity on campus, an administrator that will work to communicate with the student body on a number of pertinent issues.

During his tenure, Chapman was one of the most recognizable people on campus and was seen by many as the visible face of the administration. While several high-ranking officials' schedules kept them from interacting with students on a regular basis, Chapman could usually be found conversing with students or joining them in the cafeteria.

The search committee aimed to find similar qualities in the new dean. "That's a key piece of it, both in terms of their personal style of relating to students and faculty and the person's comfort level in doing it," Plympton said. "There's a bunch of major things going on for students' lives where this person will be a lynchpin player. There are important and visible roles for this person to play on programmatic issues as well as value as a visible figure on campus."

The committee recognizes that the office does not require any immediate revamping. "There was a committed sense that we have a strong Dean of Students office," Plympton said.

Anna Shaw—The Bucknellian

Gerald Commerford, associate dean of students, is one of five finalists.

"There was a pretty obvious sense that this isn't something that is broken." Allen Schweinsberg has been served as dean on an interim basis since Chapman left for Maine last summer, taking time out of his own personal plans to fill this vital role. Although many administrators have praised Schweinsberg's work thus far, the interim dean did not apply for the position.

According to Plympton, the committee members hope to make a recommendation to the President Adams as quickly as possible. They believe that a new dean could be named as early as the end of the month.

The presidential search continues, but the two committees have had limited contact. The

Cunningham to leave University

Engineering dean, husband accept positions at University of the South

By Jim Leahy

Associate Dean of Engineering Trudy Cunningham has long been an engineering student's favorite. This is all about to change when she and her husband, Dr. Joel Cunningham, move to Sewanee, Tennessee, where Joel will assume the position of Vice Chancellor and President of the University of the South.

In 1979, after turning up nothing in an exhaustive search throughout local high schools, Dean Cunningham came to the University as a professor of mathematics on a one-year contract to fill in for a professor on leave.

One year turned into four, and during her fourth year, President Dennis O'Brien requested that Trudy assume the role of acting Dean of the College of Arts and Sciences for one semester to fill in for Dean Bob Chambers, who was on sabbatical.

Following that assignment, Dean Cunningham stepped into a new role in 1983, a position in the engineering department focusing on student advising and aid.

Since then, Cunningham has made many contributions to the University. Her most visible one, however, has been the creation and development of the Engineering 100 course for first semester engineers. Feeling that the old system of educating engineers was "killing them," she reasoned that giving engineers an introductory course exposing them to all the different engineering disciplines would help them survive since they could experience various subjects before declaring a major.

According to the Susquehanna press release regarding Joel's resignation, "As President of Susquehanna University he began his tenure as vice president for academic affairs in 1979. He also served as professor of mathematical sciences and dean of the faculty until 1984 when he was appointed acting president. Then in 1985, he was elected as the 13th president of Susquehanna University."

Monica Montgomery—The Bucknellian

Trudy Cunningham will be leaving her post as associate dean of engineering this summer to become an admissions consultant at the University of the South.

The hiring of Dr. Cunningham by Sewanee took a long period of time because he was unsure if he wanted the job. According to Dean Cunningham, one of his conditions was, "I will take the job only if you want Trudy more than you want me."

The school created the Senior Consultant for Admissions and Advising position so that Cunningham could do much of what she does now. Consequently the move was solidified and on January 6, The University of the South announced the hiring of their new president.

Cunningham's job will be to assist students with problems they may have and to aid in the admissions process. Besides overseeing the College of Arts and Sciences and Episcopal Seminary, Joel will also be the mayor of the town of Sewanee.

According to the school's website, "The University of the South is a coeducational institution of liberal arts and sciences with 1,300 undergraduate students and a graduate theological school of 100 students. It is consistently ranked among the top tier of national liberal arts colleges. Located on 10,000 acres on the Cumberland Plateau, it was founded in 1857 by leaders of the Episcopal Church and still maintains that historic relationship."

Arrest made in parking lot shooting incident

By Peter Van Emburgh

Stemming from the Nov. 22 shooting in the parking lot across from the Langone Center, the estranged husband of a University employee was charged in mid-January.

Dean L. Loss of Mifflinburg, was charged with violating the protection from abuse order, making terroristic threats, committing harassment and stalking and two counts of recklessly endangering another person. Loss was arraigned on his charges and then released on $10,000 bail.

According to court papers, Colleen Loss was working at the Langone Center that morning and phoned Union County Emergency Services to report that her husband was in the parking lot in a white station wagon across Moore Avenue. Loss's husband was violating the abuse protection order prohibiting contact with her.

Before the police arrived, Dean Loss spoke with Steve Troisi '00 on his way to class. Loss told Troisi that his wife was in the Langone Center. Troisi apologized for not being able to help but explained that he was late for class. Troisi reported that he saw Loss drive "slowly and suspiciously" into the parking lot and stop in a spot where the station wagon remained.

"There was nothing else out of the ordinary," Troisi said.

According to *The Daily Item*, Loss also made contact with a University employee on his way to the Langone Center. Loss asked if he would tell Colleen Loss that her husband was outside and that needed to talk to her.

Court documents state that East Buffalo Township Chief Barry Hosterman, East Buffalo Township Officer Darryl Fisher and Lewisburg Police Officer Travis Burrows responded to the scene and saw Loss in the driver's seat of the station wagon.

Hosterman called to Loss to get out of the vehicle, but his command was ignored. Hosterman, Fisher, and Burrows approached Loss by surrounding all sides of the vehicle. Burrows knocked on the passenger side window and told Loss to get out of the vehicle. That command was also ignored.

According to court papers, Burrows then called out that Loss had a long gun. Burrows continued to tell Loss to leave the gun alone and take his hands off the weapon. Hosterman said Loss looked at him, then looked forward and began shaking his head in a "no" gesture.

Burrows then shattered the passenger side window and reached in to control the weapon. Hosterman saw Loss remove his hands from the weapon, sit up and then reach down under the coat that was cover-

See ARREST, page 2

Student arrested on drug charges

By Matt Albert

Lewisburg Police arrested a University student last week on three counts of narcotics violation. Nineteen year-old Travis Vaughn '03 was taken into custody Jan 27. The police obtained a search warrant to search Vaughn's triple in Smith Hall and found 206 hits of LSD in his possession. A set of scales used for weighing drugs and assorted other drug paraphernalia were also found.

He has been released on $10,000 bail.

Vaughn will be faced with 2 possession charges and one charge of intent to deliver. Vaughn will appear before District Justice Leo S. Armbruster on Feb 10 for a preliminary hearing.

Bucknellian experiences technical problems

During the production of our first issue of the spring semester on Thursday, Jan. 27, the editors of *The Bucknellian* experienced some production problems.

In an attempt to upgrade our production process, we attempted to change from our hard copy production format to a completely electronic process. However, the new programming required additional adjustments beyond our original expectations, resulting in the late publishing of the issue.

Due to the formatting used last week, many of the photographs and advertisements were altered beyond our control.

We are currently working to correct this problem but have decided to return to our usual style of production in order to eliminate errors in this issue.

We apologize to our advertisers and subscribers for any inconviences these problems may have caused.

DEAN from page 1

dean search committee did their best to keep up with the presidential search primarily to inform the dean candidates of any progress.

Plympton commented that although there is some obvious mutual interest in the respective committees' progress, there was no concern that the two selections may cause a conflict.

"Bucknell is going through a lot of changes, and we wanted someone who would embrace these changes," Joshi said.

Plympton feels that because the University's mission is clearly defined, it is not likely that two conflicting personalities or ideologies would be placed into the respective offices.

"We as a committee did not focus on the possibility of a president with a wildly different notion on student life being named," Plympton said. "Bucknell has a clearly articulated institutional vision that the president of course would endorse and into which the dean of students, as we define it, would fit in."

In addition to Plympton and Joshi, the committee includes Charles Pollack, interim vice presidents for student affairs; Elaine Garrett, associate dean of arts and sciences; Kari Conrad, assistant dean of students and director of campus and activities programs; Laura Denbow, director of the Career Development Center; Glyne Griffith, associate professor of English; Jim Orbison, professor of civil engineering; and Bill Epley '01.

ARREST from page 1

ing the gun. Loss then discharged the weapon and shot himself into his upper abdomen.

Loss opened the driver's side door and was helped from the car onto the pavement. Emergency medical services personnel were summoned. The gun was identified as a single shot 12-gauge shotgun. Police also found a five-page suicide note in the Loss vehicle. Loss was taken to Geisinger Medical Center where he was listed in critical condition for some time and eventually discharged.

Prior to the shooting incident, Colleen Loss told police that around Oct. 21, Dean Loss told her he was going to purchase a gun and kill himself.

Union County District Attorney D. Peter Johnson has continued to refuse to answer any questions or provide a basic account of the incident. East Buffalo Township and Lewisburg Police Departments have also declined to comment under the direction of Johnson.

A preliminary hearing before Lewisburg District Justice Leo Armbruster is scheduled for Feb. 10.

Public Safety Log

January 25, 2000

THEFT- A student reported to Public Safety that personal property was missing from Dana Engineering building. East Buffalo Township Police was notified. The incident is under investigation.

January 26, 2000

VEHICLE ACCIDENT- An employee reported to Public Safety that a minor vehicle accident had occurred on Lit Road. There were no injuries and the operators exchanged insurance information.

January 27, 2000

UNDERAGE CONSUMPTION/PUBLIC DRUNKNESS/TRESPASS- Public Safety responded to Bucknell West for the report of an unauthorized visitor. The intoxicated student was identified by Public Safety as under the age of 21 years. Citations for underage consumption, public drunkeness, and trespassing were issued by East Buffalo Township Police and Public Safety.

INFORMATION- Public Safety responded to Vedder Hall for the report of an unauthorized visitor in a student's room. No one was located in a search of the area. The student was advised to keep the room door locked.

INFORMATION- A student reported to Public Safety that she had received a harassing phone call from in a Swartz Hall room from an anonymous person. Public Safety advised the student of the resources available to deal with this problem.

MEDICAL ASSIST- Public Safety responded to Smith Hall for the report of an ill student. Student Health Services transported the student to Evangelical Community Hospital Emergency Room for treatment and the individual was later returned to campus.

January 28, 2000

INFORMATION- Public Safety responded to Vedder Hall for the report of a BB gun located in a student's room. No weapon was located.

HARASSMENT BY COMMUNICATION/DISORDERLY CONDUCT- Public Safety responded to Kress Hall for the report that a male student was harassing a female. The incident is under investigation.

NON EMERGENCY MEDICAL TRANSPORT- A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency Room for treatment of flu symptoms. Student Health Services transported the individual who later returned to campus.

VANDALISM- Public Safety responded to the Weis Center for the report of a damaged lock on an exterior door. Repairs were made by the locksmith.

MISSING PROPERTY- A student reported a missing room key to Public Safety. Office of Housing and Residential Life authorized a lock change.

January 29, 2000

BU PROPERTY DAMAGE- Public Safety responded to the Langone Center for the report of a broken pane of glass in an exterior door. No witnesses or suspects were located in a search of the area.

UNDERAGE CONSUMPTION/PUBLIC DRUNKENESS- Public Safety responded to Swartz Hall for the report of an intoxicated male. The individual was identified and admitted to having consumed alcohol although under the age of 21 years. University citations were issued for underage consumption and public drunkeness.

UNDERAGE CONSUMPTION/RECKLESS OPERATION- Public Safety observed a vehicle that had come to rest on bushes at the entrance to Bucknell West. It was later determined that a student had lost control of the vehicle and left the scene. The vehicle owner was identified and admitted to have consumed alcohol although under the age of 21. East Buffalo Township Police and University citations were issued for underage consumption and reckless vehicle operation.

UNDERAGE POSSESSION- While on a routine party check at Kappa Delta Rho, Public Safety identified a student in possession of alcohol. The student was determined to be under the age of 21 years. A university citation for underage consumption was issued.

VANDALISM- A University student reported to Public Safety that unknown person(s) did break his Sig Ep room window for unknown reasons. The incident is under investigation.

THEFT- A student reported to Public Safety that unknown person(s) did take his Scooter from a first floor storage closet at the Lambda Chi Alpha fraternity. The incident is under investigation.

January 30, 2000

BU PROPERTY DAMAGE- Public Safety responded to Vedder Hall for the report of a broken window pane. No witness or suspects could be located in a search of the area.

UNDERAGE CONSUMPTION- Public Safety responded to Roberts Hall for the report of an intoxicated student, who was under the age of 21 years. A university citation was issued.

January 31, 2000

MEDICAL ASSIST- Public Safety responded to Taylor Hall for the report of a student injured in a sledding accident. The individual was transported by Student Health Services to Evangelical Community Hospital Emergency Room for treatment and later returned to campus.

THEFT- A student reported to Public Safety that unknown person(s) did remove clothing from a washer in Swartz Hall. The incident is under investigation.

MEDICAL ASSIST/TRANSPORT- Public Safety responded to Taylor Hall for the report of a student injured in a sledding accident. The individual was transported by ambulance to Evangelical Community Hospital emergency room and later returned to campus.

February 1, 2000

INFORMATION/FOUND PROPERTY- Public Safety responded to Smith Hall to investigate the report that an employee found a razor blade containing white residue in a room. Lewisburg Police was notified.

INFORMATION/SUSPICIOUS CIRCUMSTANCES- Public Safety responded to Swartz Hall for the report of a possible break-in. Nothing was found missing in an investigation of the area. Physical Plant responded to check the door lock.

INFORMATION/UNFOUNDED ACT 64 REPORT- Public Safety responded to Larison Hall for the report of the odor of marijuana coming from a room. Nothing was located in a plain view search of the room and the report was listed as unfounded.

This week in Bucknell Headline History

More Room at Bucknell
February 7, 1899

The attendance at Bucknell College has increased from seventy-one in 1890 to two hundred and sixty-nine in 1898. More would be in attendance this year if there had been rooms for them. Increased accommodation is a necessity if the college is to hold its own. It must either advance or recede.

It is proposed to erect a building 40x140, four stories in height to be used as rooms for students. The cost of the proposed improvements will be about $50,000.

President Harris has made a preliminary canvass of the State, and feels justified by assurances of aid from leading men to undertake and raise the money needed.

Summer Tours for Students
January 29, 1923

Students and instructors in Bucknell University are invited to participate in the Students' Tours which have been organized for the coming summer under the general auspices of the Institute of International Education.

The International Students' Tours have been established as a non-commercial undertaking for the purpose of enabling American college students and instructors to travel in foreign countries at minimum cost, under dignified auspices, and under conditions that permit a close contact with the people and institutions of the countries visited.

Said Dr. Stephen P. Duggan, director of the Institute of International Education, "The International Students' Tours have been organized to meet what I believe to be a double need: the need for travel as a broadening and vitalizing element in the education of our young men and women, and the need for travel as a means of establishing a closer intellectual relationship between the youth of America and of other nations."

Bertrand Library Begins Campaign
February 13, 1959

Beginning this week the library is starting a campaign against mutilation and theft of books.

The circulation department is concerned with the loss and disappearance of books as well as the mutilation and theft of reserve books. Many lost works have been on order since as far back as 1950, but, as yet, none have been sent by the publishers because of limited quantities on hand for distribution.

In addition to the time, work, and money involved in replacing missing and misused works, such offenses make study difficult for students. Mutilation is not the fault of the library; it results from irresponsible and non-considerate students.

Olin Fire 'Suspicious'
February 4, 1977

State fire marshals are investigating a fire of 'suspicious' origin that caused nearly $20,000 damage to the Olin Science Building on the Sunday before finals last semester, according to John Zeller, vice president for administration and finance.

Walter Geiger, director of the physical plant, anticipated the opening of the auditorium for classes next week.

Both Geiger and Zeller noted unofficially that the incident contained some suspicious elements, suggesting that the fire was not necessarily accidental.

"The gas jets (on the lab table) were left on, and there is some reason to believe that someone opened them and started the fire," Zeller said.

"The four jets were wide open," Geiger added. "One of our foremen went in there during the fire and remembers seeing a flame come out of one of those jets."

Alarm in Trax was no Joke
February 4, 1994

The sounds of a fire alarm in the wee hours of the morning is enough to give most students that feeling if disgust and anger as they toil between dragging themselves out of bed or rolling over and dismissing it as a false alarm. But on Thursday morning, a fire alarm in Trax Hall sounded at 8:19 a.m. and students evacuating the building were greeted by the sight of smoke pouring from a fourth floor window.

The fire was discovered when the occupant of the room awoke and saw the lampshade of a nightstand lamp in flames. The student left the room to get water from a fountain in an effort to douse the flames. The high intensity of heat from the fire (at least 165 degrees Celsius) then activated the room's sprinkler, located above the lamp, and extinguished the fire in seconds.

Several rooms in the building sustained minor to moderate fire, smoke, and water damage.

NEWS BRIEFS

McCain and Gore Win in New Hampshire

Vice President Al Gore has won the New Hampshire Democratic primary over former Sen. Bill Bradley of New Jersey, while Arizona Sen. John McCain has beaten Texas Gov. George W. Bush on the Republican side, according to CNN estimates.

"I think we finally have a poll without a margin of error," a smiling McCain told a jubliant crowd attending a victory party in Nashua. "We have sent a powerful message to Washington: Change is coming."

"This is the beginning of the end of the truth-twisting politics of Bill Clinton and Al Gore," McCain said.

McCain finished with an 18-point margin of victory over Bush in the Republican primary, 49 percent to 31 percent. Millionaire publisher Steve Forbes is likely to finish third with 13 percent of the vote, talk show host Alan Keyes with 7 percent, and conservative activist Gary Bauer with 1 percent.

Although it is no longer true that a candidate must win New Hampshire to become president — Bill Clinton broke that jinx in 1992 — a poor showing in the state appears almost certain to snuff out the chances of a presidential candidate.

NTSB Question Role of stabilizer in Crash off the Coast of California

Just 11 minutes after the crew of Alaska Airlines Flight 261 first told air traffic controllers that they were having trouble controlling their plane, the aircraft disappeared from radar, federal investigators reported Tuesday.

National Transportation Safety Board officials said the initial transcript of the conversations between controllers and the plane indicated the cockpit crew struggled to control the MD-83 while making altitude and landing requests to controllers Monday afternoon. The pilots also advised controllers they had a "jammed stabilizer and were experiencing difficulty maintaining altitude." Minutes later, the plane carrying 88 people nose-dived into the cold Pacific Ocean waters off the southern California coast.

On MD-80 series airplanes, the horizontal stabilizer looks like a small wing mounted on top of the tail. The stabilizer, which includes panels that pitch the nose up and down, is brought into balance, or "trimmed," from the cockpit. If a plane loses its horizontal stabilizer, there is no way to keep the nose pointed to the proper angle, and the aircraft will begin an uncontrollable dive.

"We continue to search for human life," declared Coast Guard Vice Adm. Tom Collins. But he noted that no survivors had yet been found.

IRA Accused of Failing to Turn Over Weapons

Northern Ireland Protestant leader David Trimble accused the Irish Republican Army on Tuesday of defaulting on the Good Friday peace deal for Northern Ireland by failing to turn over its weapons. Representatives of both the British and Irish governments were in the Irish capital reviewing a report issued by Canadian Gen. John de Chastelain on the IRA's progress in decommissioning — turning in its vast weapons cache — to determine what was to happen with the British province's fragile multi-party, home rule government. De Chastelain's report was expected to be made public later on Tuesday, but Trimble said he already knew what the report said. "I am in a position to say to you that we know there has been no act of decommissioning," said Trimble, leader of the Ulster Unionists.

"While there may be some other language in the report, that cannot change the simple fact that de Chastelain found that no act of decommissioning had taken place. Under the circumstances, Trimble said, there was no choice but for Britain's Northern Ireland Secretary Peter Mandelson to suspend the assembly, formed after a compromise was reached last fall."

Forty-five Nations in Arrears Lose UN Voting Rights

Forty-five countries, most of them in Africa, lost their voting rights in the General Assembly on Tuesday after failing to pay their dues on time, U.N. officials said. Many of them, however, are expected to pay up before the assembly starts its session again in September. A total of 52 of the 188 U.N. member states, the highest number in recent years, fell victim to Article 19 of the U.N. Charter after a January 31 deadline for payment passed. The rule stipulates that a country loses its vote in the assembly if the amount of its arrears equals or exceeds the amount it was billed in the preceding two years.

Political apathy still alive on campus

Citizens in different states across the country are watching closely as the presidential race approaches their area. The American public has expressed a general sense of apathy toward politics and elections in the past several years, a negative aspect that many of the current candidates are working to change.

Republicans and Democrats alike continue to urge all residents to cast votes in their respective primaries. Campaign staffers work diligently to distribute information about their candidate to the masses. Though the election is still months away, the race for the White House is heating up.

Here on campus, its politics as usual.

For years, University students have been labeled apathetic toward political issues. In the past three years, we have seen a dramatic decrease in the amount of candidates for our own student government positions as well as the turnout of student voters in these elections. While many students probably care more about national politics than college government, a simple precedent still remains.

While we boast a strong political science department, its courses have not generated a sense of political involvement or activism among the student body. This semester, the department offers two timely courses, The American Presidency and Campaigns and Elections. Both of these courses involve in-depth investigation and analyses of the current races. Unfortunately, not every student is exposed to this sort of education.

The lack of forums or seminars offered by this or any other department is equally upsetting. As the focal point of political education on campus, the political science department should hold meetings and informational sessions to help prepare and educate students about the candidates and issues that will effect them in the coming election. Such programs may be made available as Election Day moves closer, but hopefully they are not too late.

The campus was exposed to a degree of political involvement this year with the establishment of the Bucknell College Democrats, though no Republican students took it upon themselves to form or even inquire about such a group. The Democrats sent out campus-wide emails urging students to travel to New Hampshire to assist in Al Gore's campaign for the state's primary but expressed no interest in aiding in Bill Bradley's efforts. This organization should work to stay neutral to offer an informative, unbiased view into the workings of the party.

Students commonly tend to ignore current events while away from home. Many are so apathetic that they make no effort to obtain an absentee ballot for an upcoming election. Others think their ballot will not count. Most simply do not seem to care.

Politics can be a difficult subject to tackle—American politics may be even harder. However, major political events are happening all around us. The campaign season is in full swing. The various candidates offer new proposals to improve the various facets of our life. These issues do apply to students, but we will only realize this if we all make a concerted effort to examine the proposals, read about the candidates, and, most importantly, to decide what issues effect us most.

We must look to the experts on campus to work to alleviate the general sense of apathy and neglect expressed by students toward politics. Students must make their best attempts to educate themselves.

Election Day is over nine months away, clearly enough time for the campus community to revitalize its interests and reexamine our political beliefs. And maybe even make a difference.

Should the University shut down when local public schools close due to inclement weather?

Yes

By Rebecca Rowland

We are having a particularly snowy late winter here in central PA. There has been a major snowstorm once every week for the last three weeks and there is more forecasted. Every time big, wet flakes start to fall from the sky we can expect two things: one, most of Union County will shut down and two, Bucknell won't.

My plea for canceling classes for "snow days" has little to do with my desire to sit and watch the evening news with anticipation, waiting for April Amonica to tell me that my classes for tomorrow have been cancelled; the reason we should cancel classes is because if the rest of the county has closed down, it is more trouble than it's worth to stay open.

Think about all the people it takes to run the University—in the general scheme of things, students fall somewhere between squirrels and, well, more squirrels in terms of importance. Yet we are the only ones who can actually make it to the University with relative ease the day after a snowstorm. Sure we can walk to class, but who will teach us?

Professors can live as close as Market St. and as far away as Harrisburg, how fair is it to expect them all to get to class on time, regardless of the weather? It takes about an hour to get to campus from Harrisburg on a good day, it might be double that if the roads are in bad condition.

And let us not forget that professors and all other University staff members have more pressing concerns when it snows than "How will I feed/teach/clean for the kids?" No, these people have their own families; children whose schools were cancelled now have to sit at home alone; animals out to pasture have to wait to be brought inside or given fresh hay; essential supplies like milk, toilet paper and bread cannot be purchased until the end of the working day when many stores will be in short supply. It is rude and inconsiderate for the powers that be at the University to expect these people to take care of our needs before their needs.

Another group of University employees severely inconvenienced when school is kept open are the physical plant employees. It is these people's job to make sure people can safely navigate campus; when it snows they have to clear and salt the roads, sidewalks and steps up to buildings. What happens when it snows continually for a full day? Instead of being able to go home and come back once the snow has stopped and perhaps melted or drifted and then begin clearing the roads etc., they have to do it through the snow—how much sense does that make? If we receive a bad snowstorm the night before classes, the physical plant could use a day free of cars on the road and people on the walkways to get in some uninterrupted work. By keeping the University open through snowstorms, the physical plant's work essentially triples.

Keeping the University open on days when the rest of the Union County closes does nothing but make everyone's day who is connected with Bucknell a little more difficult than necessary.

No

By Ryan Delahanty

Every time I wake up and see that it has snowed the night before, my mind rushes back to high school and the days I had off due to inclement weather. Then, with a sigh, I realize that school won't be cancelled and I will have to make the trip across Route 15 to class. While I, along with almost every student on campus would like to have a day off because of bad weather, it's not a possibility because of the way Bucknell is set up.

By this I mean that we go to a relatively small school and our campus is compact and easy to navigate. Unlike city schools that potentially have more than one campus or where lots of time is required to travel, most of the students live nearby and can attend class somewhat easily, with a few exceptions. Bucknell is not known for having a large number of day students so travel really isn't an issue.

I understand that it might not be the most pleasant thing to wake up and walk to class in the middle of a snowstorm, but the only alternative is cancelling class whenever it snows and according to the weather this season so far, the administration feels that would be too often. The only problem that I foresee is for some of the professors at Bucknell. I know personally a few teachers that live far away, for example in Harrisburg, which on a normal day constitutes at least an hour drive. I really can't blame them if they don't want to make that hectic trip all the way to campus.

If we were to have off nearly the same schedule as public schools around the area, it would be ridiculous. Elementary and high schools are given the days off because it is too dangerous for the students to be picked up by buses, which have very little traction in the snow and aren't very maneuverable. For the majority of students at Bucknell, walking to classes takes about 10 minutes at the most. There isn't really that much danger, considering the extensive work the maintenance crew does to keep the sidewalks and paths clear to facilitate our trips to class.

In college classes meet less often than in high school, some times only once or twice a week, and if that class doesn't convene, then the students will be missing a whole week's worth of lecture and/or discussion. Whereas in high school, you normally would have class that met for forty minutes each day, a Bucknell student might miss his or her three-hour seminar on a Wednesday, for example. Even Monday, Wednesday, Friday classes are not good to miss because they cover many topics in a single lecture. Bucknell can never cancel school as much as high schools because we simply would miss too much class.

Although I am one of the first people to be happy when classes are cancelled for some reason or another, the arrival of snow can't be one of them. We would miss too much class and besides there isn't much danger in traveling, which means for most of us, walking. I am however looking forward to the day where school is closed because the snow covered the entranceways to the academic buildings!!!

Letter to the Editor

In his "Locking Horns" article in the January 27 issue of *The Bucknellian*, Ryan Delahanty offered the opinion that Bucknell University's new parental notification policy will be effective, but he went to considerable length to suggest that Bucknell "has absolutely no right to implement" the policy. I wish to remind Ryan and the readers of *The Bucknellian* that Bucknell's right derives from an October 1998 law passed by Congress that permits colleges to disclose to a student's parents or guardians violations of a school's disciplinary code involving use or possession of controlled substances or alcohol. Subsequently, in April 1999, the University Committee on Complementary Activities approved our new policy whereby the parents or guardians of a student who is found responsible by the University for use or possession of a controlled substance or for an alcohol violation under certain circumstances will be notified.

Allen Schweinsberg
Interim Dean of Students

OPINIONS

Students targets, but not victims

Police stake out Downtown for the good of the community

By Michael Boland

Project SCAT (Specific Crimes and Tactics) is a new project, created by the borough of Lewisburg, that is looking to crack down on local residents who disturb the peace through loud partying, underage consumption of alcohol, vandalism and other such actions. Lewisburg officials swear that "this program is not aimed at Bucknell students." But by local official's own accounts, the main focus of SCAT's attentions will be on the areas of Lewisburg where the concentrations of off-campus students are the highest; namely Market, South 7th, South 6th, 4th and Brown Streets. Also, the stated goals of the project are to reduce the types of infractions that are typically associated with collegians: vandalism, loud partying at all hours of the night, fighting, underage drinking and things of that nature. It's not the rest of the town doing this stuff. Sadly, it appears that local residents are being frightened into action by crimes that are probably 90% Bucknellian in origin.

It would be so easy for us as a student body to have a knee-jerk reaction to the news of Project SCAT. We could stamp our feet and scream. We could protest. "They blame us for everything!" But getting defensive isn't going to help the situation. Maybe we should look at things through their eyes for a minute. I have a hard time believing that we are innocent victims of an unreasonable police crackdown.

The fact is, the number of complaints about off-campus partying by Bucknell students has been increasing and these complaints are, "serious in nature," according to the local chief of police. I quote a letter to the editor from last week's *The Bucknellian*, written by a group of students whose beer had been stolen from inside their own house: "Because we are college students, do normal societal rules not apply?" When we vandalize, destroy private property, keep families awake late at night and leave beer out on the porch overnight, we are, in effect, breaking an unwritten pact with the borough of Lewisburg. We can only ask for as much respect from the borough as we give back to them. And honestly, is it reasonable to claim that Bucknell students aren't doing the kinds of things that have spurred Lewisburg into creating SCAT? I'm not sure it is. I've walked down 6th and 7th Streets on Saturday and Sunday mornings and I have seen half-filled cups of beer just sitting there, within potential reach of any child who happened to be passing by.

Local residents have a right to be upset about that! And when they worry about the atmosphere that these parties (and their aftershocks) create for their children, they're not being killjoys: they're being good parents. And when the local chief of police takes action in response to resident's complaints, he doesn't deserve criticism from us. He's just doing his job. If all of this stuff (vandalism, property destruction, underage consumption, etc.) is happening, Lewisburg has every right to respond.

I think those students who choose to party hard should be thankful that Project SCAT was the extent of the actions taken by the borough of Lewisburg. This is just a guess but I believe that at most of the off-campus parties, there's enough stuff going on where, should they choose, Lewisburg police and Public Safety could break up every single party they see, for any number of reasons. But they choose not to; I think that's pretty reasonable of them. Maybe we shouldn't push them too hard. Maybe they'll start to change their minds.

I don't mean for this to be a lecture or to trash Bucknell students in any way. I think there are a lot of great people here. My only point is that the village council and the chief of police have every right to maintain the highest level of safety possible for the residents of Lewisburg, even if that means 'targeting' Bucknellians who are breaking the law and creating a nuisance. The fact that local residents are opening up their very homes to the police for surveillance should tell us something. Maybe we, as a student body, can do better.

Clinton takes credit

President lauds himself in address

By Gretchen Schrock

Who or what deserves the credit for the amazing prosperity that has enveloped our nation for the past seven years? In the State of the Union address on January 27, the answer was evident. In President Clinton's opinion, the credit belongs to his administration. The longest period of economic growth in history, crime at its lowest level in the last quarter century, welfare rolls cut in half and the first back-to-back budget surpluses are a few of the accomplishments cited. According to Clinton, when he stepped into office the nation was "gripped by economic distress, social decline, political gridlock" and now, thanks to his administration, the vital center has been restored, government has been reinvented and a "new vision anchored in basic, enduring values" has been implemented. Clinton also criticizes Congress for not acting on "our most pressing national issues" like campaign finance reform and overdue judicial nominations and signed on to a Republican proposal to ease the marriage penalty in the tax code.

How could the Clinton administration have pulled off something so complex when throughout his address, Clinton presented numerous lofty, sometimes unreachable goals with no sign of any possible solutions? In one section, the President proposes to double the investment in states and districts to help turn around their worst-performing schools or shut them down. If those schools were closed, where would these students go? To other overcrowded schools lacking an adequate faculty? Yet, President Clinton, you call for smaller class size? With questions like these, I do not think this solution will be effective. I enjoyed the presentation of unattainable goals, like bringing "prosperity to every American community" and reserving the course of climate change. Let's be realistic. That means, Mr. Clinton, not comparing yourself to Theodore Roosevelt, one of our greatest presidents. Just because he led the country at the turn of the 20th century and you are supposedly doing the same at the turn of the 21st century does not mean you can put yourself in the same category. Perhaps if Teddy has some unknown scandals, it may be a possibility.

Somehow, Vice President Gore has accomplished enough to warrant mentioning several times throughout the address. Or is Clinton subtly endorsing Gore for the Democratic nomination and for the presidency? These achievements include the Vice President's E-rate program, which connects schools to the Internet, his "suggestion to make low income parents eligible for the insurance that cover their kids," and his tie-breaking vote that passed gun-safety legislation. Furthermore, in the present political and electoral climate where not just the candidate is in the spotlight but also his family, the potential first lady's merits are also mentioned. So, while you are already clapping for the Vice President and thanking him for assisting in the creation of this prosperity and the Internet, thank Tipper for the advances in the treatment of mental health patients.

Another interesting facet of the State of the Union address this year is the almost complete absence of a foreign policy agenda, unless you consider encouraging Russia and China to become "stable, prosperous, democratic nations" a strong and innovative foreign policy agenda. Once again, Clinton listed his so-called numerous accomplishments in foreign affairs, especially in the Balkans, where our authoritarian friend Slobodan Milosevic still has a firm grasp on Serbia and thousands of Kosovars were killed by the Serbians in the wake of the bombing campaign of the United States. Nevertheless, according to Clinton, we prevailed. With globalization a powerful force in recent years, one would think foreign policy would take on more precedence.

Where foreign policy was absent, Clinton filled it in with an array of tax cuts and program spending initiatives. There were proposals for tax credits for those on Medicare, those spending money for the long-term care of an aging loved one and for families with more than two children. Government spending for the Head Start program, the Gear-Up program that mentors disadvantaged youth for college, the Children's Health Insurance Program and Social Security would increase if Clinton's suggestions were acted upon. All of these ideas show how Clinton frequently contradicts himself in his State of the Union addresses. In 1996 Clinton declared that "the era of big government is over" three times. While in 1993 he sounded much as he does today saying, "Tonight I want to talk to you about what government can do, because I believe government can do more." So, which do you actually believe in, President Clinton—more or less government spending? Being firm in one's beliefs, not indecision, is seen as a virtue in politicians.

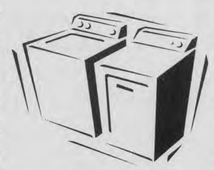
I am tired of hearing about the 21st century when technically it is not the 21st century yet—"a 21st century American revolution,"0 "21st century skills" and "21st century weapons." Please get a new adjective! One would think that the President would realize that. Again, I guess my assumption was wrong.

The high cost of clean living

Inadequate laundry facilities pose problems for students

By Kristen Jancuk

Students are often amazed by the changes they observe in themselves once they set foot on campus. They are more responsible, focused and energetic. They are ready to challenge themselves academically and, perhaps most importantly, willing to do things they never thought they would do—namely, wear the same clothes day in and day out because doing laundry on campus is about as difficult as a 400 level course in Thermo-dynamic Nuclear Engineering Organic Biological Chemistry.



I am no rocket scientist, but even I have deduced that washing your clothes is pretty darn hard without a —what's it called? That thing with the water and—oh right, a washing machine. A dryer would be pretty useful too. However, advanced technology such as this is pretty scarce on campus. In Kress, for example, we have four washing machines and two dryers. You would think that it would at least be an equal number. One of the machines is usually broken as well. These four washers and two dryers are supposed to accommodate the entire building, which, by my calculations, has over 100 residents. I guess I'm spoiled, since I lived in Swartz last year. We had plenty of washers and dryers—they just didn't work.

In order to actually use one of these precious few machines, you have to do your laundry at ungodly hours. When you think the time for laundry is nearing, my advice is to skip your classes and sleep all day so you can get up at 2am and do it. Once you've claimed a machine DO NOT LEAVE YOUR LAUNDRY UNATTENDED! Doing laundry is a vicious task. Turn your back for one second and POOF! Your clothes are on the floor in a sopping wet pile and the culprit is sitting on top of your machine, a smug smile on his or her face while using your precious quarters to launder a single pair of socks.

Please, folks, I beg you, don't get your hopes up once you've put your clothes in a machine. While the obvious assumption would be that once you've put your clothes in the washer they will come out clean, we all know what assuming does. If for example you use the powder detergent, which many of us do because it's cheaper and we are but impoverished college students, you will find upon opening the washer that it hasn't completely dissolved and is now ingrained in your favorite jeans. Liquid detergent is probably a better choice if you can afford it, but I've heard that it still takes two cycles to get your clothes clean, no matter what.

The dryers, whose name of course implies that they *dry* your clothes, are the same story. How many times have you heard people cursing in the laundry room because their clothes are just as wet as they were when they threw them in the dryer an hour ago?

If you've been keeping track, you've figured out that all this washing, rewashing and multiple drying cycles is adding up. In fact, if you have light clothes and dark clothes to do, one day of laundry could cost you close to $10.00, plus the cost of detergent and dryer sheets, for those extravagant students.

It may also cost you a day of classes, a night's sleep and/or your sanity, a high price to pay for clean clothes. However, since I know that no one "higher up" will do anything about this situation, the best I can do is wish you luck and warn you that I will be attempting to do my laundry this afternoon, so stay out of my way unless you want to get hurt.

Fieldhouse failure

By D.L. Kleinman

It's a typical Saturday afternoon. You roll out of "the rack" in time to shower, grab some food and meet friends at the fieldhouse to play basketball for an hour or two. However, when you arrive you notice that the fieldhouse isn't available for student use for any number of reasons.

It's either a track meet, the fact that the basketball hoops aren't even set up or one of what seems like an infinite number of sports teams that use the fieldhouse for practice. Sometimes you'll get lucky and Davis Gym will be available for use but you've got a better chance of convincing the team's coach that practice should be cancelled so you can shoot some hoops.

Now don't get me wrong, I love the fieldhouse. I love the atmosphere, the purpose, and what it brings to the student body. I also understand that all the reasons why the field house is closed are relevant. I do find it frustrating though that there's always the possibility that when I go, I might have to turn around and retrace my steps back home. I think that's utterly ridiculous.

Here's the point: Bucknell is desperately in need of a larger fieldhouse to support the wants of students. I've heard that the University is beginning to set the wheels in motion but obviously during my stay here nothing will get done. These things don't happen overnight.

Here's what I propose instead: There should be something posted in the fieldhouse or on the web stating exactly when the fieldhouse is open and when it is not and for what reason. I'm not saying that teams should stop using the facility. I'd simply like to know when the field house is available to me so my only exercise for the day isn't just the walk there and back home. Is that asking too much? I think not.

Not yet underpaid, but already unappreciated

Future teachers deserve more recognition for their efforts

By Nora Daniels

It is the omnipresent question asked of seniors each year: "what are you doing next?" The possibilities for the future call to every member of the graduating class, inducing stress, anxiety and hope as decisions are made, evaluated and embraced. Securing employment or a place in a graduate program are the two main plans of action for those who will walk away from Bucknell this May with a degree in hand.

Many of these graduates will be paid much more than their parents, earning salaries that may not rival Bill Gates but are nevertheless impressive. These young alumni may receive signing bonuses of more than enough for a down payment on that new car, or much more than they need to take a two-week vacation on a Caribbean island.

However, one special group of graduating students cannot look forward to such a lifestyle. These young professionals have stressed over classes, studied long into the night, and spent hard days hitting the books, just as their highly paid peers did. While at Bucknell, they spent a semester in their actual profession, learning from a cooperating individual with experience and knowledge. They went on to take rather intense national exams to reveal to all their skills and intelligence, yet they, upon graduation, will be pleased to find a job that pays the equivalent of half the tuition for a year at this institution. These people, for those who have not yet guessed, are future educators, rigorously trained in early childhood, elementary, and secondary teaching here at Bucknell.

Despite their dedication to the learning process, many of these newly certified teachers will be depressed and saddened by the lack of appreciation they feel upon securing employment. They will not be able to buy the new car their roommates can. They will not be able to afford to buy a house as quickly as the engineers who lived in the apartment next door may be able to. Instead, they will work long hours, planning lessons for students of all backgrounds, making do with little or no professional respect—after all, they are "just teachers."

Such problems cannot be solved by one Bucknellian, or by all Bucknellians. However, they can be lessened, to a certain extent ... when one of these future teachers explains his or her plans for next year, don't scoff or question why he or she would want to teach, (of all things). Don't bring up the lack of large income; he or she is fully aware of this fact. Instead, encourage, support, and congratulate him or her on this decision. After all, in a few years, your children could be taught by one of these alumni.

FEATURES

A day in the life of . . . Yoshi Maisami '01

By Rebecca Rowland

Junior Yusuf "Yoshi" Maisami is arguably one of the most recognizable students on campus. Most Bucknellians became acquainted with Maisami as the charismatic president of the Bucknell Student Government (BSG), a position that has just recently passed to his close friend Chris Bouchoux '01.

"I have so much free time now," Maisami said of his return to "civilian" life. "I went to the cafeteria for the first time in six months the other day. I actually have the time now to sit down and eat a meal or kick back with my friends."

Maisami is not one to fill his newfound free time with countless hours in front of the television, however. He is the lone student member of the Presidential Search Committee, a member of the BSG Appropriations Committee and a brother of Phi Gamma Delta Fraternity.

"With the changes to the weight room, the Presidential search, the Dean of Students search, the new buildings and the Uptown, it is an exciting time to be a Bucknellian" Maisami says. "Now that I am no longer BSG President and have less time commitments, I can play a role in everything." A lofty goal to say the least but not one uncharacteristic of Yoshi.

Hailing from Towson, Maryland, Maisami attended the McDonogh School in Baltimore where he was the president of the Student Government Association (SGA). Maisami also played lacrosse, pole-vaulted, ran the 400 meter and was even a cheerleader in his senior year.

Maisami participated in Building on Foundations (BOF) the summer before his freshman year at Bucknell and credits that experience with helping accustom him to college life.

"BOF was definitely one of the most influential experiences at the University" Maisami said. "It helped me to acclimate to Bucknell quickly and I also met some great people."

These new friends then helped Maisami win the position of class president which he held both freshman and sophomore year, while cheerleading freshman year as well.

Maisami credits his early and continual involvement in both high school and University activities with helping him learn how to prioritize. When called an overachiever, he smiled and said earnestly, "Every Bucknellian is an overachiever."

Lydia Hagstoz—The Bucknellian

Yusuf "Yoshi" Maisami, '01.

After graduation, Maisami hopes to put his management major with an economics minor and a marketing concentration to good use as venture capitalist.

"People have told me I have entrepreneurial skills," Maisami says. "I would love to work in e-commerce, maybe launch my own Internet start-up company. I like the idea of a fast-paced, risk taking corporate world."

A dedicated member of the campus community, Maisami made use of the University's Institute for Leadership in Technology and Management (ILTM) and spent six weeks on campus this summer in a program dealing with the many complicated aspects of modern business.

"ILTM opened my eyes to a lot of different opportunities as far as career goals," Maisami said. "I would definitely recommend the program to anyone interested in the field of e-business or venture capitalism."

While he is looking forward to making his mark on the business world, Maisami will always have a special place in his heart for his time spent here at the University.

"I am such lucky a person for being at Bucknell University. Everyone else should feel the same way, it is such a beautiful place," he said, "The University is like a living being; it is growing and we are growing with it."

Maisami's feelings for Bucknell have no doubt been enhanced by his involvement here. "BSG gave me an avenue to be a catalyst for change at the University. When I see changes I helped work for come into being ... it's a great feeling. I enjoy the changes even more."

From class President to BSG President to committee member for University President, Yoshi Maisami has been a perpetually influential student here at the University. The campus is lucky to have such a naturally gifted leader in its midst, ready, willing and able to do whatever he can to better his community.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

With the recent snowfalls I know that people are beginning to think more and more of spring break. For some reason it seems that whenever the snow hits Bucknell people enjoy it at first but then grow increasingly tired of it as they realize one of two things. First, that classes will never be cancelled no matter how much its snows, and second, that you can't drive with the top down in a BMW convertible when it's 20 degrees.

Therefore, even though spring break is more than a month away, one can't help but think of the warm sun, the white beaches, palm trees, and, of course, the daiquiris. However I am not particularly looking forward to spring break this year.

Sure I am going to Nassau, and that should be a great time with my girls, but I am really worried about what my boyfriend is doing. Ever since he and some of his friends started planning their trip to Cancun, how great Mexico is going to be seems to be the only thing that I hear about. I am glad that he is going but I am still concerned with what may happen while he is there.

Last year, before my boyfriend and I started going out, he and the same group of friends went to Puerto Rico for spring break. Upon returning to campus he was given the name the "Puerto Rican Player." Now I may not be the smartest girl alive, but I don't think that it's too hard to figure out how he was given that name.

I mean, let's be real, during spring break there are a lot of girls, wearing almost nothing and it is a recipe for disaster. Even though I trust my boyfriend, I am still worried about their trip and what kind of name his friends will have given him this time when they come back.

He has told me that I have nothing to worry about, but I don't know whether to believe him or not. Additionally I feel as though if I say something to him about it he will become very offended. Therefore, I don't know whether to just speak my mind to him and work the whole situation out and address all of my concerns, or just let him go and hope that he will not return this time known as the "Cancun Casanova." So I ask you, what is a girl to do?

Sincerely,

Mad Over Mexico

Dear Mad Over Mexico,

I think you must decide on your own if you feel as though you can trust your boyfriend. I don't know the status of your relationship, so it is hard for me to comment on whether or not I think you should talk to him about your concerns over his faithfulness to you. However, I always stress communication, and therefore I feel that you could probably talk to your boyfriend about his trip in such a way that he may not grow offended from your line of questioning.

Simply sit him and tell him your concerns; you don't have to imply that he is going to cheat on you but just talk over his trip in general. Who knows what information you may gain from this conversation.

In addition, I must say that the tone of your question sounded as if you are truly afraid that he will cheat on you. I admit that guys do cheat—as do girls—there is no way around it. Either they are not committed to a relationship or they simply like to meet girls. If you are in a relationship in which you always fear that the other person is going to cheat, you are probably far better off without that person. A relationship is supposed to be good, not something that causes fear; if the other person in a relationship causes such feelings, he or she simply isn't worth it.

You should probably also realize that your boyfriend could be experiencing the same feelings that you are. Just because you are a female doesn't mean that you can't cheat as well. After all, I am sure that you are going to be sitting on a beach, in a bikini, with a beach full of other guys; it is safe to say that this is a situation that could be considered full of potential.

All in all I think that you should speak your mind to him. However, do it in a non-confronting manner. If after you talk to him you feel as though he is trustworthy, you will have lost nothing and may in fact have a stronger feeling regarding your relationship.

I really don't think that you want to spend your whole break worrying about your boyfriend, you should be having fun on your own trip.

Don't risk a broken heart by not saying anything to him before he goes. If you feel he isn't trustworthy after you talk to him, well better sooner than later. You definitely don't want to have him come back and hear him being called the "Cancun Casanova." That will do nothing except hurt you.

I see people all the time who seem as though they are with people who show them no respect. I have no idea what these people see in each other and have no idea why the individual who is treated poorly would stay with the other person. You don't want to be put in a situation like that.

So take a stand in your relationship, and party it up in Nassau. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry—all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Slifer House Museum combines past, present styles of Lewisburg

By Katie Hays

As a striking reminder of the 19th century, the Slifer House Museum, situated one mile north of Lewisburg off Route 15, possesses not only telling remnants of the past, but also the lively present, including musicals, ice cream socials, concerts, fashion shows and teas.

The Museum's many rooms serve as reminders of the Slifer family's comfortable lifestyle. For example, an original Lewisburg iron stove stands staunchly in the museum's kitchen (Abraham Lincoln owned a Lewisburg Stove of the same type), and the kitchen table, set for a traditional Victorian period dinner, testifies to the Slifers' attention to style, beauty and detail. Each room of the house encapsulates a different aspect of the Victorian era and various customs of the 19th century Lewisburg community.

Courtesy of Rebecca Sheinfeld

The Slifer House Museum offers a rich history of Lewisburg.

Owing its name to Eli Slifer, a remarkable man who rose from the position of an orphaned canal boat worker to that of state senator, the mansion evokes not only the wealth and accomplishment of its owner, but also visions of the time period of which it is a product.

Slifer's meager beginnings, however, could not have foretold his end. Not long after giving birth to Slifer in 1818, Slifer's mother died and his father remarried. Both Slifer's father and stepmother died when the boy was 13, and at the age of 16 he apprenticed himself to a hatmaker, a job which he later abandoned in order to work the canal boats of the Susquehanna River. As he labored on the river, Slifer met William Frick, his future business partner, and Frick's sister Catherine, who later became his wife.

Upon the success of his business with Frick, Slifer immersed himself in politics. He served as a state senator from 1852 to 1854, as Treasurer of the Commonwealth in 1855, and finally, as Secretary of the Commonwealth for the duration of the Civil War.

At the start of the Civil War, Slifer commissioned an esteemed Philadelphia architect, Samuel Sloan, to design the beautiful Tuscan-style mansion that now stands prominently at the edge of Lewisburg. *Godey's Ladies Book*, a well-known magazine of the day, featured the elegant home where Slifer lived with his family until his death in 1888.

Slifer's family sold the house to Dr. and Mrs. Lamont Ross in 1908. In 1916, the Evangical Association purchased the house, added dormitory wings and fashioned the house into a "Home for the Aged." In 1921, an orphanage was constructed on the mansion's rolling property, and in 1926 Lewisburg's first hospital began on the same grounds. As time passed and buildings on the property aged and altered, builders constructed nursing care apartments on the property, some of which remain today.

Currently, Albright Care Services owns the Slifer House Museum and its grounds; residents of the nearby retirement home staff the museum.

For those who welcome a venture into the past, the Slifer House Museum provides a glimpse into one man's legacy, a chance to explore Victorian customs, and a fragment of Lewisburg's fascinating history.

Visiting hours are Tuesday-Friday, 1 to 4 p.m. Contact The Slifer House Museum at 1- 570- 524- 2245 for more information.

An abroad perspective: Ireland

Dublin offers excellent study, travel opportunities, glimpse of Irish culture

By Brian Watson

I won't lie—when I first thought about going abroad, the idea didn't sound extremely interesting. As the semester went on, I came across an advertisement outside my adviser's office about a new internship program in Dublin. I had been to Ireland a few times before and wanted to go back but wasn't convinced that I would be happy studying abroad. But something made me look a little deeper and reconsider.

And words cannot describe how happy I am that I went.

Spending five months in Ireland was by far and away the most exciting and satisfying experience of my life. In Boston University's Dublin Internship Program, I had the opportunity to learn about Irish culture, history, and literature from experts, as well as participate in a two-month internship at a leading Irish newspaper.

Joining a new program did have its downfalls, as my fellow students and I were the guinea pigs for a fledgling operation. Although I stayed positive throughout my stay, others were not as pleased.

We were housed with Irish families, with most of us staying about 25 minutes outside Dublin's city center. I happened to luck out, being placed with a great young family who took me in as one of their own. The parents, especially the father, quickly became two of my closest friends.

Classes were interesting but not extremely challenging. Our professors were prominent young Irish lecturers who took to us like any of their Irish students and constantly remarked how much they were learning from us in return.

After completing our six-week classes, we began internships in varied areas of Irish society. I was placed with *The Sunday Tribune*, a leading weekly newspaper. At the start of my work, I served as a newsroom assistant, helping writers in fact-checking and numerous other tasks. I was quickly given the chance to write and soon settled in as a full-time news writer. The lessons I learned from my editors have helped me in my editorial responsibilities here at Bucknell and also jump-started my aspirations to pursue a career in writing.

Away from the grind of work and study, we were given the chance to take long weekend travel breaks, opportunities of which we took full advantage. Various excursions took us throughout the island's four provinces, allowing us to see some of the most breathtaking sights in the world. We were able to climb County Mayo's Croagh Patrick, the mountain where St. Patrick cast out the snakes from Ireland. We took several trips to the west coast city of Galway, an upbeat college town with plenty of side trips. From there we ventured to Inis Mor, the largest of the ancient Aran Islands.

On the island, a bike tour took us to archaic cemeteries, small craft shops, secluded beaches, and, most notably, the ancient fort of Dun Aengus, a military post overlooking an 800-foot cliff. Another notable trip was to County Kerry, where my family and I ventured throughout the regions legendary Ring and the Dingle Peninsula. This trip provided some of the most amazing views of my entire semester.

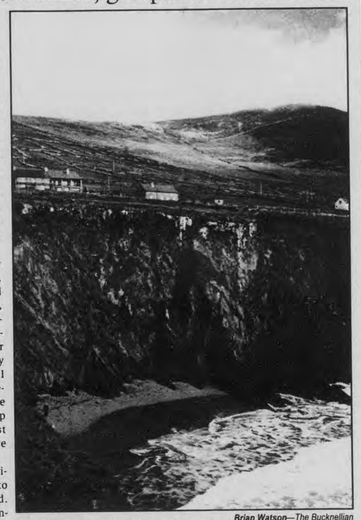
Our most shocking experience came in a group trip to Belfast in Northern Ireland. While we all expected the conflict-torn city to be an active battleground, we were pleasantly surprised by the warm greetings we received from various academics and city officials.

Several tours guided by Queen's University professors taught us about "The Troubles," the quarter-century old conflict between the nationalists and protestants in the six counties of Northern Ireland. Viewing the various paramilitary murals and "peace walls" gave us a first-hand perspective on the struggle.

Nobel Prize winning poet, Seamus Heaney, a prominent Northerner, opened our program with a reading of some of his favorite works. Besides Heaney, we rubbed elbows with Michael Sullivan, the American ambassador to Ireland, as well as former Irish parliament members.

As the program neared its end, my excitement to return home reached an all-time high. It wasn't until I actually arrived that I realized how much I would miss Dublin. The experience allowed me to live more independently than ever and introduced me to so many new people and opportunities that will stay with me forever.

The chance to study in Ireland is an opportunity that should not be passed up. It taught me valuable lessons and helped me prepare for all the challenges that await me in the future.



Brian Watson—The Bucknellian

The cliffs at Slea Head in the Dingle Peninsula, County Kerry, provide some of the most breathtaking views in all of Ireland.

Sledding leads to serious accidents

By Ryan Delahanty

The first two snowstorms of this year laid down a solid foundation for the approximate six inches we received on Sunday evening. Having snowed significantly three times in the past two weeks, the ground was packed with snow and ready for the yearly ritual of sledding. Many students decided to brave the cold weather on Sunday and have a little fun, either on the golf course, the front quad, or behind Roberts Hall. What many people don't consider though, is the inherent danger that comes from sledding.

In 1997, the Consumer Product Safety Commission issued a report that stated 34,000 people needed emergency room treatment due to sledding accidents. Another alarming figure is that there has been, according to medical professionals, a 30 percent increase in U.S. sledding accidents since the beginning of the decade. Children and adults alike are injured every year, although children ages 5 to 9 are the most susceptible due to their relative inexperience in maneuvering and coordination skills.

Potential injuries could be greatly reduced if children and adults both examined where the hill they are to sled on leads. Sledding accidents are more prevalent among males, 58% of the injured, and 65% of males that are injured fall between the ages of 5-14. This suggests a certain lack of supervision by parents in that most injuries occur to younger children. A quick look down to the base of the hill usually reveals whether or not there are any trees, telephone poles, ditches, or roads. Also, if jumps are built, then there is a greater likelihood that injuries will occur.

Most sledding accidents happen when the participant goes down the hill headfirst, particularly on a snow tube, where there is no way to control one's descent. The "GT type" sled, with one ski in front and two in the back resulted in 40% of all injuries in 1994-1995. Toboggans were slightly less dangerous consisting of 37% of injuries. The most common types of injuries from sledding are abrasions, bruising or inflammation, making up 36% of the injuries, while fractures and dislocations made up 29%.

Here on campus, the most popular sledding spot has become the hill behind Roberts Hall. While the hill is steep and long—perfect for a tube or saucer—it is also densely packed with trees. Additionally, many students build jumps to sled or even snowboard over, sled at night or sled while intoxicated, increasing their risk of injury.

Since last Sunday, the most recent snow fall, three people have been injured sledding behind Roberts: one suffered a black eye, one received neck and back contusions and the third lost conciousness due to sustaining a head injury. The student with the black eye received treatment at the Health Center; the other two misfortunate sledders were transported to Evangelical Community Hospital where they were treated and later released.

"Any time an injury involves head trauma, MRIs and CAT scans are administered as a precautionary measure" said Jane Haile, a nurse at the Health Center.

"However, not all injured students are hurt severely enough to warrant a trip to the hospital," reassured Haile. "Most of them only sustain bruises and lacerations."

While the chances of needing an MRI or CAT scan are slim, their mere possibility should be enough to deter even the most dogged sledder.

Overall, sledding is an extremely fun ritual of wintertime that, if proper precautions are taken care of ahead of time, can also be a safe one. By taking a quick look at the hill, supervising one's children and not taking daredevil risks, then the number of accidents that occur each year due to sledding injuries can decrease dramatically.

Nearby ski resorts provide alternatives for weekend enjoyment

Courtesy of www.elkskier.com

Elk Mountain, in Union Dale, PA offers over 20 different trails for beginner, intermediate, and advanced skiers at affordable prices.

By Helen Shen

With several inches of snow piling up on the University campus, many students are reminded of their favorite winter pastime—skiing. And although our numerous hills seem ideal for a quick run with a sled, thankfully, there are other options for those who long for a day or even a weekend on real slopes.

Camelback, located off Interstate 80 in the town of Tannersville, is perhaps a student's best bet. Only minutes from Exit 45, the trip to Camelback is very worthwhile; the resort offers almost everything, from the largest two-tow snow-tubing park in the country to a brand-new learning center for beginners. Voted "One of the Best in the East" by the popular *Ski* magazine, Camelback offers 33 trails and a vertical drop of 800 feet.

Over the last six years, Camelback has spent over $15 million creating new slopes, renovating new lodges and providing for their skiers' needs. Camelback has an amazing uphill capacity of 18, 600 persons per hour, and even 40 miles of Pipe. Slope lovers can ski for only $90 a weekend (slopes are open from 8 a.m. to 10 p.m.) and rentals start as low as $22 a day for skis and $28 for snowboards.

Camelback is conveniently located within miles from a variety of restaurants and cafes, and for those who aren't adequately prepared for a weekend of skiing, ski and snowboard shops are only a few minutes away. Open until March 30, 2000, Camelback offers the Camel Card Savings Program—registration is only $99, and Card members enjoy savings up to 50% off Camelback's usual fees. For snowboarders, Camelback has recently created a program that offers snowboard clinics every day. Visit Camelback's website at www.skicamelback.com, where you may pre-order tickets for a lower price.

Elk Mountain is one of Pennsylvania's first commercial ski areas, and has a rich history of entertaining skiers from all over the country. Built in 1959, Elk Mountain boasts 27 trails and calls itself "the most challenging terrain in Pennsylvania." Recent improvements to the resort exceed $10 million, and Elk Mountain continuously works to make its skiers feel right at home (even planting 13,000 additional Norway Spruce trees!).

Elk Mountain, located in Union Dale, Pennsylvania, is right off Interstate 81, exit 63. For those who appreciate extensive programs and a variety of slopes, Elk Mountain is a perfect match. Elk Mountain hosts several racing programs, mogul clinics, and even women's day programs. A special program called "The Weekend Program" is offered every weekend until March 5, 2000. This program "provid[es] continuity and learning in a relaxed, unhurried environment" and is ideal for both beginners and those who desire to improve their skills.

Visit www.elkskier.com to view a map of Elk Mountain's 27 trails, 11 of which are for expert skiers. For a weekend of skiing at Elk Mountain, plan on spending $72 on lift tickets and $36 on ski rentals. Those who intend on renting snowboards must come prepared—a picture I.D., credit card, and $100 in cash are required if you want to borrow a board.

Lastly, for those who are looking not only for skiing but also competition and fun should head over to Montage in Scranton, Pennsylvania. Montage, "totally committed to blanketing [its] mountain with snow and then grooming it with finesse," has been recently voted "One of the Best Snowmaking Resorts in the MidAtlantic." It offers 21 trails, a lodge and a great variety of programs. Open from 8:30 a.m. to 10 p.m. on weekends, Montage charges its skiers and snowboarders $40 a day for lift tickets and $20 a day for rentals. Snowboard rentals are $30 on weekends.

Montage is a little different from the other two ski resorts in that it places a great emphasis on "winter fun." If you go to their website, www.skimontage.com, you'll come face-to-face with a long list of events offered by the resort. For example, on Feb. 9th, there is a Snow Bunny Model Search. A Spa Weekend is also on the calendar of events. From March 11th to the 14th, Montage celebrates the end of its season with the Montage Mardi Gras, four days of live music, parties and special races.

Perhaps the greatest winter event at Montage is the Keystone State Winter Games Sports Festival. Its goal, "to provide a statewide, multi-sport program with an Olympic format to encourage and assist in preparing Pennsylvania's athletes to enter national competitions," is reached once a year at Montage, where many gather to watch many competitions, including skiing, snowboarding, and mountain biking. Winners of the Keystone State Winter Games go on to Mechanicsburg, PA, to participate in the 2000 Pennsylvania Skating Championships. Bucknellians interested in participating should apply online at Montage's website.

Although many may be more accustomed to the towering slopes in Colorado or the incessant snowfall in Vermont, Camelback, Elk Mountain, and Montage can offer Bucknellians three simple things: snow, affordable prices, and a weekend of fun!

Arts & Entertainment

Line dancing brings country flair to campus

Club offers taste of country western, alternative to the modern dance scene

By Sahana Ravindranath

Lisa Melitz-The Bucknellian

The country line dancing club provides a fun and energetic means of exercise as well as providing a great social setting.

Break out the country music and leather cowboy boots because Bucknell's line dancing club has arrived. This fairly new club activity was started by co-founders Mary Wycheck,'01 and Shelley Merritt, 01 who put together this team of dancers at the beginning of 1999. Wycheck and Merritt have a great deal of energy and experience that will undoubtedly drive line dancing to be the next "big thing" on campus.

The average student must be wondering,why line dancing when hip-hop and other such dances are all the rage today.?" Merritt said, "Line dancing caught my interest because it was different and a lot of fun. Also, you meet the greatest people!" The club which held it's first interest meeting on Wednesday, January 26, 2000 is open to the entire campus community. The line dancing club will provide students, male and female alike, a way to relieve stress and anxiety that classes often bring on by promoting a fun, relaxed and down-home atmosphere. "And hopefully this semester we'll be doing more off campus traveling so students might want to be prepared for the 'outside world.'" Merrit said.

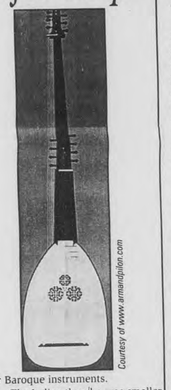
In addition to providing some good times and an opportunity to meet new and interesting people, line dancing provides an excellent form of exercise. If students are not in the mood to hit the treadmills or participate in kick boxing, line dancing will help burn off those extra holiday calories while also providing a tremendous amount of fun. "People tend to go through two or three shirts a night due to the amount of perspiration!" said Meritt. If potential line-dancers are a little apprehensive because of the amount of quick-side stepping action that goes on, there is no need to worry. "At club we [Merritt and Wycheck] go at a pace that's convenient for everyone. We go over a dance step by step and then we'll do the dance through a couple of times before putting it to music" reassures Merritt. Another advantage to line dancing is that similar steps are used in many different songs, only put together in different sequences. Therefore, if a student masters a few steps they will be able to go out and line dance at clubs or bars like the pros.

The line dancing club has all the potential to become one of Bucknell's most popular activities. It has energetic and enthusiastic teachers, music with a great beat and plenty of opportunities to meet new people here on campus. So put on a pair of comfortable ole' fashioned jeans and grab a pair of cowboy boots (or anything else) and be prepared for a high-energy, high-power hour of dancing that will leave you line dancing all the way home.

For more information about the club as well as regular meeting hours please email Shelley Merritt (smerritt@) or Mary Wycheck (wycheck@).

Unusual instrument of the week: *The Theorbo, a taste of the baroque*

By Andrea Beisser



Courtesy of www.armandjalon.com

For those in the mood for peacefulness and rest, the performance of Olde Friends, a Baroque music ensemble, held in the Weis Center on January 21, was a perfect solution.

Among the panoply of baroque assets was an unusual guitar-shaped instrument called the theorbo. It accompanied the collection of baroque instruments, which included the violin and the viola.

This odd shaped member of the lute family was common in the 17th and 18th centuries. Invented by Jacques Gaultier, a French lutenist, around the 1630's, the theorbo closely resembles the lute. This instrument has an extra set of bass strings that are not stopped on a fingerboard and are plucked as open strings.

There are three predominant forms of theorbos: the French, Italian, and English. French music and musicians had a profound impact on the English court and were especially influential in the realm of lute music. French theorbos were large and had broad-ribbed bodies and single roses. They were usually tuned in A with two re-entrant strings.

The English theorbo was commonly associated with the large 12-course lute which had a string length of 23 1/2 inches. The theorbo was purchased by the English court in March 1627. By 1634 it was played frequently as a solo and in ensembles, accompanied by other Baroque instruments.

The Italian theorbo was smaller and common in the 17th century artwork and portraiture. The head was much shorter than the English and French models and it had a double fingerboard course with a single base. The shape was very flat and elongated with triple roses.

The theorbo contributes a unique and rich sound in an ensemble of Baroque instruments and adds to the style of Renaissance music. Near the 18th century, however, the theorbo's popularity decreased, giving way to the more fashionable archlute.

Down to You only disappoints audiences

By Krista Reisdorf

Courtesy of downtoyou.com

***Down to You* features stars Freddie Prinze , Jr. and Julia Stiles.**

I entered the movie theater of *Down to You* with expectations of a cute, intelligent film with fresh, talented faces. What i got was a cheesy, pointless story told by boring characters. The movie tells the story of Al (Freddie Prinze, Jr.), a college sophomore, and average guy." Al falls for Imagen (Julia Stiles), an artsy and somewhat hyper college freshman.

The two complete opposites attract, though it leaves the audience wondering...why? As we are exposed to the ups and downs of their relationship, we see no real development or change, no sequence or sense. The characters are so fickle in emotion and behavior that the audience is easily lost. The story is choppy and has no real direction, leaving many missing pieces.

Stiles and Prinze are very disappointing, especially after the impressive breakthrough performance from Stiles in last year's film, *10 Things I Hate About You*. The characters in *Down to You* may be aesthetically pleasing, but that's where it ends. Prinze comes off as a wimpy pretty boy, while the emotional range of Stiles is strained at best. There is a significant lack of chemistry between the couple, and every attempt at romance seems to fizzle.

One tiny bright spot in the movie is Shawn Hatosy, who plays Al's slightly moronic friend Eddie. His antics evoked some laughter from the audience, but unfortunately his performance was not enough to resuscitate the already dead film. Henry Winkler was a nice surprise as Al's kooky chef father, but he didn't get the amount of screen time needed to save the movie from its forced humor and unsuccessful jokes.

Those leaving the theater seemed to agree with me. Although some of the teenage girls said that they liked it, the majority of the audience disagreed. One male college student said "It wasn't realistic. It was a waste of time and money". Other male audience members appeared to share this opinion, claiming it was just plain "stupid". Though the movie is geared towards the female population, even the girls found it hard to take. One female student said "It was cute, but it was a stupid movie. It was very predictable and moved kind of slow." Another claimed that "the story line is cliché and overdone, and while they tried to freshen it up with humor, their jokes fell flat, leaving an overdone teenybopper chick flick".

While absolutely hopeless romantics will find the film to be "cute," it won't change the fact that any kind of a plot is severely lacking. So those of you looking for a movie with substance, you'll have to find it elsewhere.

Mirth Grinder goes above and beyond the literary magazine

By Jennifer Johnson

Wednesday Jan 26th saw the campus-wide release of the literary magazine *Mirth Grinder*. The current issue contains over thirty literary works, including pieces ranging from sumo wrestlers and hamsters, to engineering and love poems. Nearly every page displays some type of artwork as well, including a picture of Duchamp's ready-made fountain in the table of contents. This picture, according to *Mirth Grinder*'s editor, John Hanowell is "one of the most hilarious artistic ventures of art history." Both Bucknell students and faculty, including Stewart Horodner, the Art Gallery Director and Xie Xiaoze, Bucknell's painting professor, produced these works of art. *Mirth Grinder* is under the leadership of advisor Mark Svenvold who has included his work "from Catastrophilia".

The *Mirth Grinder* has an amazingly interesting history. This literary magazine started out four years ago as the *Catalyst* but quickly changed its name to the accredited *Les Temps de Assassins*. After the staff of *Les Temps* graduated they passed down the remnants of the magazine to the current staff. As Hanowell states, "We wiped away the ashes of *Les Temps* and started anew, but maintained the same high quality material and eye-catching layout."

The new staff decided that a new name was in order. The name *Mirth Grinder*, according to Hanowell "is to throw a bit of wit into a literary community. We felt that *Les Temps* and others had gotten caught up in the classics and become fairly dull. Our intent is to create a magazine with more humor than magazines of the past."

So what makes the *Mirth Grinder* so different from other literary magazines on campus? Hanowell said, "Unlike other literary publications, we do not just either publish or drop submitted work; rather, our goal is to discuss individual work with the writers at our weekly meetings." Adding to its uniqueness is the fact that the magazine, though the name has changed, crosses generations. Hanowell explains that his brother, Michael, also had poems published in the second issue of Les Temps de Assassins.

The next issue of *Mirth Grinder* is due to be released the end of the semester and the deadline for submission of work for that volume is mid-April. Anyone who has not yet obtained a copy of the current Mirth Grinder and would like one should call Hanowell at 577-4493.

A poem from Mirth Grinder....

Shasta

By Sean Webb

We keep a sumo wrestler in our garage
for added weight in the back of the truck
when it snows. After a blizzard, we pull out
into the alley, me, the wife, the kids, the sumotori.
We are thankful that our truck no longer gets stuck.
The sumotori bounces about with the cord of the firewood
piled in the truck's bed. He lost too many matches
and was sent away from his stable. There was nothing
left for him to do, so he headed west. To America.
After the winter the snow is gone, he sits in the garage
on a pallet, by the boxed Christmas tree and a unicycle,
lamenting his loss pride and ancient tradition.
He only needs a bowl of rice, a little fish, some tea.
There is no longer the need for the voracious appetite
that sustained him in battle. There is no longer a need
to fortify and substantiate his body in order to leverage
his mass against his opponent's. There is no longer
a need for the ritual and the heritage. He misses
the clay ring, grains of salt and sand beneath his feet.
He misses the admiring crowds, the camaraderie and
the familiar life. Here, he pushes the lawnmower
over the rectangle of lawn surrounding our house.
In the fall he will rake the leaves and prepare for another
cold winter in the foothills of a mountain whose name
he mispronounces and keeps forgetting anyway.

Weis Center welcomes The Acting Company for their performance of Shakespeare's *Macbeth*

The "Weird Sisters" nurse a phantom baby in the Acting Company's production of *Macbeth*.

By Katie Parker

The Weis Center was practically full last Friday night with hundreds of students and faculty excitingly anticipating the renowned performance of *Macbeth* by The Acting Company, called "one of the country's most exciting, creative and impressive theatre companies"(Miami Herald).

"Macbeth" is considered one of Shakespeare's greatest tragedies, gripping and psychologically saturated, as well as horrifically bloody and suspenseful. An agonizing plot that rivals and even outperforms most modern-day thriller movies, combines with exquisite language and sublime speeches to make it a most electrifying ride from start to finish.

Grays and reds were strewn across the stage in the form of props, lights, and clothing. The blend of these symbolic colors were key in scenes, such as the death scene, where the witches knitted red yarn in an allusion to the Fates, who cut the thread of life; or when the witches are commanded to kill Banquo, and Macbeth hands them the scarlet-red gloves of assassins.

The acting was quite melodramatic—During Macbeth's famed "Is this a dagger I see before me?" monologue, his expression of insanity was too forced. The disappointment of Lady Macbeth was even greater. In most performances of Macbeth, the Lady is dominating and aggressive. This Lady Macbeth, however well-played, was portrayed to be less sexually dominating than Macbeth, who would corner her against walls or grab her waist forcefully. Despite her words being forceful and dominating, the acting did not reflect this at all. However, it must be said that the three witches were portrayed excellently. The scene of the famous "Double Double, Toil and Trouble" speech was hilarious, a real comic relief from the seriousness of the play.

The Acting Company has a history of eminence that some still found apparent in the performance. The Company was founded in 1972 by current producing director Margo Harley and the late John Houseman, and is of late America's only nationally touring classical repertory theatre.

Bill Boswell, Director of Cultural Events, was thrilled to offer such a fantastic opportunity to the campus community. "This is the Acting Company's third appearance at Bucknell, and it will no doubt be the third time audiences are captivated by the company's excellence," Boswell said.

The Company has won Obie Awards, Audelco Awards, the Los Angeles Drama Critics Circle Award and two Tony nominations. Its founding thespians assigned the project a unique mission. Not only is the Company dedicated to preserving our cultural heritage through constant production of the most important dramas in our literary history, but also they have made it their responsibility to put on these productions in the smaller towns and rural communities of the United States.

The performance offered a chance to see an incredible work, worthy of big-city glamour, in our very own Weis Center. The chance to see a masterpiece performed by a professional acting company does not come often to Bucknell, and the experience alone was worth the sacrifice of two hours on a Friday night.

Bartender Brad (Craig Kuinsland), Donnie Smith (William H. Macy) and Thurston Howell (Henry Gibson)

Audiences applaud the complexities *of Magnolia*

By Carolyn Hyman and Kyle Menghetti

One of *Magnolia's* complex characters, quiz kid Donnie Smith, confesses, "I have all this love to give and nowhere to put it," revealing the sentiments of all of Magnoliais lonely hearted searching for acceptance, forgiveness,and someone to bestow upon all the love they have to share.

Magnolia begins with the accounts of three seemingly unrelated eerie coincidences and then proceeds to trace the lives of seven needy souls during the course of a night in Los Angeles. Writer and director Paul

Thomas Anderson's characters are tragically flawed yet forgivable. A dying television executive; his regret-torn trophy wife; his estranged son, an elevangelical "sexual education" guru preaching his policies of "Seduce and Destroy." Also interwoven into the story of this family is a debt-ridden has-been who once wowed television audiences as a boy genius on a game show; the game show's cancer-stricken host who downs his sorrows in a bottle of scotch prior to appearing before the camera, his cocaine-addicted daughter, and the straight cop who falls in love with her. Anderson unfolds his story slowly, inter-twining his tales of sorrow and desperation, relying heavily on bizarre flukes of nature. They collectively reach emotional meltdowns when they begin taking turns singing karaoke style to the refrain "It's not going to stop," from one of Aimee Mann's haunting songs that speckle the soundtrack.

The all-star cast includes Tom Cruise as the macho man teaching others to prey upon women, Julianne Moore as the torture-stricken wife about to inherit millions, Jason Robarts as her husband, William H. Macy as the pathetic former quiz show kid, and John C. Reilly as the good cop. Each character complements one another, as there is no central starring role.

Cruise, Moore, and Macy all gave stellar performances, illustrating intense vulnerabilities.

Magnolia is the long awaited follow up to 1997s critically acclaimed Boogie Nights, which also starred Moore and John C. Reilly in the chronicle of the 1970s porn industry. Anderson's style is distinctive and *Magnolia* does not disappoint fans anticipating a similar artistic effort. Although the dark mood of *Magnolia* is a far cry from the flashy burlesque of Boogie Nights,the desperation of the atmosphere and the strong character development confirm Andersonís talents.

However, there is something unsettling, almost disturbing, about the flow of the film, jumping from scene to scene. The quickness of the camera and the independent accounts of seven stories told simultaneously keep the audience attentive and wondering how Anderson will leave his characters as the first-signs of morning brighten over the city. Anderson's artfully constructedtales of angst are so poignant, that they leave the viewer emotionally drained during the three-hour viewing as we finally discover how these victims of depression are connected by random twists of fate.

Let this be a warning, *Magnolia* is not a light-hearted, easy-going movie experience; it's challenging and frustrating, but also rewarding. Sit back and prepare yourselves because it is a long and bumpy ride.

Hannigan to give recital

Courtesy of the We

By Jennie Scheerer

On Friday, Feburary 4, a recital will be given by pianist Barry Hannigan in the Weis Center at 8:30 p.m. The performance is in celebration of the release of his new CD which is available through the Bucknell bookstore.

Hannigan, a professor of music at Bucknell, will perform Ravel's famous piano suite, *Le Tombeau de Couperin*, which is one of the major works that is included on the CD. "This piece is a group of dances dedicated to the spirit of 18th-century French music. Ravel wrote it in 1914-17 and each of the movements was dedicated to a friend of his who died in World War I." Also included in the recital is Ernest Blocks Sonata, which was written in 1935. Hannigan said of this piece, "The work is a large-scale , neo-classical sonata that contains an extremely wide rane of color and pianistic effects.

In 1984, Hannigan had his New York debut recital at Carnegie Hall in 1984 and his European debut at the Edvard Munch museum in Oslo, Norway. He has appeared as a guest artist at several festivals and universities, and has also been aired on National Public Radio. The recipient of a doctorate from the Eastman School of Music, Hannigan became a member of the faculty at Bucknell. The recital is open to the public and free of charge.

Do Bucknellians appreciate the arts?

An A&E Commentary

By Nicole Gull

Living in the infamous "bubble" it is often too easy to bury our way into the repetitive nature of routine. Each day passes with class, a few hours of studying, possibly some extracurricular activity, and time spent with friends. However, how often do we as a student body show a genuine appreciation for the arts? When was the last time you went to the musical or headed to the Weis Center on a Friday night to see a ballet or even last week's presentation of *'Macbeth'*?

The University puts forth a consistent effort to bring a taste of high culture to our small central Pennsylvania home, and it is interesting to note exactly how many students take advantage of such venues. Overall, I do believe Bucknellians genuinely appreciate artistic expression. Yet, despite this, I do not see this respect manifested through active support of the arts on campus. That is, if the average Bucknellian was asked if he or she appreciates the arts, the answer would be yes. After all, we are a community of intelligent individuals that, to an extent, demonstrates and understands the cultural and intellectual value of the arts.

Paradoxically, if this same student was then asked if he or she frequently attends artistic events on campus, the student would most likely answer no. Perhaps this may be blamed on lack of publicity, low motivation, conflict in scheduling, or any number of things. Reasoning aside, the fact remains that student support is minimal when artistic events are planned. In fact, when asked whether he believes students appreciation of the arts, cellist Chris Lay '00 states, "No, I do not think so because the University offers many cultural activities and from my experience, I have noticed a lack of student participation."

Lay's opinion is further supported by that of Kelly McManus '01 when she assert that "Bucknellians do not appreciate the arts. Everyone always complains that there is nothing to do, but no one ever makes the effort to go to anything. I don't and I honestly feel bad about it."

Although I do agree with Lay's and McMannus's comments I think Dawson Hodgsen too stated it best when he notes that there is "a lot of interest, but not a lot of motivation" in the student body's appreciation and support of the arts.

As stated earlier, it is painfully easy, almost convenient, to get caught up in ourselves and our daily activities, making a deviation from the norm seem impossible. It is always much more comfortable to maintain routine and never really follow through with something new, whether that be a poetry reading in Bucknell Hall or a play in the Harvey Powers Theatre. We all have both academic and social commitments that with each week's passing fossilize in daily life, but if we would all just attend one event this semester we would see the University in a different light, learn a little, and maybe burst the bubble for one day.

Beck's latest album, *Midnight Vultures* proves to be his best

Courtesy of www.beck.com

By Cambell Gerrish

Beck's latest album, *Midnight Vultures*, is by far my favorite new album this year. Released this past November, the album is a solid follow up to Odela, which featured hit singles such as "Where It's At," and "New Pollution." This time, Beck has created an utter masterpiece, pasting together an innovative musical collage. *Midnight Vultures* blends vastly different styles, from retro sixties sounds to new age, techno-pop, into hip, fluid, pop tracks. The first single released on to major radio air waves was "Sexx Laws," a song with a sound frighteningly similar to that of a baby-boomer favorite, The Monkees. With lots of horns, tamborine shaking and high-pitched vocals, Beck modernizes a sixties sound with funky bass riffs, drum samples and synthesizer effects.

Immediately following "Sexx Laws" on the album is "Nicotine and Gravy", which combines a dark, droning bass melody with handclapping, Jackson Five-ish, grooves. Although these two styles are on virtually opposite ends of the music spectrum, Beck combines them impeccably. Another track, "Mixed Bizness," is influenced by a sort of ska-jazz, authentic disco beats, bass and vocals and funky wah-wah guitar. It is the kind of song that makes you want to get up and dance, or and at the least gets your head bobbing.

"Milk and Honey," the final song on the album, is a truly unique musical creation. The chorus sounds like part of a Steppenwolf record, while the main melody is comprised of classical brass, guitar, and clavichord buzzes, eventually turning into a punchy synthesizer and bass part.

With the release of *Midnight Vultures*, Beck has proven himself to be one of the most versatile, creative, and accomplished musicians of this generation. *Midnight Vultures* is by far Beck's best yet, and one of the best albums out this year.

Bud wins over .com

By Monica Montgomery

It was a close game, but many think that the most exciting part of the game was not the Super Bowl — Commercials ranked number one in entertainment this past weekend.

The average price for 30 seconds on Sunday was $2.7 million. Some companies paid went as high as $5 million. As a result, Walt Disney's ABC brought in roughly $130 million, an increase of $25 million from 1999.

Rex, the dog, representing Budweiser for Anheuser—Busch, was ranked number one in a poll taken by *USA Today*.

Other companies that excelled were Mountain Dew, Pets.com, and E-Trade.com.

There were also several first-timers to the Super Bowl. Oxygen Media, a woman's cable network born on Feb. 2, Motorola, and EDS, all did extremely well for newcomers.

Patricia Wenner, associate professor of computer science, said that she was under-whelmed. "There wasn't much innovation in the commercials. If you don't remember what it's for, it's not a good commercial."

"I liked the commercial for Nuveen, which featured Christopher Reeves walking. It was different from all the usual ads," Mark Langer '02 said.

This was a commercial that was generated by computer graphics. Thinking about it, there were a lot of ads that were digitally altered. When was the last time that you actually saw a dog talk about his owner to a camera? Or see a bicyclist chase down a cheetah to get his soda back?

It might not be as obvious as it is in these commercials, but every commercial has at least some form of computer graphics. Most editing is done to eradicate unwanted lines and enhance different aspects of an angle.

"Graphics are sliding away. Soon, you won't realize how much is being used," Wenner said. "The only things that was obviously [during the Super Bowl] were the ABC football graphics and a commercial for a movie."

TECHNOLOGY EDITORIAL

DVD litigation threatens free speech

By Matthew Trunnell

Have you ever watched a DVD movie? If not, do you ever want to in the future?

Right now, the Motion Picture Association of America (MPAA) is prosecuting people for trying to watch DVD movies they legally purchased.

Why would the MPAA, which includes Buena Vista, MGM, Paramount, Sony Pictures, 20th Century Fox, Warner Bros. and Universal, want to discourage sales of DVDs? That answer depends on how you choose to view your DVD; unless your movie player is licensed from these companies, they do not want you to watch.

The Content Control Authority

Every DVD comes encrypted. Before every viewing, your DVD player must first decrypt the disc. This "feature" was meant to curb the illegal copying of DVD movies; movie executives believed that they would lose money if people could copy their discs, so encryption was used to protect every movie from copying. However, the actual consequences are far different.

Anyone can copy a DVD, regardless of the encryption. All you need is a commercial "DVD stamper" that mass-produces the discs. This device costs around $10,000, and makes bit-for-bit copies of DVDs — encryption and all. Is this the great fear that motivated movie executives to encrypt these movies? That we would all buy expensive equipment to make copies of movies?

No. The MPAA had something completely different in mind. They wanted a monopoly over a market just as lucrative as the initial sale of the discs: the market for DVD players. By creating the Orwellian-sounding DVD Content Control Authority (CCA), the Motion Picture Association could sell the lucrative licenses needed in players to decrypt every movie. The revenue from these license sales is apparently a hugely motivating sum.

Back to basics

What does this mean? First, an analogy: DVDs are just like books.

What if all books were published with secret ink that could only be seen with a special light, and these lights could only be bought from book publishers? If you wanted to read any book, you would have to purchase the special reading light which would reveal the print. Then one day you discover that if you place ordinary blue cellophane over a normal light, you can read the book. You share this discovery with your friends, and eventually the secret is printed in magazines.

The book publishers sue both you and the magazines, claiming that your discovery allows anyone to copy and sell books on the black market. Nevermind that Xeroxing hundreds of pages would be more expensive than buying the original.

Amazingly, this is exactly the situation faced by a few computer programmers who learned how to see through the encryption on DVDs. Why did they want to break the encryption?

These programmers chose to use Linux as their computer operating system (instead of Microsoft Windows or Apple Macintosh) and there is no DVD player licensed for use with Linux. So the enterprising programmers decided to make their own player. (There are millions of computer users around the world who use Linux, which is a free operating system developed over the past nine years by thousands of computer scientists working collaboratively. Since Linux is an Open Source operating system, it can be downloaded and installed free of charge.)

> *"The motion picture industry is using its substantial resources to intimidate the technical community into surrendering rights of free expression..."*

The MPAA as World Police

Did you know that large US corporations could have foreign citizens arrested on a whim? Jon Johansen, a 16-year-old Norwegian, was the first person to post to the Internet the grassroots DVD decryption program called DeCSS. This program enables Linux users to watch DVD movies on their computers.

Jon and his father were arrested by Norwegian authorities due to legal pressure from the Motion Picture Association of America. The MPAA asserts that the DeCSS program facilitates content piracy, so whoever distributes the program is doing so illegally.

But in truth, you don't need DeCSS to copy discs. In fact, the encryption process provides absolutely zero protection against illegal DVD copying.

The Spin Cycle is on High

Readers of the *Los Angeles Times* on Sun., Jan. 30 were treated to some amazing rhetoric. Jack Valenti, the President and CEO of the MPAA, wrote an article on what he described as "Internet hackers" who were "stealing their work."

"They have circumvented copyright protection illegally and without authorization ... The posting of the hacking code is akin to mass producing and distributing keys to a department store," Valenti said.

Mr. Valenti never mentions that DVD encryption does not stop copying. Nor does he explain that encryption only serves to block playback — playback of movie discs that were legally paid for.

This line of impossible lies has already persuaded California Superior Court Judge William J. Elfving to issue a preliminary injunction against sites offering the DeCSS program for download.

"The motion picture industry is using its substantial resources to intimidate the technical community into surrendering rights of free expression and fair use of information," said Tara Lemmey, Executive Director of the Electronic Frontier Foundation. "These actions are a wake-up call for the technical community. The process of reverse-engineering and public posting and commenting of code that the MPAA is attempting to suppress is fundamental to the development of commercial and open source software."

Wildlife photographer comes to talk to students about the perfect picture

By Alex Piel

"In photography, it's crucial that you figure out what you want, and adapt that to what you see," began Robert Rattner, a well-established animal and wildlife photographer who visited the University last week. Mr. Rattner travels globally photographing everything from gorillas in the Jersey Islands (between France and England) to exotic birds in Cuba.

Leading a two-day wildlife-photography workshop, Rattner met with 12 students Friday examining slides, explaining equipment and eventually modeling techniques as he showed students how to use the available natural elements to take a captivating picture. "The different dynamics of the picture depend on the relevant context," he said.

The workshop continued on Saturday at the Animal Behavior Laboratory, with students photographing the baboons, lemurs, and squirrel monkeys to practice and apply their new knowledge of animal photography.

Though he talked much about lighting, lenses and procedure, Rattner touched upon some of the photography world not mentioned on magazine covers and nature posters. There are two types of animal photographs: illustration and documentation. A documentation photograph is a picture using the available resources and attempting not to alter the animal's world. With illustration, the animal's world (and often the animal) is manipulated to depict a natural scene. Rattner does not endorse these types of pictures. "It's wonderful to photograph them, but our presence affects the animals ... environments are controlled more than people admit."

Paige Cull — The Bucknellian

Mr. Rattner shows students how to work with light to photograph animals

Not surprisingly, much of his talk and many of the fielded questions revolved around the idea of light. "Light is what it's all about; it is quantitative," Rattner said. "But if I had one piece of advice to give you guys, it would be look at the light."

He said that taking a photograph is a 2-step process. The first requires you to ask yourself, "What is the photo? What am I trying to show?" and the second is "What do I have to do to make it?" Rattner answers the second question in 3 parts: compose, focus and expose. He explained that "taking a photograph is like driving a car; it becomes intuitive." In each case, he said, it is crucial to view the world from the animal's perspective (a philosophy that may apply to other disciplines as well).

Even after thinking like the subject, there are other factors that contribute to taking a good picture. Rattner talked of crawling through bushes, along sandy beaches and up to the tops of ancient Brazilian trees to get that perfect shot. Often it is necessary to be able to predict the animal's next movement. "Wildlife photography is based on knowledge: experience with the animals in their natural habitat," Rattner said.

Frequently, he continued, he needs the help of the local residents in further understanding the movement and behavior of the animals. "Working with naturalists is critical ... I will not harm an animal," he said.

The workshop continued Saturday morning as students met Rattner and Professor of Psychology, Doug Candland at the lab. Students alternated photographing all four species of animals as they practiced indoor and outdoor shooting. Rattner helped predict why some shots would be better than others based on sunlight, shadows and the movement of the animals.

After Cee Tee Photographics developed the film, Rattner met again with each student to evaluate, as he said, "the good, the bad and the ugly." Many students were disappointed with the prints, but Rattner reiterated, "Most reality has gross differences. Film does not see the same things we see: our eyes adjust. There are two ways to take a good picture. One, you can spend a lot of money, as in several thousands of dollars. Or, more practically, you can use good technique." He concluded, "We are all slaves to limitations."

In looking at the photographs, students commented on color contrasts and lighting difficulties. As Rattner explained, there are numerous ways to manipulate a picture when developing it. "When you reproduce a photo, you increase the contrast dramatically. Every regeneration magnifies the problems. One of the ways you deal with problems is by eliminating them," he said.

Rattner does not like to use modern computers to "eliminate" these errors. Instead, he said by cutting pictures, using alternative backgrounds and using different focusing techniques, certain troubles can be avoided.

Rattner's expertise was received well by the students who participated in the workshop. Though there are only so many different shots one can take of the baboons and lemurs at the Animal Behavior Laboratory, some students have shown that animal and wildlife photography may be a potential career.

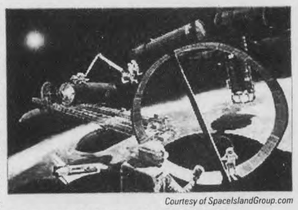
Space vacations could soon become a reality

By Brienne Terril

Ever dream about visiting outer space? Well, now your dream may become a reality according to Space Island Group, Bigelow Aerospace and Hilton Hotels which plans to commercialize space travel in the next decade or so.

"Vacationers already pay tens of thousands of dollars to explore the Antarctic or climb Mt. Everest," said Gene Meyers, president of Space Island Group. "So space is the next exotic vacation spot for them."

The first years of commercial space travel will probably be limited to the wealthy who can afford to pay the $50,000 to $1 million ticket price, but Meyers sees the price coming down to $20,000 per couple for a week in space.



Courtesy of SpaceIslandGroup.com

Using empty NASA space shuttle fuel tanks, the Space Island Group plans to build vacation resorts.

Surprisingly, a recent survey conducted by adventure travel companies revealed that more than 10,000 people were willing to pay $1 million for a chance to visit space. Space tourism could possibly be a billion-dollar industry.

According to Fox News, Space Island Group — a private association of aerospace engineers, researchers and marketers — expects its station to be complete by 2006 making the dream of space travel a reality in seven to 12 short years. The group has already received passionate support from presidential candidate Senator John McCain. In the same respect, President Clinton signed a bill last December that authorizes NASA to adapt existing space technology for commercial use.

The resort station will be made of empty NASA space shuttle fuel tanks and will orbit at 400 miles above the Earth. According to Fox News, Meyers says that at least 12 tanks, each one a comfortable suite, will be assembled end-to-end to form a ring. All guests will get a private suite and a direct view of Earth.

The resort station will rotate at one revolution per minute, creating one third of the gravity experienced on Earth. This will allow normal eating, entertainment, running water and medical facilities. Space Island Group is also working in conjunction with Dow Chemicals and a clothing company to develop materials and clothing suited for the partial gravity environment which will cut down on the amount of luggage needed as well. Myhome.com is also in on the project, providing suitable furniture including items with soft, rounded edges to ensure safety.

Because the station will be rotating at such a quick speed, the suites will be windowless, but myhome.com plans to install flat panel screens that will project camera views of space.

Hilton Hotels Inc. is also looking into the idea of a space hotel. "We want to take a hard look and see if Hilton can be first into space," said Hilton spokeswoman Jeannie Datz. "It's certainly not going to happen tomorrow. We're talking 15 to 20 years down the road, if any of it makes sense."

If all turns out well, space travel may be a realistic option by 2012. "The challenges are still there," Meyers said, "but it's not as big a challenge as people think."

Bison drop another heartbreaker vs. Lafayette

Karavanic's game-winning attempt as time expires falls short; Bucknell loses fourth consecutive close game vs. Leopards

By Chris Ellis

EASTON, PA-The rock group The Eagles popularized the phrase "Two out of three ain't bad." But in last night's crucial midseason game against Lafayette, two out of three wasn't quite good enough.

In order to have a chance to hand Lafayette its first patriot League loss, the Bisonbasketball team needed to find a way to contain Stefan Ciosici, Tyson Whitfield and Brian Ehlers, the Leopard's well-decorated trio of stars who each rank among the finest players in the league. The Bison big men neutralized former league player of the year Ciosici, and Bucknell's guards pressured former League Rookie of the Year Whitfield into bad shots throughout most of the game. The Bison had no answers for the third member of Lafayette's triad, however, as 1998-99 Patriot League MVP Ehlers slashed through Bucknell's defense for 26 points on a near perfect shooting night, leading his team to its fifth consecutive win over the Bison, 75-73 at Lafayette last night.

Ciosici scored just eight points in the game and played sparingly in the second half after getting into foul trouble. Whitfield scored nine points, but it took him 13 shots to do it. But it was Ehlers' performance, which included a seven-for-eight night from the floor and an 11-12 night from the foul line, which meant that the Bison—despite shooting 48 percent from the floor and holding a 42-25 rebounding edge—would go home in third place in the Patriot League.

The game was another in the recent history of tough, close contests between the two of the Patriot League's best. Lafayette won all three meetings against the Bison last season-including a victory in the League Championship game-by a total of 14 points, and expected another close contest last night. Both teams opened leads of nine points or more in the first half, which featured three lengthy runs. As has been custom, though, the squads battled close throughout the second half.

"What a game, huh?," Lafayette coach Fran O'Hanlon joked after the game. "The second half was a typical Lafayette-Bucknell game. Both teams played hard and played well, and again, it came down to the last shot. I'm glad we have a player like Brian (Ehlers), who really knows how to take control in games like this."

Ehler's hot hand nearly wasn't enough for Lafayette. After Lafayette's Tim Bieg hit one of two free throws to give the Leopards a 75-73 lead with nine seconds remaining in the game, Bucknell's Dan Blankenship—in the game

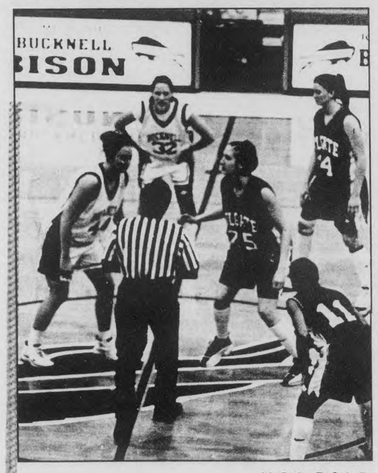
The Bison dominated the Bucknell Open. They will travel to Cornell Saturday, for a tri-meet with Yale.

Women remain on top of the Patriot League



John Frazier—The Bucknellian
Vicki Quimby '02 awaits the tip in Bucknell's 59-57 victory vs. Colgate.

By Andrew Bevan

Momentum is a powerful force.

With just under five minutes left in their Patriot League contest against Colgate last Wednesday, the Bucknell women's basketball team held a seven-point lead over the Red Raiders and were preparing to make their final run to seal the victory. However, in a span of 50 seconds the Bison saw their lead vanish and found themselves trailing by one—with their momentum gradually slipping away.

The game remained extremely close after this point, as freshman guard Molly Creamer made a layup with 1:02 left to play to give the Bison a 58-57 lead. Bucknell held on for the 59-57 victory and improved to 5-0 in the Patriot League.

In a sloppy first half in which there were a total of 25 turnovers, the game remained relatively close. The largest lead in the half by either team was six by Colgate with seven minutes left to play. The Bison hung tough and eventually took the lead with just under two minutes to go, and they headed to the locker room with a three-point lead, 29-26.

After the Red Raiders knotted the first points of the second half, the Bison came out strong, going on a 7-0 run to push their lead to 10 with 16:37 left in the half.

"Offensively we had a better flow in the second half," head coach Kathy Fedorjaka said.

But the Red Raiders would not go away, and two minutes later, they battled back to cut the lead to three.

Over the next ten minutes of the half, the Bison kept their lead, expanding it to as much as seven twice. However, this stretch of the game was very frustrating for the Bison, as they were never able to generate that big run to break the game open. Once again, the Red Raiders battled back, and with just under four minutes to play, they recaptured the lead for the first time since late in the second half.

"We let them back into the game," Fedorjaka said.

Then Creamer took control. With just over two minutes to play and her team down by two, Creamer hit a free throw and then a jumper to give Bucknell the lead again. After Colgate countered with a basket to retake the lead, Creamer followed with a layup to give the Bison the lead for good.

Over the final minute of play Bucknell had many chances to put the game out of reach, but the Bison missed five consecutive free throws before Creamer came through with four seconds left and hit the second of her two shots, giving the Bison the two-point victory.

"My teammates really set me up with some good screens and looks. We knew we couldn't get frustrated and that we just had to stick together," Creamer said.

"She (Creamer) wanted the ball in her hands in the last three minutes," Fedorjaka said.

Creamer finished with a team-

Bison slash records and qualify for championships

By Sean Houston

This past Saturday the Bison men's and women's indoor track teams excelled at two meets. One group of athletes traveled to Penn State for the prestigious National Open, while the other hosted a diverse field of competitors at the Bucknell Open.

Being open meets, there were no team scores or points calculated at either the event, but the Bison men and the women had strong showings at both.

According to LaTonya McSwain '02, the track at Penn State is "one of the fastest in the country if not the world." Many top schools such as Penn State, Princeton, Villanova, Georgetown and James Madison, and numerous club teams like Reebok congregated in the hope of running some remarkable times.

In the face of such stiff competition, the Bison held their own remarkably well. The Bison athletes qualifying for the IC4A championships in March included Wally Dietrich '00 (5000m - 14:42.50), Ron Hess '00 (mile - 4:12.44), David Bronfenbrenner '00 (two mile - 8:27.93) and Brad Wertz '01 (two mile - 8:20.95).

Qualifiers for the ECAC championships included Yetunde Daniels '00, who set a school record in the 400-meters with a time of 56.93, and also qualified for the 200-meters with a time of 25.18. McSwain also qualified while setting a school record in the 500-meters (1:15.27). Other qualifiers were seniors Carly Graystock and Jen Hart (5000m - 17:27.15 and 17:16.60 respectively) and Andrea Nyce '02 (pole vault - 10'6").

The schools invited to participate in the Bucknell Open included Rider, Susquehanna, UMBC, Coppin St., Houghton, Bloomsburg, Western Maryland, Kutztown, Shippensburg, Millersville and East Stroudsburg.

Among the key performers for the men were Brian Schiding '02, whose mark of 24'2.5" won by a comfortable margin and set a school record in the process, Stephen Williamson '00 (400m - 50.92) and the distance medley relay team (Williamson, Eric Furst '03, Matias Palavecino '03 and Bill Bartsch '00 - 10:17.59). Furst also won the 1000 meters in a time of 2:31.52, and Matt Kaplan '00 won the 35 lb. weight throw with a distance of 51'8.5".

For the women, Kim McGrath '00 won the triple jump with a leap of 38'11.5", and Amy Tharp '03 topped the 1000 meters in a time of 3:00.64. Linda Mangan '00 took the 3000 meters in a time of 10:34.86, and Andrea Beisser '03 won the 5000 meters in 17:59.

The next scheduled meet for the Bison is this Saturday at Cornell, where they will compete with Yale in a tri-meet.

Sports

Hockey team rolls over Penn State; remains undefeated

By Trip Sanders

The Bucknell ice hockey team skated into action last Friday night against a Penn State West team that beat the Bison last year. What a difference a year makes, as Bucknell turned the tables around with a 10-1 shelling of Penn State in State College.

Bucknell skated to an early lead with strong play from captain Jeff Werring '00, Nate "The Animal" Ledyard '02 and Chris Newhouse '01. They outhustled the Nittany Lions on the first shift to score, setting the tone for a very long evening for PSU. Over the next three shifts, the Bison added goals by Brian Hnetenka '01, defenseman Ramsey "The Rammer" Wilcox '00 and Dave Streets '01.

Bucknell jumped to its early lead by utilizing its depth of players and aggressive forechecking. Freshman Nate Streets played well for the Bison on defense, making good plays and bruising the Nittany Lions with checks. The first period ended with the Bison ahead 4-0.

The second period featured more of the same solid all-around play from Bucknell. The Bison added to their lead with tallies from freshman Eric Silvestri, Hnetenka and Wilcox. Ted O'Donoghue '00 contributed two assists and solid defensive play.

The statistics illustrate the dominance of the Bison, who outshot PSU 45-15 and outchecked them by a wide margin as well. The goaltenders, Paul Van Dillen '01 and Chris Ellis '00, again exhibited stellar play between the pipes, allowing only one goal on a defensive lapse late in the third period.

Overall, this year's team continues to dominate opponents with a balanced attack from four offensive lines, hard checking, strong defensive play and solid goaltending. The Bison carry a 6-0-1 record into February and are a team preparing for the playoffs. They will play at the Sunbury Ice Arena this Saturday at 4:15pm against Dickinson. Come out to watch an exciting game. For directions, email Rocco Russo (rrusso@bucknell.edu).

Vermiel's prayers finally answered

Jones' super stop wins a truly "Super"Bowl

By Rob Schmicker

Football is a team sport, but often it is individuals who stand out and get all the attention. We all heard about Kurt Warner, Marshall Faulk, Eddie George, Jevon Kearse and Steve McNair going into this year's Super Bowl, but none of them came up with the decisive tackle that won the game.

Enter Mike Jones, who was virtually unheard of before the game. He made the biggest tackle of his life, single-handedly stopping the Titans Kevin Dyson on the one-yard line as time ran out. But, Jones never would have been in that situation had the Rams converted from inside the red zone in the first half.

The Rams went right at the Titans to start the game, gaining 277 yards passing in the first half alone. In the middle of the field, they seemed unstoppable, but they failed to do anything once they got inside the twenty. Six possessions led only to nine points and Tennessee was still in the game, down 9-0 at the half.

A big reason for Tennessee's first half futility was the fact that Eddie George ran the ball only 7 times for 18 yards. They went against what got them to the Super Bowl: wearing the other team down with their physical running game. In the second half, he gained 77 yards against a fresh Rams' defense. There's no telling how many he could have had if they had chosen to run the ball all game instead of relying on McNair's arm.

After a mediocre first half, McNair silenced a lot of critics with his gutsy second half play. When the Rams played exceptional defense against the pass, McNair took off down the field. He finished with a new Super Bowl record for quarterbacks with 63 yards rushing. This kept the Rams' defense off guard and enabled the Titans to drive 87 yards in less than a minute and half, only to fall short of the tying touchdown by a yard as time expired.

Courtesy of the AP

Dyson's outstretched arm comes up short, and so did the Titans hopes.

Contrary to McNair, Kurt Warner threw for a Super Bowl record 414 yards and had negative yards rushing. In the teams' first meeting this season, Warner was sacked six times and the Rams lost. On Sunday, he was sacked only once and was able to throw the decisive, 73-yard touchdown strike to Isaac Bruce with 1:54 left in the game. His toughness came through, showed why he was the NFL MVP this season.

Overall, this was one of the better played Super Bowls in a long time. There were no turnovers—a big reason Tennessee fell short. The Rams made the big plays in the second half—when it counted. Not giving the ball to Faulk early was a mistake, but the Rams wanted to make sure that they exploded early with the passing game. Warner responded with 414 yards and the Super Bowl MVP. Along with McNair, he showed the world what the quarterback of the new millennium looks like - which is very exciting.

North America vs. the World:

NHL All-Star Weekend Faces off in Toronto

By Kevin Logan

The Super Bowl is over. While football fans may be crying their hearts out, hockey fans can be found gearing up for what is about to take place inside the dazzling Air Canada Centre in Toronto. That's because this brand new home of the Maple Leafs, which opened for action only last February, is playing host to NHL All-Star Weekend 2000.

While the all-star festivities have been ongoing for the past two weeks, the main attractions are set to hit the ice this Saturday and Sunday, beginning with the revered Heroes of Hockey Game, which will feature the Maple Leafs Heroes as they take on the Heroes of the NHL.

Instead of the traditional single-game format, two separate versions of the game are being held this year. Only players from the league's original six teams will skate on the NHL Heroes team in the first, while those who began their playing days after the league began expanding its borders will take to the ice in the second.

Following these games is the highly exciting and challenging FedEx/NHL SuperSkills competition, in which the NHL's best of today will compete at such events as the puck control relay, fastest skater, hardest shot, rapid fire, accuracy shooting and breakaway relay.

The weekend wraps up on Sunday, Feb. 6, with the 50th NHL All-Star Game, as the North American All-Stars face off against the World All-Stars. Detroit head coach Scotty Bowman will be behind the bench for the World team, while the North Americans will be led by Toronto's Pat Quinn. Starting in goal for World will be the Buffalo Sabres Dominik Hasek, who just last season posted an outstanding 1.87 goals against average with nine shutouts. At the other end will be the Maple Leafs' own Curtis Joseph, a.k.a. "CuJo", currently playing in his second season with the Leafs after being traded from Edmonton.

World's offense will be led by Pittsburgh superstar Jaromir Jagr (W), who was selected No. 1 with a record-setting one million-plus votes. Rounding out the team up front will be Anaheim's Teemu Selanne (W) and Toronto's Mats Sundin (C), with Detroit's Nicklas Lidstrom (D) and Colorado's Sandis Ozolinsh (D) starting on defense. They will match up against a North American team led by Anaheim's Paul Kariya (W) and Detroit teammates Brendan Shanahan (W) and Steve Yzerman (C) on offense. St. Louis' Chris Pronger (D) and L.A.'s Rob Blake (D) will start at defense.

Keep an eye out for Alaska native and New Jersey Devils rookie sensation Scott Gomez, leading all NHL rookies with 45 points (13 goals), as he will be making his first all-star appearance. Also of note, in the veteran category, this will be long-time Bruins defenseman Ray Borque's 19th consecutive appearance at the all-star game.

With the North Americans having won the only two all-star games played since the format was changed from Eastern vs. Western Conference play, the World team will be looking anxiously to get itself on the board and close the gap. It should make for an exciting weekend in Toronto as the NHL rounds the halfway point of the season.

Experts' Corner

By Ali Ahmed | By Justin McCarthy

Utah vs.LA Lakers

Although the Lakers have struggled lately, Utah should have a hard time competing against their athletic talent. This is especially so since the Mailman is suffering from injuries. As always with the Lakers, how maturely Kobe plays will be key as well as the foul situation with Shaq.

PICK: Lakers by eight

The Lakers, under coach Phil Jackson, are looking like a championship team. For the first time, all the pieces are coming together—except Shaq's free throw shooting. The Lakers won't be able to stop the Mailman from delivering, but they surely will contain him.

PICK: Lakers by five

Sacramento vs. Indiana

The Pacers probably make the best use of their individual talents then any other team in the league, but most of their players are too young or too old. Sacramento's uptempo, ragged style is perfect for disrupting the controlled style of play suited to the Pacers. Jason Williams will decide the game depending on how he sets the tempo.

PICK: Kings by two

A team of young upstarts against a team of seasoned veterans. My pick goes with the veterans. Although Jason Williams and the Kings will provide a few sparks, Reggie Miller and the veteran Pacers provide the only flare.

PICK: Pacers by 12

Phoenix vs. Seattle

Any basketball fan will love to watch this game as the best individual mathup at any position will take place: Gary Payton versus Jason Kidd. They should neutralize each other, but Payton does not have enough quality people around him.

PICK: Suns by 15

Phoenix arguably possesses the best backcourt tandem in the NBA: Hardaway and Kidd. If Gugliotta and Robinson can get on fire the Suns should easily be able to dispose of the hot-headed Payton and the Supersonics.

PICK: Suns by seven

Chicago vs. LA Clippers

This will actually be an interesting game in some regards—maybe. Even though Elton Brand has played great and Kukoc puts up big numbers, Lamar Odom should have a field day against any player the Bulls match up against him.

PICK: Clippers by 20

Chicago - Jordan - Pippen - Rodman - Phil Jackson = loss after loss, and that is exactly what is happening to the Bulls this season. The "new" Bulls lack everything that they possessed in their championship years, most importantly a playmaker. They simply have no one who can match up against the explosive Lamar Odom.

PICK: Clippers by 11

Miami vs. New York

I respect what Pat Riley does, but I hate the Heat. They do have Alonzo Mourning, but the rest of their roster pales in comparison to the talent that the Knicks hold. The interesting match-up will be at small forward, where Sprewell will probably go against Mashburn. Mashburn must be aggressive to keep Sprewell working on both ends of the court.

PICK: Knicks by five

These rivals of the Atlantic Division have had a hatred for each other ever since Pat Riley left New York to coach Miami. Even though the Heat defeated the Knicks in their first regular season meeting, neither Sprewell nor Houston were playing as well as they are now. Also, the aging Ewing is beginning to show signs of his old self.

PICK: Knicks by nine

Sports

Ahead of her class

Freshman Molly Creamer is already BU's go-to player

By Mike Myers

A great man by the name of Rabindranath Tagore stated, "We come nearest to the great when we are great in humility." One could not better express the accomplishments of Bucknell women's basketball player Molly Creamer '03.

In her first year as a Bison, Creamer leads the team in scoring, averaging 17 points per game with a field goal percentage of 42.3%. She also leads the team in 3-point shooting with an average, shooting 36.2% beyond the arc. Creamer has been the top scorer for the Bison in 10 of their 19 games, including a 16-point performance against Colgate last week.

Melissa Lawson—The Bucknellian

Molly Creamer '03 is already one of the best in the Patriot League.

The best part about Creamer's success is her humble personality. Though she has been thrust into the limelight as a freshman, she has kept her composure both on and off the court. "I am just glad I am able to get a chance to play," Creamer said.

This attitude is visible in her unselfish style of play, which has gained Creamer respect from her teammates. "(Creamer) puts the team first always and is so humble - considering her talent and abilities on the court," captain Lori Houck '00 said.

Creamer is from Mendham, New Jersey. She played on the varsity basketball team at West Morris Mendham High School for four years and was team co-captain her senior year. Molly was recruited by many Division I schools for her talent on the court but was drawn to Bucknell by the excellent coaching staff, basketball program, and team. Molly was also impressed by Bucknell's academic environment. She is currently majoring in education and hopes to become a high school teacher.

Head coach Kathy Fedorjaka feels that Creamer is one of the team's greatest assets. "Molly has been an impact player from day one. She elevates the people around her," Fedorjaka said.

Bucknell is currently undefeated in Patriot League play with a record of 5-0. Molly Creamer has been a huge part of the team's success thus far and will be a key player in the Bison's continuing effort to reach the NCAA tournament.

Bison down Lafayette, 63-54 WOMEN

from page 13

high 16 points. Sophomore forward Vicki Quimby added 11 points and 15 rebounds, and senior tri-captain and starting point guard Lori Houck tossed in 12 as well for the Bison.

"Vicki Quimby had the most solid performance of the second half. She was calm and poised and she made big shots," Fedorjaka said.

Good, consistent bench play was another key for the Bison, as Monique LeBlanc '02, Rebekah May '02, Kate Rounsley '02 and tri-captain Lyndsay Earhart '00 put in strong minutes.

"I think that the players are really starting to find a rhythm and they are playing well as a team. Our bench has been giving us strong and reliable play along with the production of the starting five," Fedorjaka said.

"There are no easy games once you get to the Patriot Leagues, every night out any given team can beat another," Quimby said. "We didn't play our best basketball that night, but we did what was needed to get the win. This year's team is full of talent from player 1-11. We are going for the same goal and we all are having fun while we're doing it."

The Bison treaveled to Lafayette this past Wednesday and recorded an impressive 63-54 victory over their Patriot League foe. Houck and Creamer each had 16 to lead the Bison.

This is the first time in school history that the Bison have started league play 6-0.

The Patriot League leading Bison will travel to Navy this Saturday and Holy Cross next Tuesday in important League games.

John Frazier—The Bucknellian

The Bison will play two important Patriot League games this week at Navy and Holy Cross. They are currently 6-0 in League play.

Old rivals, new teammates

Long Island cagers Bailey '02 and Werner '03 excel as Bison

By Craig Kimball

Dribbling down the court at Chaminade High School Brian Werner '03, a highly publicized basketball player, knew he would be playing college basketball. Having been recruited at many top universities, it was only a matter of where he would play.

During his senior year he received a call from his former Long Island rival Bryan Bailey '02, who encouraged Werner to come play basketball at Bucknell.

Bailey was a freshman walk-on to the Bison men's basketball team last season. His quickness combined with his excellent decision making and shooting capability has catapulted him to the starting point guard position this season.

Bailey and Werner were teammates on their seventh grade team, but it wasn't until Bailey's senior year in high school that these two future Bucknell stars would be pitted against each other. The two went head to head in a Long Island rivalry that matched Werner's Chaminade Flyers against Bailey's South Side Cyclones. Chaminade came out victorious, but both players played extremely well.

When asked about the changes in Werner's skill level since they last played against each other, Bailey replied, "He has definitely improved." When posed the same question about Bailey, Werner responded, "I knew he was good in high school, but since then he has really improved his shooting and speed."

Werner, one of the first off the bench for the Bison, has made a significant impact this season. His unique combination of size and speed make him a prime target for the running and gunning Bailey.

The two of them know how the other plays and now, thanks in part to the two former nemeses, the Bucknell men's basketball team has become a Patriot League contender.

Melissa Farrar—The Bucknellian

Werner '03 (left) and Bailey'02 squared off against each other two years ago in high school. They both have been significant contributions on the Patriot League-contending Bison men's basketball team.

Clark Hinkle '32: One of NFL's greats

By Brooke Rea

Before the Super Bowl, before endorsement deals and pro trading cards, there were the "iron men" of football. Big, heavy and fierce, these players battled it out on the field throughout the 1930's, known as one of the toughest periods in football history.

To be great then meant to be strong, fit, fast and rough. One man stood out from these football giants, but it was not because of his 5'11", 202-lb. stature.

Rather, Bucknell graduate William Clarke Hinkle became a collegiate star and, later, an NFL great because of his quickness, skill and versatility on the field. A member of the class of 1932, Hinkle is known today as one of the greatest football players of all time and as the greatest Bison football player ever.

In 1964, at the age of 55, Hinkle received the highest honor that can be granted to an individual football player. He was enshrined in the NFL Hall of Fame in Canton, thus making him the only Bucknell graduate ever to receive the honor.

That prize opened the door for dozens more, as Hinkle was then honored in the College Football Hall of Fame in 1966 and the National Football Foundation Hall of Fame in 1971.

He is also a member of the Pennsylvania and Wisconsin Halls of Fame and was in the first class of ten inductees into the Bucknell Athletic Hall of Fame.

Hinkle's road to stardom began at Bucknell, where he entered as a freshman in 1928. "Hink", as he was known by teammates and friends, had already gained fame by his sophomore year when he led the East in scoring with 128 points.

1929 was a good year for Hinkle, as he made himself known by scoring 50 points in one game against Dickinson and tallying a total of 21 touchdowns for the season.

In 1931,in what possibly was the most memorable moment of his collegiate career , Hinkle punted the ball 100 yards against Villanova, only to have it nullified because of a penalty. He took the kick over again and sent it flying an impressive 86 yards the second time around.

Former Bucknell coaching legend Carl Snavely recollected in Feb. 25, 1971's *Union County Journal*, "Hinkle was a big, rugged fullback with the finest physique of any football player I've ever seen. Without a doubt the greatest defensive back I have ever seen or coached."

Hinkle left behind a legacy when he graduated in 1932. He was the first Bucknell player with more than 1,000 yards total offense in one season. He had a total of 37 touchdowns and 230 points in his college career. In 1931, his final season, Hinkle led the to a 6-0-3 record, the only undefeated record in the East.

In January 1932, Hinkle played in the East-West game in San Francisco. There he was named outstanding player and was picked to play for the Green Bay Packers.

He played with the Packers from 1932-1941 under coaching great Curly Lambeau, who praised Hinkle in the Feb. 25, 1971 *Union County Jounral* as "the greatest all-around fullback to ever play in the National League."

Hinkle was one of the most versatile and hardest-hitting players in the NFL. He was a rough blocker and tackler, a skilled passer, punter and placekicker and a runner. During his 113 games with the Packers, Hinkle played fullback and linebacker. He was the NFL's top scorer in 1938, and earned all-league honors in '36, '37 and '38. He scored 373 points and rushed 3,860 yards during his career.

Hinkle joined the ranks of former coach Carl Snavely and Bison star Andy Wyatt (1888-1891) when he was inducted into the National Football Foundation Hall of Fame in 1971. He regarded this as his most treasured award.

In 1942, Hinkle joined the U.S. Coast Guard as a lieutenant and came out four years later as a commander. He served in the North African and North Atlantic campaigns of World War II.

In the 1970's, Hinkle was living in Toronto, OH (his birthplace) and working as a manufacturer's representative for J.P.M. Company of Lewisburg, PA.

He also worked on a television sports show in Steubenville, wrote a sports column for the local paper and was a speaker and lecturer. Hinkle played golf throughout his fifties and sixties until his death in 1988.

Bucknell drops close contest in Easton

BISON

from page 13

after starting point guard Bryan Bailey fouled out seconds earlier—set up a play designed to find an open 3-pointer. Valter Karavanic broke free from Lafayette defender Rob Worthington, but missed an open 3-pointer from the left elbow as time expired. Karavanic, Bucknell's leading 3-point shooter on the season, missed seven of eight of his attempts last night.

"We were going to win it," Flannery said. "We got the shot we wanted and we'll do it (go to Karavanic again and again. The ball just didn't go down."

At several points in the first half, it appeared as the game wouldn't come down to the final shot, as both teams looked as if the would run away with the game early. Bucknell came out on fire from the opening tip, opening a 13-4 lead six minutes into the game. The Bison shooting suddenly went cold and ball control disappeared, as Lafayette used seven straight points from Ehlers-including a made basket on an intentional foul from Brian Werner- to ignite a 26-4 run that lasted for most of the rest of the first half and gave Lafayette a 30-17 lead. Bucknell rallied to score the half's final ten points, though, to cut Lafayette's lead to three points at the half. Bucknell shot nearly 50 percent in the first half and outrebounded the Leopards 21-14, but committed 14 turnovers and tallied just two assists.

If the first half was a game of free-wheeling runs, though, the second half was a vintage Lafayette-Bucknell battle. Neither team scored more than five straight points in the half as Bucknell took better care of the ball and used strong individual performances to get back in the game.

Lafayette threatened to break the game back open briefly after Brian Burke's 3-pointer with 11:21 left gave his team a 10-point lead, but Bucknell reserve Shawn Asbury briefly took over the game. Asbury, who had connected on just four of 21 3-point attempts on the season, found the perfect time to discover his shooting touch from outside, connecting on 3-pointers on three straight possessions to trim Lafayette's lead to one. Asbury finished the game with 11 points.

Lafayette held on to a slim lead for most of the rest of the second half, relying on clutch 3-point shooting from Ehlers and others while Bucknell's Dan Bowen took over the paint with Ciosici on the bench. Bucknell's only lead in the second half was a thirteen-second, one point edge after a Bailey free throw with 4:50 remaining.

Still, the Bison had a chance to win the game. Bowen's 3-point play with :28 remaining sliced Lafayette's lead to one at 72-71, and after a pair of Lafayette free throws, Karavanic added a layup of his own with 11 seconds left. Bieg hit one of two free throws on Lafayette's next possession, to open a two point lead and set the stage for Bucknell's last play. Karavanic got an open look, but the result was the same: another closely-played game, another physical battle- and other Bucknell loss at Lafayette.

"It was a great atmosphere, great competitiveness," Flannery said. "The experience that our young guys got in the game will help us down the road."

Bowen led the Bison with 20 points on 9-16 shooting, scoring 17 of his points in the second half. Bailey added 15, Asbury 11 and Karavanic 10 for the Bison (12-8, 4-2)

The loss, coupled with Navy's narrow win over Colgate last night, pushes the Bison into third place in what again is a three-horse race in the Patriot League. Lafayette is 6-0 in the League and Navy moved to 5-1 with the win.

Sports

Concussions hinder today's athletes

Concussions are a frightening reality in many of today's sports, especially those that require or put players at risk of contact to the head—most notably soccer, football and hockey.

But the issue hadn't garnered much attention until recently, when the futures of NFL quarterbacks Steve Young and Troy Aikman and NHL star Eric Lindros became impacted by concussions.

Now everyone wants to know what causes concussions, what their short-term symptoms and long-term effects are, and how they can be prevented.

Here's what doctors know: A concussion occurs when part of your brain collides with your skull, usually a result of a blow to the head.

Common symptoms include confusion, "seeing stars," wooziness, short-term memory dysfunction, and unconsciousness. Possible long-term effects include sleep disturbances, personality changes, headaches and memory loss. Severe cases can possibly trigger and exacerbate Alzheimer and Parkinson's diseases.

Commentary

Carmen Mauriello
Sports Editor

What doctors can't tell is which concussion will be the one that sidelines an athlete permanently.

"I don't know how many athletes have sat in front of me and said, `Doc, what is down the road for me if I've had so many concussions?"' Dr. Michael Collins told ESPN.com.. "We just don't know."

With uncertainty surrounding the immediate danger that concussion-prone athletes face, many players have let their passion for the game overcome their sensibility.

A clear example is Young, the 38-year-old San Francisco quarterback whose history includes several Super Bowl rings and MVP awards—and four serious concussions. The most recent occurred against the Arizona Cardinals this past Sept. 27; it kept him on the sidelines for the remainder of the '99-00 season and magnified doctors', analysts', and his agent's recommendations for Young's retirement.

"Steve Young is at higher risk for concussions," Dr. Martin Holland said. "There's nothing that tells me he won't have a fifth or a sixth or a seventh if he continues to play."

Because they are usually risk-takers and may have had their reaction time dulled by past impairment, athletes who have had concussions are at a higher risk of having future concussions.

Yet, Young stubbornly insists on coming back next season, and so do athletes in similar situations. Aikman has had nine concussions in his career—including two in an eight day span last season. Lindros was forced to miss two weeks of action after suffering a concussion against Atlanta on Jan. 14, his third in 22 months.

Concussions have ended the careers of many athletes prematurely. Some concussion-prone athletes have cautiously chosen to retire early. Included are legendary Cowboys quarterback Roger Staubach and hockey players Brett Lindros (Eric's 19-year-old brother) and Geoff Courtnall—both of whom have retired this season.

In hindsight, dozens more probably wish they would have. In a feature on ABC's Super Bowl pre-game show on concussions, former Steelers' great Merril Hoge revealed that the multiple concussions he suffered as a player have left him with some long-term memory loss. Doctors believe that repeated blows to the head may have exacerbated Muhammad Ali's debilitating Parkinson's disease.

The evidence of the damaging effects of concussions and the risk that today's athletes are at of getting them are understood; but the big question is how they can be prevented.

The general consensus is more headgear. Today's modern, high tech football helmets have virtually eliminated skull fractures (a common problem in early 1900s football). Unfortunately, they can't eliminate the danger of concussions because they don't stop the brain from moving around inside the skull.

Hockey has made good progress in instituting headgear among its players. As recently as early 70s, most NHL players chose not to wear headgear, as those who did gained a reputation of being "soft."

Soccer players have drawn attention as being at risk of brain injuries due to head balls, and mandatory protective headbands have been proposed.

Boxers obviously are at a great risk of head trauma, but protective headgear remains only a part of Olympic bouts —with little inroads expected into the professional ranks.

Why, you ask? Because sports fans crave violence. They love seeing a good hit, seeing an athlete battered, bloodied and bruised.

Not just in boxing, but in all contact sports. Contact - that's what sells. Do you think the NFL would be so popular if it was two-hand touch? How about hockey with no checking and fights? No.

People want to see players getting their bell rung in ESPN's "Plays of the Week." The want to hear John Madden say, "He'll feel that one tomorrow." They want to see Rocky (the true American hero who will need an interpreter for people to understand him if those rumors of Rocky VI are true).

"It's not as if we have an NFL that takes the whole (concussion) issue seriously," said sports agent Leigh Steinberg, whose clients include Young and Aikman. "I mean, two helmets hitting together is the logo that we start Monday Night Football with. Lots of money is made from the videotapes that they sell which extol the hits."

My recommendation for reducing concussions and other brain injuries in sports is threefold: continue making improvements and advancements in headgear, de-emphasize the role of violence in sports, and give doctors a greater role in informing players about concussions and preventing high-risk athletes from returning to play.

Since there's no way to remove all the contact from "contact sports" and headgear isn't fully effective in preventing concussions, the role of team physicians is paramount.

They must frequently check for symptoms of concussions in players, airing on the side of caution when allowing them to resume playing after a concussion and issue strong recommendations of retirement to injury-prone athletes in order to make concussions an unfortunate rarity instead of an all too common occurrence in sports.

Wrestlers approaching crunch time

John Frazier—The Bucknellian

Ryan Fasnacht '01 attempts to take down his Maryland opponent.

By Justin White

No pain, no gain. This cliche is very appropriate when describing the '99-00 season for the Bucknell wrestling team. The grapplers now stand at a crossroads as they prepare to enter a critical stretch of their season with a .500 dual meet record.

The tireless training performed by coach John Hangey's team needs to come to fruition in the upcoming weeks of this difficult schedule.

The Bison held on in the waning moments of Saturday's match for a 24-23 victory over a mediocre American team. Then, the following day, Bucknell experienced some growing pains, falling to Maryland, 31-6.

American entered the match against the Bison with only one win on the season. Early on there did not look to be much hope for an Eagles' turnaround as Bucknell began the match strong.

The Bison got six points early, picking up a forfeit at 149 pounds. Junior Ryan Fasnacht and senior Brian Pitzer each added to the lead with a pin.

American chipped away at the 19-point lead, closing the gap to 24-17 with only two matches remaining. An 11-5 win by Peter Tarricone of American cut Bucknell's lead to four heading into the final match, meaning that the Eagles were a pin away from victory.

Bucknell's Rocky Miller '01 held the team's hopes for victory in his hands. The American wrestler fell behind quickly before going on the attack in the final two periods, pressing Miller with his back to the mat.

However, the three-year veteran exerted tremendous willpower to fight off the pin for more than a minute in the final round, claiming victory for the Bison.

"We're moving step-by-step toward the conference tournament," Miller said of the team's progress. It was the 15th time in 16 meets that the Bison have defeated American.

Hangey said that he "didn't expect the score to be so close. We can't be 'on' every day, but we still got the win."

The Maryland Terrapins came to the Davis Gym the following day.

Bucknell again darted to a quick start. Brock Hostetter '03 began the match for the Bison at the 174-pound weight class and defeated his opponent, 10-3.

Next, senior Gbenga Akinnagbe won by a score of 11-4. Unfortunately, they proved to be the lone Bucknell winners. Maryland claimed the final eight weight classes, two by forfeit, on their way to victory.

However, the competition was much closer than the score indicated. The Bison were not able to win the close matches that they had anticipated and needed for victory.

"One match does not make a season," Hangey said.

The Bison face-off against local rival Bloomsburg on Thursday and then head to Buffalo on Saturday. Bloomsburg is ranked in the top 25 in the country.

Miller emphasized the importance of the match to the team. "They've seemed to step it up against us the last couple years. This is one that we want to win," he said.

Women's crew trains in Miami over break

By Jennifer Ciotta

Over winter break, five members of the varsity women's crew team trained in Miami Beach, Florida for their upcoming spring season.

Annie Calcagni '00, the open weight women's captain, and Kelly Wanger '00 rowed a pair to individually improve upon technical rowing skills. Elizabeth Barrows '00 and Julie Engel '03 trained as a pair as well. Joined by coxswain Melissa Sholtzow '02, the women converted to a four and focused on rowing as a team.

For 11 days, the women woke up at 7:00 a.m. and worked out on the water for an hour and fifteen minutes. Next they hit the weight room at 11:00 a.m. to improve upon power and strength. The day was capped off by a 4:00 p.m. row where the women were on the water for another hour and fifteen minutes.

"We spent 11 days brushing off the cobwebs," Barrows said. "It was an ideal situation since it would have been one to two months water practice here."

The highlight of the trip was rowing pieces against Boston University, a traditionally strong rowing school. The Bucknell women held their own when faced with this challenging test of skill and strength.

"Rowing against Boston University was a good competitive experience," coach Steve Kish said.

Overall, the winter training trip was a complete success. It left the women's crew team looking forward to a rewarding spring season.

"There are three seniors in the boat with the advantage of four years of racing experience," Calcagni said. "We know what to do (in competition)."

Joined by the women's pair consisting of Sarah Diegnan '00, the lightweight women's captain, and Keri Heuberger '02, the team will kick off its season with the Erg Armageddon on February 20.

The Bison also look forward to a spring break training trip in Augusta, GA and the Spring Invitational on March 25-26, which will be hosted by Bucknell.

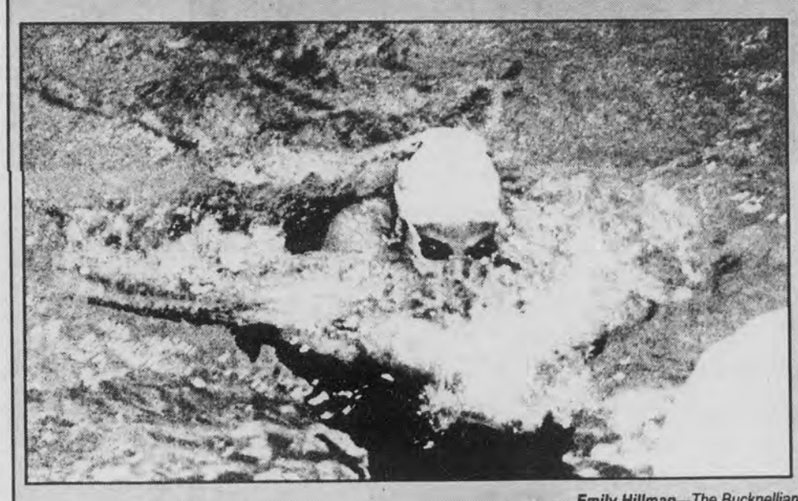
Punxy Phil says write for sports

Swimmers peak at right time



Emily Hillman—The Bucknellian

The teams' final dual meet before the league championships is Saturday at Penn.

By Chuck Vicente

A wise man named Plautus once said, 'There are occasions when it is undoubtedly better to incur loss than to make gain."

However, the Bucknell swim team incurred both loss and gain in their meet last Saturday. Despite losing to both Army and Lehigh, head coach Jerry Foley said that the men's and women's teams had a great showing individually and as a team.

"[The team looked] outstanding," Foley said. "We swam right where we want to be. We're at our peak." And that peak is at the perfect time with Patriot League Championships steadily approaching.

Although the men's and women's teams lost to Army, 161-82 and 137-104 respectively, and Lehigh, 150.5-92.5 and 155-88 respectively, many Bucknell swimmers came away with impressive performances.

Among them was Chris Neary '02, who took first in the 50-yard free with a time of 21.36. Coach Foley described him as having the best start in the league.

"[We swam] excellent," Neary said. "We are much better than last year at this time."

One main reason that the teams are looking so strong is the emergence of key freshmen. Darby Golino '03 helped boost Bucknell's score by posting a 2:07.44 to win the woman's 200-yard back, which was impressive enough to be the best in the league this season. Kurt McCoy '03 swam an excellent men's 1000-yard free.

Clocking in at 9:48.83 and earning second place, McCoy qualified for the ECAC tournament.

Other standout performances on Saturday came from Abby Weaver '02, who grabbed second place in both the 50-yard free and the 100-yard free, and Molly Lowe '01, who earned second place in the 200-yard fly.

The Bucknell men's and women's swim teams have three more meets remaining this season: this Saturday at Penn, the Patriot League Championships and the ECAC Championships.

Every team ideally likes to peak at the end of season competition. After last Saturday's performance, the Bison appear ready for their upcoming stretch. "We are definitely on the right path," Foley said.

Presidential search down to three

By Peter Van Emburgh

The Presidential Search Committee has announced that they are one step closer to finding President Bro Adams' successor, narrowing the pool down to three finalists. "Those three people will be on campus shortly," said Professor John Peeler, chair of the faculty and a faculty representative on the committee.

Since the announcement of the nationwide search in September, the committee tendered to over 200 names. The applicant pool was chopped to 62 names during the fall semester and, by early January, the committee had selected 10 semi-finalists to be interviewed off-campus. The next step of the search is supplementary interviews during a campus visitation and additional off-campus interaction.

"At the outset of the search, the committee's objective was to find the most talented and suitable candidate to serve as Bucknell's fifteenth president," said Trustee Lee Hamilton '57, chair of the committee.

The President acts as the chief operating officer and reports directly to the Board of Trustees. The President is expected to build upon the special qualities and traditions of Bucknell to lead the University to new levels of academic excellence in the next century.

According to Hamilton, the committee pursued candidates that have shown exemplary academic careers as well as people hailing from "nontraditional" careers, such as business, religion or the military.

"However, the three remaining candidates are 'traditional' presidential search candidates," Hamilton added. "These candidates have had careers in teaching or in the administration of institutes of higher learning."

According to Peeler, there is a female candidate, a sitting president of a University and all three hail from academic careers. Due to the nature of the search, the identities and backgrounds of each finalist can not be released in order to maintain the confidentiality of the candidacy.

"I feel [that the confidentiality of the search] is personally frustrating," Peeler said. "I have maintained that we are not doing the candidates any service by bringing them to campus under these circumstances." Peeler feels that it is unfortunate that the majority of the campus constituencies will not have a chance to hear, see or pose questions to the candidates.

Each candidate, during his/her visitation, will interact with representative groups on campus. A select number of students, alumni, parents, administrators and staff will have the opportunity to converse with the finalists.

After the campus visit, the finalists will undergo final screening by the committee, including further interviews and reference checks. The committee will then make their recommendation to the Board of Trustees for the ultimate decision.

"Everyone that participates in the interview process will be free to pass on whatever comments they wish to the board for consideration," Peeler said.

According to Hamilton, the University will be well served by any of the three remaining candidates. "I feel very comfortable with the finalists," Hamilton said. The committee is "very much interested" in the reaction of the finalists by the campus representatives.

Hamilton said that the Board will select Bucknell's next president by no later than mid-March.

Faculty responds to Trustee tenets

Ideologies clash as professors offer formal reply to Board's "Bucknell's Character"

By Chris Ellis

University faculty, after expressing extreme concern with the method of release and philosophies embodied in a document released by the University trustees in November, have formulated a document which, in effect, calls on Trustees for an open dialogue about the direction of the University.

The original document—referred to by the Faculty as "Bucknell's Character"—was intended to be a philosophical statement of tenets deemed essential by Trustees to the University's development. The faculty response, though, raises questions of the goals and policy objectives of the Trustees—and, perhaps even more importantly, addresses a broader issue of the role of open discourse on University policy issues.

The issues raised by the faculty express concern with both the method the Trustees used to develop their statement and release it to campus and the philosophies explicated in the statement. The response by the faculty, which was generally formulated in a special closed-session faculty meeting in late November and the regular December faculty meeting, expresses disdain for the timing and philosophy of the Trustees' release, but is also an attempt to initiate conversation with the Trustees about the goals and directions the University should take. According to many, the faculty response was seen as a necessary move.

"I believe that most members of the faculty thought it was important for the faculty as a whole to respond to the Trustees' written statement," said Alice Poust, associate professor of Spanish and secretary of the faculty. "At the same time, I think most agreed that a detailed response to the various points of the Trustee document would not be the most effective way to proceed at that time."

Instead, the faculty drafted a document that, while addressing a few specific tenets of the Trustee plan, generally critiques some statement and philosophies of the trustees. More importantly, it encourages open dialogue among the two constituents, a dialogue that may have been jeopardized by the method in which "Bucknell's Character" was released.

According to John Peeler, professor of political science and chair of the faculty, only President William D. "Bro" Adams knew about the two-year formulation of "Bucknell's Character", and no other administrators nor faculty members were informed.

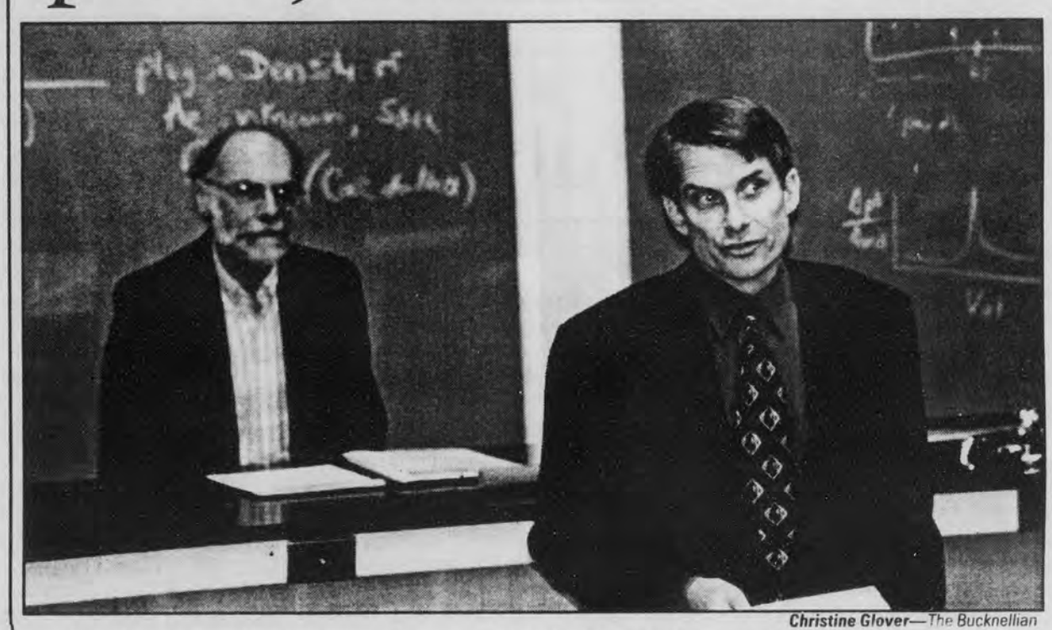
"Except for the President, no senior members of the administration even knew the document exited," Peeler said. "The fact that it was put out on such short notice with no prior input from the campus was a cause for concern."

Also crucial to the faculty's response was an impression that "Bucknell's Character" may not have been simply a statement of philosophy, but a statement of policy. No policy initiatives were directly stated in the document, but many feel that philosophies that would affect University policy were implicit in the tenets.

"A lot of faculty and administrators looked at the statement and thought that it would serve as a background when considering policy proposals," Peeler said.

See FACULTY, page 2

Peeler leads faculty with patient, deliberate demeanor



Christine Glover—The Bucknellian

Professor John Peeler (back) has been instrumental in finding a replacement for President Adams.

By Jared Silliker

He is a politician, a negotiator, a peacemaker.

His leadership has been strong, but flexible in considering all perspectives.

He is John Peeler, faculty chair and professor of political science.

Peeler, in his 32nd year at Bucknell, is finishing his four-year term as the chair of the University faculty, and has served as an integral piece in representing faculty interests with other campus constituencies.

Besides physically presiding over monthly faculty meetings, Peeler is a connector between the faculty and both the administration and Board of Trustees-relationships that are often strained and tension-filled. These groups often hold significantly different ideologies in working toward the improvement and development of the University.

There are also some vastly different types of individuals involved. Communication is a key in this regard, and Peeler has been invaluable in improving this interaction.

"I find it interesting to try to bring people together ... to get people working together on things they have in common," Peeler said. "And then to deal effectively and constructively with conflict."

See PEELER, page 3

John Hardt named new athletic director

By Jim Leahy

The University's new athletic director, John Hardt, will arrive on campus on Tuesday, Feb. 15. Hardt will replace Interim Athletic Director Brad Tufts and former Athletic Director Rick Hartzell.

Since 1996, Hardt was the Associate Director of Athletics for Administration and Compliance Services at Michigan State University. He supervised the sports medicine and athletic training staffs, strength and conditioning staff, equipment operations, computing and technology services and NCAA/Big Ten rules compliance services. Hardt also handled all departmental legal matters, was the university's chief compliance officer and assisted with the athletics department's strategic planning.

"I am humbled and honored by this opportunity to lead the athletics program at one of the nation's premier academic institutions," Hardt said. "By achieving the ideal balance between successful academics and athletics, Bucknell continues to be recognized as a model for NCAA Division I athletics."

As a native of Iowa, Hardt attended the University of Iowa and was a member of the Hawkeye football team that went to the 1982 Rose Bowl. He graduated cum laude in 1984 with a bachelor's degree in English and later earned his law degree from Iowa. Hardt currently stands as a doctoral candidate within Iowa's College of Education.

Prior to his tenure at Michigan State, Hardt spent five years at Syracuse University as Director of Athletic Compliance where he oversaw all aspects of the university's NCAA compliance program. Before Hardt arrived at

Engineering recieves $300,000 grant

By Katie Marston

The College of Engineering at the University has received a $300,000 grant from the GTE Foundation to develop a new collaborative learning studio in Dana Engineering Building. The laboratory will allow students to investigate networking technologies and system software and hardware in ways not now available through other university facilities.

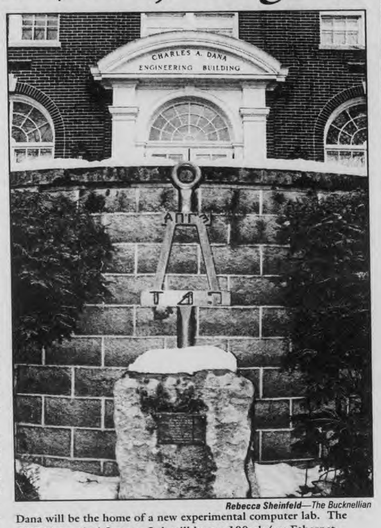
"The creation of the lab and the new studios is an exciting moment in the distinguished history of Bucknell's College of Engineering," said Joseph A. Humphrey, dean of the College of Engineering. "We are grateful to the GTE Foundation for enabling us to expose students to state-of-the-art technology that will be an essential part of networked computing systems in the next century."

The facility will be named the GTE Networked Systems Laboratory and will include 20 experimental computers with a 100mb/sec Ethernet. These machines will provide reliable remote and network access, while being configurable to run multiple operating systems. The new lab will be housed in one of the two new "collaborative learning studios," which will be shared by all five departments of the College of Engineering. These two modern, flexible studios will contain accompanying seminar rooms, along with a staging area for student and faculty project materials.

The learning space will be used to develop and explore new methods of instruction aimed at helping all University engineering students learn their subject material more effectively. At the same time, students will be learning collaborative approaches to solve open-ended, real-world problems like those they will face in the workplace after graduation.

"GTE's grant will provide equipment and software support, laying a strong foundation that will enable the University to offer current technology platforms, as well as adapt to future developments in networking," said Maureen Gorman, vice president of the GTE Foundation. "Student achievement will be enhanced through project-based, group-learning activities on real, not simulated, networks. This effort should help counter the significant number of information technology jobs that are today going unfilled due to lack of qualified applicants."

The GTE Foundation, the philanthropic arm of GTE Corporation, is one of the largest corporate contributors in the United States. It plans to provide $32 million in 2000 to charitable and educational institutions on behalf of GTE and its thousands of employees.



Rebecca Sheinfeld—The Bucknellian

Dana will be the home of a new experimental computer lab. The GTE Networked Systems Lab will have a 100mb/sec Ethernet.

Public Safety Log

February 2, 2000

VANDALISM/CRIMINAL MISCHIEF (Bias Related) - Public Safety received the report that unknown person(s) defaced a University poster at Larison Hall. The incident is under investigation.

February 3, 2000

UNDERAGE CONSUMPTION/PUBLIC INTOXICATION - Public Safety responded to Larison Hall for the report of an intoxicated female who had vomited in the safe escort vehicle while being transported back to campus from downtown. The female was identified as a University student and charged with underage consumption and public drunkenness.

VEHICLE ACCIDENT - Public Safety responded to the Physical Plant garage for the report of a minor vehicle accident involving two university vehicles. No injuries resulted from the accident.

INFORMATION/MISSING PROPERTY - A student reported to Public Safety that a parking decal was missing from her vehicle. The incident is under investigation.

February 4, 2000

RECKLESS DRIVING - Public Safety responded to the Bucknell West practice fields for the report of a student driving on the fields. Citations for reckless driving, disorderly conduct and property damage were issued.

February 5, 2000

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Vedder Hall for a fire alarm activation and found that a pull station had been activated by unknown person(s) for unknown reason. The incident is under investigation.

February 6, 2000

INFORMATION - Public Safety responded to the Gateways for the report of vandalism to the common area of an apartment. The Office of Housing and Residential Life was contacted for information. The incident is under investigation.

MEDICAL ASSIST - Public Safety responded to Larison Hall for the report of an ill student who had temporarily lost consciousness. When Public Safety arrived the student was recovered. The individual signed a form refusing medical treatment.

February 7, 2000

MISSING PROPERTY - A student reported to Public Safety that her jacket was taken during a visit to the Phi Gamma Delta Fraternity. The individual was advised to make notification to the Office of Housing and Residential Life with reference to a university residence hall key in the jacket's pocket.

INFORMATION/PROPERTY DAMAGE - Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a broken window. No witnesses or suspects were located in a search of the area.

MEDICAL ASSIST - Public Safety responded to Davis gym for the report of a student with an ankle injury. The individual was transported by Student Health Services the individual to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION/ALLEGED THREAT - At 4:00 p.m., a student reported to Public Safety that she heard loud music and conversation in the Harris parking lot earlier in the morning (3:00 a.m.) University officials were notified and the incident is being investigated.

This week in Bucknellian Headline *History*

Annual Relay Races

February 6, 1900

The sixth annual relay meeting given by the University of Pennsylvania will be held on April 28 on Franklin Field. Already many inquiries concerning the games have been made, and the interest seems greater than ever. The schools invited are more numerous than in previous years, while several additional colleges have applied for admission. The championship college contests promise to be the best in the history of American sport. Besides the Yale, Chicago, Georgetown, and Pennsylvania teams, who are practically assured, Cornell, Michigan, and Notre Dame have signified their intention of sending one or more teams for these contests. Princeton is also reported as intending to enter two teams.

In previous years the athletic events besides the relay races have been closed to University of Pennsylvania men. Because of numerous requests, and in harmony with the policy of development pursued by the managers of these games, these events will this year be open to all college men, graduate or undergraduate.

Hinkle Visits B.U. with Playing Mate

February 5, 1936

Clarke Hinkle, one of the greatest backs ever to represent Bucknell on the gridiron, and who has been continuing his football fame for the past three years with the Green Bay Packers, professional team, returned last week for a short visit with his school and team mates at the Sigma Alpha Epsilon house. Bobby Monnett, All-American halfback in 1932 at Michigan State and now playing in the Packer's backfield, accompanied him. They are two of the All-American and pro players traveling the country on a lecture tour of larger high schools, sponsored by the General Motors Corporation.

Hinkle has been playing with the Green Bay Packers ever since he left Bucknell and has built up an enviable record as a 'valuable back.' He is known for his accurate kicking. A 47-yard field goal against the Detroit Lions this fall, which won the game 3 to 0, and a 40-yard field goal in drizzling rain on a muddy field against Boston, are examples of his 'educated' toe.

'Moore' on Space and Flight Exhibit Featured During Engineering Week

February 10, 1963

Dr. Heber G. Moore of the Manned Space Flight Center in Washington will visit the campus in Tuesday. He will deliver a special lecture in conjunction with the "Manned Space Flight" exhibit that goes on display at the Dana Engineering Building on the same day.

Dr. Moore will appear in the Olin Science Auditorium next Tuesday at 7:30 p.m.

In addition, the audience will be invited to view motion pictures on "Project Apollo" and "America in Space."

The exhibit is being sponsored jointly by the departments of mechanical engineering and astronomy at Bucknell and the National Aeronautics and Space Administration. It has been timed to coincide with the national observance of Engineers' Week.

Included in the display are scale models of the three-man Apollo space capsule, the two-man Gemini space capsule, a Lunar Excursion module, the mercury capsule, and a full-size model of an astronaut in an authentic space suit.

The models will be on display daily, except Sunday, in the lobby of Dana Engineering Building. The exhibit ends February 24.

Arson Suspected in Vedder Hall Fire

February 13, 1987

One of the largest fires on campus this year occurred early Monday morning on the first floor of Vedder Hall West. The fire, which broke out shortly before 2:30 a.m., was contained in a trashcan in the first floor hallway. The fire is suspected to have been started by people not affiliated with the University.

David Vituccio '90 said he had just gone to bed when he heard some commotion in the hall. "I heard some people laughing and all and it really just sounded like people on the hall hanging out. Then I heard what sounded like pizza boxes go into the trashcan. The commotion stopped and about two minutes later the alarm went off.

"We've had so many false alarms that I wasn't going to get out of bed, but because I heard these guys outside, I thought they might have pulled the alarm, so I went to chase them. Then, when I got outside my door, I saw flames." There have been 70 alarms since the beginning of this academic year, according to Vedder R.A. Eric Anderson '88.

Minutes before the alarm went off, several students watching television in the basement of Vedder saw two men wandering around. "They looked like they didn't belong in the building, and they were obviously looking to find some mischief," according to Anderson, who talked to the students.

Compiled by Jim Leahy

AD From page 1

Syracuse, he spent four years with the NCAA as a compliance representative, where he was a liaison with the Big Ten, the Big Eight, the Pac-10 and the ACC. Before the NCAA, Hardt was an administrative assistant in the University of Iowa's Office of Athletic Student Services.

According to President Adams, "John Hardt will be a strong leader with a good vision for Bucknell's strong and comprehensive program. He has demonstrated in a short time all the critical skills and understandings, plus the energy and enthusiasm, that Division I programs require. In particular, he appreciates the student-athlete model that operates at Bucknell, where academics always come first but athletic achievement is still considered important."

FACULTY From Page 1.

cy proposals," Peeler said. "Is this document (Bucknell's Character) policy? If you accept the widespread view on campus that it is some kind of policy statement, then more campus input is necessary."

In addition to the general criticisms, six specific tenets were critiqued and questioned in the Faculty response. In particular, the faculty questioned the University's commitment to "Judeo-Christian values and principles. In their response, the faculty expressed concern that this ethic may not be inclusive enough to foster development of campus diversity.

"We felt it important to show the Trustees that their document may be interpreted in ways that perhaps they had not anticipated," Poust said. "We were concerned that certain phrase could be viewed negatively by some members of the University community and beyond."

The faculty document also directly addressed concerns of the proper balance between faculty teaching and scholarship, the composition and direction of the University curriculum, and the role of the University President in implementing policy objectives.

Peeler believes that the Faculty's main mission in issuing a response to "Bucknell's character' is to open campus dialogue about the issues addressed in both documents. "The Strategic Tenets articulated in 'Bucknell's character' in general treat subjects about which reasonable people might differ," read the faculty response. "They are appropriate subjects for reasoned dialogue. By publishing them as fixed, not subject to change, the Board appears to foreclose real dialogue. Even though it promises to 'consider other viewpoints,' it states that it will do so 'against the backdrop of this document' ... The character of the University cannot be determined by the action of the Board."

By many accounts, the Board of Trustees appears receptive to faculty concerns. conversations regarding the issues of the documents have already occurred between Peeler, Trustee Chairman James Schubauer, President Adams and BSG president Chris Bouchoux '01.

Shortly after spring break, focus groups with members from each of the campus constituencies will meet to further discuss "Bucknell's Character" and the direction of the University.

"I think that the divisions between the faculty and trustees are less than what might appear," Peeler said. "We are both trying to make Bucknell a better place, and in many ways, we agree. In the course of a conflict like this, it's easy to lose sight of the many ways in which we do agree."

"We cannot continue to move forward as an institution if we cannot work together. We can't move ahead with where we want to go if we waste time and energy battling each other instead of pulling on the same rope."

Israel Soldier and Militiaman killed in Renewed Fighting with Hezbollah

An Israeli soldier and a pro-Israeli militiaman were killed Tuesday in renewed fighting with Hezbollah guerrillas in southern Lebanon, just hours after Israeli warplanes extensively damaged the electric power grid around Beirut.

Israel is warning that further attacks on its troops will provoke new retaliation. The soldier, according to the Israeli army, was killed a few kilometers north of the Israeli border by a direct hit from a missile fired from the village of Nabetiyeh. He was the sixth Israeli soldier killed this year.

The militiaman from the pro-Israeli South Lebanon Army was killed by what was described as anti-tank fire in Israel-occupied southern Lebanon.

Israel said its attack on Beirut's power grid was a warning to the Lebanese government and Hezbollah to stop the attacks on its soldiers. Fifteen civilians were injured in Israel's strikes on the power grid.

Lebanon and Syria accused Israel of violating a truce agreement intended to protect civilians from attack during military operations.

Large Internet Site Hit By Hackers

The Internet was reeling Tuesday night as attacks by hackers on a number of high-profile web sites continued. During the early evening on Tuesday, CNN.com confirmed that it was the latest site to suffer. "At 7 p.m. EST, we were attacked by hackers. A denial of service attack occurred until 8:45 p.m. We were seriously affected. We were serving content but it was very inconsistent and very little," Edna Johnson, director of public relations for CNN Interactive, said in a statement.

"By 8:45 p.m., our upstream providers had put blocks in place that are shielding us and we are now serving content."

The leading auction Web site eBay and the Internet-based discount retailer Buy.com were crippled Tuesday by outsiders, and online retailing giant amazon.com also came under siege late Tuesday.

Amazon's Web site was virtually shut down Tuesday with problem that appeared similar to the failures that have hit other popular Web sites in recent days.

Amazon said in a statement that its site was inaccessible for more than one hour late Tuesday because a "large amount of junk traffic" was aimed at the company's computers, tying them up and preventing nearly all its customers from making purchases.

The incidents on Tuesday at Buy.com and eBay Inc. came one day after a hacker onslaught knocked Yahoo!'s heavily trafficked web site out of service for about three hours. Yahoo said that it is cooperating with the FBI and other law enforcement agencies in an investigation of who perpetrated the cyber attack.

Nitrogen Leak Apparently Caused Missile Test Failure

A leak in a section of metal tubing that carries frigid nitrogen gas appears to have been the cause of the January failure of a national missile defense interceptor system, U.S. defense officials say.

"We are 95 percent sure that [the leak] was the problem," Pentagon spokesman Ken Bacon said Tuesday, adding that the $100 million test failure could cause a delay of weeks in a third test of the system.

Bacon said investigators had virtually concluded that no significant design flaw caused the experimental "hit-to-kill" interceptor, fired from Kwajalein Atoll, to miss a dummy warhead target in space on January 18.

"The good thing about this is that it is fairly easy to fix. You don't have to tear the whole thing apart," Bacon said.

Defense Secretary William Cohen told the Senate Armed Services Committee on Tuesday that President Bill Clinton would still be able to make a decision this summer on whether to immediately begin building a controversial system of 100 interceptors in Alaska or further delay deployment.

Clinton is under heavy pressure from Republican congressional leaders to proceed quickly with a slimmed-down version of former President Ronald Reagan's space-based "Star Wars" missile defense in order to protect U.S. cities against possible limited future attacks by such "rogue nations" as North Korea, Iraq and Iran.

If a decision is made to build and deploy such a system, it is envisioned that 100 interceptor missiles would be fielded to defend the U.S. against a limited ballistic missile attack.

Teacher Barred for Calling Hitler "Cool"

A substitute teacher has been barred from the Boston's city schools for telling students, "Hitler is cool."

"I have no idea how the conversation got started or where it was going, but his statement was inappropriate in front of children," Jane Wilson, principal of J. Henry Higgins Middle School, told The Boston Globe. "We don't want anything [said] that would be controversial with students."

School officials would not identify the teacher, but said he had extensive experience substituting in Peabody, which is north of Boston.

Wilson said the teacher was supervising a group of seventh-graders two weeks ago when he made the comment. She said several students were offended, and they reported him to school officials.

The teacher told administrators that he meant that Adolf Hitler was dead so his body is cold, according to Superintendent Louis Perullo.

News Briefs Compiled By: David Arnold from CNN Interactive

The Road to the White House

By Brian Watson

The Republican establishment experienced a major shakeup when Arizona Senator John McCain took the New Hampshire primary by nineteen percentage points. GOP's in Washington are now forced to take a closer look at Texas governor George W. Bush—their hand-picked golden boy—and decide if he really is the right man to retake the Oval Office.

On the other side, Democrats watched as insurgent former senator Bill Bradley lost by a narrow margin but gained more support than expected. Vice President Al Gore remains the leader in the Democratic race, but Bradley's success in New Hampshire may give added momentum as the primary season moves on.

Bush's blunder in New Hampshire, a neglectful campaign highlighted by his father calling him a "boy," allowed McCain to appeal not only to the crucial independent vote, but to Republicans who themselves were leery about the frontrunner's qualification and determination to become our nation's leader.

Looking to capitalize on the general distrust created by the Clinton administration, Republicans see this as a perfect year to take back the executive. One problem exists—the man who many believed would be a shoe-in is now stepping on his own laces.

VIABILITY

Bush's response to his opponent's growing popularity has him attacking McCain's viability and honesty. Redefining himself as "the reformer with results," Bush sought to publicize his successful reforms in Texas while dispelling the reputation of McCain as a maverick for change. While using everything but the term itself, Bush pointed out McCain as a hypocrite, claiming the Arizona senator's efforts toward campaign finance reform cannot be taken seriously because of the amount of contributions he has accepted from lobbyists.

His statements were powerful, but unfortunately for him and his advisers, they were also far from the truth. Referring to an article from The Wall Street Journal, Bush claimed that McCain has taken far more donations from lobbyists than any other candidate. The real numbers show that Bush has received over five times as many lobbyist donations than McCain, and a considerable amount more than either Democratic candidate.

Responding to these accusations to media in Michigan, McCain said: "...all those things are being fired at me and we are going to have to fire back. We won't just respond. We will respond doubly." The former POW and war hero, often criticized for his quick temper, followed with a smile: "We will have a lot of fun while we are doing it ...We can play as rough as anybody."

The growing trend of looking to the person more than the issues is digging Bush into a deeper hole. McCain's camp is taking full advantage, promoting their candidate as an ideal leader, military hero and trustworthy competitor. Bush's new strategy attacks McCain's stance on campaign finance reform, a movement the senator has led for years. Whether or not voters will listen to Bush's offensive is yet to be seen, but progress must come soon: McCain's victory in New Hampshire has both increased his fundraising totals and catapulted him from a 50 point deficit to a virtual dead heat with the party favorite in South Carolina. If McCain can effectively campaign and court the state's large number of veterans, he could easily deal Bush a crucial second defeat.

Bradley faces a similar struggle in the upcoming primaries-the former New Jersey senator must gain added support from Democratic voters soon before his campaign shuts down. Gore has garnered nearly enough delegate support to win the nomination, but like Bush, the vice president has party leaders taking a second glance. Gore believes that he is the true Democrat, and has gone so far as to accuse Bradley of "acting Republican."

"When he retired from the Senate during President Clinton's first term, Senator Bradley spoke about what he called a budget stalemate and a process that was, in his words, paralyzed, a continual deadlock. So he decided to leave," Gore said. "But he was wrong-If Senator Bradley could not foresee the progress we made when we decided to stay and fight against the Gingrich Republicans, what else does he not see now?"

Bradley has remained complacent to attack Gore, besides his constant allusion to Gore's involvement in the perceived "corrupt" Clinton era. His strategists undoubtedly have ammunition for him to act on, but whether Bradley will seek to expose the frontrunner remains to be seen. Bradley told "Meet the Press" that Gore's campaign finance history will be exposed if he wins the nomination and moves on to the general election; the underdog would probably benefit if he himself decided to tackle the issue.

THE RACE FACTOR

With "Super Tuesday" quickly approaching, Democratic candidates are being urged to focus on "alternative" issues to garner more votes from various constituencies. On March 7, 15 states will be holding caucuses and primaries and could be the end for Bradley's campaign. That is, unless Bradley can appeal to minority groups, most notably in New York.

Bradley, a Hall of Fame ex-Knick, hails from New Jersey and will most likely collect a considerable amount of minority votes in his former stomping ground. He will be closely contested by the vice president in a state that has seen its minority groups strongly support Clinton in the past two elections. In efforts to dissuade this potential vote loss, Bradley has vowed to make racial issues an important aspect of his campaign in the upcoming primaries.

Rev. Al Sharpton, arguably New York City's most powerful African-American, has welcomed Bradley's commitment and believes that Gore is shying away from the issue. This could mean disaster for Gore, who has neglected to commit to a series of debates on the issue proposed by Bradley. Sharpton said that if Gore continues his apathy, the reverend would spearhead a campaign against the vice president.

In Florida, the ex-Senator spoke out against Jeb Bush, the state's governor and brother of Republican candidate George W. Bush, for eliminating his state's affirmative action policies.

"Let me be very clear: Giving people opportunity, investing them with responsibility and holding them accountable is not a preference or a quota," Bradley said. "It is a standard by which the march of progress is made in America."

Gore has yet to address the issue, pointing rather to Bradley's hesitation to answer the Vice President's challenge to weekly debates.

Women's Center addresses eating disorders

By Beth Slaby

Are you influenced by super-thin women in Hollywood? Does your life revolve around dieting and the obsession with being skinny? Does food play a negative role in your life? If you answered yes to one or more of these questions, you are not alone. Many women are afflicted by the standards of Hollywood. But did you know that only five percent of American women actually are the size of Gwyneth Paltrow and Lara Flynn Boyle? They represent an unattainable ideal, and it's starting to have dire consequences for American women.

On February 2, the Women's Resource Center addressed this problem in presenting the first of a three-part film series entitled, "The Truth about Body and Beauty Film Series." The first film was called, "Slim Hopes: Advertising and the Obsession with Thinness." An issue addressed in the first of the trilogy was the fact that even Hollywood isn't perfect. In "Pretty Woman," a body double was substituted for Julia Robert's body in the opening scene. Hollywood unknowingly (or knowingly) imposes these degrading standards upon the viewing community. Women, above all, are affected by these perfect images, and feel it is their duty to emulate them.

Mary Snyder, a graduate intern at the Women's Resource Center speaks out about this unattainable standard that has permeated our culture and especially Bucknell. She recounts that at the discussion that proceeded the film on February 2, women voiced their concern about body images, and how it's getting out of hand. Many women expressed that they don't even know what good nutrition is anymore. They are learning to eat to be thin and often end up depriving their bodies of nutrients needed to protect them from sickness and diseases such as osteoporosis. Girls are beginning to worry about their weight at earlier and earlier ages. According to Snyder, the number one wish for girls ages 11-14 was to be thin. "Diet" is a word that enters their vocabulary earlier than the word "college." That's a staggering statistic.

How did this problem originate? And why are American women plagued by it the most? The answer is our culture and the ideals we grew up with. If your mother was constantly on a diet, constantly berating herself for her weight and body image, it probably became ingrained in you to want to be thin. The media also plays a role; Hollywood continues to "slim down." Models today are now 23% skinnier than they were 20 years ago. Yet, this is the American culture we all know and love.

To understand why it's causing a growing number of eating disorders, one has to step back and look at the larger picture. We are a culture consumed with fast food. More and more people are succumbing to the fast-paced ways of life. They are not taking time to enjoy the act of eating. Women are falling into these traps of not eating right, yet they are inundated with images of emaciated women. This dichotomy is producing warped self-images for teenage girls and women alike.

An article in *Self* magazine in December 1999 addressed these culturally-induced eating habits. In a comparison between French and American women, the article stated that American women need to take a cue from the French: "Enjoy what you eat. Slow down. Turn meals into main events so you aren't constantly snacking. As paradoxical as it sounds, you may end up losing unwanted pounds, enjoying food more and adding a few years to your life." These are words to live by.

Snyder offers some advice: "Women need to support each other, not focusing on just weight. It's our responsibility to rise above advertising.

Devote the energy you spend worrying about food to a cause you believe in. Women do not need to give up their lives to be thin." Exercise too. And not obsessively. Do it because it it's good for your body. It lowers blood pressure and aids in mental health.

Knowing that you have a problem with food is the first step. Then it is up to you to make a concerted effort to curb these unhealthy ways of thinking, and start treating your body as your friend. It's the only one you'll ever have.

The Women's Resource Center is offering two more films centering on this issue this semester. On March 1, the film is entitled, "Recovering Bodies, Overcoming Disorders." It will be shown at noon in the Gallery Theater and at 7:30 in the Forum. The third film is on April 5 and it's entitled, "The Hunger Inside." It will also be shown at noon in the Gallery Theater and at 7:30 in Gardner Lecture Hall in Dana.

Peeler From Page 1.

with conflict."

Peeler has brought people together, uniting the faculty during strenuous times, and leading the group to speak as one voice. He seems to have found the elusive balance of hard-nosed politics with an open-mind about all the issues involved.

"John is a calming influence. He sees issues clearly and approaches them rationally without losing his edge," John Grim, professor of religion, said. "By nature he is careful and deliberate, and he wants to see these issues through the long-term. I have a lot of confidence in him and appreciate his leadership in these issues."

"John is a man of strong principles, but he can hear the views of the entire faculty," Marilyn Mumford, professor of English, said. "He doesn't sell out, but rather can negotiate a path between two seemingly opposed groups."

His open-mindedness and rational thinking have gone a long way toward improving University relationships.

"I've tried from the very beginning to develop strong working relationships with the senior administration and members of the Board-especially the chairman, Mr. Schubauer," Peeler added.

"He's been very helpful in helping me work through the Board about issues involving the faculty," President William D. Adams said. "[The faculty's relationship with the administration] has improved because the communication has improved-I give [John] high marks for that."

Peeler was particularly positive about the lines of communication that he has worked hard at opening.

"One of the really gratifying things for me has been developing a close working relationship with both Bro Adams and Dan Little," Peeler said of his association with the President and Vice President for Academic Affairs, respectively.

"Both they and I have worked pretty hard at it-it's been very satisfying," Peeler added. "Conversely, I've also worked hard at developing a close collaborative relationship with the Board and I've had less satisfaction."

Although Peeler noted that he keeps in good contact with Board chairman Jim Schubauer, he doesn't always see eye-to-eye with the University trustees.

"We have a very activist board-they take a very strong interest in the institution," Peeler said. "I think a number of faculty and administrators are a little uncomfortable with the degree the board chooses to involve itself in the day to day activities."

"The model they're operating within is understandable, and they really have Bucknell's best interests at heart and they're very generous with their financial resources and their time," Peeler added.

Besides working towards improved systematic communication, Peeler has not been without dealing with crises.

In his first year as chair, he dealt significantly with President William Adams' strategic financial plan, and alleviating faculty skepticism about the original development of the plan.

Next was revising the merit system for faculty. The Board of Trustees came forth stating that the system needed some major changes.

"It was a matter of [determining] what changes could be accepted by the faculty and be credible to the board," Peeler said of the need for compromise.

This year Peeler and the faculty have dealt with President Adams' resignation, the subsequent Presidential search process and responding to the Board of Trustees' statement on Bucknell's character.

The role [of faculty chair] is terribly important. [John] has done a wonderful and creative job in filling the role," Adams said. "His energy and proactive work has been extremely beneficial to the University."

Peeler's efforts have not gone unnoticed by his colleagues and peers.

"He is a masterful politician and peacemaker, and has done a superb job in representing sides on different issues," John Miller, professor of management, said.

Having seen her fair share of faculty chairs in 41 years at the University, Marilyn Mumford offered the ultimate compliment, "I think he's one of the best faculty chairs we've ever had. His politics are so open-ended and effective."

"He has excellent long-range views about what universities are about and guiding people toward that view," Ralph Droms, associate professor of computer science, said.

"[John] is a first-class negotiator. He doesn't force either side to back down, but he finds paths that nobody had considered before," Mumford added.

Engineering recieves $300,000 grant

By Katie Marston

The College of Engineering at the University has received a $300,000 grant from the GTE Foundation to develop a new collaborative learning studio in Dana Engineering Building. The laboratory will allow students to investigate networking technologies and system software and hardware in ways not now available through other university facilities.

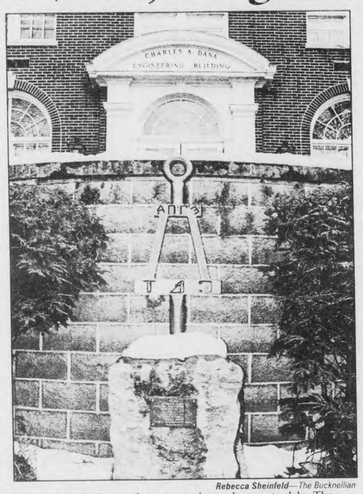
The creation of the lab and the new studios is an exciting moment in the distinguished history of Bucknell's College of Engineering," said Joseph A. Humphrey, dean of the College of Engineering. "We are grateful to the GTE Foundation for enabling us to expose students to state-of-the-art technology that will be an essential part of networked computing systems in the next century."

The facility will be named the GTE Networked Systems Laboratory and will include 20 experimental computers with a 100mb/sec Ethernet. These machines will provide reliable remote and network access, while being configurable to run multiple operating systems. The new lab will be housed in one of the two new "collaborative learning studios," which will be shared by all five departments of the College of Engineering. These two modern, flexible studios will contain accompanying seminar rooms, along with a staging area for student and faculty project materials.

The learning space will be used to develop and explore new methods of instruction aimed at helping all University engineering students learn their subject material more effectively. At the same time, students will be learning collaborative approaches to solve open-ended, real-world problems like those they will face in the workplace after graduation.

"GTE's grant will provide equipment and software support, laying a strong foundation that will enable the University to offer current technology platforms, as well as adapt to future developments in networking," said Maureen Gorman, vice president of the GTE Foundation. "Student achievement will be enhanced through project-based, group-learning activities on real, not simulated, networks. This effort should help counter the significant number of information technology jobs that are today going unfilled due to lack of qualified applicants."

The GTE Foundation, the philanthropic arm of GTE Corporation, is one of the largest corporate contributors in the United States. It plans to provide $32 million in 2000 to charitable and educational institutions on behalf of GTE and its thousands of employees.



Rebecca Sheinfeld—The Bucknellian

Dana will be the home of a new experimental computer lab. The GTE Networked Systems Lab will have a 100mb/sec Ethernet.

Public Safety Log

February 2, 2000

VANDALISM/CRIMINAL MISCHIEF (Bias Related) - Public Safety received the report that unknown person(s) defaced a University poster at Larison Hall. The incident is under investigation.

February 3, 2000

UNDERAGE CONSUMPTION/PUBLIC INTOXICATION - Public Safety responded to Larison Hall for the report of an intoxicated female who had vomited in the safe escort vehicle while being transported back to campus from downtown. The female was identified as a University student and charged with underage consumption and public drunkenness.

VEHICLE ACCIDENT - Public Safety responded to the Physical Plant garage for the report of a minor vehicle accident involving two university vehicles. No injuries resulted from the accident.

INFORMATION/MISSING PROPERTY - A student reported to Public Safety that a parking decal was missing from her vehicle. The incident is under investigation.

February 4, 2000

RECKLESS DRIVING - Public Safety responded to the Bucknell West practice fields for the report of a student driving on the fields. Citations for reckless driving, disorderly conduct and property damage were issued.

February 5, 2000

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Vedder Hall for a fire alarm activation and found that a pull station had been activated by unknown person(s) for unknown reason. The incident is under investigation.

February 6, 2000

INFORMATION - Public Safety responded to the Gateways for the report of vandalism to the common area of an apartment. The Office of Housing and Residential Life was contacted for information. The incident is under investigation.

MEDICAL ASSIST - Public Safety responded to Larison Hall for the report of an ill student who had temporarily lost consciousness. When Public Safety arrived the student was recovered. The individual signed a form refusing medical treatment.

February 7, 2000

MISSING PROPERTY - A student reported to Public Safety that her jacket was taken during a visit to the Phi Gamma Delta Fraternity. The individual was advised to make notification to the Office of Housing and Residential Life with reference to a university residence hall key in the jacket's pocket.

INFORMATION/PROPERTY DAMAGE - Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a broken window. No witnesses or suspects were located in a search of the area.

MEDICAL ASSIST - Public Safety responded to Davis gym for the report of a student with an ankle injury. The individual was transported by Student Health Services the individual to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION/ALLEGED THREAT - At 4:00 p.m., a student reported to Public Safety that she heard loud music and conversation in the Harris parking lot earlier in the morning (3:00 a.m.) University officials were notified and the incident is being investigated.

AD From page 1

Syracuse, he spent four years with the NCAA as a compliance representative, where he was a liaison with the Big Ten, the Big Eight, the Pac-10 and the ACC. Before the NCAA, Hardt was an administrative assistant in the University of Iowa's Office of Athletic Student Services.

According to President Adams, "John Hardt will be a strong leader with a good vision for Bucknell's strong and comprehensive program. He has demonstrated in a short time all the critical skills and understandings, plus the energy and enthusiasm, that Division I programs require. In particular, he appreciates the student-athlete model that operates at Bucknell, where academics always come first but athletic achievement is still considered important."

FACULTY From Page 1.

cy proposals," Peeler said. "Is this document (Bucknell's Character) policy? If you accept the widespread view on campus that it is some kind of policy statement, then more campus input is necessary."

In addition to the general criticisms, six specific tenets were critiqued and questioned in the Faculty response. In particular, the faculty questioned the University's commitment to "Judeo-Christian values and principles. In their response, the faculty expressed concern that this ethic may not be inclusive enough to foster development of campus diversity.

"We felt it important to show the Trustees that their document may be interpreted in ways that perhaps they had not anticipated," Poust said. "We were concerned that certain phrase could be viewed negatively by some members of the University community and beyond."

The faculty document also directly addressed concerns of the proper balance between faculty teaching and scholarship, the composition and direction of the University curriculum, and the role of the University President in implementing policy objectives.

Peeler believes that the Faculty's main mission in issuing a response to "Bucknell's character is to open campus dialogue about the issues addressed in both documents. "The Strategic Tenets articulated in 'Bucknell's character' in general treat subjects about which reasonable people might differ," read the faculty response. "They are appropriate subjects for reasoned dialogue. By publishing them as fixed, not subject to change, the Board appears to foreclose real dialogue. Even though it promises to 'consider other viewpoints,' it states that it will do so 'against the backdrop of this document'... The character of the University cannot be determined by the action of the Board."

By many accounts, the Board of Trustees appears receptive to faculty concerns. conversations regarding the issues of the documents have already occurred between Peeler, Trustee Chairman James Schubauer, President Adams and BSG president Chris Bouchoux '01.

Shortly after spring break, focus groups with members from each of the campus constituencies will meet to further discuss "Bucknell's Character" and the direction of the University.

"I think that the divisions between the faculty and trustees are less than what might appear," Peeler said. "We are both trying to make Bucknell a better place, and in many ways, we agree. In the course of a conflict like this, it's easy to lose sight of the many ways in which we do agree."

"We cannot continue to move forward as an institution if we cannot work together. We can't move ahead with where we want to go if we waste time and energy battling each other instead of pulling on the same rope."

This week in Bucknellian Headline *History*

Annual Relay Races

February 6, 1900

The sixth annual relay meeting given by the University of Pennsylvania will be held on April 28 on Franklin Field. Already many inquiries concerning the games have been made, and the interest seems greater than ever. The schools invited are more numerous than in previous years, while several additional colleges have applied for admission. The championship college contests promise to be the best in the history of American sport. Besides the Yale, Chicago, Georgetown, and Pennsylvania teams, who are practically assured, Cornell, Michigan, and Notre Dame have signified their intention of sending one or more teams for these contests. Princeton is also reported as intending to enter two teams.

In previous years the athletic events besides the relay races have been closed to University of Pennsylvania men. Because of numerous requests, and in harmony with the policy of development pursued by the managers of these games, these events will this year be open to all college men, graduate or undergraduate.

Hinkle Visits B.U. with Playing Mate

February 5, 1936

Clarke Hinkle, one of the greatest backs ever to represent Bucknell on the gridiron, and who has been continuing his football fame for the past three years with the Green Bay Packers, professional team, returned last week for a short visit with his school and team mates at the Sigma Alpha Epsilon house. Bobby Monnett, All-American halfback in 1932 at Michigan State and now playing in the Packer's backfield, accompanied him. They are two of the All-American and pro players traveling the country on a lecture tour of larger high schools, sponsored by the General Motors Corporation.

Hinkle has been playing with the Green Bay Packers ever since he left Bucknell and has built up an enviable record as a 'valuable back.' He is known for his accurate kicking. A 47-yard field goal against the Detroit Lions this fall, which won the game 3 to 0, and a 40-yard field goal in drizzling rain on a muddy field against Boston, are examples of his 'educated' toe.

'Moore' on Space and Flight Exhibit Featured During Engineering Week

February 10, 1963

Dr. Heber G. Moore of the Manned Space Flight Center in Washington will visit the campus in Tuesday. He will deliver a special lecture in conjunction with the "Manned Space Flight" exhibit that goes on display at the Dana Engineering Building on the same day.

Dr. Moore will appear in the Olin Science Auditorium next Tuesday at 7:30 p.m.

In addition, the audience will be invited to view motion pictures on "Project Apollo" and "America in Space."

The exhibit is being sponsored jointly by the departments of mechanical engineering and astronomy at Bucknell and the National Aeronautics and Space Administration. It has been timed to coincide with the national observance of Engineers' Week.

Included in the display are scale models of the three-man Apollo space capsule, the two-man Gemini space capsule, a Lunar Excursion module, the mercury capsule, and a full-size model of an astronaut in an authentic space suit.

The models will be on display daily, except Sunday, in the lobby of Dana Engineering Building. The exhibit ends February 24.

Arson Suspected in Vedder Hall Fire

February 13, 1987

One of the largest fires on campus this year occurred early Monday morning on the first floor of Vedder Hall West. The fire, which broke out shortly before 2:30 a.m., was contained in a trashcan in the first floor hallway. The fire is suspected to have been started by people not affiliated with the University.

David Vituccio '90 said he had just gone to bed when he heard some commotion in the hall. "I heard some people laughing and all and it really just sounded like people on the hall hanging out. Then I heard what sounded like pizza boxes go into the trashcan. The commotion stopped and about two minutes later the alarm went off.

"We've had so many false alarms that I wasn't going to get out of bed, but because I heard these guys outside, I thought they might have pulled the alarm, so I went to chase them. Then, when I got outside my door, I saw flames." There have been 70 alarms since the beginning of this academic year, according to Vedder R.A. Eric Anderson '88.

Minutes before the alarm went off, several students watching television in the basement of Vedder saw two men wandering around. "They looked like they didn't belong in the building, and they were obviously looking to find some mischief," according to Anderson, who talked to the students.

Israel Soldier and Militiaman killed in Renewed Fighting with Hezbollah

An Israeli soldier and a pro-Israeli militiaman were killed Tuesday in renewed fighting with Hezbollah guerrillas in southern Lebanon, just hours after Israeli warplanes extensively damaged the electric power grid around Beirut.

Israel is warning that further attacks on its troops will provoke new retaliation. The soldier, according to the Israeli army, was killed a few kilometers north of the Israeli border by a direct hit from a missile fired from the village of Nabetiyeh. He was the sixth Israeli soldier killed this year.

The militiaman from the pro-Israeli South Lebanon Army was killed by what was described as anti-tank fire in Israel-occupied southern Lebanon.

Israel said its attack on Beirut's power grid was a warning to the Lebanese government and Hezbollah to stop the attacks on its soldiers. Fifteen civilians were injured in Israel's strikes on the power grid.

Lebanon and Syria accused Israel of violating a truce agreement intended to protect civilians from attack during military operations.

Large Internet Site Hit By Hackers

The Internet was reeling Tuesday night as attacks by hackers on a number of high-profile web sites continued. During the early evening on Tuesday, CNN.com confirmed that it was the latest site to suffer. "At 7 p.m. EST, we were attacked by hackers. A denial of service attack occurred until 8:45 p.m. We were seriously affected. We were serving content but it was very inconsistent and very little," Edna Johnson, director of public relations for CNN Interactive, said in a statement.

"By 8:45 p.m., our upstream providers had put blocks in place that are shielding us and we are now serving content."

The leading auction Web site eBay and the Internet-based discount retailer Buy.com were crippled Tuesday by outsiders, and online retailing giant amazon.com also came under siege late Tuesday.

Amazon's Web site was virtually shut down Tuesday with problem that appeared similar to the failures that have hit other popular Web sites in recent days.

Amazon said in a statement that its site was inaccessible for more than one hour late Tuesday because a "large amount of junk traffic" was aimed at the company's computers, tying them up and preventing nearly all its customers from making purchases.

The incidents on Tuesday at Buy.com and eBay Inc. came one day after a hacker onslaught knocked Yahoo!'s heavily trafficked web site out of service for about three hours. Yahoo said that it is cooperating with the FBI and other law enforcement agencies in an investigation of who perpetrated the cyber attack.

Nitrogen Leak Apparently Caused Missile Test Failure

A leak in a section of metal tubing that carries frigid nitrogen gas appears to have been the cause of the January failure of a national missile defense interceptor system, U.S. defense officials say.

"We are 95 percent sure that [the leak] was the problem," Pentagon spokesman Ken Bacon said Tuesday, adding that the $100 million test failure could cause a delay of weeks in a third test of the system.

Bacon said investigators had virtually concluded that no significant design flaw caused the experimental "hit-to-kill" interceptor, fired from Kwajalein Atoll, to miss a dummy warhead target in space on January 18.

"The good thing about this is that it is fairly easy to fix. You don't have to tear the whole thing apart," Bacon said.

Defense Secretary William Cohen told the Senate Armed Services Committee on Tuesday that President Bill Clinton would still be able to make a decision this summer on whether to immediately begin building a controversial system of 100 interceptors in Alaska or further delay deployment.

Clinton is under heavy pressure from Republican congressional leaders to proceed quickly with a slimmed-down version of former President Ronald Reagan's space-based "Star Wars" missile defense in order to protect U.S. cities against possible limited future attacks by such "rogue nations" as North Korea, Iraq and Iran.

If a decision is made to build and deploy such a system, it is envisioned that 100 interceptor missiles would be fielded to defend the U.S. against a limited ballistic missile attack.

Teacher Barred for Calling Hitler "Cool"

A substitute teacher has been barred from the Boston's city schools for telling students, "Hitler is cool."

"I have no idea how the conversation got started or where it was going, but his statement was inappropriate in front of children," Jane Wilson, principal of J. Henry Higgins Middle School, told The Boston Globe. "We don't want anything [said] that would be controversial with students."

School officials would not identify the teacher, but said he had extensive experience substituting in Peabody, which is north of Boston.

Wilson said the teacher was supervising a group of seventh-graders two weeks ago when he made the comment. She said several students were offended, and they reported him to school officials.

The teacher told administrators that he meant that Adolf Hitler was dead so his body is cold, according to Superintendent Louis Perullo.

News Briefs Compiled By: David Arnold from CNN Interactive

The Road to the White House

By Brian Watson

The Republican establishment experienced a major shakeup when Arizona Senator John McCain took the New Hampshire primary by nineteen percentage points. GOP's in Washington are now forced to take a closer look at Texas governor George W. Bush—their hand-picked golden boy—and decide if he really is the right man to retake the Oval Office.

On the other side, Democrats watched as insurgent former senator Bill Bradley lost by a narrow margin but gained more support than expected. Vice President Al Gore remains the leader in the Democratic race, but Bradley's success in New Hampshire may give added momentum as the primary season moves on.

Bush's blunder in New Hampshire, a neglectful campaign highlighted by his father calling him a "boy," allowed McCain to appeal not only to the crucial independent vote, but to Republicans who themselves were leery about the frontrunner's qualification and determination to become our nation's leader.

Looking to capitalize on the general distrust created by the Clinton administration, Republicans see this as a perfect year to take back the executive. One problem exists—the man who many believed would be a shoe-in is now stepping on his own laces.

VIABILITY

Bush's response to his opponent's growing popularity has him attacking McCain's viability and honesty. Redefining himself as "the reformer with results," Bush sought to publicize his successful reforms in Texas while dispelling the reputation of McCain as a maverick for change. While using everything but the term itself, Bush pointed out McCain as a hypocrite, claiming the Arizona senator's efforts toward campaign finance reform cannot be taken seriously because of the amount of contributions he has accepted from lobbyists.

His statements were powerful, but unfortunately for him and his advisers, they were also far from the truth. Referring to an article from The Wall Street Journal, Bush claimed that McCain has taken far more donations from lobbyists than any other candidate. The real numbers show that Bush has received over five times as many lobbyist donations than McCain, and a considerable amount more than either Democratic candidate.

Responding to these accusations to media in Michigan, McCain said: "...all those things are being fired at me and we are going to have to fire back. We won't just respond. We will respond doubly." The former POW and war hero, often criticized for his quick temper, followed with a smile: "We will have a lot of fun while we are doing it ...We can play as rough as anybody."

The growing trend of looking to the person more than the issues is digging Bush into a deeper hole. McCain's camp is taking full advantage, promoting their candidate as an ideal leader, military hero and trustworthy competitor. Bush's new strategy attacks McCain's stance on campaign finance reform, a movement the senator has led for years. Whether or not voters will listen to Bush's offensive is yet to be seen, but progress must come soon: McCain's victory in New Hampshire has both increased his fundraising totals and catapulted him from a 50 point deficit to a virtual dead heat with the party favorite in South Carolina. If McCain can effectively campaign and court the state's large number of veterans, he could easily deal Bush a crucial second defeat.

Bradley faces a similar struggle in the upcoming primaries-the former New Jersey senator must gain added support from Democratic voters soon before his campaign shuts down. Gore has garnered nearly enough delegate support to win the nomination, but like Bush, the vice president has party leaders taking a second glance. Gore believes that he is the true Democrat, and has gone so far as to accuse Bradley of "acting Republican."

"When he retired from the Senate during President Clinton's first term, Senator Bradley spoke about what he called a budget stalemate and a process that was, in his words, paralyzed, a continual deadlock. So he decided to leave," Gore said. "But he was wrong-If Senator Bradley could not foresee the progress we made when we decided to stay and fight against the Gingrich Republicans, what else does he not see now?"

Bradley has remained complacent to attack Gore, besides his constant allusion to Gore's involvement in the perceived "corrupt" Clinton era. His strategists undoubtedly have ammunition for him to act on, but whether Bradley will seek to expose the frontrunner remains to be seen. Bradley told "Meet the Press" that Gore's campaign finance history will be exposed if he wins the nomination and moves on to the general election; the underdog would probably benefit if he himself decided to tackle the issue.

THE RACE FACTOR

With "Super Tuesday" quickly approaching, Democratic candidates are being urged to focus on "alternative" issues to garner more votes from various constituencies. On March 7, 15 states will be holding caucuses and primaries and could be the end for Bradley's campaign. That is, unless Bradley can appeal to minority groups, most notably in New York.

Bradley, a Hall of Fame ex-Knick, hails from New Jersey and will most likely collect a considerable amount of minority votes in his former stomping ground. He will be closely contested by the vice president in a state that has seen its minority groups strongly support Clinton in the past two elections. In efforts to dissuade this potential vote loss, Bradley has vowed to make racial issues an important aspect of his campaign in the upcoming primaries.

Rev. Al Sharpton, arguably New York City's most powerful African-American, has welcomed Bradley's commitment and believes that Gore is shying away from the issue. This could mean disaster for Gore, who has neglected to commit to a series of debates on the issue proposed by Bradley. Sharpton said that if Gore continues his apathy, the reverend would spearhead a campaign against the vice president.

In Florida, the ex-Senator spoke out against Jeb Bush, the state's governor and brother of Republican candidate George W. Bush, for eliminating his state's affirmative action policies.

"Let me be very clear: Giving people opportunity, investing them with responsibility and holding them accountable is not a preference or a quota," Bradley said. "It is a standard by which the march of progress is made in America."

Gore has yet to address the issue, pointing rather to Bradley's hesitation to answer the Vice President's challenge to weekly debates.

Women's Center addresses eating disorders

By Beth Slaby

Are you influenced by super-thin women in Hollywood? Does your life revolve around dieting and the obsession with being skinny? Does food play a negative role in your life? If you answered yes to one or more of these questions, you are not alone. Many women are afflicted by the standards of Hollywood. But did you know that only five percent of American women actually are the size of Gwyneth Paltrow and Lara Flynn Boyle? They represent an unattainable ideal, and it's starting to have dire consequences for American women.

On February 2, the Women's Resource Center addressed this problem in presenting the first of a three-part film series entitled, "The Truth about Body and Beauty Film Series." The first film was called, "Slim Hopes: Advertising and the Obsession with Thinness." An issue addressed in the first of the trilogy was the fact that even Hollywood isn't perfect. In "Pretty Woman," a body double was substituted for Julia Robert's body in the opening scene. Hollywood unknowingly (or knowingly) imposes these degrading standards upon the viewing community. Women, above all, are affected by these perfect images, and feel it is their duty to emulate them.

Mary Snyder, a graduate intern at the Women's Resource Center speaks out about this unattainable standard that has permeated our culture and especially Bucknell. She recounts that at the discussion that proceeded the film on February 2, women voiced their concern about body images, and how it's getting out of hand. Many women expressed that they don't even know what good nutrition is anymore. They are learning to eat to be thin and often end up depriving their bodies of nutrients needed to protect them from sickness and diseases such as osteoporosis. Girls are beginning to worry about their weight at earlier and earlier ages. According to Snyder, the number one wish for girls ages 11-14 was to be thin. "Diet" is a word that enters their vocabulary earlier than the word "college." That's a staggering statistic.

How did this problem originate? And why are American women plagued by it the most? The answer is our culture and the ideals we grew up with. If your mother was constantly on a diet, constantly berating herself for her weight and body image, it probably became ingrained in you to want to be thin. The media also plays a role; Hollywood continues to "slim down." Models today are now 23% skinnier than they were 20 years ago. Yet, this is the American culture we all know and love.

To understand why it's causing a growing number of eating disorders, one has to step back and look at the larger picture. We are a culture consumed with fast food. More and more people are succumbing to the fast-paced ways of life. They are not taking time to enjoy the act of eating. Women are falling into these traps of not eating right, yet they are inundated with images of emaciated women. This dichotomy is producing warped self-images for teenage girls and women alike.

An article in *Self* magazine in December 1999 addressed these culturally-induced eating habits. In a comparison between French and American women, the article stated that American women need to take a cue from the French: "Enjoy what you eat. Slow down. Turn meals into main events so you aren't constantly snacking. As paradoxical as it sounds, you may end up losing unwanted pounds, enjoying food more and adding a few years to your life." These are words to live by.

Snyder offers some advice: "Women need to support each other, not focusing on just weight. It's our responsibility to rise above advertising.

Devote the energy you spend worrying about food to a cause you believe in. Women do not need to give up their lives to be thin," Exercise too. And not obsessively. Do it because it it's good for your body. It lowers blood pressure and aids in mental health.

Knowing that you have a problem with food is the first step. Then it is up to you to make a concerted effort to curb these unhealthy ways of thinking, and start treating your body as your friend. It's the only one you'll ever have.

The Women's Resource Center is offering two more films centering on this issue this semester. On March 1, the film is entitled, "Recovering Bodies, Overcoming Disorders." It will be shown at noon in the Gallery Theater and at 7:30 in the Forum. The third film is on April 5 and it's entitled, "The Hunger Inside." It will also be shown at noon in the Gallery Theater and at 7:30 in Gardner Lecture Hall in Dana.

Peeler From Page 1.

with conflict."

Peeler has brought people together, uniting the faculty during strenuous times, and leading the group to speak as one voice. He seems to have found the elusive balance of hard-nosed politics with an open-mind about all the issues involved.

"John is a calming influence. He sees issues clearly and approaches them rationally without losing his edge," John Grim, professor of religion, said. "By nature he is careful and deliberate, and he wants to see these issues through the long-term. I have a lot of confidence in him and appreciate his leadership in these issues."

"John is a man of strong principles, but he can hear the views of the entire faculty," Marilyn Mumford, professor of English, said. "He doesn't sell out, but rather can negotiate a path between two seemingly opposed groups."

His open-mindedness and rational thinking have gone a long way toward improving University relationships.

"I've tried from the very beginning to develop strong working relationships with the senior administration and members of the Board-especially the chairman, Mr. Schubauer," Peeler added.

"He's been very helpful in helping me work through the Board about issues involving the faculty," President William D. Adams said. "[The faculty's relationship with the administration] has improved because the communication has improved-I give [John] high marks for that."

Peeler was particularly positive about the lines of communication that he has worked hard at opening.

"One of the really gratifying things for me has been developing a close working relationship with both Bro Adams and Dan Little," Peeler said of his association with the President and Vice President for Academic Affairs, respectively.

"Both they and I have worked pretty hard at it-it's been very satisfying," Peeler added. "Conversely, I've also worked hard at developing a close collaborative relationship with the Board and I've had less satisfaction."

Although Peeler noted that he keeps in good contact with Board chairman Jim Schubauer, he doesn't always see eye-to-eye with the University trustees.

"We have a very activist board-they take a very strong interest in the institution," Peeler said. "I think a number of faculty and administrators are a little uncomfortable with the degree the board chooses to involve itself in the day to day activities."

"The model they're operating within is understandable, and they really have Bucknell's best interests at heart and they're very generous with their financial resources and their time," Peeler added.

Besides working towards improved systematic communication, Peeler has not been without dealing with crises.

In his first year as chair, he dealt significantly with President William Adams' strategic financial plan, and alleviating faculty skepticism about the original development of the plan.

Next was revising the merit system for faculty. The Board of Trustees came forth stating that the system needed some major changes.

"It was a matter of [determining] what changes could be accepted by the faculty and be credible to the board," Peeler said of the need for compromise.

This year Peeler and the faculty have dealt with President Adams' resignation, the subsequent Presidential search process and responding to the Board of Trustees' statement on Bucknell's character.

The role [of faculty chair] is terribly important. [John] has done a wonderful and creative job in filling the role," Adams said. "His energy and proactive work has been extremely beneficial to the University."

Peeler's efforts have not gone unnoticed by his colleagues and peers.

"He is a masterful politician and peacemaker, and has done a superb job in representing sides on different issues," John Miller, professor of management, said.

Having seen her fair share of faculty chairs in 41 years at the University, Marilyn Mumford offered the ultimate compliment, "I think he's one of the best faculty chairs we've ever had. His politics are so open-ended and effective."

"He has excellent long-range views about what universities are about and guiding people toward that view," Ralph Droms, associate professor of computer science, said.

"[John] is a first-class negotiator. He doesn't force either side to back down, but he finds paths that nobody had considered before," Mumford added.

FORUM

EDITORIAL

Secrecy of search understood, questioned

The search for a new president to replace William D. Adams has sparked much controversy and division among different campus constituencies. These groups, for the most part, feel that they have been under-informed about the process and fear that they had no influence in the proceedings.

According to the search committee, which consists of several University Trustees, two faculty members and one student, the progress of the search has been made available to all members of the community on an equal basis. Trustee Lee Hamilton '57, chair of the committee, confirms that the group did everything in their power to inform the campus of their progress, and that students were in no way discriminated against.

The committee recently announced that it has winnowed the list down to three finalists. These candidates, much like the finalists for the Dean of Students search, will come to campus to make presentations to numerous student and faculty/administrative groups. However, these visits will not be publicized, and their presentations will be made to only a select group of campus members. The dates of these forums are completely unknown to most of the constituencies that fear their concerns have not been addressed.

The three finalists selected all come from esteemed academic backgrounds, satisfying the demands of the faculty. Little else is known of our presidential candidates.

The level of secrecy employed in this process is standard in almost all presidential searches. Most contenders hold high positions at other universities and prefer that their involvement in such proceedings be kept as quiet as possible to not upset their current standings.

While such stealth motives will most likely anger the majority of the campus, the committee believes that they are the most effective measures in attracting the best possible candidates. John Peeler, faculty chair and search committee member, commented that the biggest disadvantage to the community is that not many will be familiar with the new president once the final selection is made. Our new president will be more acquainted with the university than we will be with him/her.

The committee affirms that these measures were necessary to keep candidates in the pool. The group was forced to walk a fine line between complete disclosure, which could have led to the withdrawal of candidates, or the level of concealment that the committee ultimately decided was necessary. This is a simple case of the lesser of two evils; had the committee members publicized all details of the search, they may have lost applicants with serious presidential potential.

Breaking away from standard operating procedure is difficult; the committee was clearly in no position to undertake a search process that defied the standard structure. Although the members believed that they exercised the utmost caution and consideration in making this decision, that is not to say that the secrecy issue is foolproof. Two years ago, Brown University selected a new president who was highly regarded for his management attributes, an administrator who the school assumed would hold the position for several years. However, because presidential searches are so confidential, the president was able to entertain an offer from Vanderbilt University, unbeknownst to the school, and eventually left Brown to head south.

The worst-case scenario does not always play out, however, but this example does display the downfall of similar procedures. *The Bucknellian* does not wish to criticize the search committee for its actions, but rather to inform the campus community of the reasoning behind these decisions. With so many constituencies on campus, it is simply impossible to gain universal satisfaction. But we hope that the committee's procedures are clear to these groups so that awareness is paramount and any hostility toward the process may be curbed in an effective manner so that the committee can continue to its search for our next leader.

LETTERS TO THE EDITOR

Borough seeks internal peace

In response to Michael Boland's "Opinions" article:

Thank you, Michael, for expressing the opinion of so many Bucknell students. I have actively pursued input from Lewisburg residents, including Bucknell students in off-campus living arrangements. Overwhelmingly, your thoughts were echoed by all segments of the community.

Every semester the Bucknell students do great works for our small community. And every semester the small percentage of students, who choose to break our laws, which protect the safety and peace of the neighborhoods, overshadows the wonderful volunteerism.

It is in the best interest of the Bucknell students to "police themselves." Put a little pressure on the "trouble makers" before they become a nuisance to the town. These kids are giving you a bad image that you don't deserve, in my opinion. Also, meet your neighbors! I know of one group of off-campus students who called the neighbors to request that, when the house gets too loud, the neighbors call the students with the complaint before calling the police. The neighbors are willing to try this plan. That's a good start!

If anyone would like to make comments to me, please do not hesitate to contact me via e-mail: amorgan@ptd.net. Good luck! I know we can all coexist peacefully if we work together as a community.

Yvonne Morgan
President, Lewisburg Borough Council

Women's sports slighted

On first reading the February 3 issue of *The Bucknellian*, I was pleased to see the extensive coverage of the men's basketball game with Lafayette which had been played on the road the previous evening. Although the two-point loss was disappointing, it was encouraging to see this coverage under deadline pressures.

However, it was with considerable disappointment that additional reading of the same edition of the paper led me to discover that the victory by the Bucknell women's basketball team on the same evening in Easton qualified for only two paragraphs at the end of a story about a game played a week earlier. The victory by the women at Lafayette was their sixth in a row in Patriot League play and kept them in first place in the league. Why not also bring the campus community up to date on this outstanding team?

Sincerely,
Brad Tufts
Interim Athletic Director

College Democrats respond

A recent editorial in *The Bucknellian* implied that College Democrats was biased towards Al Gore and that we have done little to try and aid awareness on campus. College Democrats was only recognized a week ago as an official organization and therefore this was the first trip we were allowed to take. College Democrats, does NOT and will NOT endorse individual candidates. College Democrats has and will remain neutral in all Democratic Party affairs. In this case we were contacted by the Gore campaign to help them. The Bradley campaign on the other hand did not contact us. We did not feel that involving the club with Al Gore's campaign the weekend before the primaries would appear biased. Though there were individuals who went on the trip that supported Al Gore, the club's objective was to help raise awareness and political activism on campus and on the national level. We felt that being involved in the first primary of the 2000 presidential campaign was a great way to start. In fact, several people that came on the trip endorsed Bradley but wanted to be a part of the American election process and so were not upset by being active with the Gore campaign. Perhaps if the author of the editorial had participated or even asked us, he or she would have known our stance and reasoning behind the trip. We have also had difficulty raising awareness because BSG did not approve our organization for 2 months. However, College Democrats supports your view of political apathy on campus.

Matt Dewey
Treasurer - College Democrats.

Notice anything different? Don't worry! Locking Horns will return next week!

Bucknellian runs for U.S. president

By David McGreevy

Recent polls indicate that some 50% of young voters (under age 30) are not interested in the current presidential campaigns, and another 40% are giving "just some" of their attention to the upcoming elections. These reports should not be surprising to anyone who has been watching the race closely; clearly this year's candidates are a sorry lot, ranging from unintelligent to insane and even certifiably evil.

Still, the shocking levels of apathy among voters of our generation suggest that something must be done. As none of the candidates seem to have captured the public's interest to any great degree, I would like to take this opportunity to humbly suggest that perhaps I, a fellow Bucknell student, would be your best choice.

I would make an excellent president. I have my finger on the pulse of the American people. When recent polls showed that nearly 70% of Americans enjoyed watching reruns of "The A-Team," I listened. I understand the public's concern for these high-spirited war criminals and would be more than glad to grant a full presidential pardon to all members of the A-Team, who should not continue to suffer for a crime they did not commit. Furthermore, I shall offer the position of Secretary of Transportation to A-Team member B. A. Barracus, played by the always-entertaining Mr. T. Under his watchful eyes, I feel confident that our national van will be kept in good working order, even if the country should run into trouble with a redneck sheriff of some sort.

Barracus has already distinguished himself through his work with disadvantaged children and this cabinet position will offer him a further chance to serve the country he loves so dearly.

There is much uncertainty concerning the future role of the brave men and women in our nation's armed forces. I would propose a new plan for our military, in which our loyal soldiers would stand ready to be dispatched anywhere in the country where household chores needed to be done. While the Communist threat is largely a thing of the past, all across America lawns must be mowed, sheds are in need of painting, and gutters are filling up with debris. I have faith in the ability of American servicemen to take care of these chores.

There has also been much debate pertaining to how the projected budget surplus of three trillion dollars could best be used. Were I elected president, I would first use a large portion of this surplus to pay off mycrippling student loans. With that taken care of, I would most likely spend the remainder on nachos and compact discs; I would not keep these items to myself, however. In this era of great prosperity, there is no reason why even the poorest Americans should not have access to such classic albums as "Frampton Comes Alive!", "Classic Queen", or "Cheap Trick Live" at Budokan. Together we could eat our nachos and listen to our CD's and the nation would grow.

George W. Bush has been criticized for his lack of knowledge of world leaders. I must admit that I, too, am woefully ignorant of the major players in world politics. I do, however, have a large collection of 1991 "Operation: Desert Storm" trading cards which would allow me to quickly and easily identify the rulers of several key states including Qatar and the United Arab Emirates.

I have made it obvious that I would be the best choice in the upcoming presidential election. Your consideration and support is greatly appreciated and I would like to thank you in advance for your votes. Finally, let me remind you that if I were to lose this election, I would most likely cry, and none of us would want to see something as pathetic as that. Thank you.

OPINIONS

Cupid, you can kiss my ...

By Kristen Jancuk

Are you stressed out? Holidays got you down? Worrying about that perfect gift? Anxious about getting home to see your loved ones this holiday season? Don't worry, I feel your pain. This joyous time of year can be tough for everyone.

I know what you're thinking. "What is this girl talking about? Christmas was over almost two months ago!" Let me end this confusion: I'm not talking about Christmas, I'm talking about Valentine's Day. That's right, V-day is less than a week away. Yippie. Please share in my excitement.

Frankly, I have never liked Valentine's Day. I've traced it back to gr .de school, when every one in my class gave out those valentines with cartoon characters and little conversation hearts or lollipops. But my family couldn't afford those things, so I was, sadly, left out of all the fun.

But today, older and wiser, I still dislike V-day, and while I don't have any good reason not to, I still have reasons. For example, does anyone know why we celebrate Valentine's Day? Contrary to popular belief, it was *not* started by Hallmark or any other gift store. It is only commercialized by Hallmark. The true story begins about 1800 years ago (when industry was practically nonexistent because it had no holidays or other celebrations to capitalize on) when the Emperor of Rome was banning all marriages and engagements because no one would enlist in his army. Valentine was a Christian priest who secretly conducted marriages and was therefore put to death on February 14, 270.

So, what exactly does that have to do with pink and red candy, cards, jewelry, roses and chocolate? Well, as far as I can tell, not much.

While having a valentine makes the day bearable—I suppose—it comes with its fair share of problems: what to buy, what you're going to get, where you're going to go and what you're going to do. But let me take care of that for you, because it's basically the same every year. Your valentine shows up at your door with flowers, candy and the like.

You give him/her something cheesy and romantic. It doesn't have to be expensive or even nice to look at. It just has to be red or pink, with hearts and/or lace doilies and be accompanied by a mushy card that you would *never* in your right mind give to anyone if this day didn't dictate that you do so. Then you go to dinner and a movie and finish the night off by doing something one of you considers romantic, like watching a sunrise, counting stars or, if you're exceptionally lucky, a moonlit serenade. Now, there's nothing wrong with any of that, I guess, but if you wouldn't do it any other day, why do it on Valentine's Day? It doesn't make it special; it makes it a chore, a requirement. "Here, honey, I bought you this mushy card because Hallmark said I should." Wow, talk about romance.

Of course, being single is worse and being a single girl is practically torture. Weeks ahead of time you find yourself throwing darts at the square on your calendar marked February 14. Walking through Hallmark is like a visit to hell and you're throwing evil glares at every member of the opposite sex who crosses your path.

When the day finally arrives, you lock yourself in your room, listen to some angst-ridden music and attack the flower delivery guy with a dozen roses in hand who accidentally knocked on your door, instead of the girl across the hall with the rich handsome boyfriend from France. Or so I've heard...

I'd like to extend my deepest apologies to the many adoring fans (ok, two) who offered to be my valentine, but I'm afraid I'll be honoring St. Valentine by running off to Rome and secretly marrying Joshua Jackson—no pink heart cut-outs, chocolate or lace doilies allowed.

Unwelcome interference

Alcohol policy denies student responsibility

By Josh Guyan

There are a lot of issues to talk about in domestic politics this week, but they're all going to have to take a backseat to some disturbing school politics. I refer to the new Bucknell policy of informing our parents of alcohol and drug violations. I have several problems with this policy.

In the recent edition of *Bucknell World* reasons were given for an increased need for the school to act like our parents. Before the sixties and seventies the school was an extension of the parents, taking responsibility for student actions. During the sixties and seventies students were much more politically aware and active and took responsibility for their own actions. Now the school wants to return responsibility for our actions back to our parents by telling our mommies when we do something wrong.

The major reason for this need, as described in *Bucknell World*, is that we are only two-thirds on our way to adulthood. The article sites neuroscientists that have discovered the judgement portion of the brain is the last to develop. According to Arlyne Hoyt, director of Psychological Services, if necessary, "they will hold your hand and get you through this." The article goes on to ask the question, "How can you be an adult if your judgement is not fully refined."

Yet, as judgmentally impaired as we are, we can still decide to go to war and vote for our leaders. I realize that unlike in the sixties being shipped off to war or even volunteering for war isn't a great reality for most of us, but it is still possible. It is possible for me, with my two-thirds judgement to use that judgement and decide to volunteer for service, possibly to lose my life fighting for my country. We could have a bunch of 'kids' without full judgement capabilities sitting behind the controls of tanks deciding what to blow up.

Maybe that's an extreme case, but even the possibility is alarming. What is not so extreme is that fact that once you're 18, you're expected to have the judgement capabilities to choose this country's leaders. I know that most young people don't vote and don't even consider it a big deal—but it is. Democracies are built on the ability of its citizens to consider issues, values, and personalities and then to pick those in society who will make laws and run the nation.

How can we make informed, rational decisions about our leaders with the judgement of a child? How am I supposed to be able to sit in class and consider education, campaign finance reform, the electoral process, legal rights to privacy, contractionary monetary policy, global warming, natural rights and law, HIV in Africa, product liability, the financial system, globalization and countless other issues, topics, and fundamental questions with only a child's judgement capacity? Even more, how am I supposed to be responsible for judging correctly or coherently on a test?

Many of us who are still under the legal drinking age are applying for internships with newspapers, political think tanks, investment banks, consulting firms, biotechnology companies, etc. We are looking to find housing in some of America's largest cities where we will live on our own while we put in our hours at those internships. Those who are freshman or sophomores are working during the summer and possibly living away from home as well. We have a lot of responsibilities.

The article said parents have a right to know what we're doing here because they are paying the bills. In most cases that is true and in that case we owe a great debt to our parents. We owe them effort, performance and honesty. I do not take for granted the opportunity my parents have given me in sending me to Bucknell. But whatever arrangement we have for paying the tuition is between us, it does not involve the school.

Please don't forget that many of us here have part-time jobs and many students have taken out student loans, which they have to pay back, not their parents. I have a friend who pays for his college tuition with his personal stock; his parents don't pay his bills. It's none of the administration's business how we're financing our education, whether it's through our parents, loans, personal stock, or employment. Their interest ends when they get the check.

Even though those of us under 21 cannot legally drink, we are legally adults. That means if we do drink underage and get caught, we are responsible and the school doesn't need to tattle on us. No matter how much they may want to, parents can't baby-sit us anymore. If you and your parents have any kind of relationship of mutual respect at all, they'll understand that and you'll take your responsibilities seriously.

Fighting racism

John Rocker's punishment fits the crime

By Maren Johnson

It appears that John Rocker, pitcher for the Atlanta Braves, feels that he shouldn't be punished for publicly announcing his opinion that, "The biggest thing I don't like about New York are the foreigners" (as quoted in *Sports Illustrated*). Might I interject here to say that Hitler did not feel he should be punished either, for essentially saying that the biggest thing he didn't like about Germany were the Jews, homosexuals, gypsies, etc. While I don't feel that Rocker is in any way a threat of being the next Hitler, it is this sort of intolerance that is always in danger of starting a chain reaction. While it is unfortunate that Rocker's career and public image will suffer from this remark, his punishment will make him an example and subsequently impact the intolerance of "foreigners".

Rocker is not the first famous public figure to make such a comment, and he won't be the last, but by suspending him as well as fining him $20,000, baseball is sending a message to America that racism is unacceptable. While Rocker, and 57% of respondents to a *USA Today* online survey, feel that his punishment does not fit the crime. Only the suspension will truly hurt him, and maybe even that will do him some good. While he is sitting out for 2 1/2 months of the season, he can use that time to cool off. So he has to pay a fine of $20,000. Big deal. Most baseball players probably carry that around in their back pockets, and the money is going to support pro diversity groups. As for the sensitivity training, I think that while Rocker may not take it seriously, it certainly couldn't hurt his outlook. Making an example out of an athlete also sends a strong message to the younger generation. If baseball were to let him get away with his remarks incurring only a slap on the wrist, what kind of message is that sending to the kids? Do we really want them to think that New York is a bad place filled with "scary" foreigners? And for that matter, do we want them to think that there is anything wrong with foreigners in the first place? Finally, Mr. Rocker, if it wasn't for all those "foreigners" paying to enjoy the great American sport of baseball, you wouldn't be making so much money now, would you?

Austria in turmoil

By Gretchen Schrock

How much power should supranational organizations, like the European Union or the North Atlantic Treaty Organization (NATO) wield over individual countries? As the events of the past couple of weeks have demonstrated, the European Union believes it holds considerable power as it has been pressuring Austria to deny Jorg Haider's far-right Freedom Party from joining into a coalition government with the moderate right People's Party, headed by Wolfgang Schessel. Nevertheless, why is the European Union protesting such a political move inside an individual sovereign state?

Haider is, as numerous experienced European diplomats have asserted, a racist, a xenophobe, and a Nazi sympathizer, and his party takes an anti-immigrant view among other objectionable opinions. Despite his controversial stance, the Freedom Party came in second place in Austrian parliamentary elections last fall. Haider's party received 29.6 percent of the 4.6 million votes, coming in second place behind the Social Democratic party, which had 33.2 percent of the votes. This was what the Austrian people wanted for their government.

The European Union should have no influence on the composition of the government of Austria. The citizens of Austria, not some supranational organization, make the final decision as to how and by whom they want to be ruled. What would be the purpose of having a democratic state if the leaders knew that when the European Union, NATO, or any international organization did not approve of the election outcome, they could just nullify it by diplomatically and economically pressuring that state into submission?

If Austria were to comply with the demands of the European Union, it would set a precedent for future involvement in the affairs of individual states.

In 1996, the European Union passed a treaty on democracy and human rights, which contained provisions for expelling members if they relapsed into dictatorships. It was aimed at the new member countries of Eastern Europe, but now European leaders declare that they have the right to judge what exactly is a democrat. In their opinion, though they would not admit it, a democrat is anyone whose political, economic, and social opinions, with no major deviations, agree with their own.

However, European leaders must have thought the neo-Fascist party in the Italian government in 1994 was full of modern-thinking democrats because there was no threat of ending diplomatic ties with Italy six years ago. The same assertion must be true in all of those European countries that had Communists, who continually made excuses for Stalin and other dictators, in various positions in government—just a bunch of moral democrats. The stable diplomatic relationships with those so-called dictators in Cuba, Libya and Iraq are really with a bunch of democrats. All of the non-democratic politicians must migrate to Austria. When it was discovered that Karl Waldeim, who was the elected president of Austria from 1986 to 1992 and was a two-term secretary general of the United Nations, had served in the Nazi army during World War II in the Balkans, the country was placed under diplomatic boycott. If the European Union or any other supranational organization wishes to criticize a state for allowing controversial political parties to maintain prominent governmental positions, they must be consistent.

The reasons given by the European Union for its decision are two-fold. Austria has a strong Nazi past. The country embraced the ideology of National Socialism and gladly welcomed the annexation of its territory into Nazi Germany by Adolf Hitler in 1938. The international community should be concerned about the possibility of National Socialism engulfing Austria again, but the internal situation in this particular country, as the situation throughout the world, is much different than over 50 years ago. We are not in the midst of a staggering economic depression, following a devastating world war that wreaked havoc throughout Germany and Austria-Hungary.

Secondly, Haider and his Freedom Party want to enact a ban on immigration to ensure that immigrants, especially those of East European descent, do not take the low-paying jobs away from the Austrians. This viewpoint does deserve criticism from international observers and diplomats. Yet, does it warrant the punishment of weakened diplomatic ties that affect the entire population when a large percentage of educated Austrians voted for this party and when the appointed prime minister isn't Haider, but Wolfgang Schessel?

The entire conflict is embedded with historical and political concepts. The most important idea to remember is that the presence of the Freedom Party in Austria's new government was the result of a legitimate democratic election. What would happen to the ideals of democracy if the Freedom Party were ousted from the government based on their beliefs? The answer: the ideals of democracy would be undermined.

Hillary Clinton tackles New York

By Michael Boland

On Sunday afternoon, Hillary Rodham Clinton graced downstate New Yorkers with her presence and finally announced that she would seek to fill Daniel Patrick Moynihan's soon-to-be vacated seat in the United States Senate. Speaking as a New Yorker (no, not from the city), I'm insulted by Clinton's blatant power grab. She is not from New York state, has never before lived in New York state, and now all of the sudden she wants us to believe that she can represent us better than anybody? I'm not buying it.

So why is she running for the Senate from the state of New York? She is asked this question often, and her answer is about as lame as they come: "I care about the same issues you do. I understand them and I know I can make progress on them. That's why, my friends, I want to be your senator."

I have a better theory. I think she's running in New York because there are no Senate seats up for grabs in either Arkansas or Illinois (where she was born) until 2002 and she wants power as quickly as she can get it. Besides, she won't challenge in those states because each has a split partisan delegation to the Senate. She won't want to challenge the Democratic senators because that would be damaging to the party. And she won't want to challenge the Republican senators because she knows that she can't beat either one of them in an election. At least in New York, Democrats outnumber Republican nearly 2-1 and she stands a fighting chance.

Let's pretend, just for a minute, that she really does give a hoot about New Yorkers, and that by moving to Chappequa a month ago, she really did become qualified to run for a Senate seat from New York. The question then becomes, do we really want her in a position of authority? Hillary has some nasty scandals, both in the past and present, which demand a few explanations before she can expect voters to trust her.

Whitewater is no small matter. Has she ever really explained how exactly she made $100,000 off of a $1,000 investment? No. But usually, profit margins of that magnitude indicate illegality on someone's part. It's interesting to note that many of her former business partners from the '80s are now in jail for their role in the scandal.

A second issue that severely damages her credibility is her habit of taking campaign trips in government airplanes and not reimbursing taxpayers appropriately. Rudy Giuliani, Clinton's opponent for the seat, has taken 14 campaign trips in the past six months, and paid approximately $150,000 for those trips, out of his own campaign war-chest. Clinton has taken approximately 30 campaign trips, and so far has reimbursed taxpayers approximately $40,000. The cost of running a government airplane is somewhere around $20,000 per trip. Obviously, Hillary is not paying her fair share. You and I are paying for her to campaign for public office, straight out of our pockets. That's prohibited by law. It's nothing short of corruption.

Upstate New York accounts for 60-70% of the total vote in this race. Hillary does not, cannot and will never represent those people in the U.S. Senate, even if she does carry the city.

Hillary Clinton is an arrogant, power-hungry, scandal-ridden individual with a checkered past and an agenda that in no way reflects the needs and desires of the majority of New York. I'm no Giuliani fanatic by any means, but he's preferable to Hillary.

I'm confident that come November my fellow New Yorkers will make the right decision and send Clinton packing.

Pesticides lead to life-threatening health problems in South America

By Julie McLaughlin

As Valentine's Day approaches, possibly faster than the single population would like it to, stores, restaurants and florists are targeting the romantic side of every consumer. Clever advertising leaves every woman coveting "symbols of her partner's love," whether it is the cute bee-bear in the Bookstore or the traditional chocolates and dozen red roses.

While advertising does an excellent job of making products desirable, it often focuses only on the positive aspects of a product, ignoring the negative externalities.

In the case of roses, the flower most traditionally given in the United States, significant health and environmental dilemmas exist in South America, specifically in Colombia and Ecuador, where most of our imports originate. The production of roses causes a long list of environmental hazards, from the consumption of resources to sterility in women workers. In their book, *The Game of the Rose*, Niala Maharaj and Gaston Dorren describe a rose as an "industrial product" characterized by a sophisticated system of heating and cooling—the equivalent to sweatshop labor—dead soil and dangerous pesticides.

Probably the most detrimental effect of floriculture in South America (and in Africa) is the excessive use of pesticides. The lack of enforced regulations and laws is not only the fault of the host country but more so the fault of the North American consumer who has little, if any, awareness about the problems abroad. A 1997 EWG study revealed that a California-grown rose had 1,000 times the level of cancer-causing pesticides as comparable to food products. This suggests that the consumer should immediately wash his or her hands after placing roses in a vase and also urges the sweet boyfriend to refrain from placing a rose in between his teeth to be cute. However, what poses a bigger threat than the oblivious North American consumer who handles roses unknowingly, are those workers and residents who deal with the devastating effects of floriculture everyday.

Courtesy of Julie McLaughlin

Three fumigators in El Angel, Ecuador get geared up to spray roses with environmentally detrimental pesticides.

In a town called Cayabe in north of Quito, Ecuador's capital, the problems of floriculture are all too familiar. Merely questioning a local on a bus will initiate a half hour conversation about all of the family members, and friends and their livestock that have experienced health hazards due to the growing number of greenhouses that surround the town.

There are stories of women who experienced either stillbirths or sterility after working on flower plantations. Those women lucky enough to bear children after exposure to such pesticides often report abnormalities and defects in newborns. Maharaj and Dorren site a study in Bogotá, Columbia in 1983 "a small sample of forty women workers was asked if they had health problems. Just five of them did not."

Possibly equal in harm to the people's well being is the effect on the livestock of the area. A once entirely agricultural and cattle ranching area now feels the burden of a contaminated water table due to untreated pesticide run off from fumigation of the flowers. Simple farmers, whose lifeline is their cattle and crops, complain of sick and dying livestock.

While these problems seem unimaginable and overwhelming, the solution, while difficult, is not unattainable. The solution to this environmental disaster lies in the hands of the North American consumer. Some European countries, especially Germany, exercise their market power by urging flower plantations in South America to meet the "green stamp" requirement (a seal of approval once a business has demonstrated that they cause minimal environmental degradation). European pressure has succeeded in converting one plantation in Ecuador, out of hundreds, to a "green stamped" business. However, the largest market for South America remains North America. One plantation in Ecuador shipped 62% of their flowers to the United States alone.

Maharaj and Dorren say that "everyone in the industry stresses that the flower sector is a highly market driven one." For this reason it is fathomable that the North American consumer could change the face of floriculture from devastating to tolerable merely by choosing to only purchase environmentally friendly flowers. Consumers must make the origin of a product their priority. The florists' priority, like all suppliers', is to provide the "best product," which means the most desired qualities: low priced and aesthetically pleasing flowers.

The florists of downtown Lewisburg are no exception; they too face the dilemma of quality vs. negative externalities. One downtown florist chose to boycott African roses because of associated labor problems. This same florist expressed that he would pay extra for environmentally friendly roses if the option existed. However, moral suppliers are rare and the ultimate responsibility of investigating the product falls in the hands of the consumer. As one engineer at Queen's Roses in Ecuador put it, "if the North American client only wanted roses with the green stamp, that is the only kind of roses that would be produced."

Recipe for a sweet Valentine's Day

Can't think of an inexpensive yet sweet Valentine's Day gift for your special someone? Nothing says, "I Love You" like homemade cookies! Follow this recipe and let your Valentine know you are thinking of them!

Sweetheart Sugar Cookies

1-1/4 cups (300 mL) granulated sugar
1 cup (250 mL) Golden Crisco Shortening
2 eggs
1/4 cup (60 mL) corn syrup or regular pancake syrup
1 tbsp (15 mL) vanilla
3 cups (750 mL) all-purpose flour (plus 4 tablespoons/60 ml, divided)
3/4 tsp (3 mL) baking powder
1/2 tsp (2 mL) baking soda
1/2 tsp (2 mL) salt
1 cup (250 mL) icing sugar
3 to 5 tbsp (45-75 mL) water
Food color

Decorations: (your choice)
granulated sugar, colored sugar crystals, frosting, candies, chips, nuts, raisins, decorating gel

1. Combine sugar and shortening in large bowl. Beat at medium speed of electric mixer until well blended. Add eggs, syrup and vanilla. Beat until well blended and fluffy.

2. Combine 3 cups (750 mL) flour, baking powder, baking soda and salt. Add gradually to creamed mixture at low speed. Mix until well blended.

3. Divide dough into quarters. Wrap each quarter in plastic wrap. Refrigerate several hours or overnight.

4. Preheat oven to 375°F (190°C). Place sheets of foil on countertop for cooling cookies.

5. Spread 1-tablespoon (15 mL) flour on large sheet of waxed paper. Place one quarter of dough on floured paper. Flatten slightly with hands. Turn dough over. Cover with another large sheet of waxed paper. Roll dough to 1/4-inch (6 mm) thickness. Remove top layer of waxed paper. Cut out with seasonal cookie cutters. Transfer to ungreased baking sheet with large pancake turner. Place 2 inches (5 cm) apart. Roll and cut out remaining dough.

6. Sprinkle with granulated sugar or colored sugar crystals, or leave plain to frost or decorate when cooled.

7. Bake one baking sheet at a time at 375°F (190°C) for 5 to 9 minutes, depending on the size of your cookies. (Bake smaller, thinner cookies closer to 5 minutes; larger cookies closer to 9 minutes.) DO NOT OVERBAKE. Cool 2 minutes on baking sheet. Remove cookies to foil to cool completely.

8. For icing, combine icing sugar and 3 tablespoons (45 mL) water. Mix to blend well. Add additional water, a little at a time, if icing is too stiff. Add additional icing sugar if mixture is too thin. Divide mixture into small bowls. Add food color, a few drops at a time, to achieve desired colors. Place in pastry bag fitted with small round writing tip. Alternatively, place in small resealable plastic bag. Snip very small hole off one corner of bag. Pipe designs onto cooled cookies.

Makes: 3 to 4 dozen cookies (depending on size of cookie)

Recipe courtesy of Crisco.Com

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

Have you ever wanted to tell someone something really badly but you just don't know how to say it? Well there is something that I want to tell someone, but just can't bring myself to doing it.

One of my friends is a well-known person on Bucknell's campus; the guys are all friends with him and the girls all fall in love with him. Well, this guy and I have been friends for a little while and we always have a good time together. I have seen him through his fair share of girls-the guy has had four in the last two weeks-they all love him because he is just an all around great guy. I want to ask him out sometime but I just don't know how. The problem is that I don't know if he would like a regular girl like me. He usually dates the kind of girls that just get around all the time, if you know what I mean, and I guess good looking people are just drawn to one another. However, I just know that these girls he goes out with are awful for him, I even told one that he wore a hairpiece just so she wouldn't want to go out with him again. I think she must be a few beers short of a six pack because she believed me. Go figure.

I am left with a dilemma: do I tell my Romeo that I am his Juliet and hope that things work out or should I take another route? Is there anyway that you can think of to tell him? Do you even think that I should tell him or should I just simply look for someone that is more my style and hope that at our ten-year reunion he is still single?

Sincerely,
Damn Unpretty

Dear Damn Unpretty,

Let me start off by saying that your analogy of him being your Romeo and you his Juliet isn't the greatest comparison. In case you didn't know, Romeo and Juliet killed themselves.

Now then, let me say that you are in quite the situation. It seems to me that this guy who you are dreaming about has a different personality than you. You see, although you may really like this guy he may be into a different kind of girl than you are. He may just like the kind of girl who is relatively superficial and not the caring compassionate type (which I get the impression you are). Therefore, just know that despite the fact that in your mind it may work out, in reality things don't always happen the way you want them to.

You seem as though you are really into this guy, so regarding your question of whether you should say something to him, I say why not? You really don't have anything to risk other than losing a friend and having your heart broken. Additionally, you may not even have to tell him flat out that you are cool with him, but rather could drop some subtle hints. From what I hear Valentines Day is coming up, why not send him a bouquet of flowers, or a box of chocolates, even a valentine with a Smurf on it could do the trick. It really seems that you like this guy a lot, I mean you told a girl he wore a hair piece, which by the way is just cruel. You shouldn't tell people things like that. I think it would be a mistake not to try and drop some kind of hint.

If you do decide to drop some hints there are a few ways that you can do it. First of all you could just come out with the truth and tell him that you are crazy about him, and risk a less than pleased reaction. That scenario is really risky because you may be setting yourself up for disappointment. Another method that you could try would be to buy a night gown from Victoria's Secret and wear it into his room and ask him if he thought a guy you are after would like it. If you do that, you work the whole jealousy angle and would additionally be dropping some hints, and he wouldn't even know about it. Last of all, if you don't feel as though you can say anything, or even drop some hints, just keep hanging out with him; who knows, he may take a liking to you.

Hopefully things will work out for you in some way, shape, or form. If they don't, I have a few things for you to keep in mind. Just know that when people find one another, it is usually by coincidence, and things just go from there. If you are always looking for someone in particular, chances are you will look right over the good guys. So don't wait for someone, go out and have a good time and meet as many people as you can. Don't look for something with them though, things will just happen, you have to trust me on that. So I hope that things work out for you no matter which road you choose to follow. In addition, keep in mind, if things don't work out just know that it has nothing to do with you, some people just aren't meant for each other for one reason or another. But, hey, that's life—you learn from it, and it makes you stronger.

In the words of Blink 182 "..and it's happened once again, I'll turn into a friend, someone that understands and sees through the master plan, but everybody's gone and I've been here for too long, the faces of my own well I guess this is growing up." Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

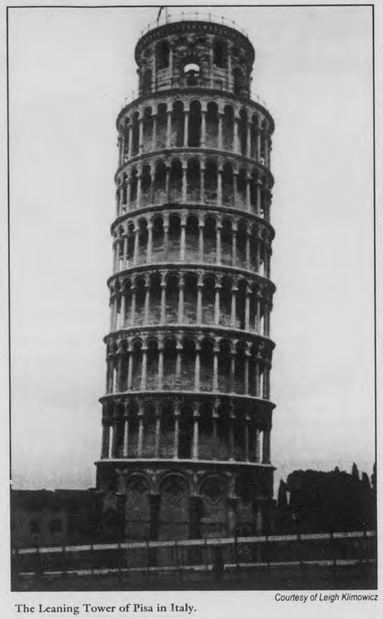
An Abroad Perspective: Florence



The Leaning Tower of Pisa in Italy.

Courtesy of Leigh Klimowicz

By Leigh Klimowicz

Studying in a foreign country was something I had anticipated even before coming to college. Consequently, when it came time to start the application process my sophomore year, the only issue to consider was where to go. After researching different programs in different countries, the Studio Arts Center International (SACI) in Florence, Italy, was the obvious choice for me.

The opportunity to study at an art school located in Florence, the birthplace of the Renaissance, was like a dream come true. Though I didn't speak a work of Italian, I was determined to go no matter what the obstacle. My dream did come true, and from the moment I arrived in the fall of 1998, I was in love with Italy. My time there has been the most rewarding and memorable experience of my college career.

SACI is an American program, run through Bowling Green State University in Ohio, and all classes are taught in English. However, this in no way limited the diversity of students and faculty, as participants were from around the globe. My semester consisted of classes in photography, drawing, art history (early Renaissance), Italian cinema, and Italian language. All of the professors were extremely knowledgeable in their fields, and they cared about each student. My professors not only taught me subject areas, but also worked to expand my creative thinking and increase my artistic capability.

A fundamental part of my experience was not only creating art, but experiencing it as well. Spending time in the studio was not what SACI was all about. While it is an integral part of being an artist, studio work and class times were consistently complemented with relevant experiences outside the classroom. For example, I traveled all around Italy with my art history class. We were able to learn about works of art located in Venice, and then visit the authentic environments.

Part of what made these experiences possible was the composition of the program. With only a limited number of students, small classes facilitated learning, allowing the professors to give students needed attention. Professors were addressed by their first names, which helped to give the school a relaxed atmosphere. In addition, all students were housed in apartments throughout Florence, usually in groups of four to six. This arrangement put us in a situation where we would have to interact with the community.

Looking back on my time in Italy, on what I learned and experienced, many things stand out in my mind. There are the memories and pictures of places I visited, great works of art I saw, and friends I met, but the most important thing I learned while I was abroad was how to live.

Knowing my time there would be short, I tried to make the most of every day. I tried to take advantage of every possible opportunity. With this approach, I found every moment to be rewarding, even the moments that brought frustration and anxiety. Partly with the help of my parents and teachers, and partly on my own, I was able to experience Italy. I was able to experience life.

ILTM program provides best of both worlds

Seminar is good opportunity for engineering and management/accounting majors

By Chad Gillenberger

Ten years ago the University was approached by a retired friend from the business sector.

He brought to the attention of the University the fact that in recent years business and technology were becoming an increasingly integrated enterprise, with a sound foundation in both areas needed in order to truly succeed in the changing economic climate. He found that too often, management professionals knew little about the role of technology in business and engineers were inexperienced at managing the resources they were developing.

The University commenced a two-year study in which they interviewed top executives at major companies in order to understand exactly what must be done to bridge the widening gap between the disciplines. Acknowledgement of the problem amongst the executives was consensual; the general opinion was that something must be done to broaden the education of students entering both fields, but the program should be additive and not replace existing curriculum.

The culmination of this research resulted in the creation of The Institute for Leadership in Technology and Management (ILTM).

ILTM is a unique opportunity for engineering and management/accounting majors who have completed their sophomore year. The program combines engineering and management education with perspectives from the humanities and social sciences, and exposes students to complex problems encountered by many technology-based businesses and industries.

The program is divided into two parts: the initial stage is a six-week stay at the University during the student's sophomore summer. During this time students have class approximately six hours a day, five days a week. Classes are taught by professors from both the management and engineering departments. Methods of study include lectures, case studies, seminars, group discussions, field trips, and interdisciplinary team projects. In the past, guest speakers have included a previous president of the Ford Motor Company and the Chairman of the Bucknell Board of Trustees.

The team projects are the most important part of the program. Participants work in groups consisting of members from both disciplines in order to come up with feasible solutions to problems posed to them by actual corporations who are either currently wrestling with the problem or would like to gain some perspective on a problem which they have already solved. Past participants have included such corporations as Corning, J.P. Morgan, Carpenter Technology, PP&L, General Electric, and Proctor & Gamble.

The second part of the program takes place during the participant's junior summer. During this time they take part in an internship with a participating corporation either domestically or around the world. This provides participants with valuable real-world experience and an opportunity to apply what they have learned in a corporate setting.

"The program provided me with a unique opportunity to work on real-world interdisciplinary projects. It taught me a lot about my critical thinking skills and made me realize the many different ways that one can approach a problem. While the program is challenging, if you work hard, you get far more out than you could ever put in. I found it very relevant to what I will be doing in my future professional career," senior Business/Management major and graduate of the program Supriya Joshi said.

Currently, twenty students are selected to participate in the program with half coming from the engineering department and the other half from the management department. In previous years, upwards of seventy students have applied for the program. Tuition for the summer is waived for the selected participants and they also receive a $1,500 stipend. In the future ILTM may be increasing its number of participants.

"We've been thinking of expanding the number of participants, but budget constraints make this currently infeasible. Eventually, I see the ideal number of participants being around thirty, any more than this may alter the effectiveness of the program," civil engineering professor and current director of ILTM James Orbison said.

The deadline for application this year has already passed but freshmen interested in applying next year can find application forms in the Management Department Office, Taylor Hall, and the Office of the Dean of Engineering, Dana Engineering Building. Additional questions may be addressed personally to Professor Orbison.

Circle K sponsors annual Connection Day for Girl Scouts

By Katie Hays

If you noticed swarms of girls clad in green vests and brown sashes gathering inside Coleman Hall last Saturday, you were not hallucinating; rather, you were witnessing the gathering of over 300 girl scouts for the annual Bucknell Connection Day, sponsored by Circle K.

From early morning to late afternoon, the Girl Scouts and Brownies participated in activities ranging from Ham Radio to sign language. The day concluded with a special ceremony, during which Circle K received the Hemlock Council's Special Service Award for planning and helping with the event for the past several years. Krystal Buhr '01, the current Circle K President, rose to receive the award. Lisa Spagnola '02, along with troop leader Anne Arney, planned the activities in which the girl scouts participated throughout the day.

After describing the learning stations that the girls attended to earn patches, Buhr went straight to the true sources to hear a first-hand account of the Bucknell Connection. With the enthusiasm for which Girl Scouts are known, four smiling girls, Alissa, Sara, Nora, and Christina elaborated on their favorite parts of the day, including activities such as "Be a Logo Guesser," and "Ads, Ads, Ads." The girls also showed Buhr the sign language that they had learned through Circle K's efforts.

Emily Hillman—The Bucknellian

Circle K President, Krystal Buhr '01

Overall, it seemed that everyone from the Girl Scouts to the Circle K members to the troop leaders radiated with energy and enthusiasm in response to the Circle K sponsored Bucknell Connection Day.

"I love working not only with the girls, but also with the members of Circle K who are so kind to give their time and attention to organizing and participating in this project. It's rewarding and a lot of fun," said Arney.

Thanks, Circle K, for a day well conceived. Our Brownie friends, Alissa, Sara, Nora, and Christina would most definitely say the same.

Stadler Center presents poetry readings by Hogue, McPhee

Paige Cull—TheBucknellian

Cynthia Hogue, Associate professor of English read poetry from her latest collection , The Never Wife, winner of the MAMMOTH award, this past Sunday in the Stadler Center's first event of the semester.

By Meghan Magee

Sunday Feb 6th kicked off the Stadler Center for Poetry's first event of the semester.Brigon writer,Martha McPhee, reading from her first novel *Bright Angel Time* and a chapter of her latest novel, not yet published or titled.

In addition to *The Never Wife*, which won the first MAMMOTH Books Poetry Contest, Professor Hogue has two previous published collections of poetry and one book of criticism entitled *Scheming Women: Poetry, Privilege, and the Politics of Subjectivity*. Currently she is working on a fourth collection of poems, *The Incognito Body*.

Hogue opened on Sunday with the new collection of personal narrative-based poetry. Prefacing her poem "Your Strange Transcendence," Hogue said, "When you begin to lose your language the mind does amazing things ... It finds other ways of writing. I began to experiment with collages."

"Your Strange Transcendence" demonstrates her utilization of collages. Hogue wrote this specific poem for a friend's 40th birthday and transgendered William Blake into a character, Mrs. Flake.

Among the several poems recited, Hogue read two poems revealing an especially personal and intimate account. "Desire, This Sweetness" and "The Philosopher's Sorrow" result from a major personal adventure. That adventure being the breakdown of her marriage, Hogue claims that the poems knew of this breakdown before even she did.

The power of Hogue's poems is the power to evoke genuine emotions, although sometimes uncomfortable or unpleasant. "Desire, This Sweetness" which displays Hogue's poetic talent and her strength to force the reader into the mental climate of the poem.

> *The sunset you see everyday-*
> *like a wife, weary, heart-broken*
> *("I stood by you")means nothing*
> *as you strain with longing*
> *for that beautiful woman walking the shore.*
> *You'll say the sex was kinky,*
> *that you just went along,*
> *but for now is just a bench by a lake*
> *with you in your shell gazing out."*
>
> ***From "Desire, the Sweetness" by Cynthia Hogue***

Martha McPhee, daughter of John McPhee, arguably one of the most influential American writers of the post-war era, received her MFA from Columbia University and has taught fiction writing since 1997. Her father isn't the only literary figure in her life; she is married to Mark Svenvold, visiting assistant professor of English. The first novel from which she read, *Bright Angel Time*, was a *New York Times* notable book for 1997. She began her reading with "The Gentleman," the opening chapter of this novel. Narrated by eight- year old Kate, the story takes place in the spring of 1970, a moment before Kate meets her mother's new lover. McPhee's aptitude for triggering the senses is strikingly evident in this piece.

McPhee's perfect blend of poetry and fiction is an indispensable quality that fiction writers should strive for. Every sentence consumes your active intellect as you appreciate McPhee's efforts to artfully construct each sentence. Her descriptive talents are like none other I've read. The eight year old narrator, Kate, describes her mother in the first chapter of *Bright Angel Time*:

"Mom had curly hair, golden curls the color of sand. She was thin, with a big bust, a gap between her teeth and green, green eyes. She wore shiny taffeta dresses with big flowers and no sleeves. Some had matching jackets, some had matching sweaters. The colors were living colors that made me think about summer: peach, lemon, strawberry. Her skin was ivory and smooth and there was no hair on her legs or under her arms. It was comforting skin, the type that showed no signs of stress, honest sincere skin that wrapped her in an extra layer,protecting what was inside."

This excerpt proves McPhee's fine attention to detail and her ability to grasp each of the reader's senses in a paralysis of ecstasy. The language of McPhee's fiction brilliantly flows with such mellifluous concentration on simply the artistic quality, unique to superior literature. Michiko Kakutani of the *New York Times* wrote, "Ms. McPhee shares her father John McPhee's gift for fine, lapidary prose.

Blessed with a poet's ear for language and a reporter's eye for detail, she proves with this volume that she is also a gifted novelist, a writer with the ability to surprise and move us."

The second reading came from her next novel, which has yet to be titled which is a sequel to *Bright Angel time*, 20 years later. This melancholic chapter evolved into a heartrending one as the Kate's stepfather (her mother's lover from Bright Angel Shining) receives a phone call telling him that he has pancreatic cancer.

The Stadler Center's next reading will be on February 20th at 8:00pm. Linda Gregg, the poet in residence for the year 2000, will read in Bucknell Hall.

Silhouttes continue with success

Paige Cull—TheBucknellian

Silohouttes, Jennie Scheerer '02, Megan Murphy '02, Chrissy Carter '00, and Ann Bonner '00 in the midst of a practice.

By Katie Parker

If you haven't heard of the Silhouettes, Bucknell's celebrated all-female a cappella group, you better listen up! One of three a cappella groups on campus (The Bison Chips, all male, and Two Past Midnight, co-ed), the Silhouettes have earned their prestigious reputation through dedication, hard work, and a love of beautiful music. Formally the Sem-Cems, the Silhouettes have amazed the Bucknellian campus with amazing style and lovely voices for over a decade.

The biggest key to the success of this group is their ability to adapt to the changing times and music. Their latest CD, "I Never...", features a song by Sarah McLaughlin, as well as some more traditional a cappella tunes. Ann Bonner '00, a member of the group since 1996, admits that she "has seen the Silhouettes go through some major changes since 1996, some for the better, some for the worst, but mostly for the better!"

What is so special about the Silhouettes, besides their amazing voices? The fact that they're a group of ten girls who are not only joined by their love of music, but also a close bond of friendship. Bonner offered, "...We are tight. We like each other and have much of the same personalities and senses of humor, and though they sometimes clash, we have lots of fun together." Although she was quick to add, "Naturally, there is disagreement, naturally there is uneasiness and tension at times but we pull through everything for the most part."

Nicole Gull, '00, said "If I have taken anything away from my Silhouettes experience it would have to be the challenge of working in a student-run organizaton. It is alays interesting to work in a group where a variety of perspectives meet on several levels, whether they be hrough music, friendship, or performing."

And what was making the CD like? "It was cool because we were right on campus and the guy came and set his equipment up in the back of [Rooke] chapel, and we had microphones set up...the sound was just incredible," said Bonner. "I had never done anything like that in my life and though it was pretty exhausting, I'll never forget those long recording sessions and what came out of them!"

Current Silhouettes members include freshmen Molly Campbell, Caitlin McGeehan and Sara Mastrony; sophomores Meghan Murphy, Beth Van Epps, and Jennie Scheerer; juniors Kate Marr, Diana Schmit and Brett Russo (who are all abroad this semester); and seniors Ann Bonner, Jen Buoncontri, Christina Carter and Nicole Gull.

The Silhouettes accept new members fairly frequently, and Bonner is quick to encourage others to try out. "I cannot imagine my Bucknell career without the Silhouettes experience. And I think I speak for the other seniors when I say that. I would encourage everyone who likes to sing to try out. No one should ever think that we are looking for one kind of singer. You never know what the Silhouettes are looking for when we hold auditions!"

The Silhouettes' many CDs are available for purchase in the Bookstore, and keep an eye out for future performances - this is one original Bucknell act you don't want to miss!

Hannigan gives recital . . .

John Frazier—The Bucknellian

Barry Hannigan, professor of Music gave a recital this past Friday night in the Weis Center. The recital was held in celebration of his new CD. Hannigan performed the famous piano suite, Le Tombeau de Couperin which can be found on the CD and is available in the Bucknell Bookstore.

Ember Swift plays a mix of music

Paige Cull—TheBucknellian

Ember Swift impressed the audience at the Seventh Street Cafe this past Friday night.

By Kyle Menghetti

When Toronto-rooted Ember Swift first took the stage, I wasn't sure what to expect. The advertisements that had graced bulletin boards across campus had called their music "jazz-folk-punk-funk." Without hearing Ember Swift, it is difficult to understand just what this collaboration of genres means.

The word "jazz" stuck in my head the most as I entered the Seventh Street Café last Friday night. I wasn't expecting Ember Swift when I envisioned a "jazz" band.

The lead singer sported a bleached braided Mohawk and was accompanied by a pink-haired bassist and a drummer wearing glasses styled after Elvis Costello.

They looked like a punk-rock garage band but their musical genius taught me not to judge so quickly.

What was at first a surprise became a pleasant shock when angelic-voiced Ember burst into the glorious a cappella jazz song, "Priv-ledge." The room was instantly silent. The cappuccino machine rested briefly and all the eyes in the room were fixed.

Ember was joined for the rest of the evening by friends Lyndell Montgomery on bass, violin, and bowed guitar, as well as Cheryl Reid on drums and percussion.

The show that ensued was a remarkable musical experience of heated, passionate lyrics and a range of combinations of guitar and percussion styles.

Where does Ember Swift fit into the musical realm? Well, take every genre you can imagine, "throw it in a blender and press puree," as bassist and violinist Lyndell Montgomery described.

A highlight of the evening came when the group was closing their set and invited the audience to dance if they felt the urge. Within minutes, the Seventh Street Café was shaking as Ember Swift blew the roof. The café came alive there was a mass of crazy dancing encircling the center floor.

The music of Ember Swift had stirred chaos unlike anything I have ever seen before at Seventh Street. It was quite momentous. Ember Swift continued to jam out the rest of the song on percussion while Montgomery's violin roared and Reid's drums carried the rhythm.

Ember Swift, the main singer and songwriter, is a jazz vocalist with folk tendencies. Swift's voice boomed throughout the café while maintaining a gentleness reminiscent of one of her greatest influences, 70s folk singer Joni Mitchell. Swift's aggressive acoustic guitar was original and creative as she jumped from song to song, all dissimilar yet with the same celebrated blend of jazz, folk, and punk.

Bassist Lyndell Montgomery, trained on violin and piano in classical music, embraced a variety of all musical spheres. Among the vast spectrum, heavy jazz like John Coltrane and Ella Fitzgerald, as well as some punk, rock, and even Nine Inch Nails, have had lasting influences. Montgomery's heavy bass propelled the music and her wild violin added to the performance.

Respectful of Ani DiFranco's business dealings but very different in style, some might lump them together as indie feminist rock. Ember Swift is not so easily categorized. Swift, like DiFranco, is the manager of her own record label. She decided early on to make her music a profession. At only 22, she decided to do it all on her own. Independent recording label Few'll Ignite Sound was born as a means of representation as a legitimate artist for bookings and business dealings as well as a networking tool for other independent artists.

Ember Swift has been around for over three years and has been touring the US for two of those years. "We didn't come to the states to break into the American market, but more for touring reasons and expanding our audience." In Canada, where the trio began, the main metropolis areas that attract large crowds are far apart. Convenient travel in the states has been a luxury for Ember Swift.

Currently promoting their fourth independent release, "Permanent Marker," Ember and company plan on continuing their tour in the states after a visit home. I hope that Bucknell is on their schedule when they make it through Pennsylvania again.

Student music recitals flourish at Bucknell Hall

By Jennifer Johnson

This past weekend was very exciting for music majors on campus. There was not one, but two sensational recitals by Bucknell students. Saturday night was the Senior Recital of music education major Krystal Rickard. Sunday afternoon was a joint junior-sophomore Recital including Renee Brody, Jennifer Sikora and Curtis Olson, all music education majors as well.

Rickard's sweet voice rang through Bucknell Hall Saturday night. "It's amazing such a tiny person can have such a wonderful and strong voice," Susie Wenger, '01 said. Other Bucknell students including violinist Mathew Hoy '02, flutist Darcy Taylor '00, sopranist Meredith Brisco '00, and tin whistle player Micah Schweizer '00, enhanced Krystal's performance. The audience was impressed by Krystal's remarkable performance of the extremely difficult work "Der Holle Rache" ("The Vengeance of Hell"). A standing ovation concluded the planned performance and Rickard added a catchy encore that brought chuckles from the crowd.

The Junior-Sophomore Recital of oboist Renee Brody '01 assisted by pianist Jeffrey Leeman '01, clarinetist Jennifer Sikora '01) and trumpetist Curtis Olson '02 saw a combination of instruments that seemed to please the crowd. "With the variety of performers there was never a dull moment," civil engineer Tara Zack '01, said. Said Renee Brody; "It was exciting to be able to perform in front of my family, friends and professors and to realize how much I have improved since I began college three years ago." The coordination of a recital takes hours of practice and rehearsals.

"A lot of work went into preparing for this recital, but looking back it was worth it to see so many people enjoying themselves, and as a musician that's extremely rewarding," Sikora said.

The performance ended with a piece written by Paul Crowe-Wermund,00. "We were searching for a piece to incorporate all of our instruments and were having difficulty until we realized a student had composed a piece suitable to us right here at Bucknell." Entitled "May 7th, 3PM, 1999", the piece was a showy ending to a wonderful afternoon of exciting music.

It was quite an unforgettable weekend for these students and also the friends, faculty and family that were there to support their musical endeavors. Keep an eye out for future student recitals on Thursdays at noon.

What is art? Is art art? Call Jennie (x74672) if you know the answer. Write for A&E

Balagurchik returns to campus

Tim Choate—The Bucknellian

Jim Balagurchik, class of '77, returned to the University and gave a performance in Bucknell Hall this past Monday evening. Balagurchik performed many of his self-titled works for a well attended audience. Balagurchik will also be giving private lessons to musicians thoughout the week.

University bans Napster

Reactions mixed among students and administrators to new enforcement

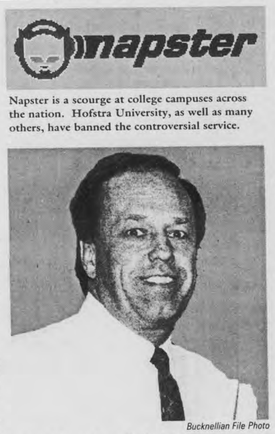
By Matthew Trunnell and Monica Montgomery

Last week, students across campus were surprised when their program used to download MP3 music files stopped working. Some became angry when they realized that they would never be allowed to use it again on campus.

Napster is a tool that allows downloading of MP3's from others over the Internet. Napster transforms the computer into a server, which connects to other computers running the program and searches these computers for a specific MP3. The MP3 file format allows CD-quality music to be compressed to a file small enough to easily transfer over a computer network.

However, so many students on campus were using Napster that 40% of the University's 10Mbps Internet connection was being utilized for the single application. And that percentage was growing. With such a strain on the campus' limited network bandwidth off campus, officials from Information Services and Resources (ISR) had to make a decision.

"We have an educational mission, and [Napster] is 99% entertainment," said Gene Spencer, associate director for ISR. "We blocked access to the Napster index."



Bucknellian File Photo

"We all have rules to live by," Associate Director of Information Services and Resources Gene Spencer said. The policy was issued Thursday.

ISR had several reasons for ending access to Napster beyond the sizeable bandwidth it was using. Many of the MP3-format songs available for download from Napster users are copyrighted materials. By downloading the songs from the Internet, users are not paying royalties to the artist. In fact, the Recording Industry Association of America (RIAA) has filed suit against Napster, Inc., charging the company with facilitating music piracy.

Napster is a scourge at college campuses across the nation. Hofstra University, as well as many others, have banned the controversial service.

Transferring copyrighted MP3s is a violation of the Appropriate Usage Policy (AUP) that governs how the University community can use ISR resources, like lab computers and ResNet. Napster violates the AUP clause that guards against excessive and disruptive use of network bandwidth. No other application comes close to the amount of bandwidth used by Napster.

Napster is both a client used to receive files and a server used to send files to other Napster users. The program is misleading in that the server portion will remain active even after users believe they have closed it. Consequently, many students were transforming their computer into an MP3 server accessible to anyone on the Internet. And distributing copyrighted files is also an AUP violation.

"We are trying to live by the laws and the economics of the bandwidth," Spencer said. Besides the illegality of downloading copyrighted material, the University's Internet connection is a costly resource. "Our 10Mbps connection costs $200,000 per year," Spencer said. Taking 40% of this bandwidth for Napster cut into speed of other network applications.

Many students and faculty members complained that the network speed was very slow; however, this past Friday, some faculty members called and inquired as to what had been done to speed up the connection. While everyone enjoys a speedier connection, some students were outraged at the loss of their favorite application.

"This is just yet another one of Bucknell's ridiculous ways to decide what's best for the students," Dennis Quintela '02 said. "I thought the Internet was one of the last free mediums left. I guess I was wrong."

Not everyone is as upset. There are technical solutions to control the network usage of one application. "What about bandwidth management? Allow people to use Napster, though prevent total Napster traffic from going over a threshold," Jason Goldschmidt '00 said.

Some have suggested that the University open its policies to recommendation. Every student who uses ResNet is forced to sign the AUP. But no student input has ever been taken under consideration in managing a resource that all students use.

Don't let techie-talk confuse you

By Rick Hoskinson

Monica Montgomery — The Bucknellian

The world of consumer computing and electronics has become an intimidating place for many people. Terms like "internet" and "e-commerce" hold unprecedented horror for many individuals. The computer has evolved from a sophisticated calculator into an entity that has a role in every person's life. For most people, the computer is an enigma. The average American fears that the computer world is something beyond their control and understanding.

Fortunately, with sophistication of the computer market comes usability. Computers are an extraordinarily useful tool — easy to understand and to manipulate. However, most Americans still struggle to cut and paste in Microsoft Word. Words like "icon" and "button" are easily confused.

The problem lies in the language of computing. Many computer buzzwords are incorrectly used in the media, in computer literature and by computer users. If you ask two friends to define the phrase "turn on the computer," you will get two completely different answers. This lack of continuity causes confusion in users that rely on computers every day.

The most common form of miscommunication in computer technology is found in friendly conversation. People are naturally interested in new communication technology, but find gigantic holes in their own knowledge of computers. Oftentimes, the consumer will try to fill in knowledge gaps by conjecture or by talking to others. However, this generally increases confusion about a given topic.

Another form of miscommunication occurs when the average user asks for help from a knowledgeable source. Often the source will report the knowledge in jargon or "tech-talk" that leaves the user more confused than before. Sometimes a source will dumb-down the technical information, only to propagate the misinformation being spread between users.

The computer industry has been little help in smoothing out the technical communication process. Often computer companies invent their own buzzwords to give themselves a competitive edge. Products are named for the purpose of standing out instead of explaining their functionality. Consumers become confused into calling a type of application by the name of a product. I have met people who have no idea what a "spreadsheet" is, but they are proficient Microsoft Excel users.

Traditionally the media has done little to help. Most media sources concern themselves with future products or new technologies. There is little help for the user initially trying to get his or her foot in the door.

I do not presume to have the answer to this dilemma. This is a complex problem that only time and education can solve. In the meantime, I would like to ease some tensions surrounding these new technologies. In the coming months, I would like to point out some of these misconceptions and help consumers realize the potential of the modern computer. Next week, I will begin with "The Internet," the reigning champion of misused terms. Hopefully, I can shed some light on this and other misunderstood technologies.

Did we once all speak the same language?

By Alex Piel

There are over 5,000 languages in the world today according to the most recent data published by population biologists and genetic archaeologists. While some scientists examine the components of these languages, others search for their origins. Do languages, like animals, have a common ancestor dating back thousands of years? One Stanford professor claims they do and has dedicated his life to providing evidence to his answer.

Fifty thousand years ago there lived one population, no more than 2,000 in number, who developed the capacity for a complex language. Using language as a means of communication, their numbers grew. From their origin in the Northeast corner of Africa, they dispersed throughout the world to Asia, Europe and the Americas taking with them their new found gift—language. Today, those who study language and its history question the origin of it and the possible means of attaining it.

Most linguists argue that languages evolve and change too quickly for accurate interpretations of their history. Any effort to trace such ancestral languages past Romance and Indo-European is futile. However, not all linguists accept such defeat. One Stanford professor is fighting that pessimism and is convinced he has classified all languages into a handful of small groups. Using similarities between the different languages, Dr. Joseph H. Greenberg has identified words and concepts that seem common to a multitude of the worldly dialects. He is unsure if there is one ancestral language, but his work is unfinished and even at the age of 84, Greenberg continues searching.

Greenberg receives mixed reviews from his peers. As one of very few linguists in the National Academy of Sciences (the nation's most exclusive scientific circle), his work synthesizes the work of other specialists. His particular practice evokes resentment and bitterness from some colleagues in his field.

His studies of the African languages is considered ingenious. His work involving American Indian languages is ignorant. Such inconsistent criticism frustrates Greenberg as his method has remained constant over the years.

He calls such a method "multilateral comparison." By creating a grid with the worldly languages along the left margin and 300 or so core words of those languages along the top, he looks for similarities between the languages. The criticism lies with the simple fact that some languages are more than 5,000 years old and Greenberg's attempts to search for similarities does not account for changes in languages over those thousands of years.

His critics argue that the only way to prove that languages are related is to establish a set of rules that would support how each language changed into another language. For example, the "p" sound in

ancestral Indo-European is now the "f" sound in English and German. They claim that the mere similarity in words and even concepts, similar to what Greenberg searches for, is insufficient evidence. These commonalties could have arisen by chance or even by directly borrowing from other languages.

Dr. Ruhlen, Greenberg's colleague at Stanford, said he is producing theories, not criticizing them. "It's a misguided perfectionism that is so perfect they have had no result," she said.

"The ultimate goal is a comprehensive classification of what is very likely a single language family. The implications of such a classification for the origin and history of our species would, of course, be very great," Greenberg said. His work is crucial to population geneticists who work to reconstruct the trail of early human migrations by means of genetic patterning in various cultures.

Greenberg has found striking similarities across languages of the Americas. He has found that words starting with "n," have a I/mine/we/ours meaning and words beginning with "m" have the though/thine/you/yours meaning. He said that not all languages show this pattern, but all American—Indian ones do. He uses similar evidence to suggest that all of these languages are derived from a single ancestral language and such is the origin of present day first and second person pronouns. His evidence does not stop with local languages though.

In considering the similarities with Eurasiatic languages, Greenberg continues: words beginning with "m" designate the first person in many languages; English, "me"; Finnish, "minAa"; proto-Altaic, "min"; Old Japanese, "mi". He cites the same similarities in words that use the letter "n" to imply negativity.

Greenberg's ultimate goal is to identify, or provide evidence for, a single "mother tongue," one ancestral language from thousands of years ago. His largest piece of evidence today is very simple. Universally, holding up a single finger can be used to denote the quantity one. In the Niko-Saharan languages, the word tok, tek, or dik, means one. Similarly, the word tik means "finger" in Amerind; it means "one" in Sino-Tibetan, "index finger" in Eskimo, and "middle finger" in Aleut. In addition, an Indo-European stem "diek" means "to point" and is also the origin of daktulos, digitus, and doigt which are the Greek, Latin, and French words for "finger," not to mention the English word digit for "finger."

It is clear that Greenberg is the only one pointing to evidence for one ancestral language.

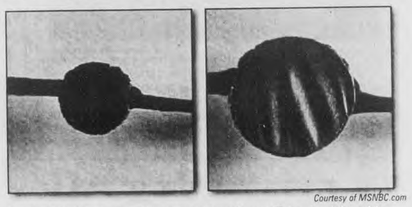
New plastic promises better artificial hearts

By Brienne Terril

Don't have a heart this Valentine's Day? Try a plastic heart. Researchers have developed prestrained plastic muscles that will soon be capable of replacing human body parts.

Scientists have been searching for years for new ways of turning electrical energy into mechanical energy. This type of energy conversion mimics the actions of muscles in the biceps and the heart. In the past, materials such as piezoelectric ceramics and carbon nanotubes have been tested for this conversion. Recently, according to a report by MSNBC, electroactive polymers—plastics that can expand or contract in response to an electric charge—look like a better material for the job.



Courtesy of MSNBC.com

On the left, the acrylic material with the voltage off; on the right, with voltage on. The enlargement is caused entirely by the electrical charge.

SRI researchers Ron Pelrine, Roy Kornbluh, Qibiing Pei and Jose Joseph said these new electroactive polymers, combined with new techniques, could improve existing devices such as pumps and motors, valves and generators, robot actuators, inkjet printers and flat-panel loudspeakers. Micro air vehicles and more lifelike prosthetic limbs could be here shortly as well.

With the discovery of the stretching ability found in electroactive polymers, the plastic are actually more efective than natural human muscles. "The strain, pressure and response time of silicone exceeded those of natural muscle," MSNBC reported. Another plastic, VHB 4910 acrylic, produced by 3M Corporation, was significantly better at stretching than silicone. The plastic tripled in length when an electrical charge was applied.

According to MSNBC, the SRI experiment consisted of placing stenciled electrodes made of conductive carbon grease on the top and bottom of the plastic film. A positive charge was applied to one of the electrodes while a negative charge was applied to the other electrode causing the top surface to attract the bottom surface. The pressure compresses the plastic into a wider, thinner sheet.

"If you really want to get wild, you can talk about something like an artificial heart," Pelrine said. "It makes a great pumping material."

Even though some technicalities, such as improving the long term reliability of the plastics must be further researched, the new plastic could be available within two or three years.

Darby Golino '03, *who won the 100- and 200- yard backstroke and was part of the winning 200-yard medley relay team, whose time was the fastest in the league this year.*

Women suffer first Patriot League loss

By Andrew Bevan

With their 63-54 defeat of Lafayette a week ago the Bucknell women's basketball team improved their record in the Patriot League to 6-0 and swept the first round of conference play. Unfortunately, the Bison couldn't keep their momentum rolling into the second half of their season, as they fell to Holy Cross, 72-62, last Tuesday.

The Bison were a little tight at the start of the Lafayette game and lackened sharpness. This was their first game in over a week since they had received a bye in Patriot League play the previous weekend.

The Bison played an excellent defensive game in which they forced 30 turnovers by the Leopards.

However, they were unable to capitalize on their great defensive effort, scoring only two points off turnovers. In a game that remained close until the end, the Bison pulled it out the victory.

"The team showed character down the stretch," head coach Kathy Fedorjaka said.

The Bison continued their strong bench play, getting a fine rebounding effort from sophomore center Kate Rounsley and key steals by sophomore forward Monique LeBlanc.

Guards Lori Houck '00 and Molly Creamer '03 continued their impressive play with 16 points each. "They hit key shots in key stretches," Fedorjaka said.

As the second round of Patriot League play began, the Bison looked to continue their winning streak when they traveled to Annapolis, Maryland to take on Navy. In an earlier meeting at Bucknell, the Bison had defeated the Midshipmen in a close contest, prevailing by six at the end.

John Frazier—The Bucknellian

The Bison look to improve upon their 6-1 league mark when they host Army this Saturday.

This contest would prove to be no different as both teams battled to the buzzer, with Bucknell coming out on top, 46-43, and extending its win streak to seven games.

The Bison posted another strong defensive effort and, although it was a low scoring game, ran their offense very effectively. "We found people out of offensive sets and got our looks and got good shots," Fedorjaka said.

The Bison only led by two at halftime and at one point in the second half had 10 consecutive possessions without a score. However, Bucknell continued its aggressive defensive play, holding its opponents scoreless during this stretch as well.

With four minutes left in the game, the Bison found themselves down by one, but this was not new territory for them. Bucknell scored on five of its last six possessions. Creamer, guard Kate Franks '03, and Vicki Quimby '02 all came up big in this four minute span. LeBlanc sealed the win for the Bison with a steal on the last possession.

"Our kids have learned how to win," Fedorjaka said.

Franks tossed in 12 for the Bison and Quimby notched a double-double, scoring 12 points and hauling down 13 rebounds.

"Franks is a real solid performance pressure player," Fedorjaka said. "Vicki Quimby had a great game inside and kept the Navy zone defense honest."

"Our team is really meshing. We have been playing well in our conference, and are taking each game one at a time," Creamer said. "In our last couple of games versus Navy and Lafayette our defense has really gotten us our victories. We have to keep that up the rest of the season."

Unfortunately, the Bison suffered their first loss in the Patriot League this season this past Tuesday when they fell to rival Holy Cross, 72-62.

Bucknell started out slow—shooting just 30% from the floor in the first half—but found itself only down six going into the locker room. The Bison fell behind 50-38 with 10 minutes left in the game, but they went on a 13-4 run to cut the lead to three. But Holy Cross had a run of its own to take a 12-point lead with 3:00 to go and cruised to the win.

Creamer and Houck led the Bison with 16 points apiece.

The Bison look to get back on track this Saturday at home when they go up against Patriot League foe Army at 1 p.m. in Davis Gym.

Struggling Bison bounce back to down Holy Cross

After two consecutive Patriot League losses to Lafayette and Navy, 54-48 win keeps Bucknell's slimming title hopes alive

By Chris Ellis

The Bucknell basketball team came into this week's games knowing that their two contests, on the road at league frontrunners Lafayette and Navy, would be critical if the Bison were to contend for the Patriot League regular-season title. The league schedule still has five games remaining, but the Bison's prospects no longer look as bright. Not only does Bucknell not control its own destiny, it now faces a seemingly insurmountable challenge as the team attempts to claw back into the top spot.

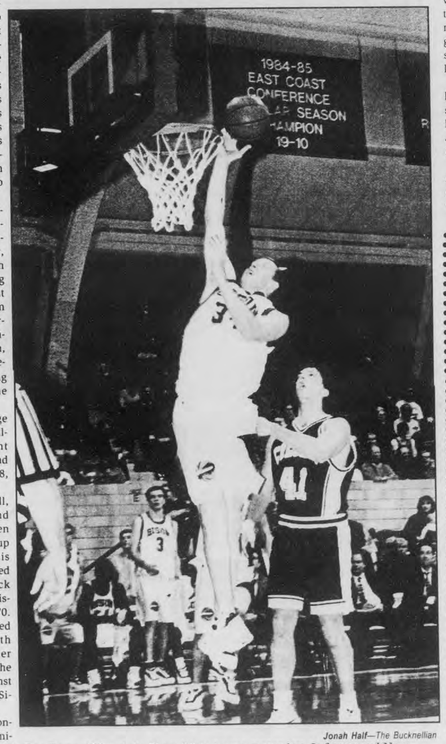
A narrow loss at Lafayette on Wednesday, combined with a 75-61 blowout by Navy on Saturday, drops the Bison to 4-3 in the Patriot League, placing them a solid third in what will likely be a three-team race for the title. Saturday's loss gave Navy a season sweep over the Bison, but the second loss is likely far more discouraging and distressing than the first.

Bucknell did salvage some hope, however, pulling out an important league victory on the road against Holy Cross, 54-48, this past Wednesday.

In January, Bucknell, without top scorer and floor leader Dan Bowen '00 in the starting lineup for the first time in his Bucknell career, mounted a furious comeback against the Mids in Lewisburg, finally falling 77-70. The Bison lost, but played Navy close even with freshman Brian Werner getting his first start of the season matched up against talented navy center Sitapha Savane.

But in Saturday's contest, Bucknell was dominated from midway through the first half on, struggling to get shots to fall and having trouble fighting off a strong, deep Navy team. The result: a 16-point loss that put the team, at least for the time being, out of contention for the Patriot League title.

"We left an awful lot on the floor (at Lafayette) on Wednesday," head coach Pat Flannery said. "At the same time, we certainly felt as if we were ready to play, and we were up from the floor after that point, and Navy began to take control of the game. As in Wednesday's loss to Lafayette, the Bison took control early, then lost it as the first half went on. Bucknell was victimized for a 26-



Jonah Half—The Bucknellian

Dan Bowen '00 and the Bison fell to league contenders, Lafayette and Navy.

4 four run over the span of 10 minutes in the first half against Lafayette, and Navy's 23-5 run over a span of seven minutes in the first half gave Navy a 29-17 lead, a lead it would not relinquish. Bucknell made just two of its 12 shots in that span.

The second half was more of the same for the Bison. They got as close as 38-29 early in the half after two Dan Bowen free throws, but again went cold from the floor, hitting just two field goals over the next nine minutes as Navy again went on a game-breaking run, this time a 24-6 spurt that gave the Mids their largest lead of the game at 62-35.

Bowen tried to single-handedly keep the Bison in the game in the second half, scoring 15 points in the half, but couldn't overshadow Savane, who torched the Bison big men for 25 points.

"They're a very intense team, and they can run a lot of good, strong people at you," Flannery said. "They wore us out as the game went along."

But Bucknell's biggest problem wasn't necessarily Savane or Navy's depth, but its own offense. Bucknell committed 22 turnovers and had just 12 assists in the contest, and shot only 37 percent from the floor. Valter Karavanic, arguably Bucknell's best overall shooter, had another sub-par night from the floor—missing all nine of his shot attempts and going scoreless for just the second time in his four-year collegiate career. It was a tough week all around on the floor for Karavanic, who missed a potential game-winning three pointer in the Bison's loss to Lafayette as part of a 4-14 shooting night.

"Every player on every level, from the NBA to the CYO, has to go through a stage like this," Flannery said of Karavanic's recent shooting woes. "You just have to have the confidence that the shots will eventually start to do down. He (Karavanic) works as hard as anyone, and he'll fight through this. When he comes out of it, he's going to come out of it in a big way."

For the Bison, the loss meant that help will be needed if the team is to make a serious run at the league crown. Going into last night's head-to-head matchup, Lafayette was undefeated in the Patriot League, and Navy had just one loss-to Lafayette. Still, Flannery—who saw league champion Lafayette upended twice last year by a mediocre Colgate team and watched as Navy lost its first-round Patriot League tournament game to 3-25 Lehigh—isn't giving up yet.

Ice hockey overcomes sloppy start to beat Dickinson, 6-1

By Trip Sanders

The Bison club ice hockey team played archrival Dickinson in an important league game this past weekend at the Sunbury Ice Arena. Bucknell emerged victorious by the score 6-1 to remain undefeated this season, but struggled against an undermanned Dickinson squad.

Bucknell's poor play may be attributed to the previous meeting between the two teams, when the Bison breezed 12-2. Perhaps looking past its opponent, Bucknell began the contest sluggish and skated poorly in the first period. Marred by bad passes, giveaways and penalties in the first 15 minutes, the Bison managed to take the lead on a shorthanded goal by senior winger Trip Sanders eight minutes into the match.

Chris Ellis '00, getting the start in goal, maintained that lead throughout the first and most of the second periods with steady goaltending, until center Alex Dixon '00 notched his seventh goal of the season to give Bucknell a 2-0 advantage. The sloppy play continued and the score remained 2-0 at the end of the second period.

After the second period intermission, a different Bison team emerged from the locker room. They returned to form, scoring almost immediately. Freshman winger Jay Sulvinski tallied his third goal of the season off a pass from defenseman Rocco Russo '00. This goal seemed to jumpstart a tired Bucknell team and brought the crowd to life—sealing Dickinson's fate.

After the crowd was quieted, play resumed with the usual punishing dump and check style of the Bison. Getting desperate, Dickinson began to gamble. In the process, it gave up scoring chances, which junior wingers Chris Newhouse and Mike Bronowicz converted into goals.

Newhouse snapped a breakaway shot over the goaltender's shoulder—thanks to senior co-captain Jeff Werring's pass—to extend the lead to 4-0. Defenseman Ramsey "The Rammer" Wilcox found a wide-open Bronowicz for the fifth goal of the game with about seven minutes to play, while goalie Paul Van Dillen '01 shut down the Dickinson attack.

Then rough play became the game's story. With repeated checks by both teams and frustration setting in, both teams began taking penalties and incurring injuries.

Sophomore wing Nate "The Animal" Ledyard got up slowly after one shift, but he managed to persevere and assist on a goal by Rocco Russo '00, extending Bucknell's lead to 6-0.

With about 30 seconds to play Dickinson ended the shutout with a goal, as a result of sloppy play by Bucknell. The game was a bittersweet victory for the Bison, 6-1.

This weekend the team will travel to West Chester, Pa. and Hagerstown, Md. to face to interdivisional opponents Penn State-Delaware County and Shippensburg. The following Saturday, Feb. 19, the Bison return home to play their final regular season home game against their toughest opponent, George Washington, at 4:15 p.m. at the Sunbury Ice Arena.

This game is billed to be exciting, featuring the final performances of the team's seniors: Ted O'Donoghue, Wilcox, Russo, Werring, Alex Dixon, Sanders and Ellis. Please come out and support the seniors in their last home game in Orange and Blue. Email Rocco at rrusso@bucknell.edu for directions.

Bison Profiles

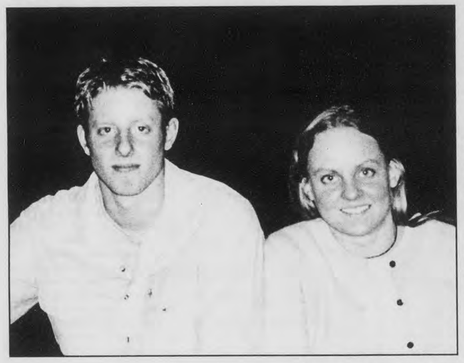
Wynn and Weaver lead Bison into league championships

Super sophomores' personalities may be "polar opposites," but both have produced excellence for Bucknell swim team

By Brooke Rea

Every athlete should know the art of tempering success with modesty, of appreciating their own talent without succumbing to egotism. And if every athlete took lessons from sophomores Abby Weaver and Tyler Wynn, they would.

These two standout Bison swimmers clearly have what it takes to succeed, but you wouldn't know it unless you begged it out of them. "Abby and Tyler aren't really the kind of people who like to toot their own horn," head coach Jerry Foley said. But, as this season has proven, they have every right to.



Rebecca Sheinfeld—The Bucknellian

Wynn and Weaver have excelled both in the pool and in the classroom while at Bucknell.

Weaver has been crucial to the women's success, helping them reach the peak of their ability just in time for the Patriot League Championships, February 17-19. A freestyle sprinter, Weaver has dominated in the 50- and 100-yard free at nearly every meet this season.

She recalls the home meet against Colgate as the highlight of her season, but not because of her first-place finishes in the 50- and 100-yard freestyle races with times of 25.05 and 53.91 seconds, respectively—and not because these times both ranked in the top ten in BU history. "It was the last home meet for the seniors," Weaver said. "And everyone was so excited to beat Colgate, it was a lot of fun."

This unselfish attitude is what has propelled Weaver to such success. In the Colgate meet, she contributed 29 points to Bucknell's 32-point victory. Two days later, on Jan. 24, she was named the ECAC Women's Swimmer of the Week.

But Weaver doesn't let success get to her head. She cites hard training and a good attitude as reasons for her speed this season. "It's hard physically and mentally," she said. "You have to get psyched for meets and want to do your best every time you compete."

Weaver knows competition well, as she has been swimming since age eight. She started out in a summer league and began swimming club when she was nine or ten; in high school, she swam for her school and club teams. The team support is what keeps her going day after day.

As a math major, Weaver is also a top student who has learned not to procrastinate because of swimming's demanding schedule. Weaver's dedication is an inspiration to fellow teammates. "Abby is the strong, quiet type. She leads by example but is quiet in what she does," Foley said.

The opposite is true of Wynn, but his contributions to the team are no less meaningful. "Abby and Tyler are both outstanding student-athletes, but personality-wise they are polar opposites," Foley said. "Tyler is an outgoing, vibrant individual. He will wear his emotions on his sleeve and will be a strong vocal leader." But although they are different, Foley concludes, "they are both wonderful to coach."

Wynn swims the backstroke and individual medley for the Bison, and he hopes to place first in the 100- and 200-yard backstroke events at Patriots.

His best times this season are 52.46 seconds for the 100 back, 155.3 for the 200 back and 159.13 for the 200 IM. Last season he was touched out at Patriots and took second place in both backstroke events. This year, he is out for redemption.

Attitude is also vital to Wynn's success, as he knows the importance of optimism in addition to hard training. "You have to keep your head high and know you're going to win," Wynn said.

Wynn began swimming at age six but didn't start competing until his freshman year of high school. He also played water polo, soccer and lacrosse and wasn't planning to swim at college until one week before arriving here his freshman year.

Now, he acknowledges the importance of his teammates and cites them as the best part of swimming for Bucknell. "I wouldn't be swimming if it weren't for the fun I'm having," Wynn said. "The team keeps me going."

A demanding schedule requires swimmers to commit to working out from September to February. Often they work out twice a day, once at 6:00 a.m. and again at night.

> *"Abby and Tyler are both outstanding student-athletes, but personality-wise they are polar opposites," —coach Jerry Foley*

But Wynn has learned that being an athlete has helped him budget his time and get into a routine that allows for some fun, too. An economics major, he hopes to become involved in the stock market after college.

Wynn's highlight of the season was the team's training trip to Ft. Lauderdale, Fl. over winter break. There everyone swam hard and got ready for the most important meets of the season. They also relaxed on the beach and had fun as a team. More than his personal goals for the season, Wynn hopes that all BU swimmers will get their personal bests at Patriots and have fun at the same time.

"After all," Wynn notes, "the sport is about competition but you have to have fun, too."

Zimmerman and Marshall honored as scholar-athletes

Nominations expand Bucknell's league-high total to 69

By Joshua Gish

Awards for the 1999 fall sports season continue to roll in, as Jenny Zimmerman '00 and Becki Marshall '02 were selected as scholar-athletes in field hockey and cross country respectively. These two nominations raised Bucknell's total of scholar-athletes to a Patriot League-high of 69 since its inception in 1990-91, more than doubling the amount of the next closest institution in the conference (Colgate, 33).

Lydia Hagstoz—The Bucknellian

Jenny Zimmerman '00 served as the field hockey team's defensive stopper during her outstanding Bucknell career, while carrying a 3.40 QPA in Biology.

Zimmerman and Marshall qualified for this honor by holding a grade point average 3.2 or higher and by being instrumental members of their teams. Patriot League staff—including Todd Newcomb '88, Bucknell's director of athletic communications—comprised a panel that decided the recipients at the conclusion of the fall season.

After graduation in the spring, Zimmerman will leave behind an amazing list of accomplishments on the Bison field hockey team. This All-Patriot League scholar-athlete award will be her second consecutive. She led the Bison in scoring with 15 goals and six assists as a senior tri-captain and also led the team in both interceptions and positive tackles. Her offensive and defensive prowess earned her a spot on the 1999 Astro-Turf/NFHCA Division I Regional All-American First Team. Zimmerman was also named the Patriot League Defensive Player of the Year by the league's head coaches in 1998.

In addition to her athletic and leadership abilities, Zimmerman defined the scholar-athlete by boasting a 3.40 GPA as a biology major and by earning herself a spot on the Dean's List and on the Patriot League Academic Honor Roll. She has had the honor of being named to the NFHCA Division I National Academic Squad for three years in a row, from 1997 to 1999.

The second nominee, Marshall, finished at the top of the pack for the majority of the 1999 women's cross country season. She placed first in five of the seven meets that she ran in and helped lead the Bison to their second straight Patriot League title.

Her outstanding 18:17 finish at Lafayette's Metzger Fields set a new course record, and she finished in 12th place finish at the Mid-Atlantic Regionals, helping the women to obtain their first-ever invitation to the NCAA Championships. Marshall was awarded All-Patriot League honors as a result of her outstanding 96th place finish in the NCAA competition, with the team finishing 24th in the nation.

Majoring in Civil Engineering, Marshall's academic achievements rival her athletic prominence. Holding a cumulative QPA of 3.64, she is a member of the Engineering Honors Fraternity and the ASCE Dean's List.

Lydia Hagstoz—The Bucknellian

Becki Marshall '02 consistently ran near the top of the pack for the women's cross country team in '99, while carrying a 3.64 QPA in Engineering.

NFL great Derrick Thomas dies at 33

By Adam Haas

Kansas City Chief linebacker Derrick Thomas, 33, died Tuesday at 10:10 a.m. at Jackson Memorial Hospital in Miami. Thomas was hospitalized recovering from an automobile accident he was involved in on January 23 in Kansas City.

The passenger in his car died immediately, and Thomas suffered severe spinal cord injury, and was paralyzed from the chest down. Dr. Frank Eisnat declared the cause of death as cardio-respiratory arrest. According to Eisnat, the death was "unexpected."

Thomas played college football at the University of Alabama, where he set school records for both sacks and tackles behind the line of scrimmage. He was the recipient of the 1988 Butkus Award for his accomplishments as a collegiate linebacker.

The Chiefs picked up Thomas in the first-round of the 1989 draft. Thomas spent his entire NFL career in Kansas City. "We would have never been able to do what we've done in the past ten years without number 58," Chiefs' coach Gunter Cunningham said.

He appeared in a Chiefs' record nine straight Pro-Bowl games. In a Veteran's Day game against Seattle in 1990, Thomas set the NFL single-game sack record with seven. He tearfully dedicated the accomplishment to his father who died in Vietnam.

Thomas' actions were as commendable off the field as they were on. "Football saved my life...I can't believe how lucky I am," Thomas said. He spread his "good luck" to those who were less fortunate.

Gene Upshaw, NFL union leader, called Thomas a "great humanitarian." Thomas started the Third and Long Foundation, an organization that helped to teach inner-city children to read. Because of his community work, Thomas was voted the NFL's Man of the Year in 1993."I looked at Thomas as one of the finest people I've ever been around, and a friend," Cunningham said.

Derrick Thomas (#58): Former Alabama and Chiefs defensive star.

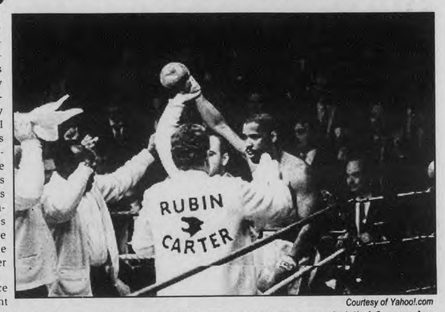
This is the story of "*The Hurricane*"

By Brian Watson

The story of Rubin "Hurricane" Carter has been subject to numerous debates stemming from his incarceration for a June 17, 1966 triple homicide in Paterson, New Jersey. A new film, entitled "The Hurricane," starring Denzel Washington, tells the story of Carter's arrest and later release from the side of his supporters, but perhaps does not tell the full story.

Carter was arrested and charged with three murders in a Paterson bar, though several witnesses claim he was not at the scene of the crime. Nonetheless, a lengthy legal proceeding, full of alleged bribery and illegal coercion by New Jersey authorities, led to three life sentences for Carter and his friend John Artis. Throughout his prison term, Carter restated his innocence and pushed for a new trial. Following a second trial that upheld the sentences, Federal District Court Judge H. Lee Sarokin freed "Hurricane" Carter after hearing defence testimony describing the improprieties on the part of several law enforcement officials. After over nineteen years in prison, Carter was released and exonerated of all previous charges.

"Hurricane" Carter walked away from a long, unjustified prison sentence to become an activist for prisoners' rights and a champion of the wrongfully convicted, but his own legal problems have not been forgotten. During a troubled childhood, the future boxer learned his fighting skills as he skipped in and out of courts and juvenile detention centers. Carter told renowned New York boxing writer Milton Gross in 1964: "I don't enjoy hitting or hurting people, not unless they mess with me. Then I enjoy it...If you mess with me, then I'm gonna try to kill you." The "Hurricane" claims these and other quotes were taken out of context and thought his comments were off the record. Either way, the vicious side of the boxer was exposed.



Courtesy of Yahoo!.com

Rubin "Hurricane" Carter was a heavyweight contender wrongly jailed for murder.

After the emergence of a massive movement for his release, which included boxing legend Muhammed Ali and other notable celebrities, one of the its female leaders said she was physically assaulted by Carter. Upon his release, Carter moved to Toronto, where he was arrested and subsequently released for purchasing cocaine from an undercover narcotics officer.

The recently released Universal Pictures film paints a strikingly different portrait of the wrongfully accused boxer. The movie chronicles Carter's troubled childhood and progression into a decorated military officer and celebrated fighter. "The Hurricane" is derived from Carter's now out-of-print autobiography, The Sixteenth Round, and a book written by a young black man who befriended Carter and convinced his Canadian educators to take up the struggle for his release. In the film, Carter is transformed from a bitter, hating convict to a loving, forgiving man freed from years of false accusation.

Numerous experts and law officers are not so easily convinced. Since his release, many former supporters have turned the tables and questioned his innocence.

"I'm not in jail for committing murder. I'm in jail partly because I'm a black man in America, where the powers that be will only allow a black man to be an entertainer or a criminal," Carter said in a 1975 interview with Penthouse. Carter now walks free and somewhat reformed, supposedly absolved of his vengeance against the racist hierarchy that ruined his life, but his doubters have not been completely satisfied with his release.

Some believe that Carter's violent past has not escaped him and that he is still a "menace to society", a moniker that the "Hurricane" has worked his whole life to erase. Washington's stunning performance of the fighter won him a Golden Globe and possibly an Academy Award, one that he feels is well-deserved, but will not end the debate on the Rubin "Hurricane" Carter controversy.

This article originally appeared in the January 16, 2000 issue of The Sunday Tribune in Dublin, Ireland.

Christina Ringwood—The Bucknellian

Shawn Asbury '00 and the Bison will host Patriot League rivals Army and Lehigh this week.

Last night, Karavanic picked a perfect time to escape from his shooting struggles.

After having off-nights from the floor in Bison losses to Lafayette and Navy, Karavanic hit the biggest shot of the night for Bucknell as the Bison rallied late to avoid a potentially devastating loss to Holy Cross. The Bison (5-3 in the Patriot League) edged out Holy Cross (2-6), 54-48.

With the Bison down 48-47 with under a minute remaining, Karavanic drilled a 3-pointer to give the Bison a one-point lead, capping a Bucknell rally that saw the team come back from four down with 2:25 remaining.

After Karavanic's shot, Bowen blocked a Holy Cross attempt, forcing a turnover, and Shawn Asbury '00 hit one of two free throws to give the Bison a two-point lead. After another Holy Cross turnover, point guard Bryan Bailey '02 hit a pair of free throws to give the Bison a four-point cushion and ice the win.

Karavanic's clutch late-game shot was part of a 12-point night for the Bison forward. Bowen led the Bison with 13 points, and Bailey added 12.

"I love the smell of ink in the morning. That gasoline smell."

Bures bros. prove the World *is* enough

By Kevin Logan

One man named Bure is enough to make a goalie want to ditch his pads for the showers. Put two of them on the same team—better yet, on the same line—and what you end up with is an unstoppable combination of speed and scoring.

North America's goaltenders discovered this the hard way, as brothers Pavel and Valeri teamed up to propel the World team to an explosive 9-4 victory Sunday in the 50th NHL All-Star Game in Toronto. The win marked the World's team's first in all-star competition, since the format was changed from the East versus West play three years ago.

With help from younger brother Valeri in the form of two assists, Pavel recorded only the 11th hat trick in all-star history and also notched an assist himself, securing him the Most Valuable Player award. The award just made the weekend all that more memorable for the elder Bure, in addition to being able to play alongside his brother for the first time since the 1998 Olympics in Nagano. Before that, they hadn't been teammates since their early days with Russia's touted Red Army team.

"I won't forget this experience. It will be one of the most special days of my career," Pavel reminisced.

That wasn't the only special moment of the afternoon. At the pre-game ceremony, fans witnessed as Wayne Gretzky's celebrated No. 99 was retired to the rafters of the new Air Canada Centre. The Great One's number is never again to be donned by a player in the NHL, as the league honored Gretzky's remarkable contributions to the game by officially retiring his number throughout the entire league.

Courtesy of NHL.com

The Bures combined for three goals and three assists in World's 9-4 victory.

It was one of the most emotional moments for Gretzky and fans alike as the banner bearing the revered No. 99 was hoisted into the air amidst the endless applause of fans, some holding signs that read, "Thanks for the memories." The ceremony concluded with Gretzky making his way to center ice, stopping to acknowledge and kiss his son and then going on to drop the puck for the ceremonial face-off between Jaromir Jagr and Paul Kariya to set the game underway.

With emotions running high from the pre-game festivities, fans anticipated an exciting game—and that's exactly what they got. It took just a little over three minutes for the first puck to be netted against Toronto's own Curtis Joseph, courtesy of the Blues' Pavol Demitra, playing for the World team. Jagr added to World's lead halfway into the period on a feed from Montreal's Martin Rucinscky. North America answered as Colorado's Joe Sakic batted one past St. Louis goaltender Roman Turek, starting in place of injured Buffalo standout Dominik Hasek.

Less than 60 seconds later, Maple Leaf Dimitri Yushkevich beat his own Toronto teammate CuJo to give World a 3-1 lead. As the clock winded down in the first, Coyotes center Jeremy Roenick scored to bring the North Americans back to within one.

The second period was the beginning of the Bure bombardment. Pavel struck twice, both times being set up by Valeri. The first goal came on the first shot of the period, which he blasted past New Jersey's Martin Brodeur. The second was a cross-ice one-timer that Brodeur couldn't handle. North America responded with goals from Blackhawk Tony Amonte and Panther Ray Whitney to close the gap to one again.

World then simply exploded against Rangers goalie Mike Richter in the third period, netting three goals in two minutes, one of which gave Bure the hat trick. Ottawa's Radek Bonk netted a meaningless goal for World with 30 seconds left to close out the scoring, while Caps goaltender Olaf Kolzig—"Olie the Goalie"—played a perfect period at the other end, stopping all eight North American shots.

The game capped an exciting weekend in Toronto—also the home of the first ever NHL All-Star Game in 1947—for both the players and fans, who now look ahead to what will become of the second half of the '99-00 season.

He's Back...

By Carmen Mauriello

Dallas Mavericks' owner Mark Cuban added a new tenant and a new power forward when he signed 38-year-old NBA bad-boy Dennis Rodman last Thursday. Obviously, he forgot to call Rodman's past employers.

The $465,000 deal that spans the remainder of the '99-00 season gives Rodman, the seven-time NBA rebounding champion who was bounced from four teams during his 13 seasons, special privileges. Rodman can opt to ride a stationary bike instead of attending practice, has permission to arrive at the Mavs' games later than his teammates and will rent Cuban's 4,000-square-foot guesthouse for $3,000 a month.

Pretty impressive for a guy who averages 7.4 points per game over his career, huh?

"He didn't come to me and say I'm not going to do this or that," Cuban told ESPN.com. "It was the exact opposite. I said, 'Dennis, what is it going to take to make you successful? How do you prepare for a game.'"

The obnoxious and multi-color-haired Rodman has repeatedly humiliated both himself and his teams over the years, and they all eventually got tired of his act and cut him. Notorious for skipping practices and getting technical fouls, his most serious shananigans was a low blow to a photographer during his Chicago Bulls' days, which earned him a hefty suspension and psychological testing.

Rodman has also had frequent brushes with the law, most recently a dropped simple assault charge last November and a DUI arrest the following month. No wonder why Cuban wants to keep a close eye on his investment.

"I've got big fences," Cuban said of his mansion. "Everywhere (Rodman) goes, he creates a scene, so I wanted to protect him from that so he can concentrate and focus."

Regardless of his weighty baggage, Rodman has proven himself as one of the greatest rebounders and defensive players of this era. A key role player on two Pistons' and three Bulls' championship teams, Rodman consistently matched up against and shut down the opponent's best big man—despite being undersized at 6'8''. His 18.7 rebounds per game average in the 1991-92 season was the highest since Wilt Chamberlain's 19.2 average 20 years earlier.

Coach Don Nelson gave his team a say as to whether or not to sign Rodman, and the response was overwhelmingly positive. "He brings what we don't do, which is rebounds and defense," Nelson said.

After a horrid start, the Mavs have been blazing as of late, winning nine of their last 12 to improve their overall record to 20-27. Only time will tell whether the addition of Rodman will make Dallas a playoff contender, or whether his sideshow act will be distracting and his special perks demoralizing.

I believe that Cuban's ulterior motive in this is to boost floundering ticket sales and interest in his lifeless franchise by stirring up some controversy. And that's the one sure thing Rodman brings wherever he goes.

Courtesy of ESPN.com

Rodman scored zero points and grabbed 13 boards in his first game and with the Dallas Mavericks last night.

An emotional tribute retired Gretsky's #99.

NBA Experts' Corner

By Justin McCarthy | By Ali Ahmed

All-Star Game

The West will break the East's three-game winning streak. It is supremely stacked in the front court, with Garnett, Duncan and O' Neal starting, and then Malone and Robinson coming off the bench. The East's front court will be severely out rebounded and its guards will have an even harder time of driving to the basket. But if the East can play a finesse game and create fast-breaks points, then it should be able to keep it close.

PICK: West by 12

Shaq, Webber, Payton and Duncan are all the most dominant players at their position and they all play for the West. Add Wallace, Kidd, Garnett and a very deserving Michael Finley and you've got a very dominant Western squad. Even though the East may be very exciting with players like Iverson, Carter, Hill and Ray Allen, they should lose to the better and more solid West, who should control the boards easily. By the way, McGrady will be the slam dunk winner.

PICK: West by 15

Charlotte at Philadelphia

The Hornets may not be able to stop Iverson - they may not even be able to contain him—but that might not even matter. While the Sixers' potent offense is all-Iverson, the Hornets' balanced attack is the exact opposite. Led by All-Star Eddie Jones, Charlotte may have too many weapons for the Sixers to counter-attack with only Iverson.

PICK: Charlotte by three

Eddie Jones is easily one of the best guards in the league, and if matched against Iverson will give "The Answer" fits. Iverson should get his points but he will probably hurt his team more—shooting around 35% and putting up 30 shots.

PICK: Charlotte by 10

Detroit at Houston

The Rockets just no longer possess that core of superb veterans that made them one of the best teams of the early 90's. Their leading scorer, rookie Steve Francis, is fresh off the injured list and was quite ineffective in his first game back. The Pistons will need big games from their leaders: Stackhouse, Laettner and, most importantly, Hill.

PICK: Detroit by five

I really like the young talent Houston has assembled. But Hill should rip through the Rockets unless Shandon Anderson steps up. On the other hand, Francis is one of my favorites. Mobley should also put up big numbers against the Pistons.

PICK: Houston by four

Boston at Utah

The Celtics are in the midst of a 2-7 run, and their fortunes will surely not turn around against a veteran team such as the Jazz. The Celtics will need a huge game out of their leading scorer, Antoine Walker, if they hope to keep up with the trio of Stockton, Malone and Hornacek.

PICK: Utah by 11

Boston has loads of talent but just can't get it together. I don't particularly like Utah but they deserve respect. Boston will not be able to consistently play good enough defense to win this game.

PICK: Utah by 12

Toronto at Indiana

Indiana is a team of seasoned veterans that is consistently at the top of its division. The Raptors, on the other hand, are a team of young upstarts who continue to baffle the experts with big games and upsets, yet they still remain underrated. Earlier in the season they defeated the Pacers by shutting down the explosive Reggie Miller—however a repeat of this feat is doubtful.

PICK: Indiana by eight

This should be a great battle in the front court where the Davises and Oakley should go at it. The advantage should go to the Raptors up front, while the Pacers have the advantage in the backcourt. The Pacers, however, do have problems with the more athletic teams. Look for McGrady or Doug Christie to have a big game.

PICK: Toronto by 15

Return of dunk contest highlights NBA All-star weekend

By Rob Schmicker

After a two-year hiatus, the NBA's All Star Weekend finally has its identity back—the Slam-Dunk Competition. A young and talented group of stars promise to make all the weekend's festivities action-packed.

In the late 80's, the NBA Slam-Dunk Competition was the most talked about competition during All-Star Weekend. Then in the mid-90's, players started to skip the event for fear they would be injured.

But the new century is here, and along with it comes the rebirth of the Slam-Dunk Competition. This year the new kids are gonna put on a show. The six contestants are Toronto's Vince Carter and Tracy McGrady, Golden State's Antawn Jamison, Houston's Steve Francis, Philly's Larry Hughes, and Detroit's Jerry Stackhouse.

All the contestants are under the age of 25 and will bring that youthful enthusiasm that the game sometimes lacks. Carter is the hands down favorite, but McGrady and Stackhouse could be two darkhorses. Carter's all-world dunks have sold the game in Canada and made Toronto one of the hot teams of the future. McGrady will have a breakout performance and put the pressure on his teammate and cousin, but will fall short in the end. The trophy goes to Carter.

Before the dunkers take the floor, the games best shooters will compete in the three-point shootout. This year there doesn't seem to be an overwhelming favorite. Jeff Hornacek will put his title up for grabs against the likes of Bob Sura, Ray Allen, and Allen Iverson. Veterans Terry Porter and Hubert Davis are purer shooters than the younger guys, and should put the pressure on Hornacek.

The other events of the weekend are the WNBA/NBA Two-ball competition and the Rookie Game. The Rookie Game will pit this year's class against last year's class. Competing in what could be the showstealing event will be Carter, Jason Williams, Elton Brand, Francis and Lamar Odom.

As for the main event, it'll be high scoring as usual. There are nine first- time all-stars playing this year, confirming the changing of the guard in the NBA. For the West, the starting team will be Kevin Garnett, Tim Duncan, Shaquille O'Neal, Kobe Bryant and Jason Kidd. The East will be playing with a smaller starting lineup consisting of Grant Hill, Carter, Alonzo Mourning, Iverson and Eddie Jones.

Call this a meeting of David vs. Goliath. Up front, the East has no one that can guard the trio of Shaq, Duncan and Garnett as well as reserves Chris Webber and Rasheed Wallace. With all those big men to pass to, Jason Kidd should rack up the assists and have a MVP day.

On the other side, Iverson, Carter and Hill will try to counter with an exciting transition offense. They have to wear the West down by pushing the ball up court every time and hoping that the big men miss their shots. Otherwise, it'll be a long day for Mourning, Mutombo and the East team. Goliath gets some revenge as the West wins by 20, 125-105.

Leap of faith

By Tim Scheu

Being from Ohio, I really don't get much of a chance to take part in any extreme sports. The closest thing to a mountain we have is the garbage pile next to city hall, and as for a body of water—well, all we have is Lake Erie. Call me crazy, but the idea of swimming or water skiing in a syringe-filled oil slick is not my idea of fun. So, when I said "hasta luego" to my uneventful state and departed for the sunny shores of South Africa, I was pretty excited.

Sure, I went for the culture and the politics, but man ... South Africans' know how to have fun.

Aside from surfing, rugby, and cricket, the rainbow nation is notorious for its extreme activities. It is home to the largest bungee jump in the world, (some 650-ft) which provides enough adrenaline to keep even snow-mobiling freaks from Steamboat happy.

A few friends and I went on a cliff jumping/repelling program while hanging out in Cape Town. Initially, the repelling was the more popular of the two options. Our tour guide had set up a repelling station about 65 feet above the water, and the idea was that you repelled down the cliff, unattached the rope and fell into the water with about 10 feet to go. The entire time we were doing this, our guide stressed the importance of safety and instructed us to clip into all sorts of back-up devices. "The fall could kill you," he said.

One by one, we repelled down the cliff, and aside from the exhilaration of unclipping the rope from the belay mechanism, the experience was rather bland.

So, we sucked in our proverbial gut and hiked up to the cliffs. There were four of us on the first jump, one of 10 meters ... thirty feet to the stubborn metricly-opposed American.

Ten minutes later we had jumped, and following a round of high-fives it was revealed that we had already had our first dropout. While the majority of us had enjoyed the pure exhilaration that accompanies a leap of faith, others were not so happy. The idea that you could land on rocks undoubtedly scared them off.

We continued our ascent while the less adventurous among us stood by and took pictures. Up until that point the limitations of our madness had never been questioned, but following the 18-meter jump my mortality became an issue.

It is then that the strange logic of any competitive male takes over. How could I live with myself knowing that I had the chance to jump off the highest cliff and not taken it? How could I let my friends one-up me and talk about the jump afterwards, while I sit silently in the backseat?

It is not that I wanted to jump off of the 22-meter cliff. It was that I had to.

And so, following an afternoon of lunacy, the moment was upon us. As we climbed to our jumping point we noticed that we would be leaping from a higher point than where we were repelling from. In doing this we might as well have been saying, "screw the equipment, I don't need it." It was blatant disregard for our safety. It was irresponsible. It infuriated our parents. It was phenomenal.

I'm not going to lie to you—I was not the first to jump. That honor goes to Josh Ginsberg '01, fellow Bucknellian, and my roommate in South Africa. To be honest, I did not think he would do it. I had already prepared my "it is not that big a deal if we don't do it" speech. But before I knew it I saw him disappear off the edge and a fist raise from the water below. Hoots and hollers filled the air as he swam to the bank and began to harass me.

I stood there on the edge thinking I was an idiot. Bungee jumping, cool. Skydiving, great. This was just stupid. Whereas you have safety equipment to support you in skydiving and bungee jumping, cliff jumping gave you nothing. I might as well have been saying, "God: I'm going to get it and you're going to it give to me."

Supposedly, it was easy. You walk over to the edge, get your footing, look back, compose yourself, and then jump.

But my experience was far different. Walking and the footing part were easy, but composure was something that I could never achieve.

My mind scrambled:

Seven stories—that is like jumping off of the top of the Bertrand Library.

How many people would come to my funeral?

If I had to break a bone, which one would I pick?

How come my last name is pronounced shy but spelled scheu?

Then I jumped. .

I would love to touch on the idea that cliff jumping is as close as you ever get to God, but I'm not going to. The point is ... it was a remarkable experience. It provides a rare example of where your head clears and you live for the moment. Your mind is in such a state of shock that it does not have time to think of anything else.

It is the perfect way to sum up my experience in South Africa,and a lesson on how to live life. Go all out, or you'll regret it.

Plus it beats the heck out of anything I could do in Ohio.

Wrestling looks to shake off tough losses

By Justin White

Sometimes you've got it, sometimes you don't.

It was the latter of these two cliches that characterized the Bucknell wrestling team's two dual meets this past week. Bucknell was downed by Bloomsburg last Thursday by a score of 35-6 and then traveled to Buffalo on Saturday—only to lose 38-3.

The wrestlers knew they were going to have their hands full against Bloomsburg, currently ranked 23rd in the nation with a plethora of talent.

Bloomsburg jumped out to a 10-0 lead after a decision and a pin.

Then came possibly the most exciting match of the day as the Huskies' Hunter Guenot faced off against Bucknell star Brian Pitzer '00. With the score tied 2-2, Guenot let Pitzer up to start the third period, giving Pitzer a one-point edge. After Pitzer registered a takedown to make it 5-2, Guenot got a reversal and two back points to take a 6-5 lead.

With Pitzer earning one point for riding time, the match went into overtime. Pitzer needed just three seconds to get a takedown and win the bout with an 8-6 decision.

Bucknell's only other win of the day was by senior Gbenga Akinnagbe. Akinnagbe recorded two takedowns and an escape in the first period, with the Huskies Chris Froelich getting two takedowns and two back points to take a 6-5 lead. After a quiet second period, Akinnagbe nearly had a pin, getting three back points.

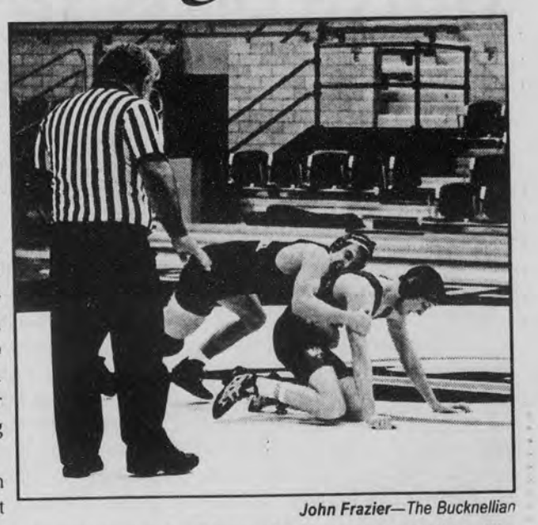
"We had good momentum in the beginning of the season, but we have to find a way to get back on track and finish the season strong."
—Brian Falciglia '02

Later in the period, Froelich had a reversal and a near pin before Akinnagbe managed a reversal of his own to grab a 14-12 lead. Akinnagbe never looked back, winning by a score of 18-12.

Bucknell coach John Hangey said that his team was too tentative early on. "They held back. By the time we realized we could wrestle with them, it was too late," Hangey said.

The Bison had an even tougher day against Buffalo. It was not until the Bison were down 32-0 that they were able to put some points on the board. However, some of the defeats were extremely close matches, including strong efforts from Rocky Miller '01 and Akinnagbe, who both lost by just two points.

The lone victory on the day came from Brian Falciglia '02, who won his heavyweight match with a 4-1 decision. Hangey praised Falciglia's performance, saying, "he wrestled with confidence and found a way to win."



John Frazier—The Bucknellian

Doerr '02 and the Bison will compete at Millersville.

Hangey went on to say that his team "had an off day. Buffalo never let up. They just wanted it more than we did," Hangey said.

With the loss, Bucknell drops to 4-6 on the season. The team heads to Millersville this Saturday to compete in dual matches against Seton Hall and Millersville.

"We had good momentum in the beginning of the season," said Falciglia of the team's progress, "but we have to find a way to get back on track and finish the season strong."

Swimmers focus for championships

By Chuck Vicente

This past Saturday the Bucknell swim teams traveled to Philadelphia for their last regular season meet against the Pennsylvania Quakers. The men's and women's teams lost 186-112 and 170-127 respectively, dropping both teams' season records to 4-4.

Coach Jerry Foley wasn't disappointed with the results, saying that the swimmers were focusing much of their attention on the Patriot League Championships, which are on the near horizon (Feb. 17-19).

"We swam really fast," coach Jerry Foley said. "And it was very business like."

Despite the scores, individual and team efforts prove that the Bucknell swimmers are geared and ready for the approaching league championships.

One remarkable effort came from the women's 200-yard medley relay team made up of Darby Golino '03, Kelly Wilson '00, Lauren Mosler '03 and Abby Weaver '02. They pulled ahead of Penn's relay team by one millisecond with a time of 1:51.50, the fastest time in the Patriot League this season.

Weaver also captured two more events. In the 50-yard free, she posted a winning time of 24.98, and she finished in 53.79 to win the 100-yard free. "We swam well," Weaver said. "We just keep getting faster."

Golino also won two events in addition to the relay. She blew the Quakers out of the water in the 200-yard backstroke with a time of 2:09.84 and also won the 100-yard backstroke. Katie Wood '00 had her best performance of the year in the 500-yard free.

On the men's side, two Bucknell swimmers won their events. Gonzalo Diaz '03 dominated the field in the 500-yard free with a time of 4:46.92. Teammate Chris Neary '02 continued to add to his stellar year by winning the 100-yard butterfly.

Both teams's have their eyes set on one goal now—the Patriot League Championship. "I just want both the men's and women's teams to score as many points as possible," Neary said.

Coach Foley did not seem concerned with his swimmers getting rusty in their upcoming two weeks of practice. "We are right on track to peak at the Patriot League Championships," Foley said. "I expect that both the men's and women's team will swim fast."

Tuning up for Patriots...

By Sean Houston

Over 60 athletes from the men's and women's indoor track and field teams went on the road to compete against teams from Cornell and Yale in a tri-meet on Saturday, Feb. 5. Both the host team, Cornell, and Yale provided stiff competition for the Bison, with both the men and women managing only third-place finishes.

Yet the teams' overall results masked some fine individual performances. On the men's side, Ron Hess '00 recorded a winning time of 4:18.82 in the mile and placed second in the 1000 meter run (2:29.71), while Dave Pomfret '00 managed a win in the pole vault (15'1"). Jonathan Dietrich '00, Steve Williamson '00, Matt Solomon '03, Bill Bartsch '00, and Dave Bonfenbrenner '00 also produced strong performances for the Bison.

On the women's side, Yetunde Daniels '00, LaTonya McSwain '02 and Andrea Nyce '02 continued to prove their determination to win week in and week out. Daniels won both the 400-meter dash (57.20) and the 200-meters (25.29)-a new meet record. McSwain set a meet record in winning the 500 meters (1:16.68) and Nyce's victory in the pole vault (10'10.25") set both a meet and school record. Stephanie Bango '02 clinched the 800 meters (2:16.86), and senior Lori Allen's shotput victory (43'5.5") set another meet record.

Their next competition will be this Saturday when they host Shippenburg, Millersville and Lockhaven at the BU Winter Classic. Both the men and women are improving upon school records each week and setting their sights on the approaching Patriot League Championships.

Tim Choate—The Bucknellian

The Bison struggled against Yale and Cornell this past weekend, but they look to bounce back this Saturday when they host the Bucknell Winter Classic. The Bison are preparing for the upcoming Patriot League championships.

Irish poet to deliver commencement address

By Brian Watson

Courtesy of www.poets.org

Eavan Boland is one of Ireland's most influential poets.

University President William D. Adams announced yesterday that Eavan Boland will deliver this year's commencement address on Sunday, May 21. Boland, an internationally reputed Irish poet, visited campus last fall, when she gave a lecture and a reading during the Irish Focus Semester.

One of Ireland's most influential poets, Boland has written nine books of poetry in addition to co-authoring a biography of W.B. Yeats. She currently serves as an English professor and director of creative writing at Stanford University.

"She eloquently writes of Irish history, identity, and violence, but with a contemporary perspective that goes beyond the traditional Irish heroic and bardic tradition. She speaks to and for those Irish not often heard from in Irish literature - the women, the emigrants, the poor. And in so doing, she speaks to all of the human condition," Adams said in an email to the senior class. "I believe she will contribute significantly to our celebration in May."

John Rickard, associate professor and chair of the English department, was instrumental in bringing Boland to campus for her fall presentation. He believes that she is a fitting selection to deliver the commencement address.

"We're very excited to have her back," Rickard said. "She gave such a stunning lecture in the fall, so we're anxious to hear her speech."

"All of the speakers on the final list were amazing; I would not have been disappointed with any one of them," said senior class president Jessica Jackley. "I feel confident that Eavan Boland will deliver a personal and memorable message."

The search process was conducted by a committee consisting of three faculty members, three administrators and the three senior class oficers. It began with a senior class survey from which the committee drew up a list of all possible speakers. The seniors were then polled to help narrow down the field. The committee gathered the responses and voted on a final list of candidates.

The final list was presented to Adams for final approval, and the president's office proceeded to inquire about each candidate's availability.

Each year, a number of influential politicians and public figures appear on the list, but many of these candidates require exorbitant payment or are difficult to book in advance; many politicians are unable to commit to a speaking engagement until the day of the speech.

Teresa Amott, chair of the committee and recently appointed assistant provost of Gettysburg College, assures that the process was efficient and successful. "The committee worked hard to select a realistic list," Amott said. "The more unrealistic the choices, the further we have to go down."

Jackley echoed her sentiments. "I felt like the students' opinions were taken into account as much as possible," Jackley said. "They really did allow the student opinion to determine much more than what might just look like three votes' worth on the committee."

Cochran warns about hate groups

Former Aryan Nations leader speaks against white supremacists in Pennsylvania

By Brian Watson

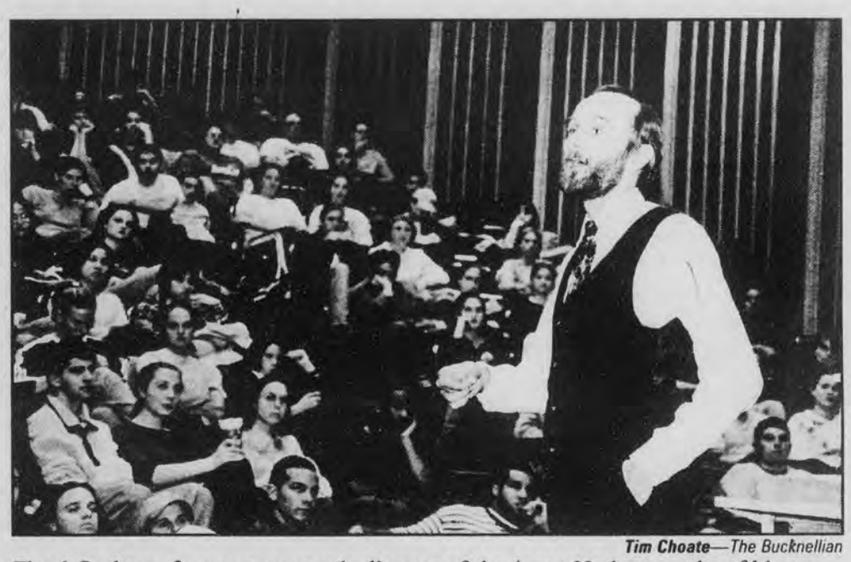
Until 1992, Floyd Cochran frequently appeared on talk shows defending the white supremacist movement. Today, he travels the country speaking out against these groups and the problems they pose.

On Monday, Feb. 14, Cochran brought his "State of Hate, Nation of Hope" lecture to the University, relaying his anti-hate message in the Langone Center Forum. The presentation, hosted by the Multicultural Center and the Community Alliance for Respect and Equality (CARE), detailed these hate groups, their motives and the threats that exist here in Pennsylvania.

Cochran's presentation always begins with an apology for his past actions. "I must take responsibility for my actions," Cochran said. "Being able to admit I was wrong was one of the most difficult decisions of my life," Cochran said. "I've come a long way. You don't change your 'life-long' ideals overnight," Cochran said.

Cochran's involvement in white power groups began when he was 14 years old growing up in northern New York. He became affiliated with the Ku Klux Klan (KKK) because they, like many people from his region despised New York City. Cochran grew to hate these minority-filled images. He commented that half of his racist ideas came from media stereotypes and his surroundings-it just took certain people to make him believe in them.

He moved onto the Aryan Nations, who he believed were more credible and powerful because they justified their beliefs through God. Cochran admired the caliber of leadership in the organization and felt more comfortable, primarily because they did not hide behind masks. "Their strong anti-government agenda appealed to farm boys like me," he said.



Tim Choate—The Bucknellian

Floyd Cochran, former propaganda director of the Aryan Nations, spoke of his past and of the growing threat of white power groups in the state.

Cochran quickly found excuses for failure in school and work, relying on his fellow members' beliefs that white men were being passed up for success by Jews and minorities. These ideals shaped Cochran's thinking, forcing him to become a dedicated white supremacist.

His communication skills quickly elevated him to the role of head recruiter for the Nations. Cochran would start up a conversation with youths on a street corner, finding a common ground mostly on racist grounds.

Georgetown football joins Patriot League

By Peter Van Emburgh

Georgetown University has accepted an invitation to join the Patriot League beginning in the fall 2001 season in the sport of football. League Executive Director Carolyn Schlie Femovich granted Georgetown associate member status to compete against Bucknell, Colgate University, Fordham University, The College of Holy Cross, Lafayette College, Lehigh University and Towson University as Division I-AA members.

"It's a tremendous step up for our program," said Head Coach Bob Benson. "Since 1993, we've grown to be very competitive in the Metro Atlantic Athletic Conference to the point where we're one of the favorites to win the conference title almost every year."

According to Femovich, Georgetown's outstanding tradition of excellence in academics and athletics reflects the core values of the Patriot League and they will be an excellent complement to the nationally competitive football league.

Under Benson's leadership, who recently signed a five-year contract extension, the Hoyas have gone 48-22 overall and 37-11 in the MAAC. The Hoyas won the MAAC Championship in 1997 with a perfect 7-0 conference record, and posted a 9-2 overall mark in each of the past two seasons.

"Now we're moving to a tougher conference where we'll be the underdogs," Benson said. "But, I think Georgetown will be able to rise to that challenge and contend for the championship very soon."

According to Todd Newcomb, director of athletic communications, Georgetown will have to upgrade its facilities as part of the agreement.

"It gives the Patriot League another quality institution, especially in the southern part of the conference," Newcomb said. "It will help the overall image of the league."

Susquehanna student runs for state legislature

By Peter Van Emburgh

Eric Prindle, a junior at Susquehanna University in Selinsgrove, has announced his intention to run for state representative in the 85th Legislative District as a Green Party candidate. He faces incumbent Rep. Russell H. Fairchild, a Republican from Lewisburg in November's elections. No Democrat has filed to challenge Fairchild.

"Residents of the central Susquehanna valley are too often left without choices in November," Prindle said. "I want to make sure people in the 85th district have two people on their ballot to choose between, so they can really consider who they want to represent them in Harrisburg."

Prindle, 20, is a philosophy major with a minor in religion and English. He is from Feasterville, PA. A four-time Dean's List member, Prindle became a member of the Green Party in 1998 and helped establish Green Susquehanna, a campus Green organization. Prindle said his campaign will address many different issues in the Green Party's comprehensive platform, not just a one-issue environmental movement.

"I got into this race for two reasons- the first is that I feel strongly that the Green Party is about to emerge as the primary political tool for sensible, progressive change, and I want to be a part of that success," Prindle said. "The second is that I believe democracy is harmed when incumbents repeatedly run unopposed."

However, Prindle hopes that through his campaign, he will be able to generate more interest in the party locally. "Most people aren't clear on what the Green Party stands for," Prindle said.

Members of Green Susquehanna as well as other Green supporters will work over the next six months to collect 300 signatures necessary to put Prindle on the ballot alongside the party's candidates for state and federal office, for which Greens across the state must collect almost 25,000 signatures. Green Susquehanna is affiliated with the Pennsylvania Green Party, which consists of locals across the state that come together for bi-monthly meetings. Prindle estimates about 19 people involved in the Green Susquehanna organization.

While Prindle admits that he isn't coming into the race with a big agenda, he does have a strong stance on environmental issues in the area. "If we don't take on the corporate power structure that violates the ecology and the values of our communities and that controls the two major parties, then we aren't really taking a serious look at environmental issues," Prindle said.

Prindle also points out the disadvantageous two-party political system. "The two major parties in Harrisburg are tied down by special interests and are so mired in squabbling that the Republican leadership recently defied the law and refused to expel a member of the assembly who had been convicted of perjury in order not to weaken their numerical advantage," Prindle said. "It's time for a new voice."

Prindle recognizes that he is not anticipating a "groundswell of voter support." However, if he were to defeat Fairchild, Prindle said that he'd gladly serve in the Legislature.

Public Safety Log

February 8, 2000

INFORMATION - Public Safety assisted a Snyder County Constable in serving an arrest warrant to a student for failure to pay parking tickets.

INFORMATION - Public Safety responded to the Langone Center for the report of an employee's stolen vehicle. East Buffalo Township Police was notified. The report was unfounded as the vehicle was picked up by a family member.

MEDICAL ASSIST - Public Safety responded to Larison Hall for the report of a student with an injury. The student was transported by a Student Health Services driver to Evangelical Community Hospital Emergency room for treatment of a finger laceration and later returned to campus.

February 9, 2000

INFORMATION - An employee contacted Public Safety and advised that a student had been treated for an injury from a pellet gun. Lewisburg Police was notified and investigated the off campus incident.

HIT & RUN/DUI/RECKLESS DRIVING - Public Safety responded to Coleman Road for the report of a hit and run motor vehicle accident involving a student vehicle and a university owned vehicle. No one was injured and the vehicle damage was minor. East Buffalo Township Police was notified. The operator of the student vehicle which left the scene was issued citations for creating a hazardous condition, reckless endangerment, violation of federal, state, and municipal laws.

INFORMATION - Public Safety responded to Vedder Hall for the report of the odor of marijuana. No evidence was found in a search of the area and the report was unfounded.

February 10, 2000

UNDERAGE CONSUMPTION/ PUBLIC DRUNKENNESS - Public Safety responded to an off campus location for the report of an intoxicated student in a private residence. After signing a medical refusal form, the student who claimed to have been injured in a fall, was returned to Vedder Hall and left in the care of a roommate. The owner of the residence declined external charges and university citations were issued for public drunkenness and underage consumption.

HARASSMENT BY COMMUNICATION - A student reported receiving several harassing phone calls in her Swartz Hall room. The incident is under investigation.

NON EMERGENCY MEDICAL TRANSPORT - A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency room for treatment of injuries sustained in a fall which had occurred the previous day. A Student Health Services driver transported the student for treatment and later returned him to campus.

February 12, 2000

BU PROPERTY DAMAGE - Public Safety responded to Swartz Hall for the report of broken door glass. No witnesses or suspects could be located in a search of the area.

UNDERAGE CONSUMPTION/ PUBLIC DRUNKENNESS - Public Safety responded to Swartz Hall for the report of an alcohol overdose. The unconscious student was transported by ambulance to Evangelical Community Hospital Emergency room for treatment. East Buffalo Township Police was notified. Citations for underage consumption and public drunkenness were issued.

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Swartz Hall for the report of a discharged fire extinguisher. No witnesses or suspects could be located in a search of the area. The incident is under investigation.

INFORMATION/POSSIBLE ACT 64 VIOLATION - Public Safety responded to Kress Hall for the report of the odor of marijuana. No evidence was found in a search of the area and the report was unfounded.

February 13, 2000

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to a fire alarm at Harris Hall caused by a hall smoke detector that was removed from its base. The incident is being investigated.

CRIMINAL MISCHIEF - A student reported to Public Safety that her visitor's vehicle was damaged while parked in the 23 University Avenue House Lot. Lewisburg Police was notified. The incident is under investigation.

February 14, 2000

INFORMATION/SUSPICIOUS INCIDENT - Public Safety responded to Bucknell Hall for the report of unauthorized entry into an office and unauthorized access to email files. The incident is under investigation.

INFORMATION - Public Safety assisted Lewisburg Police to serve a subpoena to appear in court to a student in Dana Engineering.

Cochran From Page 1

"We twisted how we interpret the Bible and in turn preach it to the youths," Cochran said. "Not once did a church or civic group approach me in the same way, with the same respect."

Throughout his involvement, Cochran began to see the downfalls of the movement. "It became hard to justify 'saving the white race,' he said. "My job was to make hate palatable, just like apple pie. But when we talk about hate, we leave out the human component. We helped make racism so difficult to deal with and understand."

Cochran left the Aryan Nations in 1992 after a life-changing discussion with a fellow member. Cochran's four-year-old son was scheduled to have an operation to repair a cleft palate, which Cochran shared with Wayne Jones, the security chief at the group's Idaho compound. Jones called his son a "genetic defect" and swore that once the Nations came to power such people would be "euthanized."

Cochran, then the Aryan Nations' director of propaganda, realized that his hateful preaching hit too close to home. He voiced his concerns to the compound leaders who handed him $100 and told him to leave immediately.

He lived in a tent for several months until a law enforcement official put him in touch with Leonard Zeskind from Atlanta's Center for Democratic Renewal. Zeskind and his associate Loretta Ross helped Cochran recover and got him started on the speaking circuit.

In 1994, Cochran decided to focus his efforts on tracking Pennsylvania groups. The state boasts 49 different hate groups, and in some areas, admitted leaders of hate groups hold political and school board positions. His presentation aimed to provide information to campus and community leaders so they can work against hate in our state.

"Most people think 'It's not in my town, my community,' when in actuality Pennsylvania ranks fourth in white supremacist organizations," Cochran said. "There are more hate groups now than thirty years ago, before our civil rights legislations," he said.

Cochran resists becoming a hypocritical or power-hungry activist. Although he has appeared on numerous television programs including ABC's "Day One, NBC's "Dateline" and Fox Network's "Face the Hate," he has not written a book, despite numerous lucrative offers.

Cochran commented that "a lot of people who leave the groups disappear after a few years" on the lecture circuit. He believes that his credibility has increased because of his concentrated efforts, allowing him to remain a paramount figure in the fight against white supremacy.

"I realize that (his former position) got me in the door, but I've been following and writing about the groups and people have taken notice," Cochran said.

He suffers from periodic bouts of depression, times when he does not think he can deal with these issues. But the inspiration he has received from letters allows Cochran to pace himself.

Although he had such immoral beliefs ingrained in him, Cochran now sees all races in a different light. "Having a white skin isn't an entitlement to more privileges," Cochran said.

He believes that minorities are still misrepresented, evidenced in the capitol rotunda in Harrisburg, adorned with statues of prominent white historical figures. "We need to change these images," Cochran said. "In order to respect people, you need to hear the stories and see the pictures."

He also believes that the Confederate flag does not belong atop a government building, a current issue in South Carolina. "It's a symbol of bigotry. The flag symbolizes years of oppression."

"Hating people leaves you paranoid and angry," he said. "People think hatred is a gut-emotional feeling that you can just turn off. You can't."

This Week in Bucknellian Headline History

New Catalog Out

February 19, 1912

The University catalog for 1911-12 made its appearance Saturday. Noteworthy changes are: the college bill is raised $10; spring vacation id extended to a week instead of five days as formerly and will continue this year from March 20 to March 27. The summary of attendance in the collegiate department is published as follows:

Graduate Students	70
Seniors	76
Juniors	74
Sophomores	113
Freshmen	131
Non-matriculates	21
Total	485

Bucknell Has New Mascot

February 11, 1923

A companion is assured for the Navy goat, the Army mule, the Pitt panther, the Yale bulldog, and kindred beasts who roam the college gridirons each fall. The newcomer is the Bucknell timber wolf.

The wolf is to become the official mascot of the Orange and Blue eleven, and is the gift of Bill O'Brien, Bucknell's "town-barber" who has performed tonsorial operations on the great and near great of the Lewisburg institution for more than a score of years. In that time Bill has absorbed enough Bucknell spirit than the freshest freshman. At the conclusion of the last football season Mr. O'Brien promised the team a genuine, pedigreed wolf for next fall.

"Those timber wolfs are tough babies. They ain't afraid o' anything. That Yale bulldog'll look twice when that he-beast of ours trots into the bowl in the fall," O'Brien said.

250 Returning Bucknellians to Enter in March

February 21, 1946

Two hundred and fifty former Bucknell students who served in the armed forces will resume their studies here in March. They have been asked to come to the University this week to register early, in order to avoid the confusion that would result if the 450 veterans who have been admitted for the coming term were to register at the same time.

About 50 of the men students will commute to classes and in addition to the Bucknell veterans and approximately 200 other veterans, 30 civilian students will enter the University in March.

The latter will include 15 freshmen men and 15 women students, 10 of whom are returning to resume work on their degrees. Two of the new women students are from Bucknell Junior College, one is a transfer student and two are freshmen students who will commute to classes.

Crowd too Rowdy?

February 12, 1974

To the attention of the student body:

On Saturday evening while attending our basketball game with Rider College, I was appalled at the very poor manners expressed by our fans while a Rider player was attempting to shoot a foul shot during a crucial part of the game. To deliberately yell, scream, and clap hands in an effort to distract a player while he is shooting a foul shot has no place in athletic competition.

I have always thought of the visiting team as our guest on the campus and that we should treat them with the same respect and consideration that we would like to have our team experience while on their campus. The unsportsmanlike conduct of our cheering sections on the occasion referred to above is un-called for and is definitely "Bush League."

We in the intercollegiate athletic department appreciate the support and enthusiasm of the student body at athletic events. However, we have no desire to win by placing the visiting team in an unfair position.

New Alcohol Policy Sanctions Implemented

February 12, 1993

On February 2, Bucknell University put into effect a series of new sanctions for individuals who violate the university alcohol policy.

According to John Dunlop, Dean of Students, "These new sanctions stem from the ineffectiveness of the old sanctions and are intended to be more educational for the students and less punitive than the previous sanctions."

The new sanctions result from a year and a half of collaborative effort by Dunlop, Gerald Commerford, Assistant Dean of Housing, a task force of students and administrators, the Bucknell Student Government, and the Committee on Complementary Activities.

Compiled by Jim Leahy

Mrs. Evans was tired of trying to get the committee to discuss youth programs. That's okay, she didn't want to talk about it anyway, so nanna-nanna-boo-boo.

News Briefs

Radioactive Leak at New York Nuclear Power Plant Contained

A small leak in a steam generator at a nuclear power plant north of New York City has been contained, Con Edison spokesperson D. Joy Faber said on Wednesday.

Plant officials said the leak had posed no danger to employees or the public.

"There is no danger to the health and welfare of the general public," Steve Quinn, vice president of utility Consolidated Edison, said at a news conference early Wednesday.

Quinn estimated about 1 cubic foot of gas escaped from the plant's containment building — the sealed concrete building that holds the reactor — and entered the air outside, constituting a "completely immeasurable" amount of radiation.

The leak occurred in one of the four steam generators at Con Edison's Indian Point 2 on the Hudson River in Westchester County, about 35 miles north of New York City.

Officials from the Nuclear Regulatory Commission were monitoring the scene.

White House Promises to Help Hostages Locate Iranian Assets

Secretary of State Madeleine Albright promised Wednesday to help Americans held hostage for years in Lebanon find Iranian assets in the United States that could be used to pay multimillion dollar judgments assessed by U.S. courts.

Albright's assurance came as the former State Department official in charge of counter-terrorism during the 1980s kidnappings testified in federal court that Iran "with shrewdness and total ruthlessness" orchestrated the kidnapping of journalist Terry Anderson and other Westerners to put pressure on the Reagan administration to sell the country arms.

Robert Oakley testified at a U.S. District Court hearing to determine the size of the award which Anderson, the longest-held captive, should receive. He sued Iran for $100 million, and U.S. District Judge Thomas Penfield Jackson found Iran in default on Tuesday because it failed to send any representatives.

Albright, at a congressional hearing, expressed caution against confiscation of Iranian diplomatic property that might prompt retaliation against U.S. assets overseas. She indicated officials have yet to determine exactly what they can do but said she would work with hostages and their families on what actions can be taken to collect on the judgments.

Pinochet Brain Damaged Report Says

Spanish newspapers published on Wednesday the conclusions of a medical report on Gen. Augusto Pinochet only hours after a British court ordered that the report be kept secret. The publication prompted an angry response from the former Chilean dictator's lawyers.

The report, according to the newspapers ABC and El Mundo, says the 84-year-old Pinochet — although suffering from various ailments — is physically able to stand trial on charges of human rights abuses, but is mentally unfit to undergo the proceedings.

The newspapers are considered to be close to the center-right Spanish government, and the reports seem to support the argument that Pinochet should be released from house arrest in England and returned home to Chile.

British Home Secretary Jack Straw had used the report to deny an extradition request from a Spanish judge, and then kept the report confidential at the request of Pinochet's attorneys.

But Belgium, which is also seeking Pinochet's extradition, and six human rights groups challenged Straw's ruling in Britain's courts. The challenge ended Tuesday when a three-judge panel of the High Court said those parties seeking the extradition had a right to see the report in order to prepare an adequate response to it.

The court ordered the evaluation released on the condition that it remained private. But on Wednesday, details from the document were made public.

On its Web site Wednesday, the Chilean newspaper La Tercera reported that doctors found Pinochet exhibited signs of senile dementia so advanced he was unable to recognize many of those around him.

Argentina to Fight Corruption by Posting Contracts on the Internet

Argentina's government is launching an Internet site to give details of public purchasing contracts that have long provided fertile ground for corruption, a government official said Tuesday.

The site, www.cristal.gov.ar, will provide information on exactly how the federal government is spending its $48 billion annual budget, making it difficult for officials to mismanage or spirit away public money, Public Management Undersecretary Leandro Popik told reporters.

"This is an important step forward for our democracy," said Popik, presenting the "Crystal Project" Web site, which is still being put together and still provides only a small part of the information it should eventually offer.

The government has signed an agreement with a group of leading nongovernment organizations that lobby against corruption and is inviting them to oversee government efforts to provide information over the Internet.

Cleaning up public life was a major election promise of the center-left Alliance of President Fernando de la Rua, who took power last December ending 10 years of Peronist Party rule under President Carlos Menem.

Other countries, including the United States and Chile, operate similar Web sites.

Run for NY Senate seat heats up

by Jim Leahy

As the first election of the twenty-first century rapidly approaches us, races are shaping up into long, hard, and exhausting battles for many positions. Bill Clinton's next successor is coming from a tightly contested group with names like Gore, Bradley, Bush, and McCain.

While this race may be the most important on the ballot, it is not, by far, the most intriguing. About fifteen percent of Bucknell students will be involved in voting for the New York race, so it is of importance right here in Lewisburg.

A little state having the largest city in the Union and the second largest representation in the House of Representatives has a Senate seat up for grabs this year. Daniel Patrick Moynihan, New York Senator, is stepping down and two candidates are competing for the seat that he has occupied for four terms. They are two very different candidates with varying backgrounds and visions for the future of New York.

Rudolph Giuliani and Hillary Rodham Clinton have different jobs right now. Giuliani is the current mayor of New York City, a popular Republican, and according to some, doing a great job of bringing New York City back from the dead. Clinton, current First Lady of the United States, is a Democrat known for many things, including sticking with her husband through many scandals and more recently for buying a large house in an upscale Westchester suburb of Manhattan to gain the residency requirement to be a New York Senator.

Now, while this race may be the most interesting, it does not officially exist. Hillary Clinton announced her candidacy after months of speculation on Sunday, February 6, at The State University of New York at Purchase. Giuliani, on the other hand, is still not a candidate. Expected to announce his campaign soon, Giuliani is still at the exploratory committee stage.

The issues are likely to be blurred as this race develops during the next nine months until Election Day and will likely fall to the wayside as negative advertisements and other attacks are launched by both candidates. The candidates have websites available online at hillary2000.org and rudyyes.com. They are highly-informative sources about the candidates but are each biased towards their respective candidate.

What follows is a summation of both candidate's views and policies on the issues of welfare, public education, and the economy of the State (upstate in the mind of Hillary and New York City in the mind of Rudy).

Welfare

Both candidates are supportive of some kind of welfare reform. How drastic the nature of that reform should be separates them. In his position of Mayor of New York City, Giuliani has overseen the widespread reforms of the city's welfare program. He has reworked it into a "workfare" system that helps people get paying jobs so that they will no longer need to rely on welfare for help. Since the overhaul began in 1995, Giuliani claims that over 450,000 people have been moved off welfare and 250,000 of those people participated in the Workfare program.

Courtesy of www.hillary2000.org

Courtesy of www.ci.nyc.ny.us

Clinton on the other hand, while liking the idea of some form of a new system for welfare, does not think it should be so drastic. According to her website, "I conditioned my support [of welfare reform] on the continuation of Medicaid for people who were making that difficult transition into the world of work and independence."

Education

Clinton is a large proponent for education as would be expected. She has spoken numerous times on the issue and fully supports the issues of teachers and the funding of a quality education. She does not support vouchers, a hot issue these days. She believes that there is "no evidence that any objective analysis could prove that these have made any difference in student performance."

In New York City, Rudy Giuliani has had mixed results in educational matters. While many students now have internet access in school that they once did not, the schools themselves are overcrowded and in some cases, falling apart. Project Read is helping to better the reading abilities of City students by keeping them after school and devoting more time during school for reading programming.

While some improvements have been made, Giuliani has had numerous problems with the City's school board and former Chancellor Rudy Crew.

Economy

The upstate economy has been on the minds of state political officials for many years. The New York Metropolitan area has long been a thriving area of economic strength. Some argue that the city is the 'Financial Capital of the World.' And Long Island is home to two of the richest counties in the country. Upstate areas, on the other hand, are struggling to grow themselves into industrial centers and homes to corporations.

Clinton has a plan to help the upstate areas. She wants to "fight for initiatives to ensure that economic prosperity reaches every corner of the state." The region's high utility rates, taxes, and airfares also hinder growth. Hillary wants to put an end to this long tradition of upstate neglect. She also feels that the rural communities of New York need special healthcare and education considerations.

Giuliani, on the other hand, has been riding the wave of economic boom in the five boroughs. In the last few years, the economy of New York City has grown faster than that of the nation. The city's revitalization of the Times Square area has boosted the attendance and success of the Broadway district. Also, the city has renegotiated the contracts of the NYSE and NASDAQ to keep itself the center of the financial world.

This race will be one of the many entertainments for the upcoming summer and fall. The presidential race will be a tight struggle for power while the citizens of New York will think hard over whom to vote for in November. There are many things to consider.

First, what do we say about Hillary? She is what was once termed a carpetbagger. Feeling that the NY Senate seat could fall in to her hands easily, she moved to New York a couple of months ago to gain residency status. She might not have all the knowledge about New York affairs that she needs to be a Senator. But, Hillary does have the best political advisors and staff to help her along.

And then there is Rudy. He is a great mayor but what can he do as a Senator? Should we really let him leave a position where he has been successful, in order to move to a position where he has no track record? And, does he know enough about the upstate region to warrant a run for the Senate? Guiliani's success may be doubtful in upstate New York, but he does have positive characteristics.

Whomever New Yorkers vote for, they will be making a big choice. Hopefully, the best candidate for the job will win and also there will not be too much bloodshed by the time the race is over.

Bucknell students in the Peace Corps

Graduates will head off to all points of the globe to aid others less fortunate

by Anne Monoky

Wondering what to do after graduation? Jennifer Ciotta '99 knows what she will be doing this summer- "I will be teaching English in a secondary school in Eastern Europe. I leave this June and will be gone for two years."

Ciotta, along with several other University students, have decided to join the Peace Corps Volunteers, a group that enables volunteers to travel overseas and help less privileged people. Currently, the program exists in 77 different countries around the world.

Last week, local recruiter Chrissy Boryenace held an informational meeting that promoted such programs as a forestry and agricultural extension in Africa and Central and South America. With this program, volunteers would be working to help manage projects that will help rural communities by protecting the environment, improving nutritional awareness, and organizing income-generating activities.

Another program Boryenance encouraged allows for volunteers to travel to Africa, Central Asia, and Eastern Europe to work as health and nutrition educators to assist in developing and promoting AIDS outreach programs. Also, she spoke of a program that calls for 27 urban planners to work in Central and South America and the Pacific Islands to provide local planners and administrators with technical assistance to address needs such as housing, sewage disposal, and economic development.

Boryenance said, "The experiences and opportunities that the Peace Corps provides are unrivalled anywhere. We are able to travel to places most of us would never have been able to visit under other circumstances. We are given the opportunity to grow and challenge ourselves in ways never before imagined."

Samuel Snyder '99 will be leaving for Central America in July to work in the field of Water and Health Sanitation. He will be helping the local community construct water lines and other infrastructures.

"The Peace Corps is something that I have wanted to do for a long time," Snyder said.

Ciotta shares such enthusiasm as she explains, "The reason that I chose the Peace Corps is because this is a service that I have always wanted to partake in. Also, I feel that my Bucknell education will provide the intellectual and social skills that will make the challenge of being a Peace Corps Volunteer that much more rewarding."

Boryenance said, "And most satisfyingly, we are able to form friendships that span the world."

Student interests jeopardized by search

The search for the University's new president is in full swing with three candidates set to enter the final stages on the process. Behind closed doors, different campus groups will be meeting with these candidates and will decide on a worthy replacement to President William D. Adams.

The drastic measures being taken by the search committee is both standard in these searches and necessary to maintain a competitive pool of candidates. The secrecy issue is understood. However, the continued lack of student involvement in the process cannot be overlooked.

This time it is not an issue of apathy; surely many students would like to be involved in the decision, but only a select few were chosen to take part. Many campus groups were left out of this process, including *The Bucknellian*.

No representative for sports teams or the athletic department was chosen as a member of the student committee, nor were any members of any scientific or engineering societies selected. Religious groups such as Hillel and the Catholic Campus Ministry were likewise snubbed from the process. Obviously, not every single student interest can be fairly represented, but better steps could have been taken to assure maximum student representation in these crucial deliberations.

The Bucknellian was not allowed representation due to a "conflict of interest" expressed by the search committee. The group was apparently worried that confidential information divulged in these meetings would be published by this newspaper, despite our vow to not print any secretive material in any future issues. The editorial staff believes that it deserved representation because of its role as a campus voice; all of *The Bucknellian*'s editors are well-versed in campus issues and consider this knowledge to be a valuable potential asset to the search committee.

We explicitly stated our intentions to offer assistance in the process in our hope to establish a formal contact with the future president—all without any ulterior motive. We wished to contribute our knowledge and opinions to the committee, not to dig for a story.

The Bucknellian staff believes that we are not alone in this matter; the aforementioned organizations represent crucial student interests that must be addressed by our new president.

While the staff believes that a competent group of student leaders has been assembled to represent our interests, it feels that too many important student interest groups were not given the opportunity to participate.

The search committee has decided to keep candidates' identities and arrival schedules secret so as not to jeopardize their status in the process. In doing so, it has jeopardized student's input and the value at which such contributions are taken.

Since its inception, the search process has drawn seemingly unending scrutiny from different members of the campus community. The student body has been given the least chance to contribute to this process. This scenario depicts the serious flaws in the presidential search process. Is it more important for a candidate to hide from their current employer his/her participation in a job search?; or would it be better if all students and student organizations had a chance to help evaluate candidates and contribute to the process that will ultimately select the most powerful administrator at the University?

Are contact sports becoming too violent?

Yes

By Rebecca Rowland

As Oliver Stone so lucidly portrayed in his latest film "Any Given Sunday," professional football is a violent, dangerous game. So is hockey as a matter of fact; these two high contact sports depend on their checks and tackles to draw fans and make the highlights on SportsCenter. While it is true that the very nature of football and hockey relies—and has always relied—on physical contact, the recent upsurge of concussions and other life-threatening injuries begs the question; have professional sports become more dangerous?

I think that they have. While the rules are still the same and the penalties have remained constant, something has changed. Athletes in their prime are being forced to stop playing their sport due to repeated head injuries, as is the case of Steve Young, or are being almost killed by the force of an opponent's slap shot, like what happened to the Montreal Canadians Trent McCleary. Something has changed, but what?

Fifty years ago football players wore half the padding they do now. Fifty years ago ice hockey was played without Plexiglas restraining walls. Nowadays the sheer physicality of a football play would kill any player from the 50's and hockey fans would be bombarded with the bodies of checked players flying into the stands. It is fairly obvious that it is not the games that have changed and increased in danger, it is the players

When hockey and football were in their younger years, the art of physical training was relatively imprecise. Aside from the Charles Atlas "dynamic tension" workout, weightlifting was limited to free weights. The fields of kinestheology and performance-enhancing drugs were non-existent. It was up to a player's hard work and determination to make him as big and as strong as he could naturally get.

Recently, the business of helping athletes achieve super-developed bodies has become a lucrative one. Starting and peaking—but certainly not ending—in the 80's, steroids became the first serious yet widely used bodybuilding drug. While popular use of steroids has declined, General Nutrition Centers are in many suburban malls and professional athletes (ahem Mark McGwire) have not thought twice about using creatine and other "natural". performance enhancers.

In addition to these supplements, exercise machines and techniques have improved. It is now common to use computer programs to measure and calculate ways to gain more muscle and burn more calories. Bettering ones body from an art into a science.

These changes in athletes' diet and exercise have made them bigger, stronger and more powerful on the field or ice. These players can go harder, longer and, consequently, do more damage to their opponents.

In order to prevent professional athletes from sustaining concussions, hideously broken body parts or even death, changes have to be made in professional sports. If referees were to call fouls more often or to lower the force needed to call a foul they would take away the incentive for a player to hit hard. While a rough check or sack may get the crowd's attention it is the refs that ultimately determine the outcome of the game and penalizing players earlier and more often for unnecessary roughness would certainly dissuade them.

Players could also wear more protective gear during games to protect themselves. Adding more padding to the inside of both football and ice hockey helmets might help reduce the incidence of concussions or implementing more substantial face guards in both sports. I know I am going to be accused of trying to take away the thrill and masculinity of professional sports but do you think when Brett Lindros looks back on his final concussion he is glad he was not wearing more protection because, had he been, he would have looked like a sissy?

No

By Ryan Delahanty

Amid all the media attention that is given today to the myriad of career-ending injuries such as concussions and paralysis, the question of whether or not professional sports have become too dangerous has arisen. Proponents of the theory that organized sports are indeed too dangerous point to all the athletes whose careers have been cut short due to usually horrific injuries. Opponents of this theory state that the time period we live in is no more dangerous than any other of the past and the real reason for these injuries is the rapid expansion of teams in sports, and sports themselves.

Today, in the sports sections of newspapers, it seems that all we read about are horrific injuries that occur on the playing field. In the NHL, where last week Montreal Canadien Trent McCleary was hit in the throat by a nearly point-blank slapshot that required an emergency tracheotomy or in the NFL where NY Jets' Dennis Byrd was paralyzed, there have been way too many gruesome injuries. Football superstars, such as Steve Young, are forced to examine whether they can continue to play, lest they receive a bone jarring hit which might result in another concussion, which could lead to problems in the future such as permanent brain damage. Another victim of early retirement due wholly in part to too many concussions is Brett Lindros, younger brother of superstar Eric Lindros. Brett was a talented young hockey player for the New York Islanders who held great promise for the future, but fearing the consequences of his many concussions, he retired in his early 20's.

But, in reality, proportionally there has not been an increase in career-ending injuries, which for the purpose of this article we define as either concussions or paralysis. The NHL, which had 6 teams originally, now boasts at least 28 teams and the augmentation of the size of the league means more people, more checking, overall a greater likelihood for injury. The same is true for football, which has also seen an increase in the amount of players and teams.

There is an inherent risk in playing these two often violent sports. Both leagues have come up with measures that they think will help to reduce these severe injuries. Helmets in both football and hockey are padded very well these days and they are engineered to prevent concussion or the awkward twisting of the neck. Overall, the equipment for both sports has improved dramatically and ensures a greater amount of protection. Surely, this is better than the days when a goalie wearing a mask was a sign of weakness. Additionally, both leagues have cracked down on violence in their sports to provide for the safety of their athletes. The NFL has enacted new rules that further protect the quarterback from late hits and the same rules apply for the kickers. In the NHL, fighting has been less tolerated than in the past and checks from behind are often rewarded with either a major penalty, or if real severe, a suspension. While it may seem that players are getting hurt more often than in the past, it is certainly not true. The increase in sports teams, players, and personnel, has provided for more bumps and collisions. And as a counter measure, many professional sports leagues are making the equipment better and the laws more restricting in order to curb career-ending injuries.

Professional sports have not become more violent. The misconception that they have merely been fueled by a couple of high-intensity injuries that have occurred recently. Once these players have recovered or left their respective games, the public will abandon their beliefs that sports have become too dangerous and once again embrace every check and tackle.

OPINIONS

I.R.A. holds key to peace in Northern Ireland

By Gretchen Schrock

Political upheaval and social turmoil is once again the normal state of affairs in the embittered province of Northern Ireland as the only chance for sustainable peace was shattered on February 11 by the British government.

Seeing no considerable signs of disarmament by the Irish Republican Army, Great Britain, forced by the terms of the Good Friday peace accords, suspended the province's government and re-established direct rule from London. The Ulster Unionists entered the multi-party government with the assurance that the I.R.A. would have turned over some weapons by now in accordance with the procedure outlined by the disarmament panel headed by General John de Chastelain of Canada. The insuring collateral provided by the Ulster Unionists was the pledge of their leader David Trimble to resign, the possibility of which was thwarted by the government suspension.

Obviously, self-rule of Northern Ireland would not have been thrown into the eternal pile of unsuccessful governmental ideas if the I.R.A. had simply cast aside its deadly arsenal of weapons and bombs.

But as Dominic Murray, the director of the Center of Peace and Development Studies at the University of Limerick in Ireland said, "When people ask why can't they just give in a gun or a bullet or a wheelbarrow of weapons or whatever, that's the wrong question. It's an understandable question particularly from outsiders, but it misses the point. It's not whether you decommission a ton or a ha'penny's worth. It's not the amount; it's the principle."

The mentality of the I.R.A is the formidable barrier to disarmament in addition to their hatred and hostility toward the British Protestants. In their minds, disarmament equals surrender. Gerry Adams, the leader of the Sinn Fein party, has pointed out that the Irish Republican Army is not an army that lost a war and must disarm as a result of a treaty with the victors. Instead, according to Adams, they are voluntarily taking part in the peace process and therefore, disarming must be voluntary.

Furthermore, surrendering their weapons would create the image that they are the villains and their purpose for decades of fighting was essentially illicit and wrong. The reasons for the existence of the I.R.A. are largely historical in nature. The Catholics have faced discrimination and second-class status for centuries following the large-scale migration of Protestants into the northern provinces of Ireland during the 17th century and the defeat of the deposed King James II by his successor William of Orange in 1690 at the Battle of the Boyne. In the 1970s, the I.R.A. in the North formed to violently combat the oppressing hand of the British. It is not the reasons for fighting that are controversial but the means through which they fight.

On various occasions, the Irish Republican Army seemed to recognize that their employment of violence was blocking the road to societal change, but a short time later they forgot that realization. For example, after 25 years of terror and bloodshed, the I.R.A. declared that it would abandon warfare in favor of peace talks. On August 31, 1994 at midnight, the fighters laid down their arms but supposedly picked them back up again on February 10, 1997 when a bomb exploded in East London, injuring 100 innocent people, an hour after the I.R.A. abandoned the cease-fire deal.

This I.R.A. violence caused the Sinn Fein party, the political wing of the guerrilla army, to be excluded from talks in Belfast. After Gerry Adams pleaded with them to resume the cease-fire, the I.R.A. called for an "unequivocal cease-fire" and six weeks later, Sinn Fein was allowed to join the peace negotiations.

One wonders if the cease-fire called by the I.R.A. was just a ploy to get the Sinn Fein party into the peace talks because they evidently did abide by the cease-fire when over a three-month period in 1998, 17 people were killed in sectarian violence between splinter Protestant and Catholic guerrillas. Even if the I.R.A. pledges to disarm, it does not ensure the end of violence and the beginning of governmental cooperation. Only the real actions of disarmament have the power to meet those ends.

If the government of Northern Ireland is to work successfully, two events must occur. First, a revolution of the province's culture is needed. The hatred and hostility between the Catholics and Protestants are so deeply ingrained in the regional psyche that cooperation is a futile effort. The horrifying events of the past are still so fresh in the minds of the citizens that retaliation and revenge are the only goals. Cultural revolution is a slow and gradual process and Northern Ireland is beginning to witness its powerful force in their society. Yet the absence of feeling relatively safe from the violence of one's enemies slows this cultural awakening toward peace and cooperation.

Secondly, in order to quicken this process, disarmament of all guerrillas groups, not just the I.R.A., is required, but the I.R.A. holds the key to the future of Northern Ireland. Great Britain will only return self-rule to the province when the I.R.A. not only agrees to disarm, but shows signs of their commitment through substantive actions. Without the disarmament of the I.R.A., Northern Ireland is back to where it stood in 1972 in terms of governmental structure when the British leadership in London dissolved the government at Stormont and imposed direct rule.

Disarmament might not be the ideal situation for the I.R.A. because it might convey the notions of surrender and wrongdoing, but what is more important for the province—a chance at peace and prosperity for an entire region or the dignity of one small group of men?

What does the I.R.A. want for the future generations of Northern Ireland? A land so torn by religious and ethnic hatred that it cannot govern itself or a land able to overcome a vicious and bloody history and realize its amazing potential?

Weekly apocalypse

Shouldn't we be dead by now?

By David McGreevy

If you were reading the news last week, you may have noticed a disturbing little item hidden in the back pages. A recently discovered asteroid with the picturesque name "2000 BF19" scientists said was likely to impact with the earth in 2022. Asteroid 2000 BF19 is "only" about half a mile wide, so while it would inflict some pretty horrific damage if it collided with the earth, it wouldn't destroy the entire planet. Still, scientists were quite reasonably alarmed and reviewed their calculations more carefully.

It turned out that they were wrong. A closer look at their work revealed that, in fact, 2000 BF19 would not come within 3.5 million miles of the planet for at least 50 years. Everything would be okay; once again the world had avoided a terrible catastrophe.

This is nothing new, of course. In just the short time that I've been alive, the world has almost ended countless times. I thought that in celebration of this most recent non-apocalypse it might be a good time to take a look back at some of the times in the last twenty or so years that we all should have probably died. You know, just for fun.

For the first eight years of my life, Ronald Reagan was in office and the Cold War was in full swing. Here was a guy who called the Soviet Union an "Evil Empire" and said that a full-scale nuclear war in the next few years was inevitable unless the Russians gave up on Communism. He was ready to do it—he had plans made and shelters built and everything—and the fact that we're all alive today and not living in some sort of post-apocalyptic "Mad Max" nightmare is pretty unbelievable when you think about it.

Fortunately, the end of the Cold War and the collapse of Communism went very smoothly, at least as far as nuclear holocausts are concerned, and we didn't have to worry much about that sort of thing anymore. The 90's, though, brought an entirely new selection of things to stay up nights fretting over.

About the time I was finishing elementary school there was a big killer bee scare that had all the kids worried. "Killer" African honeybees were apparently migrating north from Mexico and would soon reach the United States. Obviously this was trouble; the bees had "killer" right there in their name, leaving little doubt as to their intentions. I, along with all the other intensely neurotic fifth graders in the country, stressed over this coming onslaught for a couple of months, but nothing happened. The Ebola virus also proved to be something of an anticlimax: for a week or so, it was questionable whether we would live to complete the ninth grade, but it all worked out in the end.

Just about a month ago, the end of the world was narrowly avoided yet again when the dreaded Y2K bug failed to do much of anything. All the important computers kept working and there were no deadly terrorist bombings. While it is theoretically possible that the world's terrorists are all the sort of anal-retentive know-it-alls who insist that the new millennium actually begins next year, making a New Year's bombing in 1999 rather pointless, it seems more likely that one more apocalypse has been avoided.

So what's the point of all this? Is it just meaningless nostalgia for times when we were a lot more likely to be dead? Maybe. On the other hand, cataclysmic threats like these are sure to come up again. So far, the world as we know it has managed to survive, but maybe we're starting to push our luck a little now. Think about that one for awhile.

Oh, and try to have a good weekend... you never know when there'll be another one.

Morality vs. religion

Are they the same thing?

By Josh Guyan

Sometimes yes. Thou shalt not kill (actually murder) is a pretty good example of something that is both a religious teaching and moral. There are quite a few commandments, tenets and other religious teachings that have truly moral meaning; but there is also such thing as religious teaching that is immoral and people of faith have to learn to distinguish for themselves which lessons they believe are moral and which may not be.

George W. Bush chose Bob Jones University as the site for his first speech in South Carolina since his loss in the New Hampshire primary. Bob Jones University is considered a religious, Christian-values school and a bastion of southern conservative values. That's why George W. decided to give his speech there; he wants to court the religious conservative vote while John McCain moves to the center of the political spectrum. But my problem with this religious school is that while teaching its students family values, it also has a policy of no interracial dating.

The school sees three races in society, Caucasians, Negroes, and Asians. According to the University no member of any one of these races should date someone from a member of another race. Forgetting the politically incorrect nature of these racial characterizations and the fact that oriental describes a rug not a person, is this moral? Absolutely not. So while these students are being taught morality and probably thinking they are the most moral citizens around, they are taught not to date outside their race. Christians please tell me, is this moral? If not, why is it that what is said to be the most Christian values based school in the nation teaches it?

In writing this I also thought back to high school when we used to have a chapel service every Thursday. The school rotated among many religious leaders speaking at the services so they weren't for any particular religion or denomination. One Thursday a religious leader came in and proceeded to tell us a story with a moral lesson.

Basically the story was about a worker who had a deal with a landowner to work for a certain amount of gold. A couple days later the worker realized all the other workers were getting more gold than him and were doing the same work. He complained to the landowner and the moral of the story was that if you contract with someone to do a certain amount of work for a certain fee, you shouldn't worry about what others are paid for the same work.

This story came back to me while I was watching the State of the Union Address when President Clinton was talking about equal pay for equal work. Basically, women in this country get paid seventy cents for every dollar a man makes for the same work. The president was intending to change that. I thought back to that moral lesson I learned in high school from the religious leader. Does that lesson mean that women should accept their seventy cents while men make a dollar for the same work? Is that what is moral? I don't think so. As funny as this may sound, Clinton is the moral one on this issue.

Obviously these are rare cases just taken out of my experience and from politics to prove a point. This kind of contradiction probably doesn't happen very often. But what about The Bible? The Bible says being gay is wrong, slavery is okay, and women should be treated like property. Is that moral teaching? I'm certainly not saying the Bible has nothing moral to teach because it does, but there are too many people of faith out there who simply believe anything if it's in the Bible. This is wrong.

People have got to read the Bible the same way they read The Constitution or anything else—thoughtfully and critically. People should listen to religious leaders the same way they do their professors, bosses or politicians, thoughtfully and critically. We need to take in information and think about it before we decide if it's moral or good.

Isn't this box boring?

Letters to the Editor

CROPWalk thanks Greek participants

On behalf of The Lewisburg area CROPWalk, thanks to the following: Alpha Phi Omega, Alpha Chi Omega, Lambda Chi Alpha, Kappa Sigma, Delta Gamma and Rooke Chapel. With their support this past October's Walk raised just over $9,200.00 to help feed hungry people here and around the world.

We have been very pleased to be able to work together with members of the Bucknell community to do something about the problem of hunger. Student participation not only has increased the practical good achieved through fund raising but has lifted the spirits of the other walkers. The chapel community and the sororities and fraternities named above clearly have lived up to their ideals. We're grateful for their help and for the good example they have set by their actions.

Sincerely,
MacKenzie Scott (Walk Co-coordinator)

Vandals upset Women's Resource Center

The Women's Resource Center recently began a campus-wide poster campaign as part of an ongoing effort to educate the Bucknell community on important gender issues. Entitled "This is What a Feminist Looks Like," the poster features pictures and quotes from staff, faculty and students who proudly identify themselves as feminists. In an attempt to dispel stereotypical myths about the nature of feminism and those who align themselves with the cause, the poster depicts a diverse group of individuals who believe that feminism plays an important role in their lives. Advocating equality and awareness as necessary components in a mutually respectful society, those who participated in the production of this campaign hoped that the poster would raise consciousness and open up a much-needed dialogue about gender issues among members of the community. However, the day after the posters were hung in academic buildings and dormitories around campus, it was brought to our attention that a poster in Larison Hall was defaced. Using a black marker, an individual took the time to cross out every occurrence of the word feminist and replace it with offensive slurs, such as "bitch" and "dyke." Many of the faces of participants had such expletives scrawled over them and in capital letters at the bottom of the poster was written the statement, "Cook me dinner, bitch."

No doubt readers will share in my shock and disgust that a student of a reputable institution such as ours would exhibit such blatant ignorance and total disrespect for other students and faculty members. Although I do not contest this individual's right to free speech, I do contest that actions such as these are damaging to all of us. They reflect an attitude of hate and bigotry that pervades a society that is largely permissive of anti-female, misogynist beliefs and behaviors. It is an affront not only to the individuals whose images were defaced, but to the feminist mission to create a progressive environment of equality and dignity for all people.

Marie Martinez '00

Sports editor takes blame

I'd like to take the blame for the unequal coverage of the men's and women's basketball teams' Lafayette contests that Brad Tufts recognized in last week's issue of *The Bucknellian*. It was simply an issue of Chris Ellis, the men's writer, asking me for an extension for his article so he could travel to Lafayette, watch that Wednesday night's game and include the results in his article. I agreed, not realizing that this would result in unequal coverage between it and the women's team—for whose article I had set a deadline of Tuesday night. I added in two paragraphs about the women's results but not in the same depth as the men's results for a game on the same night.

I've instituted a policy of establishing with my writers which games should be covered for each week's article in order to avoid similar problems in the future.

Carmen Mauriello
Sports Editor, *The Bucknellian*

Sports correspondent defends

My name is Andrew Bevan and I am the correspondent for the women's basketball team for *The Bucknellian*. In the February 10th issue of *The Bucknellian* Interim Athletic Director Brad Tufts wrote a letter to the editor in which he claims that the women's basketball team was not covered as equally as the men's basketball team in the previous issue. In response to Mr. Tuft's complaint, I must explain how articles are handled in the sports section. *The Bucknellian* is released every Thursday. The sports editor sets a deadline of Tuesday night for articles to be turned in. The women's basketball game against Lafayette was played the day after my article was due to the sports editor and therefore I was not able to give the game extensive coverage in my article. When a situation like this arises, the sports editor usually checks on the score of the game and then adds a small part in the end of the article about the results of the game. The small amount of coverage on the Lafayette game can be attributed to the fact that the game was played after the article for that issue was due. Also, and this is in no way an attempt to take anything away from Chris Ellis, but he traveled to the Lafayette game and wrote his article that night after he returned. I do not have a car and I was not able to travel to Easton for the contest. The small amount of coverage on the game was in no way an attempt to slight women's basketball.

Sincerely,
Andrew Bevan

Kingue expresses thoughts and dreams in recent novel and stories

By Katie Hays

Again and again we learn from the exceptional spirit of Angele Kingue, current director of "Bucknell en France" and associate professor of French.

After living in Cameroon, West Africa for most of her life, Kingue received her Ph.D in foreign language pedagogy and French from Pennsylvania State University. Kingue has taught at Bucknell since 1988. Aside from planning, teaching and raising her son Yannick, she is an author.

Kingue most recently completed her first novel, *Pour Que Ton Ombre Murmure Encore (So That Your Soul Will Murmur Again and Again)* published by L'Harmattan in Paris (1999). In the novel, even as Kingue invokes the spirit of her father, she evokes "a life, a childhood, and a country."

Ideas breathe in Kingue. She blends the real and the imaginary, and the past and the present in a powerful, lively, and original manner.

Kingue has also published *Echos d'enfance, (Echoes of Childhood*, 1993) and *Une Voix dans la Nuit, (A Voice in the Night*, 1998). The theme of memory and childhood recurs in her works, for writing is, as she fondly confides, "An exercise of reflection."

"I wrote my first novel because I wanted my father's soul to be, for me, perennial. I have always admired my father; he lived a fascinating life, a life worth recounting. After his death, the book took on a different tone for me. I began to evoke his life in a slightly new way. I wanted, as the title says, for his soul to whisper to me," Kingue said.

Translated, her book opens with this poetic invocation:

If I name you Dihang, son of Ndogon Ngombi will you hear me?
If I name you spirit of Nze the sacred panther, will you come back?
If I consult the oracle of Ndje, will you reveal yourself?
Whisper to me the secret of your forest and your paths,
Whisper to me the secret of the den(s?) of your soul,
Trace for me, in the dust of the arid earth,

Paige Cull—The Bucknellian

Professor Angele Kingue, Director of 'Bucknell en France'

And in the mud of rainy seasons,
The road to forgotten ways,
Remind me of you, remind me of your dreams, Remind me that a planted tree does not loose its roots.

Rhythm, power, and strength combine not only in the novel, but in Kingue herself. In the novel, the sound of drums becomes soft, and body and spirit combine. The human and nature, color and sound form and fancy blend, within the text. Kingue writes and lives fiercely. "I draw the circle of life with every step," she states in the novel. Her personality echoes her words.

Besides writing short stories for youth and a novel in memory of her father, Kingue is writing two children's books in English, *People are Like Apples*, and *When the Rainbow Smiles*. Presently, she is planning a new novel, *Une Ame Errante, (A Wandering Soul)*, and writing two short stories, as well as teaching courses at Bucknell and directing Bucknell en France.

"I like exciting my students to experience languages and cultures beyond the ones to which they are accustomed. Through the study of French and Francophone cultures, students discover a way of life; they transform their perceptions, and see that people all over the world cry and smile, radiate, and live," Kingue said.

"The novels they read in French are little communities in which students discover interactions between people in different societies. That knowledge allows them to connect to other beings. Through experiencing other cultures, we are made more whole."

Writing her novel, too, has made Kingue more whole. "Writing calms me," she said. "It soothes; it liberates. When I write, I am with me. It is the one time when I am truly back home, in my country, with myself."

In Kingue, words, dreams, reality combine; she teaches, speaks, and listens. And she sings. She sings from the rhythm of the written word, from the light of her eyes, and from the beauty that whispers "again and again," not only from her novel, but from the vision of her inspiring spirit.

Wink Thinks

Dear Wink,

I have read your article in the past, but never thought thht I would be actually writing in to ask for your advice.

I have a relative who also attends Bucknell who wears trashy clothes, much like a guest on Jerry Springer. My relative is a few years younger than I am, and I won't say how I am related to her in order to conceal her identity, but we are close relatives. While I know that on Friday and Saturday nights the clothes on people get a little bit skimpier and tighter, especially for the girls, my relative wears practically nothing and is totally degrading herself.

She had a really good education growing up and was raised in a household where make up was barely allowed. Therefore, it is such a shock for me to see this young girl who is part of my family go out and dress like she is going to stand on a street corner. I simply just don't get it one bit.

To further the issue, I have tried to subtly tell her that dressing like she does isn't really the norm at Bucknell, however, this was to no avail as she just told me that it wasn't any of my business.

It is not so much that I think what she is wearing is stupid, but rather that because of her attire she has developed a reputation that truly doesn't fit her. I mean I have been walking with friends down the street and have had her pass by while she was in one of her outfits. Needless to say one of my friends made a comment about her dress without knowing she was part of my family. Though at the time I didn't say anything, to her or my friend, I know her dress is becoming a problem. I must say that I would rather just let her do her own thing, but when it's your family I feel as though you have a responsibility to look out for someone.

I don't know what to do. Should I try and talk to her about it again, and hope that this time she understands? Or should I tell her parents and hope that they could resolve the issue in some way? I would buy her a whole new wardrobe if I could, but to replace all the clothes would leave me broke. So I leave it in your hands, how on earth do I get some clothes on this girl?

Sincerely,
Aint Nothin' But A Hoochie Mama

Jacqueline Flicker—The Bucknellian

Dear Aint Nothin' But A Hoochie Mama,

Let me first say that I think I have seen your relative before, and let me tell you, that girl definitely needs some new clothes. I don't want to sound like I am judging anyone but, like you, I just don't understand why some girls dress like that. You do not need to dress like you are going clubbing when it 30 degrees and snowing outside!

I can definitely see the type of situation you are in, if I saw one of my relatives dressing in a way that I thought was just degrading I would definitely say something. I don't think that you are doing anything wrong in subtly suggesting some alternative clothes, after all you are looking out for her welfare. However, you have to consider that she may take it in a hostile manner. Therefore, I think that simply sitting down and telling her to change her clothes is a mistake. Rather you should try and reach her on a deeper level. If she is concerned with her appearance, which it seems she is, I am sure that she would be upset if she knew what people thought of her dress and the image that it portrays her as.

Unfortunately, while it may be wise to tell her how her peers view her, this may backfire. She may think that the comments are getting her attention, which could in fact be the whole reason she is dressing like she is, and therefore would further escalate the situation.

Your idea of telling her parents, I feel, is a good one. First of all, if they didn't allow her to dress like she is while she was living at home, I see no reason why they would let her dress the way that she is while in college. Just because she has left the nest, doesn't mean that they are going to forget about whatever values they tried to instill in her. In addition, one could hypothesize that the reason behind her dress is due to the fact that she was never able to freely express herself in the past. She may be taking her new found college freedom a little too far, and her dress may be to spite her parents. However, a lot of people simply go through phases, and she could be going through such a phase. You see the people walking around who are dressed like vampires thinking that dressing gothic is how they will express themselves. The same goes with wearing hardly any clothes. Therefore, while her dress may seem a little outrageous, it could very well be a phase in which she is abandoning the resriction of her parents for her own forms of self-expression.

If you are truly set on trying to change your relatives dressing habits, than you could also try and portray the idea that dressing in provocative ways is somewhat dangerous. I have heard stories of men trying to take advantage of women simply based upon their dress. Sometimes people misconstrue why someone is doing something, like dressing a certain way in this example. An individual could think its because she wants a date, when in fact its because the heat is broken in her dorm room and so she is dressing in light clothing. People can evaluate situations in a variety of ways, therefore, I think it would be wise for you to express this to your relative, not to badger her, but to create a sense of understanding. I think that understanding is the key factor here, not anger or hostility, but a general sense of awareness.

In conclusion I think you owe it to yourself and your relative to do something about her manner of dress. While you do not want to hurt her, you also don't want to see her hurt. We must understand that even though the girls on Springer may look ridiculous and we take them for low- lives, there may be something deeper going on. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. Students form NAG Enterprises, develop Design Management major

By Chad Gillenberger

The fashion industry is booming—and not just in New York or Los Angeles—it's booming right here on our very own campus. Bucknell has one of the most fashion-conscious student bodies in the country. I challenge anyone to find a better-dressed campus than our own. Abercrombie and J.Crew might as well just set up a store in the Langone Center. This homogeneity however, is not necessarily always a good thing. Clothing is often times a visual outward extension of one's creative persona. Our campus in some ways lacks diversity in this respect. That is where NAG Enterprises enters the picture.

NAG, which is an acronym for Natalie Sopic '01, Anddy Carmona '02, and George Cowan '02, its three creators, is a newly formed fashion design company at Bucknell. Their goal is to bring about an awareness of modern fashion alternatives on campus. Their focus is primarily urban streetwear and their designs reflect the multi-faceted uniqueness of modern day city life.

Infused in their designs is an agenda of positive social messages. Some examples of current designs in progress include t-shirts and jeans stylized with graffiti art emulating spray-painted walls in New York City and pieces constructed from recycled materials such as bottle caps, paper and bubble gum wrappers. Many designs will reflect a retro influence and others that worn-out comfortable look which has become so popular recently.

NAG enterprises began as the vision of junior Natalie Sopic. Natalie has always been interested in fashion; she interned the last two summers for DKNY in New York. Originally a management major, she decided managing wasn't going to be enough for her—she wanted to be involved in the actual design of the goods she'd be marketing. This eventually brought about her decision to create her own major, Design Management.

Soon after its creation, two of Sopic's fellow classmates, Carmona and Cowan, decided to take up Design Management as their major also. Carmona and Cowan, both sophomores, encourage anyone interested in management and fashion to look into the major as it provides a unique experience by combining the best of both disciplines. Some courses that they have taken or currently are taking include; Management 101, Art Issues and Actions, Costume Design, and Elementary Drawing.

The efforts of these three entrepreneurs will result in a showcase of their designs sometime in the fall semester of next year and will be titled "Urban Millennium." It will count as Sopic's senior design project and will be a big step forward for NAG. The show will include over a hundred pieces of clothing.

Lydia Hagstoz—The Bucknellian

Anddy Carmona '02, Natalie Sopic '01, and George Cowan'02, the three creators of NAG Enterprises.

"It's going to be a lot of work but we're really looking forward to it. It'll be nice to see all our hard work pay off. It's a great learning experience and a lot of fun. I would encourage all interested to come and participate, we need a lot of help," Sopic said.

Anybody interested is encouraged to join the group—you don't need to be a Design Management major to participate in NAG. They are looking for people to help with design, advertisement, modeling, sewing, planning and fundraising.

While they are receiving funds from the University they will also be looking to local businesses to help sponsor the event. They will also be holding a clothing drive sometime later this semester; they are counting on using the donations to help create their designs and thus would greatly appreciate anything people could spare. *There will be a tryout this Saturday for all those interesting in modeling. If you are interested in attending the tryout or any other part of NAG you can contact Sopic at 577-8493. All inquiries are welcome.*

Apply electronically for federal student aid. It's fast, free, and easy.

An abroad perspective: Tanzania, East Africa

By Darlene Robe

Jambo mzungo ("Hello, white foreigner!")—those were the first words I heard upon landing in Tanzania, East Africa, my study abroad destination and home for the next four months of my life.

The opportunity of a lifetime—the chance to go see another part of the world and to study another culture not from a textbook but from the people themselves—came to me through the School for International Training (SIT), an organization that believes in what they call "experimental living", or in other words, complete cultural immersion.

There were a total of 13 students on my program and collectively we represented colleges and universities across the US, from Stanford University to Bucknell. Although we were all unique and brought different perspectives to the program, there was one thing we all had in common—everyone was a science major and interested in some aspect of biodiversity and conservation biology.

Courtesy of Darlene Robe

99% of Tanzanians really live in these mud and stick houses.

Our academic advisor was Reese Matthews, an American citizen who has lived and worked extensively in Tanzania for the past ten years. For the first six weeks of the program, we traveled around as a group looking at local conservation projects currently underway.

At each destination we were required to read academic papers about the topic at hand; attend lectures from local experts (i.e., forest officials, University of Dar es Saleem professors etc.), as well as participate in intensive KiSwahili language classes. Although the academic course load was rigorous, it was also a lot of fun having class outside, under trees or around a campfire at night.

In addition to being students, we were also tourists and visited various attractions, such as national parks and sandy white beaches on the coast. Plus, through homestays with local families, we were fortunate enough to be given the chance to "go off the beaten track" to really experience Tanzania.

For a total of one month, I stayed with two different families each in a different socio-economic class. I was able to experience Tanzania from the perspective of a family. My Tanzanian mother and father were told to treat me as if I was their child.

One of the first questions I was inevitably asked wherever I went was, "How is Tanzania different from America?" My immediate response was that it was a *totally* different style of living in Tanzania; in Tanzania there is a much slower pace to life and living is definitely more people-oriented. As a whole, Tanzanians do not seem to be in as big of a hurry as Americans.

This concept of "go, go, go" is definitely not in the Tanzanian mind-set as evidenced by the fact that they are always late for everything! Through my life-altering experience abroad, I was given the chance to learn more about myself as a person, and, as a result, I have changed; I am no longer the person I was when I left in September.

In the words of my academic advisor out in Tanzania, I learned "how to walk a little bit slower". No longer do I stress about the little things in life but rather I am able to take a step back and look at the bigger picture.

It was a very humbling and enlightening experience for me to see how people in Tanzania can live so simply but yet be so happy. Ninety-nine percent of Tanzanians live in poverty. The average Tanzanian lives in a mud and stick house, with a thatched roof and a dirt floor. There are no modern appliances—no washing machines, televisions, stereos, refrigerators, stoves or even toilet bowls.

Courtesy of Darlene Robe

Darlene Robe '01 with her first homestay mother and sister.

Tanzania showed me how to go back to the basics, how to appreciate the little things in life. So next time you turn on the faucet and water comes out or flush the toilet, or even go to the supermarket, be thankful for these things, no matter how small, as there are many people in the world who would give anything to be in your shoes.

My advice to everyone is this—if you get a chance to journey abroad for an extended period of time, I say go for it, it could very well change the way you look at the world, and yourself. Goodness knows it did for me.

College pressures lead to higher levels of stress for women than men

By Helen Shen

College and stress: these two words seem to go hand-in-hand. It is nothing new to say that college students are faced with a high level of pressure as they begin paving a path for their future. However, recent studies have shown a new angle to this age-old problem—stress seems to target women more than men. In a recent study, even though a record 30 percent of college students reported to feel stress, women reported that they were twice as likely to feel stress as men.

Why, in a society where men and women boast of their equal opportunity, are women experiencing more stress? Is this trend a reflection of the different pressures society places on men and women? Is a college campus a place where men and women can find equality? Several factors contribute to this recent trend although no definite cause may be determined.

Janice Butler, the director of the Women's Resource Center, has spent 11 years working with men and women on campus. The Resource Center, which was established in 1986, evolved from a group of students who petitioned because their "needs were not being addressed" into a interactive organization that has a mailing list of over 600 people on campus. "The pressures that young people are facing today are pressures that the previous generation did not have," Butler said. She lists some of these pressures including relationships, STDs, and the high cost of college tuition.

When questioned why women report a higher level of stress, Butler explained, "The kind of women that come to Bucknell are driven to succeed," and therefore, tend to be 'perfectionists.'

"To some degree, men have the same level of stress ... our culture simply allows women to ask for help while men seek more autonomy and independence," Butler said. From her years of working with young men and women she concluded, "It is a cultural tradition that men don't want to be needy and vulnerable" therefore, men are not as likely to report the anxiety they feel. Bucknell women, on the other hand, seem to live by the motto: "We must do good and look good."

"Adolescence is a time when people do a lot of self-reflection," Butler said, "Bucknellians tend to be young people who are very high achievers and who come from backgrounds where they are expected to do well." When young men and women self-reflect, they tend to find aspects of life that can encourage stress. Consequently, they tend to expect a lot from themselves.

The question returns: What *is* the difference between college men and women and what roles does society play in creating this difference? Trudy Cunningham, Associate Dean of the College of Engineering, believes that "stress has always been fairly high." She explains that each generation faces a different type of stress and that college students today don't necessarily experience a higher level of stress than previous generations of college students. She does, however, offer several factors that contribute to the pressures felt by our generation. "We are living in an economically driven world," she said, "where it's not about getting a job, it's about getting a well-paying job."

At the same time, "tuition seems outrageously high," Cunningham notes, and the trend is that

Christine Glover—The Bucknellian

Two female engineers stressfully attempt to solve a problem for class.

American families tend to spend rather than save. "When students see their parents taking out second mortgages, they no doubt feel the pressure to do well in school."

Lastly, Dean Cunningham emphasizes the inconsistency of relationships that college students today face. "Students tend to bounce between relationships ... there are more short relationships than long-term ones, and this type of 'short cycle' relationship gives students less time to be open with [themselves]."

The bottom line? "Society is imperfect, 18-22 is an uncomfortable age, and [students] must go from living under [their] parents' control to controlling [their] own life," Cunningham said. This is enough to cause alleviation of stress in anyone's life. But why the higher level of stress in women? During her 21 years at Bucknell, Cunningham has made some interesting discoveries.

"It's hard to get women to consider engineering, and even harder to keep them in engineering," Cunningham said. Although Bucknell's population of women engineers is higher than the national average (25% of its engineers are women), the statistics are still drastically lower than the percentage of men. 17% of women go into the College of Engineering, while only 13% come out as engineers after four years.

What causes this low percentage of women in the College of Engineering? "While men climb the ladder to success, women spread the web of support," Cunningham said. This idea, taken from Carol Gilligan's book, *In a Different Voice*, proposes that evolution has to do with preserving the next generation, and that women tend to posses an innate quality that teaches them to act as a "web of support." As a result of this quality, women tend to shy away from things they haven't tried, such as engineering. "Something I do in my office is to make people believe that they can do engineering, to make them understand that they have a choice," Cunningham said.

"There seems to be an assumption among Bucknell students: I have to be perfect to be here," Cunningham said. But this, she continues to explain, is a big misconception. Many female students seem to suffer from the "imposter complex," the theory that even when one has tried their best, one feels as if one just hasn't done enough. "Studies show that more women suffer from the 'imposter complex' than men. Why is this?" Cunningham asked. There isn't a simple answer.

The "imposter complex" can be illustrated by the following test: A teacher who had recently administered a test called in his students who did poorly and asked them why they received such a grade. A surprising majority of women answered with replies such as, "I didn't study hard enough; I didn't spend enough time; I could have worked harder." On the other end of the spectrum, the majority of men explained, "The test was too hard...The test was unfair." The difference in the types of responses generated from this test is both interesting and complex.

"It is no surprise that college students often find themselves under a lot of pressure," stated Leo Reisberg in his article, "Student Stress is Rising, Especially Among Women." Although there is no magical spell that can be administered to reduce stress, both Butler and Dean Cunningham offer some solutions. "We are human beings, not human doings," Butler said, "and we should try to find diversity in *all* things." The most important thing? "Be yourself," she suggested.

Although Dean Cunningham conceded that "society is always hard to deal with," she also leaves students with an important piece of advice: "No matter what you do, you can't lose yourself. [Instead], seek experiences that will take you out of your comfort zone so that you can let that zone grow a little."

We're women so according to this article, we're probably stressed out. Please make our lives a little less hectic and write for features! Call Rebecca today at X74453!

Kingue expresses thoughts and dreams in recent novel and stories

By Katie Hays

Again and again we learn from the exceptional spirit of Angele Kingue, current director of "Bucknell en France" and associate professor of French.

After living in Cameroon, West Africa for most of her life, Kingue received her Ph.D. in foreign language pedagogy and French from Pennsylvania State University. Kingue has taught at Bucknell since 1988. Aside from planning, teaching and raising her son Yannick, she is an author.

Kingue most recently completed her first novel, *Pour Que Ton Ombre Murmure Encore (So That Your Soul Will Murmur Again and Again)* published by L'Harmattan in Paris (1999). In the novel, even as Kingue invokes the spirit of her father, she evokes "a life, a childhood, and a country."

Ideas breathe in Kingue. She blends the real and the imaginary, and the past and the present in a powerful, lively, and original manner.

Kingue has also published *Echos d'enfance, (Echoes of Childhood,* 1993) and *Une Voix dans la Nuit, (A Voice in the Night,* 1998). The theme of memory and childhood recurs in her works, for writing is, as she fondly confides, "An exercise of reflection."

"I wrote my first novel because I wanted my father's soul to be, for me, perennial. I have always admired my father; he lived a fascinating life, a life worth recounting. After his death, the book took on a different tone for me. I began to evoke his life in a slightly new way. I wanted, as the title says, for his soul to whisper to me," Kingue said.

Translated, her book opens with this poetic invocation:

If I name you Dihang, son of Ndogon Ngombi will you hear me?

If I name you spirit of Nze the sacred panther, will you come back?

If I consult the oracle of Ndje, will you reveal yourself?

Whisper to me the secret of your forest and your paths,

Whisper to me the secret of the den(s?) of your soul,

Trace for me, in the dust of the arid earth,

Paige Cull—The Bucknellian

Professor Angele Kingue, Director of 'Bucknell en France'

And in the mud of rainy seasons,

The road to forgotten ways,

Remind me of you, remind me of your dreams, Remind me that a planted tree does not loose its roots.

Rhythm, power, and strength combine not only in the novel, but in Kingue herself. In the novel, the sound of drums becomes soft, and body and spirit combine. The human and nature, color and sound form and fancy blend, within the text. Kingue writes and lives fiercely. "I draw the circle of life with every step," she states in the novel. Her personality echoes her words.

Besides writing short stories for youth and a novel in memory of her father, Kingue is writing two children's books in English, *People are Like Apples*, and *When the Rainbow Smiles*. Presently, she is planning a new novel, *Une Ame Errante, (A Wandering Soul)*, and writing two short stories, as well as teaching courses at Bucknell and directing Bucknell en France.

"I like exciting my students to experience languages and cultures beyond the ones to which they are accustomed. Through the study of French and Francophone cultures, students discover a way of life; they transform their perceptions, and see that people all over the world cry and smile, radiate, and live," Kingue said.

"The novels they read in French are little communities in which students discover interactions between people in different societies. That knowledge allows them to connect to other beings. Through experiencing other cultures, we are made more whole."

Writing her novel, too, has made Kingue more whole. "Writing calms me," she said. "It soothes; it liberates. When I write, I am with me. It is the one time when I am truly back home, in my country, with myself."

In Kingue, words, dreams, reality combine; she teaches, speaks, and listens. And she sings. She sings from the rhythm of the written word, from the light of her eyes, and from the beauty that whispers "again and again," not only from her novel, but from the vision of her inspiring spirit.

Wink Thinks

Dear Wink,

I have read your article in the past, but never thought that I would be actually writing in to ask for your advice.

I have a relative who also attends Bucknell who wears trashy clothes, much like a guest on Jerry Springer. My relative is a few years younger than I am, and I won't say how I am related to her in order to conceal her identity, but we are close relatives. While I know that on Friday and Saturday nights the clothes on people get a little bit skimpier and tighter, especially for the girls, my relative wears practically nothing and is totally degrading herself.

She had a really good education growing up and was raised in a household where make up was barely allowed. Therefore, it is such a shock for me to see this young girl who is part of my family go out and dress like she is going to stand on a street corner. I simply just don't get it one bit.

To further the issue, I have tried to subtly tell her that dressing like she does isn't really the norm at Bucknell, however, this was to no avail as she just told me that it wasn't any of my business.

It is not so much that I think what she is wearing is stupid, but rather that because of her attire she has developed a reputation that truly doesn't fit her. I mean I have been walking with friends down the street and have had her pass by while she was in one of her outfits. Needless to say one of my friends made a comment about her dress without knowing she was part of my family. Though at the time I didn't say anything, to her or my friend, I know her dress is becoming a problem. I must say that I would rather just let her do her own thing, but when it's your family I feel as though you have a responsibility to look out for someone.

I don't know what to do. Should I try and talk to her about it again, and hope that this time she understands? Or should I tell her parents and hope that they could resolve the issue in some way? I would buy her a whole new wardrobe if I could, but to replace all the clothes would leave me broke. So I leave it in your hands, how on earth do I get some clothes on this girl?

Sincerely,

Aint Nothin' But A Hoochie Mama

Jacqueline Flicker—The Bucknellian

Dear Aint Nothin' But A Hoochie Mama,

Let me first say that I think I have seen your relative before, and let me tell you, that girl definitely needs some new clothes. I don't want to sound like I am judging anyone but, like you, I just don't understand why some girls dress like that. You do not need to dress like you are going clubbing when it 30 degrees and snowing outside!

I can definitely see the type of situation you are in, if I saw one of my relatives dressing in a way that I thought was just degrading I would definitely say something. I don't think that you are doing anything wrong in subtly suggesting some alternative clothes, after all you are looking out for her welfare. However, you have to consider that she may take it in a hostile manner. Therefore, I think that simply sitting down and telling her to change her clothes is a mistake. Rather you should try and reach her on a deeper level. If she is concerned with her appearance, which it seems she is, I am sure that she would be upset if she knew what people thought of her dress and the image that it portrays her as.

Unfortunately, while it may be wise to tell her how her peers view her, this may backfire. She may think that the comments are getting her attention, which could in fact be the whole reason she is dressing like she is, and therefore would further escalate the situation.

Your idea of telling her parents, I feel, is a good one. First of all, if they didn't allow her to dress like she is while she was living at home, I see no reason why they would let her dress the way that she is while in college. Just because she has left the nest, doesn't mean that they are going to forget about whatever values they tried to instill in her. In addition, one could hypothesize that the reason behind her dress is due to the fact that she was never able to freely express herself in the past. She may be taking her new found college freedom a little too far, and her dress may be to spite her parents. However, a lot of people simply go through phases, and she could be going through such a phase. You see the people walking around who are dressed like vampires thinking that dressing gothic is how they will express themselves. The same goes with wearing hardly any clothes. Therefore, while her dress may seem a little outrageous, it could very well be a phase in which she is abandoning the resriction of her parents for her own forms of self-expression.

If you are truly set on trying to change your relatives dressing habits, than you could also try and portray the idea that dressing in provocative ways is somewhat dangerous. I have heard stories of men trying to take advantage of women simply based upon their dress. Sometimes people misconstrue why someone is doing something, like dressing a certain way in this example. An individual could think its because she wants a date, when in fact its because the heat is broken in her dorm room and so she is dressing in light clothing. People can evaluate situations in a variety of ways, therefore, I think it would be wise for you to express this to your relative, not to badger her, but to create a sense of understanding. I think that understanding is the key factor here, not anger or hostility, but a general sense of awareness.

In conclusion I think you owe it to yourself and your relative to do something about her manner of dress. While you do not want to hurt her, you also don't want to see her hurt. We must understand that even though the girls on Springer may look ridiculous and we take them for low- lives, there may be something deeper going on. Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. Students form NAG Enterprises, develop Design Management major

By Chad Gillenberger

The fashion industry is booming—and not just in New York or Los Angeles—it's booming right here on our very own campus. Bucknell has one of the most fashion-conscious student bodies in the country. I challenge anyone to find a better-dressed campus than our own. Abercrombie and J.Crew might as well just set up a store in the Langone Center. This homogeneity however, is not necessarily always a good thing. Clothing is often times a visual outward extension of one's creative persona. Our campus in some ways lacks diversity in this respect. That is where NAG Enterprises enters the picture.

NAG, which is an acronym for Natalie Sopic '01, Anddy Carmona '02, and George Cowan '02, its three creators, is a newly formed fashion design company at Bucknell. Their goal is to bring about an awareness of modern fashion alternatives on campus. Their focus is primarily urban streetwear and their designs reflect the multi-faceted uniqueness of modern day city life.

Infused in their designs is an agenda of positive social messages. Some examples of current designs in progress include t-shirts and jeans stylized with graffiti art emulating spray-painted walls in New York City and pieces constructed from recycled materials such as bottle caps, paper and bubble gum wrappers. Many designs will reflect a retro influence and others that worn-out comfortable look which has become so popular recently.

NAG enterprises began as the vision of junior Natalie Sopic. Natalie has always been interested in fashion; she interned the last two summers for DKNY in New York. Originally a management major, she decided managing wasn't going to be enough for her—she wanted to be involved in the actual design of the goods she'd be marketing. This eventually brought about her decision to create her own major, Design Management.

Soon after its creation, two of Sopic's fellow classmates, Carmona and Cowan, decided to take up Design Management as their major also. Carmona and Cowan, both sophomores, encourage anyone interested in management and fashion to look into the major as it provides a unique experience by combining the best of both disciplines. Some courses that they have taken or currently are taking include; Management 101, Art Issues and Actions, Costume Design, and Elementary Drawing.

The efforts of these three entrepreneurs will result in a showcase of their designs sometime in the fall semester of next year and will be titled "Urban Millennium." It will count as Sopic's senior design project and will be a big step forward for NAG. The show will include over a hundred pieces of clothing.

Lydia Hagstoz—The Bucknellian

Anddy Carmona '02, Natalie Sopic '01, and George Cowan'02, the three creators of NAG Enterprises.

"It's going to be a lot of work but we're really looking forward to it. It'll be nice to see all our hard work pay off. It's a great learning experience and a lot of fun. I would encourage all interested to come and participate, we need a lot of help," Sopic said.

Anybody interested is encouraged to join the group—you don't need to be a Design Management major to participate in NAG. They are looking for people to help with design, advertisement, modeling, sewing, planning and fundraising.

While they are receiving funds from the University they will also be looking to local businesses to help sponsor the event. They will also be holding a clothing drive sometime later this semester; they are counting on using the donations to help create their designs and thus would greatly appreciate anything people could spare. *There will be a tryout this Saturday for all those interesting in modeling. If you are interested in attending the tryout or any other part of NAG you can contact Sopic at 577-8493. All inquiries are welcome.*

An abroad perspective: Tanzania, East Africa

By Darlene Robe

Jambo mzungo ("Hello, white foreigner!")—those were the first words I heard upon landing in Tanzania, East Africa, my study abroad destination and home for the next four months of my life.

The opportunity of a lifetime—the chance to go see another part of the world and to study another culture not from a textbook but from the people themselves—came to me through the School for International Training (SIT), an organization that believes in what they call "experimental living", or in other words, complete cultural immersion.

There were a total of 13 students on my program and collectively we represented colleges and universities across the US, from Stanford University to Bucknell. Although we were all unique and brought different perspectives to the program, there was one thing we all had in common—everyone was a science major and interested in some aspect of biodiversity and conservation biology.

Courtesy of Darlene Robe

99% of Tanzanians really live in these mud and stick houses.

Our academic advisor was Reese Matthews, an American citizen who has lived and worked extensively in Tanzania for the past ten years. For the first six weeks of the program, we traveled around as a group looking at local conservation projects currently underway.

At each destination we were required to read academic papers about the topic at hand; attend lectures from local experts (i.e., forest officials, University of Dar es Saleem professors etc.), as well as participate in intensive KiSwahili language classes. Although the academic course load was rigorous, it was also a lot of fun having class outside, under trees or around a campfire at night.

In addition to being students, we were also tourists and visited various attractions, such as national parks and sandy white beaches on the coast. Plus, through homestays with local families, we were fortunate enough to be given the chance to "go off the beaten track" to really experience Tanzania.

For a total of one month, I stayed with two different families each in a different socio-economic class. I was able to experience Tanzania from the perspective of a family. My Tanzanian mother and father were told to treat me as if I was their child.

One of the first questions I was inevitably asked wherever I went was, "How is Tanzania different from America?" My immediate response was that it was a *totally* different style of living in Tanzania; in Tanzania there is a much slower pace to life and living is definitely more people-oriented. As a whole, Tanzanians do not seem to be in as big of a hurry as Americans.

This concept of "go, go, go" is definitely not in the Tanzanian mind-set as evidenced by the fact that they are always late for everything! Through my life-altering experience abroad, I was given the chance to learn more about myself as a person, and, as a result, I have changed; I am no longer the person I was when I left in September.

In the words of my academic advisor out in Tanzania, I learned "how to walk a little bit slower". No longer do I stress about the little things in life but rather I am able to take a step back and look at the bigger picture.

It was a very humbling and enlightening experience for me to see how people in Tanzania can live so simply but yet be so happy. Ninety-nine percent of Tanzanians live in poverty. The average Tanzanian lives in a mud and stick house, with a thatched roof and a dirt floor. There are no modern appliances—no washing machines, televisions, stereos, refrigerators, stoves or even toilet bowls.

Courtesy of Darlene Robe

Darlene Robe '01 with her first homestay mother and sister.

Tanzania showed me how to go back to the basics, how to appreciate the little things in life. So next time you turn on the faucet and water comes out or flush the toilet, or even go to the supermarket, be thankful for these things, no matter how small, as there are many people in the world who would give anything to be in your shoes.

My advice to everyone is this—if you get a chance to journey abroad for an extended period of time, I say go for it, it could very well change the way you look at the world, and yourself. Goodness knows it did for me.

College pressures lead to higher levels of stress for women than men

By Helen Shen

College and stress: these two words seem to go hand-in-hand. It is nothing new to say that college students are faced with a high level of pressure as they begin paving a path for their future. However, recent studies have shown a new angle to this age-old problem—stress seems to target women more than men. In a recent study, even though a record 30 percent of college students reported to feel stress, women reported that they were twice as likely to feel stress as men.

Why, in a society where men and women boast of their equal opportunity, are women experiencing more stress? Is this trend a reflection of the different pressures society places on men and women? Is a college campus a place where men and women can find equality? Several factors contribute to this recent trend although no definite cause may be determined.

Janice Butler, the director of the Women's Resource Center, has spent 11 years working with men and women on campus. The Resource Center, which was established in 1986, evolved from a group of students who petitioned because their "needs were not being addressed" into a interactive organization that has a mailing list of over 600 people on campus. "The pressures that young people are facing today are pressures that the previous generation did not have," Butler said. She lists some of these pressures including relationships, STDs, and the high cost of college tuition.

When questioned why women report a higher level of stress, Butler explained, "The kind of women that come to Bucknell are driven to succeed," and therefore, tend to be 'perfectionists.'

"To some degree, men have the same level of stress ... our culture simply allows women to ask for help while men seek more autonomy and independence," Butler said. From her years of working with young men and women she concluded, "It is a cultural tradition that men don't want to be needy and vulnerable" therefore, men are not as likely to report the anxiety they feel. Bucknell women, on the other hand, seem to live by the motto: "We must do good and look good."

"Adolescence is a time when people do a lot of self-reflection," Butler said, "Bucknellians tend to be young people who are very high achievers and who come from backgrounds where they are expected to do well." When young men and women self-reflect, they tend to find aspects of life that can encourage stress. Consequently, they tend to expect a lot from themselves.

The question returns: What *is* the difference between college men and women and what roles does society play in creating this difference? Trudy Cunningham, Associate Dean of the College of Engineering, believes that "stress has always been fairly high." She explains that each generation faces a different type of stress and that college students today don't necessarily experience a higher level of stress than previous generations of college students. She does, however, offer several factors that contribute to the pressures felt by our generation. "We are living in an economically driven world," she said, "where it's not about getting a job, it's about getting a well-paying job."

At the same time, "tuition seems outrageously high," Cunningham notes, and the trend is that American families tend to spend rather than save. "When students see their parents taking out second mortgages, they no doubt feel the pressure to do well in school."

Christine Glover—The Bucknellian

Two female engineers stressfully attempt to solve a problem for class.

Lastly, Dean Cunningham emphasizes the inconsistency of relationships that college students today face. "Students tend to bounce between relationships ... there are more short relationships than long-term ones, and this type of 'short cycle' relationship gives students less time to be open with [themselves]."

The bottom line? "Society is imperfect. 18-22 is an uncomfortable age, and [students] must go from living under [their] parents' control to controlling [their] own life," Cunningham said. This is enough to cause alleviation of stress in anyone's life. But why the higher level of stress in women? During her 21 years at Bucknell, Cunningham has made some interesting discoveries.

"It's hard to get women to consider engineering, and even harder to keep them in engineering," Cunningham said. Although Bucknell's population of women engineers is higher than the national average (25% of its engineers are women), the statistics are still drastically lower than the percentage of men. 17% of women go into the College of Engineering, while only 13% come out as engineers after four years.

What causes this low percentage of women in the College of Engineering? "While men climb the ladder to success, women spread the web of support," Cunningham said. This idea, taken from Carol Gilligan's book, *In a Different Voice*, proposes that evolution has to do with preserving the next generation, and that women tend to posses an innate quality that teaches them to act as a "web of support." As a result of this quality, women tend to shy away from things they haven't tried, such as engineering. "Something I do in my office is to make people believe that they can do engineering, to make them understand that they have a choice," Cunningham said.

"There seems to be an assumption among Bucknell students: I have to be perfect to be here," Cunningham said. But this, she continues to explain, is a big misconception. Many female students seem to suffer from the "imposter complex," the theory that even when one has tried their best, one feels as if one just hasn't done enough. "Studies show that more women suffer from the 'imposter complex' than men. Why is this?" Cunningham asked. There isn't a simple answer.

The "imposter complex" can be illustrated by the following test: A teacher who had recently administered a test called in his students who did poorly and asked them why they received such a grade. A surprising majority of women answered with replies such as, "I didn't study hard enough; I didn't spend enough time; I could have worked harder." On the other end of the spectrum, the majority of men explained, "The test was too hard...The test was unfair." The difference in the types of responses generated from this test is both interesting and complex.

"It is no surprise that college students often find themselves under a lot of pressure," stated Leo Reisberg in his article, "Student Stress is Rising, Especially Among Women." Although there is no magical spell that can be administered to reduce stress, both Butler and Dean Cunningham offer some solutions. "We are human beings, not human doings," Butler said, "and we should try to find diversity in *all* things." The most important thing? "Be yourself," she suggested.

Although Dean Cunningham conceded that "society is always hard to deal with," she also leaves students with an important piece of advice: "No matter what you do, you can't lose yourself. [Instead], seek experiences that will take you out of your comfort zone so that you can let that zone grow a little."

We're women so according to this article, we're probably stressed out. Please make our lives a little less hectic and write for features! Call Rebecca today at X74453!

Arts & Entertainment

Campus favorite Pat McGee Band returns to Uptown

By Stephanie Nickse

Pat McGee returned to Bucknell University this past Sunday to perform for students at Uptown. With all the events on campus over the Valentine's Day weekend, Pat McGee arrived on campus to turn the heads of all music lovers. His band caught the attention of almost 300 students who crammed onto the dance floor to get a look at the Dave Mathews sound-alike musician. Pat performed music from all three of his albums, including new songs from his latest album, soon to come out in April.

Upon entering Uptown, the band was an inviting sound to the ears. It gave the area a nice atmosphere where students were eager to dance and sing along with the music. As a first timer to Uptown, it was amazing to see how many students spent their Saturday night.

Along with good music, there were refreshments offered and pool tables available for use. "I like being able to go out and listen to good music on the weekends. It is a nice addition to campus life and a great way to keep kids indoors over the long winter," said Alaina Cotillo '03. With snow blowing through the quad, students from Swartz Hall prefer walking to the basement for good music and fun, rather than battle the elements to find entertainment elsewhere.

The general audience was definitely encouraging and cheered the Pat McGee Band on from the start of the performance. Students were enthusiastic about going to the concert and once there, no one was hurrying out the door. "He was very impressive. I think he has the talent to really become something huge," said Jennifer Kercull '03, a student who attended the Saturday event. "I have heard a few good bands while working there (Uptown), but I think that the Pat McGee Band is definitely going to make it in the music industry", an Uptown employee said. The band has definitely proven itself to be a big seller nationwide.

Pat began playing music and singing in his home state of Virginia as a boy. Initially a pianist, Pat picked up the guitar at sixteen. His career began in high school when he formed a band, Gillian's Fun Deck. This three-man band was composed of Hugh, Chris, and himself.

Pat idolized the Allman Brothers and followed their style until he formed a new band in 1996, the Pat McGee Band. Today, he travels around the country performing and recording his music. He has played in thirty-two states and has still managed to produce three albums.

Pat McGee's first album, "From the Wood", was a product of his early days in high school and college. The first Pat McGee Band album was titled *Revel* and later came *General Admission*, a live album. "I think that *Revel* is my favorite CD but I am very excited to hear the complete version of the band's album coming out in April. Still, it was great to hear "Girl from Athens" and "Rebecca" from his first album", said freshman, Matt Sandusky.

Today, the Pat McGee Band consists of Chardy McEwan on percussion; John Small on the bass; Al Walsh as vocalist and on acoustic guitar; Chris Williams on drums; Jonathan Williams as vocalist and pianist; and Pat McGee as lead vocalist and guitarist. Pat looks at his accomplishments and thanks his family and friends for all of his success.

The University wishes the Pat McGee Band the best of luck in its future endeavors and great success with its upcoming album.

Monica Montgomery—The Bucknellian

Leader vocalist Pat McGee, accompanied by Al Walsh on accoustic guitar, entertain students at Uptown last Saturday

Medeski, Martin, and Wood bring five years together in latest album

Courtesy of www.mmw.net/menu.html

***Last Chance to Dance Trance* is a compilation of the favorites of Medeski, Martin, and Wood from 1991 to 1996, and will appeal to fans as well as jazz lovers.**

By Campbell Gerrish

Do you like classic and new age Jazz? Do you like funk too? Wouldn't it be really great to combine all these styles together into one hip, jazzy, sound with a heavy funk edge? Well search no further. Medeski Martin and Wood have put it all together in their latest album *Last Chance to Dance Trance (perhaps). Best of (1991-1996)*. This album includes fragments of their work over a five-year period, their most productive and creative time since they formed in the early 90's. Ace Hayes from Plan9 Music described them best when he said, "There was funk in the grooves, swing in the beats, reggae and soul and blues all swirled together in a sound that always seemed natural, never reaching or contrived". That is Medeski Martin and Wood - something original that stems from popular styles.

The first two songs on the album are well known favorites, "Chubb Sub" and "Bubblehouse". On "Chubb Sub", Martin lays down a funky jazz bass riff that includes the slides and drones reminiscent of John Coltrane or Miles Davis on a stand up bass. On "Bubble House", Medeski plays an organ that sounds like what you might hear at a hockey or baseball game. The song starts out mellow but picks up to a pace that sounds a bit like Tower of Power's hard, driving grooves. This song definitely focuses on the funk side - good time changes + good bass + good organ = good funk.

The fourth song Hermeto's Dream is absolutely beautiful and displays MMW's versatility. This song comes off of *Notes from the Underground*, the first album on which Medeski plays entirely piano. The piano in this sounds a lot like Brubeck, the bass is playful with many plucks and taps, and the drums add a more modern, danceable beat. Masters of the time change, MMW switch from a dance-jazz creation to a chaotic, free-jazz section, and then whip right back into the sectionpart with astounding precision.

Another more noteworthy piece is, "Is There Anybody that Love my Jesus", which meshes an atonal melody with a recognizable soul descent on the bass. Medeski follows the bass with the soul on the Wurlitzer keyboard.

"Night Marchers" is one of the best songs on this album. This one is a live track, so you can hear all sorts of screams and cheers, and it stays more along the funk/soul lines. It is a longer song, but the whole time Medeski and Wood improvise, grooving off of each other, while Martin keeps a steady hip-hop beat.

Lastly, is "Bemsha Swing/Lively Up Yourself". It begins as a slow and romantic, fairly classic swing piece. On this one a horn section is included which provides some essential jazz elements including a mellow trumpet and sax. Just as the swing part has you relaxed, almost entranced, the trumpet takes a solo and the band kicks into a rendition of a well known Marley tune—"Lively up Yourself". The change will take you by surprise and make you want to get up and bounce to the groove.

Clearly this is an album worth adding to your record collection. The jazz lover will appreciate MMW's inventive style, blending long time cherished standards with a new age twist. For those who usually dismiss classic jazz as noise, this is a good place to start developing a taste for the first real revolutionary music style and its masters. MMW's *Last Chance to Dance Trance* (Perhaps) chills you out, gets your head bobbing, your feet stomping, makes you feel good, and puts a smile on your face. As stated in Rolling Stone, this album is "....an ass shaking testament to the many moods of the Holy Groove". Need I say more?

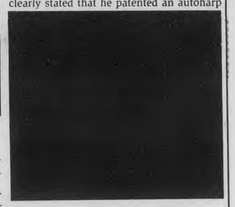
The unusual instrument of the week: the autoharp

The autoharp got its manufacturing beginning in Philadelphia in 1885.

By

The origin of the autoharp has been recently subjected to scrutiny by a reporter for *The Autoharp Quarterly magazine*. This instrument was thought to have been produced by Charles F. Zimmerman from Philadelphia, PA until critical investigation proved differently. Analysis of the autoharp reveals that its physical qualities were changed by Zimmermann, but the original came from a German named Christian August Gutter.

The instrument that Zimmerman patented evinces several variations from Gutter's original creation. The shape of Zimmermann's autoharp differs from the original along with the mechanism used to dampen the strings. After further investigations in the foreign patent section of the U.S. Patent Office and various libraries and museums in Pennsylvania, Washington D.C., New York City, and Germany, the investigators found clarification in Zimmermann's patent. It clearly stated that he patented an autoharp with the "new and useful improvements, suggesting that he did not invent the original. The autoharp was not manufactured in Philadelphia until 1885.



Though Charles Zimmermann was not awarded as founder of the autoharp, he spread its popularity throughout the country. Now that the true history of the autoharp has been uncovered, it is venerable to give full credit to Christian August Gutter.

Weis Center continues Svard's series *150 Years of the Avant-Garde . .*

By

Friday, February 11th Lois Svard performed Concert III in her Weis Center series of 150 Years of the Avant-Garde. Lois Svard is a member of the University's Music Departments' piano faculty. The purpose of thisseries is to perform the music of radical composers of the past century and a half; this concert specifically covered music from the beginning of the 20th century.

The concert seemed to be not only a listeningexperience but also a learning experience for the audience, as Svard gave background information for all of the pieces she performed.

The first piece of the program was "Bacchanale" prepared for piano by John Cage. Svard spoke of another piece that Cage had written entitled "4:33" in which a performer walked on stage, opened the piano lid andsat silently on stage for 4 minutes and 33 seconds.

In this piece Cage stresses that in the absence of sound there is indeed sound, for example the squirming of people in their chairs, coughs and sneezes, watches ticking. Fortunately, Svard did not perform Cages' "4:33" but instead performed his prepared piano piece "Bacchanale". In this piece, Cage was looking to create a percussive sound on the piano therefore the performer is instructed to insert screws, nuts, boltsand weather stripping between the strings of the piano in order to create this unique tambour.

The next group of pieces Svard performed were "Three Tangos"; one by Stravinsky, one by Wolphe and the finalpiece composed by a member of the University Music Department Jackson Hill. Svard explained that each tango had a different influence. Stravinsky's had a Russian "flavour", Wolphe's a cubist twist and Hill's a Japanese influence. The pitches from Hill's piece were taken from the 13-stringed Koto, a Japanese instrument.

The second half of the program Svard performed pieces for two pianos with musician Genevieve Feiwen Lee. The first piece the two performed together was Charles Ives' "Three Quarter-Tone Pieces for two pianos". In this piece the two pianos are tuned a quarter of a step apart, creating a very unique and often uneasy blend of sound.

Svard told the audience that Ives had originally written the third movement of the piece for a chorus but quickly came to the realization that it is,difficult for choruses to sing a quarter step apart.

The final piece of the night included two excerpts from the well-known "Le Sacre du Printemps" by Stravinsky. Svard spoke of how the piece incited a riot when first performed around 1913. The riot was sparked by the radical nature of the piece. Since there were no riots during this performance, the mainobjective of this series seems to be proving the success of musicians who have pushed the musical envelope during the past century and a half.

Are Hollywood's actresses setting their sights too slim?

By Carolyn Hyman and Kristen Barton

Courtesy of www.resoftlinks.com

Calista Flockhart is one of the many Hollywood actresses who has been getting attention about her weight.

The idea of "impossible beauty" has never been so visible. Today's models and actresses look gaunt and sickly instead of lean and toned. The sex symbol of the 1950s, Marilyn Monroe, was a 5'5" curvaceous size 14. Now it's practically impossible to identify a female celebrity not donning a single-digit dress size. Today's celebrities are going to extremes. Calista Flockhart from *Ally McBeal*, *Friends'* Jennifer Aniston and Courtney Cox Arguette, Helen Hunt, Paula Devicq of *Party of Five*, and "Posh Spice" Victoria Beckham have all recently become significantly slimmer, raising inquires about their health and nutrition. Standing 5'5 1/2" tall and weighing only 100lbs. Flockhart has received the most attention; however, many of today's stars are slowly approaching emaciation.

Not only do these scrawny stars set a standard of beauty impossible for normal women to achieve, but they place pressure on one another to become slimmer and slimmer. *Ally McBeal's* Courtney Thorne-Smith, size four, admitted that she would probably be 5lbs. heavier if she wasn't concerned with looking "big" next to her size two castmate.

They also feel pressure to look thin for fear of losing their jobs. By 1998, seven shows featuring women over 40 who did not necessarily fit the super-skinny mold had gone off the air: *Cybill*, *Murphy Brown*, *Roseanne*, *Grace Under Fire*, *Murder She Wrote*, *Dr. Quinn, Medicine Woman*, and *Ellen*. Today's actresses are not representative of real women. Real women come in all shapes and sizes; however, in Hollywood, diversity of size may as well not exist.

In fact, our standards are so delusional that even our most beloved stars cannot fulfill them. Even Julia Roberts' body wasn't considered to be satisfactory, as a body double was used in her place in the poster shot of her film Pretty Woman. In fact, advertisements are often compilations of the best attributes of several models. With the use of technology they can cut and paste one model's legs with another's rear, another girl's chest, and a separate model's face. A recent cover of *Mirabella* featured a computer- generated model. Using airbrushing techniques they were able to create the "perfect woman." How are women expected to compete? It's like competing in a math bee using only your own intellect against a calculator. It just isn't fair.

Arts & Entertainment

Electric guitarist, Tim Brady performs at Weis Center

Courtesy of www.genration.nell-tbrady/

Tim Brady provides his audience a blend of self-composed music on the electric guitar.

By Campbell Gerrish

On Tuesday, February 8, Canadian composer and electric guitarist Tim Brady came to the Backstage of the Weis Center to perform pieces from his seventh CD, *Strange Attractors*. Brady is a world-renowned guitarist/composer and has worked on many different projects. He leads an electroacoustic chamber ensemble called Bradyworks, which frequently performs solo concerts In London, Amsterdam, New York, Prague, and Kobe, Japan and was also the artistic director for The Body Electric Festival, a 23 concert celebration for new electric guitar music. He is certainly an accomplished composer and works with an instrument and technological style that is not easily accepted by the mainstream composer's world. However, according to *Guitar Magazine*, "Of all the talented composers attempting to storm Symphony Hall fully plugged, none surpasses [Brady's] guitaristic insight and compositional craft. Brady's work for solo electric guitar, guitar and tape, and guitar with chamber and orchestral ensembles skillfully exploits the instrument's unique properties, eliciting colors and combinations unprecedented in rock and classical."

Well, I can honestly say that the Brady's performance was one of the most bizarre, obscure, but at the same time impressive shows that I have ever seen. To sum it up, it sounded as though he were playing the soundtrack to *The Empire Strikes Back*, phasers, hyperspace take-offs, light saber duels, and all those crazy booms, flashes, and explosions included in the extra-terrestrial saga. There was a foot-pedal board with about ten buttons, three or four other separate pedals, and then the main computer that made up Brady's sound-effect control center. The integration of the technological set-up and Brady's guitar playing resulted in one audience member's summation of Brady's character—"A computer nerd who met the guitar".

After an introduction, Brady jogged up to the stage with a lot of bounce in his step, gave the audience a nod, plugged in, strapped in, closed his eyes, gave himself a relaxing shrug and began to play. The first song initiated the show with a bang. "Linear Projection in a Jump Cut World" was a ballistic, jumpy, sporadic piece that reminded me of Stanley Clarke's work in the 70's. It was dramatic, confusing, and just plain wild. He played along to a tape on which he had prerecorded 24 other guitar parts, which made it hard to follow. I knew right off the bat that this was going to be an interesting experience.

Next was "Collapsing Possibility Wave". My first thought on this piece was, "Wow, this sounds a lot like horror movie theme music, like something out of a Freddy Krueger chase scene in a boiler room". For this song Brady used his computer and pedals diligently, layering many different parts over each other with a delay/recording effect and a volume pedal. He would play with the volume up, the computer would record the riff and the machine would loop the riff, playing it over and over again. His precision during this process was impeccable. Over the violin loop he kept whipping out this funny little riffs similar to those from the Top Gun theme song.

The third piece, "Difference Engine #1, #2, #3", moved away from the techy-electronic stuff to a solo guitar piece which was completely live. He played his intro as though he had set his fingers onto rapid fire mode and shot out notes with astonishing speed. Then he slowed it down into a nice melody, did some tapping, used a bunch of harmonics, and then jumped into a part in which he used Flamenco style strumming. It was as if he had taken chords from a Pink Floyd tune and put them into a traditional Latin song.

For "Pandemonium Architecture", Brady mentioned that this piece displayed how "the sounds of guitar could be radically transformed by the computer." Well, once again, the beginning of this piece sounded as though the Weis Center was lifting off and making the loud, explosive transition into hyperspace. But then we came out of hyperdrive and Brady played a serene part during which I assumed we were floating through a colorful and peaceful galaxy. Further into the peace he started beating on his guitar, knocking on it, and bending notes by pushing down on the top of the instrument.

The next piece was a really short one which Brady dedicated to the slide guitar. Brady said he "fell in love with the slide guitar listening to Duane Allman in the 1970's". "Minimal Surface", a slide guitar composition, was an enjoyable, short and peaceful piece, a good warm up for the finale.

Brady's final piece, "Memory Riot" was quite long, but definitely my favorite piece from his performance. Before starting Brady stated that this song was "really about one thing and one thing only—rhythm pulse and rhythm, because that's all there is really". This piece was the most impressive of all, including the wild and crazy, confusing parts, but also some sections here and there that were very easy to follow and enjoyable to listen to. He went back and forth from serenity to chaos and ended with one big rock and roll chord which was very satisfying.

Overall, I did enjoy the performance, but Brady's music is nothing you're going to hear on WVBU anytime soon. I was interested and impressed but did not become a fan. Tim Brady's style is very complex and technological. He treats the guitar more as a computer keyboard than an instrument. It allows him to program unique sounds and complicated musical pieces through a big computer. Brady describes his album as "a world of sonic delights where the six string behemoth rules supreme and where the musical imagination, constrained only by the rapidly diminishing limitations and very considerable possibilities of current music technology, seeks to explore the full dramatic and expressive potential of the electric guitar".

This week's Movie Reviews . . .

Audiences are screaming for *Scream 3*

By Krista Reisdorf

Courtesy of movies.yahoo.com

While Posey is a new addition to the Scream 3 cast, Cox and Arquette return for the third film.

As a movie-goer, I am generally wary of sequels and trilogies, especially when they pertain to horror movies. I usually expect a big disappointment, a movie that is nothing like the first (which was a hit), and so pathetic that I can't believe it was even made. Because of this theory, I wasn't sure if I wanted to see *Scream 3*. I thought the original was great, but the second (as of many sequels) couldn't even come close.

To my surprise, *Scream 3* renewed my faith in sequels and in horror movies. Neve Campbell returns as Sidney, the young girl who has been terrorized by the masked killer more than once in her life. She is now living in the middle of nowhere under a new name, and trying to start over again. Meanwhile, the movie "Stab 3," a portrayal of the actual killings, is being filmed in Hollywood. Soon everything begins to go awry. The killer is back and out for his final revenge—this time no rules apply.

David Arquette is back as the dorky but lovable Dewey, and Courtney Cox Arquette reprises her role as the nosy, ruthless reporter Gail Weathers. Some new additions to the cast include Jenny McCarthy, Scott Foley (Felicity), and Parker Posey (You've Got Mail), who gives a hilarious performance as the woman chosen to play Gail Weathers in "Stab 3". Patrick Dempsey (With Honors) arrives as a detective on the case.

Although the movie isn't overwhelmingly scary, it has it's frightening moments. It offers quite a few laughs, whether they're from witty lines or just plain slapstick comedy. It surpasses *Scream 2* as engaging characters are introduced, hysterical cameos occur (people won't believe some of the stars that make brief appearances in the movie), and many mysteries are revealed.

Other audience members seemed to enjoy it as well. One male Bucknell student said, "It was a lot better than *Scream 2*, and at least as good as or better than 'Scream.'" Hillary Depiano '02 said "It was enjoyable, but not that scary". "It had more plot than the former scream movies. It kept you interested in the story," said Nicole Sizgorich '02.

Obviously, *Scream 3* isn't Oscar-caliber, but who cares? It's a fun movie to watch and it holds the attention of the audience. I recommend seeing this movie, whether you've seen the previous movies or not (although seeing the first two will give you some background).

In my opinion, it lives up to the original, and provides sufficient and satisfying closure to the trilogy. You're guaranteed to laugh or scream so either way you're in for a good time!

Leo fans go wild over *The Beach* while leaving others disappointed

By Katie Parker

A shirtless Leo. A wet Leo. A Leo screaming. A Leo kissing. Basically, aside from Leo cavorting and galloping and smiling pretty for the camera, there wasn't much else to *The Beach*.

Sitting down in the theatre amidst the goggle of high schoolers all discussing the actual percentage of time Leo is shirtless already started the movie off on the wrong foot. But I sucked it up and gave it a chance. We start with Leo in Bangkok, running into a psychotic Robert Carlyle, who first brings up the dream of The Beach, a beautiful, tropical island paradise, completely secluded and unspoilt by man. DiCaprio, being a free-spirited hippie type who leaves the USA for Bangkok (for a reason that is never explained properly in the movie). Leo meets up with a French couple, explains the idea to them, and they head off to discover the magic of the Beach themselves—and run into certain obstacles (such as drug growers) on the way.

Here is where the film has its majesty. The scenery was absolutely brilliant. Every shot was at a perfect angle, every scene was masterfully portrayed under the watchful eye of director Danny Boyle. The mountains, the ocean, the waterfalls—everything is exactly how one would imagine a secluded heaven on earth to be.

Unfortunately, the brilliance ends here. The acting was, at best, mediocre. Virginie Lodoyen, the French beauty, wasn't much more than a beauty, although she was one of the better actors. And while Leo did exhibit his known ability to act well (in films like *What's Eating Gilbert Grape?*), he did so sparingly. Robert Carlyle, however, true to form, did lend a good performance to a semi-difficult role.

I think what was most disappointing about this rendition was the fact that the actual novel *The Beach* was very enjoyable. I tried not to bring my prejudices in with me, and I hope they didn't taint what I felt was a merely average interpretation of a brilliant book. And, if all you're looking for is a good 1hr 58 min of Leo-candy ... this is definitely the film for you!

Courtesy of www.thebeachmovie.com

Along with Leonardo DiCaprio stars the new face of french actress Virginie Lodoyen.

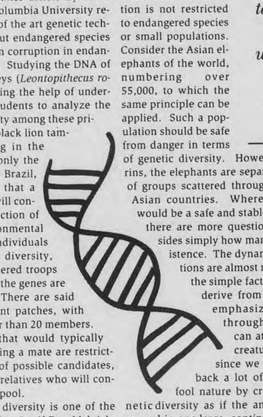
Science & Technology

Part I: Genetic homogeneity threatens endangerd species

By Alex Piel

While so many of our modern resources and technology work to help present-day societies expand into the habitats of non-humans, not all work is this anthropocentric. Sometimes the combination of tax dollars, intellect and unselfish motives can contribute to significant ecological and environmental gains outside of the human race.

A recent *New York Times* article by Alexander Stille reports that Columbia University researchers are using state of the art genetic technology to learn more about endangered species and investigate the hidden corruption in endangered species sales fraud. Studying the DNA of black lion tamarin monkeys (*Leontopithecus rosalia*), researchers are using the help of undergraduate and graduate students to analyze the decreasing genetic diversity among these primates. With only 1,200 black lion tamarin monkeys remaining in the world today, inhabiting only the Atlantic forest of eastern Brazil, researchers are worried that a lack of genetic diversity will contribute more to the extinction of this species than environmental loss. Although 1,200 individuals are enough to maintain diversity, the tamarins live in scattered troops throughout the forest, so the genes are not distributed evenly. There are said to be about nine different patches, with some troops having fewer than 20 members. Consequently, animals that would typically wander in search of finding a mate are restricted to a limited number of possible candidates, most of whom are close relatives who will contribute little to the gene pool.



"The loss of genetic diversity is one of the biggest causes of extinction," saif Don Melnick, a professor of biology and anthropology at Columbia and the head of CERC, the Center for Environmental Research and Conservation. Arguing that it is more than just habitat loss driving animals extinct, he said that the homogeneity of a troop leaves them more susceptible to disease and epidemics. Additionally, possible lethal genetic deficiencies that would normally be recessive in larger-sized populations now occur more frequently as animals inbreed. Such dangerous reproductive practices often cause unrecoverable population losses in isolated colonies of animals. With too many losses such as these, entire troops are wiped out and eventually the species becomes extinct.

Previously theories, accepted by both researchers and the general population, advertise that saving habitats equates to saving species. But Melnick disagrees: "In conservation, we've learned that it's not enough to protect an area in order to save a species. If a population has lost its genetic diversity, you can build a wall around its habitat and the species will still die off," Melnick said. The threat of extinction is not restricted to endangered species or small populations. Consider the Asian elephants of the world, numbering over 55,000, to which the same principle can be applied. Such a population should be safe from danger in terms of genetic diversity. However, like the tamarins, the elephants are separated into hundreds of groups scattered throughout over a dozen Asian countries. Whereas initially 55,000 would be a safe and stable number, suddenly there are more questions to be asked besides simply how many animals are in existence. The dynamics of such populations are almost more important than the simple factual statistics we can derive from research. Melnick emphasizes that it is only through strategy that we can attempt to save these creatures, "Realistically, since we are not going to get back a lot of forest, we have to fool nature by creating the same genetic diversity as if the animals were moving around in one large, continuous space."

Studying the DNA of black lion tamarin monkeys, researchers are using the help of undergraduate and graduate students to analyze the decreasing genetic diversity among these primates.

The problems of genetic homogeneity do not only rest only in animal mating, though. Not long ago, scientists at the American Museum of Natural History began a project entitled the "caviar project". Investigating whether or not endangered species of caviar (especially sturgeon, a species which is considered off-limits to commercial fisherman) were being sold under false names, researchers tested various types of caviar for sale in New York. Sampling caviar from the finest food stores and restaurants, their results were astonishing. Over 25 percent of the caviar was mislabeled as merchants deceptively fooled the public into buying cheaper caviar than the type that was advertised. Importers were selling both illegal caviar that is supposed to be protected under the Department of Fish and Wildlife Law, and also using cheaper fish eggs and mislabeling them to increase profit. The United States Fish and Wildlife Service then implemented its own method of genetic fingerprinting of caviar and began banning shipments across the country. Such a method of prevention has yet to be universally accepted by researchers without unified support; the endorsers have been vulnerable to lawsuits from caviar suppliers who are upset at their reputation damage and sales loss.

Such private investigation, however, stops neither with caviar nor with New York. Currently, environmental activists are going undercover into the Chinese and Japanese areas of major cities throughout the country to examine products and merchandise that may contain such illegal imports as rhino horns or bear gall bladders from various endangered species whose parts are highly valued by traditional oriental medicine. Similarly, Harvard University's Center for Conservation and Evolutionary Genetics annually sends a team into prestigious Tokyo sushi markets to search for the meat of whales that is supposed to be protected by international whaling conventions. Japanese law prohibits the exporting of whale meat or whale DNA so American and European biologists must setup small laboratories at local hotels and run the necessary tests there to explore the contents of such shops.

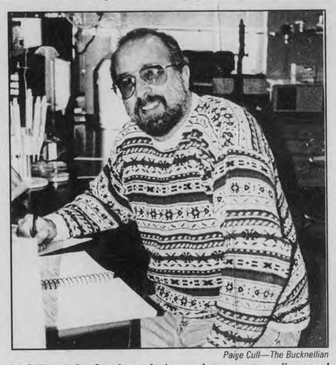
Not to the scientists' surprise, but to their dismay, they discovered a multitude of other species being sold as expensive and rare whale flesh such as dolphin, porpoise and even goat meat. Like the caviar, almost 30 percent of the actual whale meat being sold was from endangered and supposedly protected species. Steve Palumbi, the director of the Harvard Center and a professor of evolutionary biology, says that number has plummeted to near 5 percent since this project began six years ago. Such tests and projects, though, have only been possible by a chain of technological breakthroughs beginning in the late 1980's.

See next week's Science and Technology section for Part II of this article to discover how modern science is working to help save the endangered species of the world today.

Chernin gives talk on DNA research

By Jon Anson

On Monday afternoon, Professor of Biology Mitchell Chernin delivered an informative seminar entitled "My Heart Swells for You on Valentine's Day" to a packed audience in Gardner Lecture Hall. This biomedical engineering seminar focused on the molecular and physiological affects of a synthetic gene on the growth of the heart. Specifically, the lecture focused on angiotensin II, a hormone that regulates blood pressure. Over the past five years, Chernin has worked in collaboration with Dr. Keneth Baker (Texas A&M medical school) and undergraduate assistants to determine what factors are responsible for heart growth. Using mice, Chernin's laboratory has been the first to successfully show a direct relationship between angiotensin II production and heart growth in vivo.



Paige Cull—The Bucknellian

Prof. Chernin has found a synthetic gene that promotes cardiac growth.

Chernin hypothesized that cardiac growth results from expression of angiotensin II in the heart and that the mechanism of action is via an intracrine pathway, one in which a hormone binds to receptors in the cell that produces it. To test this hypothesis, Chernin studied protein synthesis and the increase in cardiac cell size due to angiotensin II. A major obstacle in this task was to differentiate angiotensin II produced in the heart from angiotensin II produced in other areas of the body. To overcome this obstacle Chernin combined biochemical methods with engineering methods and was able to differentiate between angiotensin II produced in different parts of the body. Plasmids (circular pieces of DNA) and synthetic genes were used in this process, and the heart weight to body weight ratio of the mice studied was determined.

Chernin's results showed that angiotensin II produced in cardiac cells stayed in the heart and caused significant heart growth. He also concluded that angiotensin II does not act independently but rather initiates a growth cascade pathway. The results of this study have several medical ramifications and open the door for further experimentation in several areas. The next question is to see if the process can be reversed if an adult's renin-angiotensin system is turned on when it should not be. Preliminary studies by Chernin have proven this to be possible, with the help of expensive drugs. Despite all the accomplishments of his laboratory, Chernin is pushing forward, searching for more answers through experimentation in this field.

TECHNOLOGY COMMENTARY

Confused by The Internet?

Forget the hype—here's what it *really* is

By Rick Hoskinson

When the World Wide Web first aided universities and government organization in 1992, few people realized its private sector potential. The Internet hardware at the time was relatively simple, and did not meet the high capacity standards we have today. The Internet was a place only technophiles visited; those without a technical background were not invited.

Thanks to the World Wide Web, the Internet has soared to new heights of popularity. Every day the local news has a story about new Internet developments. Dot Com companies spring up like weeds, choking out the traditional dinosaurs of industry. Old companies learn new tricks and use their extensive resources to develop web empires. Every school-age child can hop on a computer and "surf" the web for information on their favorite hobbies.

Even with all of the Internet hype and consumer attention, the term "Internet" remains as confusing as ever. The word "Internet" means a lot of things to a lot of different people. Recently a family member proudly reported to me that the Internet was nothing more than millions of users dialing up a single computer called "The Internet". I have heard people explain the Internet as computers chained together in a huge, decentralized data exchange network. Some have personified the Internet into a living, computer spirit that intrudes upon one's home and from which no one is safe.

As fun as Internet theories are, the real Internet is actually quite simple in design. At the heart of the Internet are huge information "clouds". These clouds are made up of interconnected network hardware. Much of the information in these network "clouds" is passed though fiber optic cables between huge electronic switches. These switches are used to determine the destination of Internet data. For example if information is sent from a computer in New York, it could be passed though a phone line, through any number of Internet switches, and finally to the destination computer.

The layout of the Internet is like that of a spider web. The design is very robust, and an Internet outage at a switch can be countered by re-routing data through working switches. This same technology routes Internet traffic around crowded areas.

That still leaves the question of what exactly Internet traffic is. When one sends information over the Internet, the data has to take some shape. Therefore, information is sent in a data structure called a packet. The functionality of the packet is very similar to that of a standard postal envelope. The envelope has a destination address, a return address, and the information to be sent. If you have been using the Internet for any length of time, you may have heard the term TCP/IP. This is the protocol of the Internet or loosely, the format of the envelopes being sent. Computers are a bit more particular than post offices when it comes to addressing, so a strict set of protocols are maintained.

All of the Internet hardware is expensive though, and somebody has to pay for it. Right now, phone companies own the majority of Internet cables and network components. Phone companies are in a prime position to do this, as they already have the infrastructure in place. Cable companies are other businesses that come to mind when one thinks of connectivity. Right now there are many initiatives by cable companies making high speed Internet available to subscribers.

Since the Internet is not owned by one entity, an organization has been created to determine standards and direction for the Internet. The Internet Society (ISOC) is a group of industry leaders and interest groups that are called upon for Internet standards and architecture recommendations. Domain names (Internet addresses) are organized though a service called InterNIC. This organization is actually the cause for international dispute about who owns Internet registration rights. Since InterNIC was appointed by the U.S. Department of Commerce, many countries feel that they are unfairly represented on the Internet.

In actuality, the Internet itself is really pretty lackluster. The user community makes the Internet the hotbed it currently is. Hopefully, this lack of insight can help you better understand the current flood of debate surrounding the future of the Internet. Realize that the Internet is not some government invention of Al Gore, but it is a very expensive computer infrastructure owned by private industry. The question of government regulation becomes incredibly complex when multinational corporations own much of the Internet hardware.

Next week, I would like to explain a growing threat to the health of the Internet. Recently, there has been a torrent of reports about "hackers" denying service to major Internet sites and providers. I will attempt to clarify this very real threat and give some insight into the scope of the problem.

Worldwide need for family planning

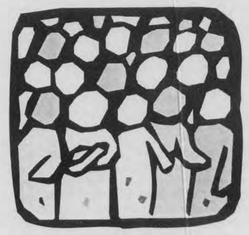
By Amanda Libengood

The world's population exceeded 6 billion in 1999. That's an increase of over one billion in just 12 years! Global population is increasing by 78 million every year, despite the decline in the average number of children born to each woman (fertility rate).

This rapid growth in the population will continue, especially in underdeveloped countries that do not have adequate family planning services. A direct correlation has been noted between contraceptive use and fertility rate. However, doctors have been berated for discussing birth control with their patients in many countries, including England.

In the past 30 years, family planning services have improved on a worldwide scale. Contraceptive use has risen from 1 in 10 couples to over half of all couples in the developing world. The desire for smaller families is spreading, but access to birth control methods is still rather limited.

Contraceptives are available in most countries, but often at very high cost. In Sri Lanka, women were quite eager to control fertility, but could only afford to buy birth control pills five at a time rather than the monthly pack of 21.



In Japan, women were forbidden access to the pill until 1999. Thus, birth control took the form of abortion. In India, injectable contraceptives are illegal. Even today pharmacists in Ireland are not required to sell condoms. With this sort of government regulation, family planning can be difficult even in developed nations.

Only since the 19th century have families routinely seen more than two children survive to the next generation. Otherwise the population explosion would have happened years ago. Smaller families reduce stress on the environment, benefit their respective economies, and have a greater internal success rate. Research has shown that children coming from smaller families have a greater likelihood of entering and staying in schools. In addition, pregnancies that are at least two years apart increase the survival rate of the baby and the mother.

Despite the overwhelming reasons to push for family planning in poorer nations, the people who need the most assistance cannot afford it. Donations from richer countries are absolutely essential. Failure to receive this support could push underdeveloped nations to the extreme.

Birth rates could continue to increase, and, with earth's limited resources, food and shelter availability could soon become a more serious issue. Should birth rates continue to rise, governments may be tempted to enforce population-control measures such as those taken in China during the 1950s and 1960s. This could force the abortion rate to skyrocket and jeopardize many mothers' health as a result.

Much expertise has accumulated about how to make family planning available to those who need it. The cost to developed nations of meeting this worldwide need is less than $5 per person, per year. Compared to the financial, environmental, and human costs of failing to act now, this amount is trivial.

Athlete of the Week

***Valter Karavanic '00**, who scored 20 points on 7-12 shooting and grabbed four rebounds to lead the men's basketball team to a 73-56 win over Lehigh last night.*

Bison run away from Lehigh, win 73-56

Karavanic and Werner have breakout games for Bison, who extend their winning streak to two after 66-55 win over Army

By Chris Ellis

For center Brian Werner '03, it was a breakout game.

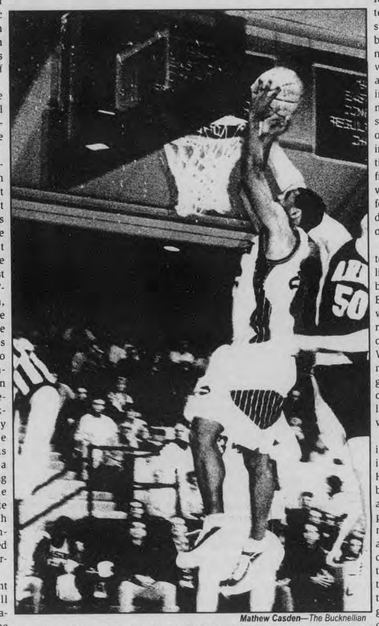
For forward Valter Karavanic '00, it was a sign that midseason shooting struggles may be a thing of the past.

And for the Bucknell basketball team, it was exactly the kind of game that they needed.

Sure, Bucknell's 73-56 win over Lehigh last night—a game that wasn't nearly as close as the score indicated—didn't come against one of the league's best teams. Lehigh is 7-17 on the season, and the road to the Patriot League Championship is far more likely to run through Annapolis or Easton than it is Bethlehem. But Bucknell's efficient, tidy win over the Mountain Hawks gave the team a two-game winning streak in the league—and, quite possibly, the birth of some momentum sorely needed as the League tournament nears.

"It's important to get on a roll now," said Karavanic, who led the Bison with 20 points in just 25 minutes of play. "It makes it much easier as the tournament starts."

It is important for Bucknell's top players to get on a roll as well, and Karavanic used yesterday's game to signal that the jump shot that has made him one of Bucknell's best shooters over the past four seasons ette earlier in the month, began to break from his mini-slump by hitting a clutch three-pointer late in last Wednesday's win over Holy Cross.



Mathew Casden—The Bucknellian

The Bison dropped Army, 66-55, last Saturday and Lehigh, 73-56, last night at Davis Gym. The wins improved their league mark to 6-3.

Karavanic attempted just two shots (hitting both) in Bucknell's weekend win over Army, and broke through in a big way last night. Karavanic scored 20 points on 7-12 shooting in the contest, hitting four of seven free throws. Karavanic also grabbed four rebounds and didn't turn the ball over.

Karavanic had to share the spotlight, though, with backup center Brian Werner, who scored a career high 15 points on 7-9 shooting. Werner played 23 minutes in the game, taking some of the inside-game load off Dan Bowen '00.

Lehigh, playing without leading scorer Jared Hess, struggled both offensively and defensively, as poor shooting and missed defensive assignments doomed the Mountain Hawks from the start. Bucknell took control of the game early and opened leads of as large as 32 points midway through the second half.

"I think that this is a great place to play, and I was feeling good about my team coming in here," Lehigh coach Sal Mentesana said. "I felt like we were really going to be competitive in this one. Wow—I couldn't have been more wrong."

The Bison had to wait a while to get rolling in yesterday's game—tipoff time was scheduled for 7:30 p.m. but was delayed almost 45 minutes by the women's game—but once the action started, the Bison took control. Karavanic set the tone for both his night and his teams' very early in the game, drilling a three-pointer on Bucknell's second possession to give the Bison a 3-0 lead. Karavanic hit two free throws on the next possession to open a five-point lead, making a statement and helping the Bison run away with the game early.

"It's a plus to have the first shot go down," Karavanic said. "If you keep shooting, though, you know some will start to fall. I felt good in warmups today, and after the first went down, I felt even better."

The Bison played a bit sloppy for much of the first half, but were still able to run away and hide from the undermanned Leopards, who shot just 32% in the first half.

Werner and Karavanic led the charge during Bucknell's first-half domination. Werner played 13 minutes in the half, scoring 10 points on 5-6 shooting and grabbing four rebounds, and Karavanic scored 12 points on 4-7 shooting. Karavanic's jumper with 9:28 remaining gave Bucknell a 24-8 lead, and hit a 3-pointer as time expired to give the

Newhouse's hat-trick leads BU ice hockey over Shippensburg

By Trip Sanders

In an important league game last Saturday, the Bucknell men's ice hockey team took on a weak but hungry Shippensburg squad. In the first meeting between the two teams, Bucknell whitewashed the Raiders by a count of 16-0, leaving some bad blood and prompting Ship to try to get some respect. But the Bison stepped onto the ice in front of a hostile crowd and held their composure, downing the Raiders 10-1.

The game began at a slow pace as Bucknell played down to Ship's level. However, the individual effort of Chris Newhouse '01 erased the bad showing. The Bison went ahead early in the game on a goal by sophomore winger Mike Fussarelli, assisted from linemates Steve Trempe '01 and Mike Bronowicz '01.

Not much later Newhouse received passes from Will Holigan '00 and Jeff Werring '00 to pick up his first goal. The first period ended with that score and saw Bucknell not playing up to its potential.

With four regular players missing from its lineup, Bucknell began the second period the way it ended the first—poorly. The Bison did, however, get excellent defensive play from Paul Van Dillen '01 in net and blueliners Rocco Russo '00, Graham Dewar '02, Nate Streets '03 and Dave Streets '01.

The Bison picked up the tempo in the second period and finally netted the third goal of the contest more than halfway through. Russo capitalized on a powerplay goal off a feed from fellow senior Alex Dixon.

Slow play dragged on into the third period and both teams seemed content to end the game that way until an important substitution came with about eight minutes remaining when Senior Ramsey "The Rammer" Wilcox replaced starting goalie Van Dillen, Bucknell's offense ignited.

Holligan blistered a shot past the Raider goalie for a 4-0 lead. This goal opened the floodgates for the Bison. In the successive five minutes goals poured in from everywhere, starting with Eric Silvestri '03 followed by two from Werring on the same shift. Then Silvestri netted another and Newhouse put the game truly away with his second and third goals to complete the rare hat-trick.

The fact that what was a 3-0 lead turned into 10-0 in a matter of minutes can be attributed to the emotional lift Wilcox provided. Unfortunately, the shutout was nullified when Ship scored on a two-on-one, ending the game at the score of 10-1. The game showcased domination by the Bison, who outshot Ship 49-13.

Bucknell will take its 9-0-1 record into a tough game this Saturday at 4:15 p.m. at the Sunbury Ice Arena against George Washington. This will be the final regular season home game for the team's eight seniors: Werring, Alex Dixon, Trip Sanders, Holigan, Wilcox, Ted O'Donoghue, Russo and Chris Ellis.

Come out and cheer on these Bison for the final time in a Bucknell uniform. Email Rocco (rrusso@) for directions.

Women fall to Lehigh in double OT, 96-91

Fall to Mountain Hawks after getting back on winning track against Army; remain Patriot League contender with 8-2 league mark

By Andrew Bevan

The Bucknell women's basketball team has found itself in many close games this season and have found a way each time to get a victory. Unfortunately, their luck ran out last night as they fell to conference foe Lehigh in double overtime, 96-91. In a game in which both teams battled back from significant deficits, the Mountain Hawks prevailed in the end by playing tough defense and hitting clutch shots.

After suffering their first conference loss this season just over a week ago, the Bison came out against Army this past Saturday at Davis Gym hungry for a win. They satisfied their appetites, edging out the Cadets, 70-63.

"I think the kids came in with the right mindset," head coach Kathy Fedorjaka said.

In a sloppy first half in which there were a total of 27 turnovers, both teams provided answers to each other and the game remained very close, with the largest lead by either team during the half being three. The first half was high paced with both teams doing a lot of running and scoring many of their points in transition. After falling behind by three with three-and-a-half minutes to play in the half, the Bison responded with six consecutive points to take a three-point lead, 29-26, into the locker room.

As the second half got underway, the Bison came out flying, going on a 6-0 run that stretched their lead to nine and forced Army to call a timeout.

As the second half neared its midpoint the Bison extended their lead to 10 on a jumper by senior tri-captain Lori Houck. However, Army would not go away without a fight and battled back to cut Bucknell's lead to three with a little under eight minutes to play in the contest. The Bison responded by pushing their lead back to eight with five-and-a-half minutes to go.

Army would not relinquish and fought back again to get within one with 90 seconds left to play. After freshmen guards Molly Creamer and Kate Franks connected on their free throw shots, the Bison victory was sealed by two key rebounds from sophomore forward Monique LeBlanc in the waning seconds of the game.

"The team came back well from the loss at Holy Cross," Fedorjaka said.

Houck had another strong performance, tossing in 26 points for the Bison, while Vicki Quimby '02 notched her eleventh double-double of the season, scoring 10 points and hauling down 11 rebounds.

"Lori is a tremendous player. She is in the race for player of the year," Fedorjaka said. "Quimby was huge. She was very open and outward as a leader for the team on the floor."

"We wanted to show the league that we meant business. We wanted to come back strong," Houck said. "I don't like having the game be that close, but I knew we would pull it out."

The Bison looked to initiate another winning streak as they went up against Lehigh. They looked like they were going to do so as they built a five-point lead just over four minutes into the contest. Five minutes later the Bison went on an 8-0 run and pushed their lead to nine, 24-15. They stretched their advantage to 10 with just over two minutes left in the half and went into the locker room with an eight-point lead. The Bison were sparked in the first half by a 14-point effort from Franks.

The very first play of the second half turned out to be a signal for what would happen in the following critical minutes of the game, as the Mountain Hawks got a three-point play off a foul on Houck. Lehigh started the half on a 5-0 run to cut the lead to four.

After extending their lead to seven just over four minutes into the half, the Bison saw it cut to two in a span of one minute. The Bison responded by increasing their lead by as much as six but the Mountain Hawks roared right back again, this time capturing the lead with 9:16 to play. The Hawks then went on an 8-0 run to open an eight-point lead, 58-50, with just over eight minutes to play, which forced the Bison to call a timeout.

The Bison did some battling of their own as they tied the game at 60 three minutes later. The last five minutes of the game kept the entire crowd on their feet as the lead exchanged hands four times. The Bison found themselves down by three with just over a minute to play. After calling a timeout, the Bison tied the game promptly on a three by Houck on a designed play.

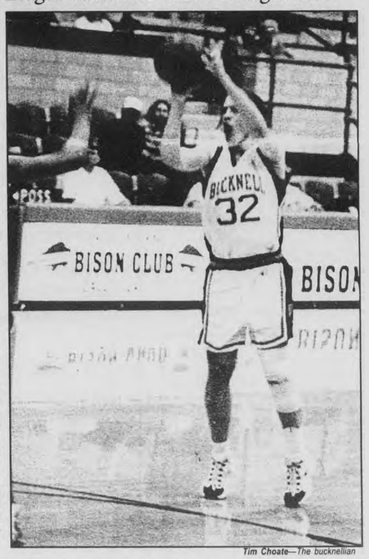
After Lehigh answered this with a score of its own, Quimby came through with another clutch play-hitting a layup for the Bison with 12 seconds left-to tie the game at 71 and send it into overtime.

Neither team really opened up the game in the first overtime. The largest lead by either side was three. The Bison found themselves down by a three with only 36 seconds to play in the overtime. After a layup by LeBlanc to cut the deficit to one, Franks made a key steal at mid-court and was subsequently fouled hard going to the basket. With a chance for the Bison to recapture the lead, Franks was only able to hit on one of her two free throws-which knotted the game at 80 and, a missed jumper by Lehigh with two seconds to play, sent it into a second overtime.

Lehigh started in the same overtime much in the same manner as they did the second half, going on a 5-0 run. Bucknell lost two of their key players in this stretch, as both Quimby and Houck fouled out. However, the Bison fought back behind a seven-point effort by Creamer in a span of three minutes and tied the game at 89. Lehigh responded by going on a 7-0 run to seal the game for good.

"The game was decided in the first twelve minutes of the second half," Fedorjaka said. "We let them emotionally get back into it. We were coming from behind the rest of the way."

With the loss the Bison fall to 8-2 in the Patriot League with two league games left to play. The Bison travel to Hamilton, NY on Saturday to face Colgate at 1 p.m.



Tim Choate—The bucknellian

Kate Franks '03 spots up for a three-pointer for the Bison. Franks hit the free throws that iced Bucknell's 70-63 win over Army last Saturday and exploded for 14-first half points in last night's loss to Lehigh.

Februrary frenzy adds life to sports world

Big happenings with Griffey, Marino, Woods, college basketball, and the NBA highlight a truly amazing week in sports

By Tim Scheu

I hate February. It, without hyperbole, has to be the worst month ever. It is cold, there's no snow, and it is always grey. No wonder the calendar people only made it 28 days. As a sports fan, it stinks, too. Football is over, baseball is two months away and the NBA is drudging its way through another over-hyped season.

But just as Valentine's Day adds a spring to your step, so too has the sports world. In contrast to its typical monotony, the second week of February produced one of the most exciting weeks of sports in history.

Courtesy of AP
Ken Griffey Jr. will be reunited with his father, Cincinatti's first base coach.

I am a huge baseball fan, so I am always anxious during the winter months. Granted, with the large market franchises sucking the life out of the sport, the regular season is tough too. But, last week a light came down from heaven and put Junior in Cincy. The move adds life to a franchise that dominated the 70s, but that has struggled to compete in a league where *dinero* equals wins.

Last year, the Reds were somewhat of an anomaly. Though they only had a 30 million dollar payroll (in contrast to the Yankees $86,000,000), rookies stepped up, and veterans came together to produce a solid baseball team. Now, Griffey returns home for nine years at the generous price of 116.5 million (or $568,292 per pound). Add him to a team that won 96 games, signed Dante Bichette, have the best bullpen in baseball and you have a new NL favorite. Eat 'it Braves.

In other news, with the announcement that Chan Gailey will be the Dolphins new offensive coordinator, Dan Marino voided his contract. Marino, the most prolific passer in NFL history, struggled all year under Jimmy Johnson's system and is looking for a new start.

My take: Marino is washed up. Sure, he has every record in the book, but that was in a system that relied directly on him. In all his years, the Dolphins never had a solid running game-only Marino.

As a result, their pass—happy offense never got it done in the big games, and the Pitt alum is still looking for his first ring. But now, Marino is too worn out to win the game by himself, and his ego won't let him play second fiddle to a running back. He should just retire in grace.

In other football news, teams are saying goodbye to veteran players as they rebuild for next season. Aside from the Bills trio of Thurman Thomas, Bruce Smith, and Andre Reed, KC said bye to Neil Smith, New England dumped Ben Coates and Terry Allen, the Vikings got rid of Jake Reed and the Giants waved Kent Graham.

College basketball had one of the more exciting weeks in recent history. Seven out of the top ten teams lost, and the top 25 was completely reshuffled. Syracuse was bumped from the ranks of the unbeaten as they lost consecutive games to Seton Hall and Louisville. Third-ranked Duke had won 18 games in a row after opening the season 0-2, before an 98-87 loss to visiting Maryland. The loss was their first in eons at Cameron Indoor, and re-established this heated ACC rivalry. Other teams that took the tumble were number five Ohio State, number six Michigan State, number seven Auburn and number nine Indiana.

In golf, Tiger Woods continued rolling along, as he won his sixth straight tournament. Though we all know he lost this past week, finishing four shots behind Phil Mickelson, Woods' run was nonetheless spectacular. Going into the final day of play in the AT&T Pebble Beach Pro-Am, Woods came from seven strokes down to overtake Vijah Singh. His streak was the longest since Byron Nelson won 11 straight in 1945.

Courtesy of AP
Tiger celebrates another win.

His play last weekend was almost as spectacular, as he again recovered from a seven-stroke deficit to tie the leader, but he faded down the stretch to finish a disappointing second.

And even the NBA was exciting. Now that the slam-dunk contest has returned, and we can all put that NBA/WNBA two-ball business behind us, All-Star weekend is again exciting. In the main event, the West was lead by co-MVPs Shaq and Tim Duncan, as they put on an offensive clinic and beat the East 136-126.

In the slam-dunk contast, Vince Carter won something that we all knew he was going to win. His most convincing dunk was one which Carter jumped some two feet above the basket, put the ball almost all the way through the net and held onto the rim with his elbow.

In short, it was the type of week that allowed warm-weather wishers to forget the cold, and absorb continuous episodes of Sportscenter. If only sports fanatics could be so lucky every week...

ESPN doesn't win ESPY for taste

By Carmen Mauriello

The 2000 ESPY awards went off with a bang last Monday at New York City's Radio City Music Hall. The star-studded guest list was treated to awards presentations for the top stars and teams of the decade and of 1999, a touching tribute to late Columbine High School teacher and coach Dave Sanders and, unfortunately, some ill-fated attempts of humor.

The biggest prizes of ESPN's production were the 15 Decade awards, and the big winner was the Chicago Bulls dynasty. They took home Team of the Decade, Phil Jackson was honored as Coach of the Decade, and Michael Jordan was awarded NBA Player of the Decade and Male Athlete of the Decade.

Jordan, the new President of Basketball Operations for the Washington Wizards, joked with the crowd after receiving the first of his two standing ovations. "Unfortunately, I have no jobs for any of you at the Wizards," he said. "So you can sit back down."

Other Decade honors went to Mario Lemieux for hockey, Jerry Rice for football, Dale Earnhardt for auto racing, Pete Sampras for tennis, Evander Holyfield for boxing and Michael Johnson and Bonnie Blair for the Olympics category.

Tiger Woods' domination of the sport of golf earned him the biggest haul of the 1999 annual awards, which honored 27 of today's brightest stars. Woods received ESPYs for Golfer of the Year and Male Athlete of the Year, in addition to being named Golfer of the Decade.

Courtesy of AP
Jordan and Gretsky posing at the ESPYs.

Other 1999 winners included Dominik Hasek for hockey, Kurt Warner for football, Tim Duncan for men's basketball, Roy Jones Jr. for boxing, Mia Hamm for women's soccer, Andre Agassi for men's tennis, Lindsay Davenport for women's tennis and Pedro Martinez for baseball.

The highlight of the evening was the awarding of the eighth annual Arthur Ashe Award for Courage to Sanders, who lost his life during the tragic Columbine shooting. The moving ceremony included a video biography of Sanders that revealed the many lives he had touched during his 25 years of teaching business courses and coaching softball, basketball and track at the school. It was followed by the awarding of the honor to Sanders' surviving wife and three daughters, who issued emotionally charged acceptances after their standing ovation.

The lowlights of the evening were the producers' failed attempts at humor, which were viewed by many as crass and tasteless. The first incident was annoying college basketball guru Dick Vitale opening the ceremonies by flying onto the stage clad in full Elvis attire.

The second was far worse, as a Don King impersonator claiming to be John Rocker's agent took the stage to accept the Ty Cobb Humanitarian Award for his client throwing in a barrage of Rocker insults to boot. The stunned crowd was noticeably not amused by the stunt which meshed one of the most forgettable acts in recent sports' history with an event that recognized some of the decade's greatest memories.

One thing can be learned by these blunders from ESPN—sports is what made you, what you're good at and what you should stick to—not comedy.

BASKETBALL from page 11

Bison a 37-19 halftime cushion.

The beginning of the second half was more of the same, as Bucknell's used its tough defense to pull away. The Bison extended their lead to 57-25 with 11:20 remaining, and cruised from there.

Lehigh made a late charge against Bucknell's reserves to make the final score closer, but the 17 point win—coupled with Saturday's 66-55 win over Army (a game which the Bison started with a 16-0 run)—meant that Bucknell's back-to-back Patriot League losses have been followed by a pair of relatively easy wins.

"We took care of Army (on Saturday), and I thought[e] we went out and took care of it from start to finish tonight," Bucknell head coach Pat Flannery said. "It's not the best ball that we're capable of playing, but we're doing what we need to do."

In addition to Karavanic and Werner, Bison point guards Bryan Bailey '02 and Chris Zimmerman '03 played arguably their best games of the season as well. The duo combined for 13 assists and just one turnover in the game, and Bailey added six points. Zimmerman might have produced the game's most exciting play, though, as the 5'9" point guard from nearby Shamokin Dam high school energized the sparse crowd of 1643 midway through the second half by blocking 6'7" Lehigh forward Tanner Engel's layup attempt from behind.

Zimmerman, who shares point guard duties with Bailey and Dan Blankenship '03, has become one of Bucknell's pivotal reserves. He averages just eight minutes a game, but is key in spelling Bailey at the point.

"I'm definitely comfortable (with my role) now," Zimmerman said. "Whatever it takes to get the team going and to get the team to win."

Zimmerman was told in post-game interviews that he finished with zero points, three rebounds, and a career-high six assists.

"And one block," he added.

The Bison, now 15-9 overall and 6-3 in the Patriot League, remain mired in third place behind Lafayette (18-6, 8-1) and Navy (19-5, 8-1). Bucknell travels to Colgate this Sunday and hosts SUNY-Albany in a non-league game on Wednesday before next Sunday's regular-season finale against Lafayette.

"To the students who gave up their tee shirts at the men's basketball game against Colgate on January 26, our group of seven children extend a big thank you!! Right on for our kindness!!"

Northumberland County Homekeepers Program sent this letter of thanks to the students of Bucknell after a group of kids arrived to the game early in order to receive free t-shirts, but were unable to get them.

Sports

Is Marino ready to move on?

By Rob Schmicker

Dan Marino recently voided the last two years of his contract with the Miami Dolphins, giving the 17-year pro a little more time to decide what his future holds. Marino is the NFL's all-time leading passer but has not led the Dolphins to the Super Bowl since his second year in 1984.

Last season injuries got to him, forcing him to miss five regular season games before leading the Dolphins to a wild card victory over Seattle. The thought that Marino was back didn't last long, though, as the Dolphins were humiliated by the Jaguars, 62-7, the following week. Many thought that might have been Marino's last game ever and it is really looking like that now.

New Dolphins' coach Dave Wannstedt has said repeatedly that he would like to go with a younger QB next year—leaving Marino's future with the team uncertain. With that in his mind, he has to decide whether he wants to come back for an 18th season as the Dolphins backup, retire or go somewhere else. Three teams that are said to be interested in Marino are the Oakland Raiders, Seattle Seahawks and Tampa Bay Buccaneers, according to ESPN's Hank Goldberg. Goldberg also says that location is important to Marino, so Tampa Bay might be the only team he would consider.

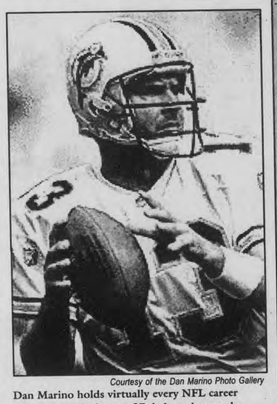
Dan Marino as a Tampa Bay Buccaneer?

It just doesn't seem right, but it could be his last shot at the Super Bowl. We'd all love to see Marino win the big one and then retire, but the chances that the Dolphins will be the team to bring him there seem to be slim.

Is it that easy though? Can he just pack up after 17 years and leave the franchise that was so good to him? Probably not—I think he'd rather retire as a lifetime Dolphin, than move on at the age of 38. Still, the loss to the Jaguars has to play a major role in his decision.

"I don't think anybody wants to end a career on the kind of game that we played in Jacksonville," former teammate Troy Drayton said. "He deserves to go out on a white horse and with lots of fanfare. He's done a lot to revolutionize the quarterback position and the NFL as a whole. I can't see him with another team."

Unfortunately, if Marino decides to retire, he'll go out as a 62-7 loser—unlike John Elway, who ended his Hall of Fame career with two Super Bowl titles. That may be the only thing to convince one of the NFL's all-time greats to return for another year.



Courtesy of the Dan Marino Photo Gallery

Dan Marino holds virtually every NFL career passing record—but, at 37, he's no longer the player he once was and finds his future uncertain.

NBA Experts' Picks

By Ali Amhed | By Justin Mcarthy

Seattle at Sacramento

Gary Payton is probably the best guard right now in the NBA. He has elevated his game even more this year and is just coming off a career high. Jason Williams will have a long night trying to battle "the Glove" on both sides of the court. However, the front court and bench of Sacramento should take it to their counterparts.

PICK: Sacramento by 10

In this matchup of divisional foes, both teams come at each other with similar attacks-each has a high scoring, go-to forward in Webber and Baker respectively, and each has a versatile attack led by play-making guards in Williams and Payton respectively. Earlier this season, the Kings defeated the Sonics on a big game from Webber and without the help of the innovative Jason Williams. If the Sonics hope to win this one, they will need a big game out of Payton.

PICK: Sacramento by five

Dallas at Toronto

Everybody loves talking about Vince Carter but this game also highlights one of the leagues other great young talents-Michael Finley. He leads the league in minutes and is a triple-double waiting to happen. Finley also happens to be Dallas' best player. This should be a great match also at the four spot with Oakley and Davis taking on Rodman. I give the recently surging Mavericks the nod in this one.

PICK: Dallas by five

Toronto defeated Dallas earlier this season, however that was in the midst of a 2-10 Dallas run. The Mavericks are now a rejuvenated team and the Raptors will have a hard time battling for the boards and driving in the lane against Rodman and Finley. However, if the Raptors can get big games from Oakley and Christie, as well as from their two young stars, they could pull out the victory.

PICK: Dallas by eight

Portland at Sacramento

This should be another great match down in the blocks with Wallace, Grant and Sabonis taking on Webber, Divac and Funderbuke. However, Portland has the edge with its more consistent back court. Scottie Pippen should once again have a complete game—especially on defense were he will attempt to disrupt the rhythm of the Kings and make a case for the most valuable player on the Blazers.

PICK: Portland by 15

The Trailblazers have the best record in the NBA and are currently on a five-game winning streak. Portland already defeated the Kings once this season and it possesses a starting line-up unparalleled by any other in the NBA-with Pippen and Wallace in the frontcourt and Smith and Stoudamire in the backcourt. If the Kings even hope to keep it close, they will need huge games from Webber and Williams.

PICK: Portland by 11

Indiana at New York

A great rivalry that will not disappoint. A balanced Knick attack should be enough to overcome a huge game from Reggie Miller. Look for Ewing to have a big impact down low, with Houston lighting it up behind the arc. New York is in a great position to make a run for the Atlantic crown.

PICK: New York by 10

This game between hated rivals will come down to one matchup: Allan Houston against Reggie Miller. Both are their team's leading scorers and both possess the capacity to take over a game with their outside jumpers. Sprewell and Camby should have big games.

PICK: New York by seven

Phoenix at San Antonio

With all its players healthy, Phoenix should be among the top three teams in the league along with Portland and the Lakers. Look for Phoenix to post up their guards and force the double teams from the Spurs big guys. This should work for the Suns since their big guys have very consistent outside shots. Hardaway must have a big game and the Suns must limit either Robinson or Duncan to win this one.

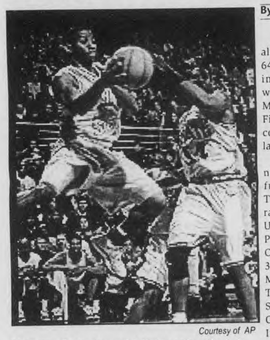
PICK: Phoenix by 23

These teams are meeting for the fourth and final time this season; the Spurs have won two of three. The Suns arguably possess the best backcourt in the NBA in Hardaway and Kidd, and they will need huge games from both of them if they hope to stay in this game. However, that may not be enough to matchup against the Spurs' dominating frontcourt of Duncan and Robinson, who are both averaging double-doubles in points and rebounds against the Suns this season.

PICK: San Antonio by 14

There's some "Madness" in the air

By Mike Myers



Courtesy of AP

Michigan State downed OSU in a Big 10 clash.

March Madness is almost upon us. The 64 teams competing in the tournament will be announced on March 12 at 6:30 p.m. First round action will commence four days later on the 17th.

This year's tournament looks to be full of excitement. The top ten teams, as ranked by the ESPN/USA Today Coaches Poll, are currently: 1. Cincinnati 2.Stanford 3. Duke 4. Arizona 5. Michigan State 6. Tennessee 7. Ohio State 8. Syracuse 9. Oklahoma State 10. Indiana.

Previously unbeaten Syracuse fell in the rankings as they suffered two losses last week. This now brings up the question of who will be the fourth number one seed in the NCAA tournament brackets as Cincinnati, Stanford and Duke appear to be in the driver's seat for top spots. Frontrunners for the position are Tennessee and Arizona.

Cincinnati and Utah State are the hot teams right now. Both teams are perfect in their last ten games. Cincinnati also enjoys a 3-0 record against RPI Top 25 competition and an undefeated 8-0 record on the road this year. Number two Stanford also has recorded some impressive victories as they have a 4-1 record against RPI Top 25 teams and are a perfect 7-0 when playing on the road.

Teams to watch in the weeks to come are Seton Hall and Pepperdine. Seton Hall handed Syracuse its first defeat of the year and followed with an impressive overtime victory at Rutgers and a home win over Boston College. Pepperdine bested Gonzaga-snapping the Zags' 11-game winning streak-and earned a tie for first in the WCC.

Among "mid major" conferences, the following leagues project to earn an at-large bid regardless of their conference tournament outcome: MAC-Kent State, WCC-Pepperdine or Gonzaga and MVC-Indiana State.

The countdown to the tournament has begun. There will be a lot of great games in the next couple of weeks leading up to what should be a very exciting month of March.

So get your polls ready and be sure to secure a seat next to the television, because this year's March Madness will be something you don't want to miss.

Autumn's over, but Leafs just starting to fall

By Kevin Logan

The 50th NHL All-Star Game may have temporarily lifted spirits in Toronto, but so far that hasn't helped the Maple Leafs escape their recent slide. The Leafs, who lead the Northeast Division with 69 points, suffered their fourth consecutive loss Monday—their third since the All-Star Break—at the hands of the Carolina Hurricanes, a team that currently is struggling to catch the Rangers and earn a playoff berth.

The upset was spurred by a four-goal first period for Carolina. The first two came within the opening four minutes of the game on shots from defensemen Glen Wesley and Dave Karpa. That put Toronto in an all too familiar position, marking the 10th time in the past 13 games that the Leafs have begun a game with a two-goal deficit. But the Leafs weren't willing to give up just yet. Russians Nik Antropov and Alexander Karpotsev both scored to knot the game at two.

But Toronto wouldn't get any closer. Ron Francis netted the first of his two goals in the game less than two minutes later to put the Canes back in the lead. And owner Peter Karmanos must've been feeling pretty confident about the recent acquisition of center Rod Brind'Amour, who Carolina received in a trade that sent the unhappy Keith Primeau to Philly. Brind'Amour scored on a picturesque play that saw him beat defenseman Danny Markov and then juke goalie Curtis Joseph with a great backhand-forehand move. Francis then scored again in the second period to ice the Canes' 5-2 win.

This week in the NHL

Toronto did have its opportunities, especially in the third when Kevyn Adams, just re-signed to a two-year deal, was awarded a penalty shot, but Arthurs Irbe stood strong in net for the Hurricanes.

The victory not only gives the Hurricanes momentum from having beaten one of the top teams in the conference, but it also brings them to within three points of the Rangers, who presently occupy the eighth and final playoff spot in the East.

Moving into the Western Conference, the Detroit Red Wings found themselves in a situation similar to the one the Maple Leafs faced Monday against Carolina. In one of the bigger rivalries in hockey, the Colorado Avalanche jumped to a 3-0 lead over the Wings Tuesday at the Pepsi Center. Unlike the Leafs, however, the Wings were able to overcome the deficit-as they have twice before against the Avs this year.

Chris Drury's power-play goal opened the scoring midway through the first period. He was followed by Joe Sakic, who jumped on a rebound off an Alex Tanguay shot to beat Chris Osgood and increase the lead to two. Tanguay got another scoring chance in the second period, and this time he didn't miss, adding a goal to his assist to give him two points on the night.

Colorado's three-goal advantage lasted a mere 17 seconds, when Sergei Fedorov banged one home against goalie Patrick Roy. Less than three minutes later, Fedorov assisted on a Darren McCarty goal to close the gap to one. Veteran Pat Verbeek netted the tying goal in the third period and Brendan Shanahan got the game-winner—his 29th goal and eighth game-winner of the season—with under four minutes remaining. Fedorov assisted on the goal to give him a three-point game.

The dramatic win pulled the Wings closer to snagging the top spot in the Western Conference, leaving only a three-point gap between them and the St. Louis Blues.

Players of the week:

-L.A.'s LUC ROBITAILLE: "Lucky Luc" scored the 544th and 545th goals of his career Monday against the Flames, moving him up in the record books ahead of the legendary Maurice Richard to take over the 18th all-time spot in career goals scored.

- Detroit's BRENDAN SHANAHAN: Shanahan scored his 30th goal of the season, making this his eighth season scoring 30 or more goals.

Notes from around the league:

Sabres all-star netminder Dominik Hasek, who had announced to his native Czech Republic that this would be his last season, has decided to stick around for one more year. His decision was influenced by the fact that he has been out most of the 1999-2000 season with a groin injury. However, with the upcoming expansion draft, his change of heart puts him in jeopardy of possibly being traded or left unprotected so that the Sabres can protect up-and-coming goalie Martin Biron.

Dan Bowen: Bucknell's rock in the middle

Bison star started 99 straight games and hopes to use his experience to lead Bucknell to the '99-00 Patriot League crown

By Craig Kimball

Coming to Bucknell as a freshman, Dan Bowen '00 knew that he would be an important factor for Bucknell University's men's basketball program, but he never guessed that he would start a school record 99 straight games.

His 6'9" muscular frame complimented by his immense knowledge of the game helped Manchester Central win a New Hampshire State High School Championship during his senior year. However, once he began to practice at Bucknell, Bowen knew things would be different.

During a practice his freshman year, he was approached by former captain Gordon Mboya '97. Mboya had noticed Bowen playing well—but not as well as he potentially could—so Mboya lectured the impressionable freshman. "You have the potential to play a lot of games and a lot of minutes, but if you don't work hard it won't happen," Bowen recalled Mboya saying.

At that point, Bowen picked up his game and work ethic; since then he has started every game in his Bucknell career until earlier this year when he injured his foot and required surgery.

During his rookie season, he played the role of fifth option, but began to establish himself as a force in the Patriot League. At the end of his freshman year, Bowen's work ethic, understanding of the game and natural ability earned him the prestigious honor of Patriot League Rookie of the Year. Bowen's first season was a success—however, his second season would be different.

The 1996-1997 team graduated many key players and left a void in program. The '97-98 Men's team thought that Bowen would be the go-to guy. "The team was counting heavily upon me, and I wasn't ready for that big of a role," Bowen said. He described his sophomore year as "frustrating" because the team finished with a mediocre record.

However, the class of 2000 began to play together more and more and anxiously awaited the '98-99 season. During that summer Bowen worked out religiously in the weight room and on the track. The entire time he trained he remembered Mboya's words.

Bowen's junior year could not have had a worse of a start. The team's expectations plummeted and by mid-season the Bison found themselves with an overall record of 3-9, including a loss to Princeton that saw Bucknell score an embarrassing 29 total points.

But guided by Bowen's leadership and determination, the Bison exploded and won 13 out of their next 17 games. In the final 12 games, Bowen scored over 12 points in every game. His inside game was accompanied by the pinpoint shooting of Valter Karavanic '00 and Willie Callahan '99.

The trio led Bucknell through the first two rounds of the Patriot League tournament with wins over Lehigh and Holy Cross, which pitted them against arch-rival Lafayette. In the Patriot League Championship game, televised on ESPN, Bowen showed no intimidation under the scrutiny of the cameras and played an extraordinary game—scoring 19 points in a heartbreaking four-point loss for a bid to the NCAA Division I basketball tournament.

Bowen's accomplishments during the '98-99 season hardly went unnoticed. He received many prestigious honors, including the exclusive Benton A. Kribbs Award for outstanding contributions and a spot on the All-Patriot League first team.

For the season, Bowen averaged 10.7 points per game and 5.8 rebounds per game, also tallying 56 assists and 28 steals. His balanced statistics earned him a nomination for the Patriot League Player of the Year award. At the team's awards banquet, head coach Pat Flannery presented Bowen and forward Brian Muckle '00 with the distinguished honor of being co-captains for the '99-00 season, which is voted on by the players.

Flannery explained that Bowen was elevated to captain not only because he improved physically, but because he improved mentally as well. "Danny gets doubled and even triple teamed, depending on the teams we play, and he has learned to pass the ball and create better opportunities for his teammates," Flannery said. "He is also one of the most popular players on the team and he commands the respect of his peers. He isn't extremely vocal, but he gets his point across through his play on the court."

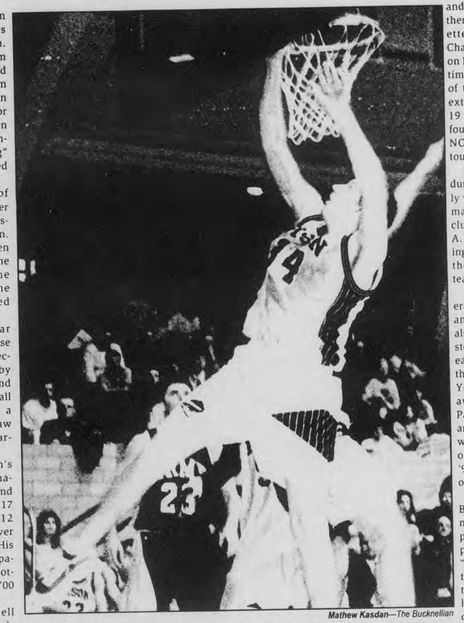
"Danny's work ethic and intensity inspires everyone to work harder and play physically tougher," Brian Werner '03 said. "When I am playing with Dan he makes everyone, including myself, play above their ability."

This '99-00 season—Bowen's final year at Bucknell—has seen Bowen emerge as the team's leading scorer and rebounder. He is currently averaging 15.6 points per game, 7.9 rebounds per game, 1.7 steals per game, 1.7 blocks per game and is shooting 80.7% from the free throw line.

"Goals have been set, some have been achieved and some haven't been achieved yet," Bowen said of his senior season. So far this year, the Bison have a record of 6-3 in the Patriot League and 15-9 overall, however, March 4-5's Patriot League Championships will be the ultimate measure.

The fate of the team rides heavily upon its four starting seniors. Bowen has been in championship situations numerous times before and he knows now what is expected of him and his teammates.

Bowen's basketball career may not be over after this season. He has heard from several European teams and is considering playing for them. His many summers of hard work and perseverance have paid off and, most importantly, Bowen still enjoys playing in every game.



Mathew Kasdan—The Bucknellian

Bowen on the glass last Saturday against Army. He leads the Bison in scoring and rebounds this season and has added 56 assists and 28 steals from the center position.

Second-year swim coach stresses student-athlete ideal

By Brooke Rea

They are fast, they are strong, and they smell faintly like chlorine as they stumble a few minutes late into your eight o'clock class. They spend four hours a day staring at a black line and shave off all their body hair to avoid something they call "drag," and all you can ask yourself is what, exactly, possesses these swimmers to pursue such a sport?

At Bucknell, the answer is simple: head coach Jerry Foley. In his second season at Bucknell, Foley is keeping alive BU's outstanding swimming tradition and pushing the team to work harder than ever in the pursuit of excellence.

Foley brings fifteen years of coaching experience to the job. His career began at the volunteer level, and then continued with positions at two USS teams on Long Island.

The highlight of Foley's early career was the time he served as the head coach at The Long Island Aquatic Club. Most recently, Foley was the head assistant coach at Army for four years, but the opportunity to be a head coach again is what made him decide to make the move to Bucknell.

Foley admits that moving to Lewisburg was the best thing he could have done for his family. His wife and two daughters, ages six and two-and-a-half, "couldn't be happier," he said. Foley and his family live about a mile and a half from campus.

Women's team co-captain Kelly Wilson '00 couldn't say enough about Foley. "Jerry seems quiet, but he is full of emotion and totally supportive," she said. "I feel like I have a very personal connection with him; he is like a friend to us and I am lucky to have had him as a coach."

Foley's attitude toward his swimmers is no less complimentary, and even though he is only finishing out his second season at Bucknell, he has already established a tight bond with the team.

"I am very happy with the development and progress I have seen since I got here," he said. "Most of all, I am impressed with the character of the team. I am very proud of the men and the women both in and out of the pool."

BU had high hopes for the 1999-2000 season, and no one was let down. Foley is impressed by the swimmers' performances as athletes and as students.

His main goal for the season was to help the team minimize out-of-pool distractions, which he believed would improve every aspect of their performance.

At the beginning of the season, he proposed this goal to the team and also emphasized the importance of maintaining the swim team's traditionally high academic standard.

The swimmers came through in both areas, and first semester both the men's and women's teams were given Academic All-American honors.

At the Patriot League Championships this weekend, Bucknell will compete against league foe Army. Foley is not worried about experiencing any split loyalties for his former team.

"As I tell my team everyday," he said, "I now bleed blue and orange." He feels that the team will do wonderfully at Patriots and knows that they are ready to swim fast and have fun.

Foley received an undergraduate degree in engineering from The US Merchant Marine Academy, where he was also a swimmer. He then earned a Masters Degree in Physical Education from Adelphi University and is now planning to complete a doctoral program in Physical Education, which he began while coaching at Army.

Due to the amount of time he spends at the pool, Foley prefers to get away from the pool for exercise and likes running outside. He and his family enjoy trips to the beach, and all four of them traveled to Fort Lauderdale with the team for training over winter break.

A moment of pride this season was during that trip, where Foley remembers receiving countless compliments about how the polite and well behaved the team was everywhere they went.

"At Bucknell you attract a great student-athlete," Foley said when asked what he likes about coaching here. "You are really getting the complete package as a person, which is what I was used to at Army. There aren't too many places that can give you that."

Rebecca Sheinfeld—The Bucknellian

Jerry Foley, a four year assistant at Army, will be pitted against his former team this weekend.

Taking flight

After the San Antonio Spurs won the NBA championship last season, it seemed as though a new set of stars were ready to assume control of the league. Tim Duncan appeared virtually unstoppable, especially when flanked by David Robinson.

This season, however, has been anyone's guess, though. A handful of teams have shown glimpses of greatness, but then fade away. The Lakers have won consistently and Shaq is making comments like "Nobody can break me." He forwards that he is the only human being capable of stopping Shaquille O'Neal.

Ok, Shaq, but maybe you should utilize some of your salary for a new free-throw shooting coach.

The real spark in the NBA, however comes in the form of Toronto's Vince Carter. If there is a savior for the Michael-less league, it may very well be Carter. And the NBA capitalized on his high-flying acrobatics this past weekend in Oakland, CA.

Commentary

Brian Watson

In bringing back the slam-dunk contest that has been absent from the All-Star agenda for two years (including last year when the entire All-Star game was axed due to the NBA strike), the NBA showcased it's brightest stars at just the right time.

Even in the last few slam-dunk fests, the best dunkers weren't even entered in the contest. Well, that mistake was taken care of this time. Heck, David Stern and company could have run a one-man dunkfest and nobody would have complained. With all due respect to Tracy McGrady, Larry Hughes (who somehow couldn't seem to get the roundball through the rim in endless dunk attempts), and the rest of this year's dunkers, everybody was waiting for Carter to unleash his power, flight, and creativity above the rim.

And he didn't disappoint. Carter's performance in this year's contest may go down as the greatest ever. Yes, that includes Michael, Dominique and, dare I say, Kenny Walker. Carter had everyone in the arena going nuts, including the judges.

Following his third dunk, an off-the-glass, through-the-legs power slam, the judges jumped over their desk in disbelief. Carter looked into the camera, gave the slit throat sign, and simply said "It's over."

Thankfully for the NBA, he's just getting started. Carter, along with numerous other young talents like Kevin Garnett, Kobe Bryant and Allen Iverson, are the players that are going to put the NBA back on the map.

While many peg Iverson or Bryant as the one to replace MJ, Carter may in fact be the closest comparison: He left North Carolina after an All-American junior campaign, he was drafted at the top of the lottery by a team desperate for a franchise player, and has a strong, athletic build that causes mismatches and headaches to all opposing offenses.

And he can flat out jump.

Such a young influx of talent will surely boost the NBA's image and appeal to a new breed of fans.

Carter's aerial displays will continue to appear on SportsCenter, probably even in the off-season.

Don't blink.

Track and field prepares for Patriots

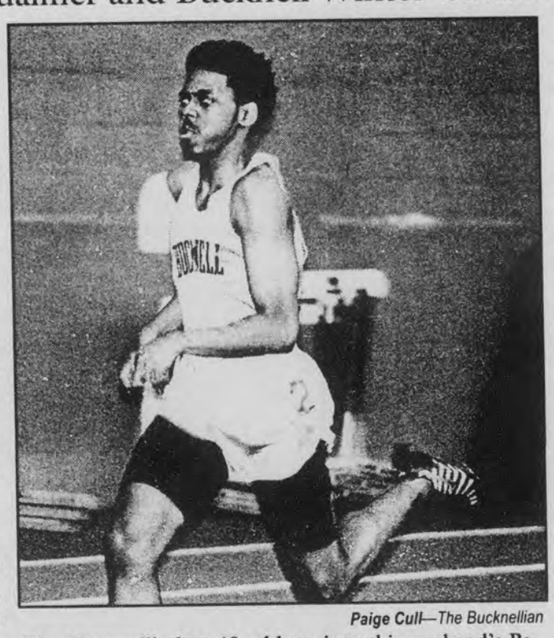
Success at Nittany Lion Qualifier and Bucknell Winter Classic builds teams' confidence

By Sean Houston

The waiting is over. The athletes of the Bucknell indoor track and field team have sweated through countless hours of practice since September in preparation for their most anticipated event of the season: the Patriot League Championships. From this Friday to Sunday, the Fieldhouse will play host to this prestigious event.

The final preparation for the big event took place this Friday and Saturday when members from both the men's and women's teams competed at the Nittany Lion Qualifier in State College in addition to hosting the Bucknell Winter Classic. The results were very encouraging and will be a cause of concern for Bucknell's visiting Patriot League Rivals.

There were many outstanding performances at the Nittany Lion Qualifier, including senior Ron Hess's 800 meter run of 1:51.87, the fastest time in that event in the Patriot League this season, as well as the women's 4x400 meter relay team's school record breaking effort of 3:47.14.



Paige Cull—The Bucknellian

The Bison will place 40 athletes into this weekend's Patriot League Championships at Bucknell's Fieldhouse.

At the Bucknell Winter Classic, Dave Pomfret '00 set a school record by pole-vaulting 16'9", and Kim McGrath '00 won both the long and the triple jump competitions (18'8.5" and 39'1.5" respectively).

Nevertheless, head coach Art Gulden stressed that "the real strength of the team is depth. There are new athletes in the spotlight each week, and I know that everyone is going to be scoring a lot of points for us."

The men will have their work cut out for them in trying to upset Army, while the women will also have their hands full with Navy. But Gulden was optimistic, saying, "the team has never been in better health physically and mentally, and all the athletes are definitely peaking at the right team."

"We're feeling great about our chances and looking forward to having a lot of fun," Stephanie Bango '02. "There's no feeling of anxiety or intimidation." With the home track advantage, great depth and a confidence built on success, the sky's the limit for the Bison this weekend.

Banged up Bison drop two more matches

Wrestlers still 3-0 in EIWA conference with league championships approaching

By Justin White

You can't play solitare without a full deck.

Similarly, the men's wrestling team traveled to Millersville, Pa. this past Saturday without their full arsenal. Sitting out due to injuries were co-captain Ryan Fasnacht '01 and Brian Pitzer '00. The injuries gave two freshmen the opportunity to gain some match experience, but it also made a young team younger.

The Bison lost to Seton Hall (9-29) and then to Millersville (32-12). The losses lowered the squad's dual meet record to 4-8.

The first meet of the day for the Bison was against the Seton Hall Pirates. Bucknell's first points came with a victory by sophomore Brian Neuman, who was Bucknell's lone double-winner on the day, in the 186-pound weight class. He defeated his Seton Hall opponent 2-1 in overtime. The other win in the match for the Bison came from Adam Webb '00, who won by fall in 6:09.

Coach John Hangey said Webb, "wrestled well. He kept his composure and came back strong (after being behind early in the match)."

The Millersville match immediately followed Bucknell's loss to Seton Hall. However, Hangey said that fatigue was not a factor. "We were in better shape than they were, but we just didn't perform like we're capable," Hangey said.

Gbenga Akinnagbe '00 continued his solid season by winning 7-5 in the 184-pound weight class. Next, Neuman recorded an 8-4 decision despite moving up a weight class from his first bout of the day, since Carl Perrone '02 injured himself during his match against Seton Hall.

"It's good to know you have a solid backup," Hangey said.

Sophomore 133-pounder Tommy Doerr picked up his second fall of the year with a pin in 2:45.

Hangey was a bit disappointed in the team's overall performance, saying, "We need to believe in the team on a higher level and not take no for an answer."

He also stated that the team needed confidence. "It's a mental game that we need to get over and through," Hangey said.

The Orange and Blue will travel to Lock Haven this Saturday for one of their final dual meets before the EIWA championships. Lock Haven is ranked nationally and its noisy arena is one of the toughest places for a visiting team to wrestle.

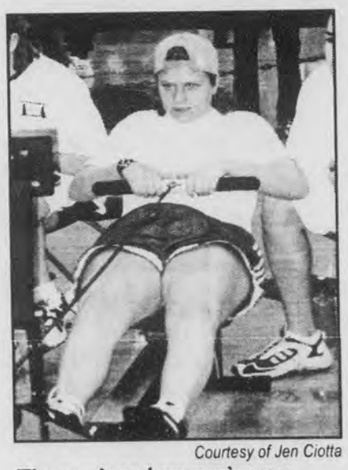
Despite a losing overall record, the Bison still hold a perfect mark of 3-0 in the conference. The team is looking toward the championships as the culmination of their season. Bucknell will bring its 10 starters to Navy on March 3 for the meet.

"Guys are starting to peak, as we're moving in the right direction and starting to get it together," Nueman said.

John Frazier—The Bucknellian

The Bison will travel to nationally-ranked Lock Haven this Saturday at 2:00 p.m.

Crew to host fourth annual Erg Armageddon



Courtesy of Jen Ciotta

The men's and women's crew teams will host six rivals in the erg competition Sunday at Davis Gym.

By Jen Ciotta

This Sunday the Bucknell men's and women's crew teams will host the fourth annual Erg Armageddon at Davis Gym.

An ergometer, or more commonly referred to as an erg, is an essential part of rowing. This machine simulates the rowing movement and enhances power and technique. Erg competitions are a test of strength, endurance and work ethic.

The competitors for this year's event are Penn State, SUNY Binghamton, Susquehanna, Franklin and Marshall and Patriot League rivals Lehigh and Lafayette.

Lightweight captain Sarah Diegnan '00 will attempt to break the lightweight women's record. Kelly Wanger '00 and Elizabeth Barrows '00 will compete for the open women's record.

The event is a pre-cursor to the men's and women's teams spring outdoor seasons. Under the guidance of head coach Steve Kish, the Bison will travel to races throughout the entire Northeast coast. An experienced group of rowers has the team confident heading into its spring season.

The Erg Armageddon events are open to spectators at 11:00 a.m. this Sunday.

Race Times

1 Women's Lightweight Novice 11:00 a.m.
2 Men's Lightweight Novice 11:30
3 Women's Novice 12:15 p.m.
4 Men's Novice 1:00

The Bison Chips released their new CD, entitled *Party in Your Pants.*

Bison Chips hold concert, release CD

Party in Your Pants opens to rave reviews

By Nicole Gull

Although Rooke Chapel is most often home to a serene and particularly sacred atmosphere, this past Saturday evening its doors were open to the music and comic antics of the Bison Chips, the University's only male *a cappella* group. The chapel was filled with fans for the anticipated the formal announcement of *Party In Your Pants*, the Chips' newly released CD.

The show began with an unexpected 'West Side Story' introduction and continued with a varied mix of both new and old songs such as "Satellite," "Lady in Red," "Only You," and "Africa."

As a result of the varied set list, the Chips found it necessary to rehearse a considerable amount prior to the show. "We wanted to only perform the songs on the CD, and that was a challenge. It was very difficult to re-learn all the old songs and teach them to the newer members, but we were all pleased with the results," Scott Pugh '00 said.

Music aside, the Bison Chips came fully prepared to incite the audience with yet another night of Gold Bond gimmicks, a pizza delivery and a short skit on the University's Presidential search. "I believe the concert was well attended and the skits were hilarious. Scott [Pugh] is a great chimp, while Alex [McCausland] is just Alex, and Jeff [Lehman] was amazing as well," director Jason Van Druff '00 said. The audience was responsive to the group's levity in addition to their musical talents. "Aside from the fact that the Bison Chips all have incredible voices, they're all good entertainers that make you laugh and put you at ease," Doug Johnston '00 said.

In addition to the current 14 members, three alumni were in attendance—Aditya Joglekar '98, Leeds Allen '98, and Bill Pfeifer '99.

The CD release also seemed to go extremely well for the group as they offered audience members a chance to win free CD's and an opportunity to buy the disc after the show. The recording has had a great effect on the Chips. Van Druff stated, "The CD took three years to make, but the guys were always very dedicated and understanding to the long process." Junior member Chris Halldorson reminds fans, "We have some exciting concerts coming up in the near future. Chipfest will be in the spring as always and we will have our 25th Anniversary Concert/Reunion on Homecoming Weekend this fall. It should be quite an event."

Indigo Girls to play Spring Concert

By Tim Scheu

For all those students who question the use of their tuition money, the University administration has an answer. After hosting prominent artists like Dave Matthews, Counting Crows, and Rusted Root over the past three semesters, the Student Concert Committee has attracted yet another big name act to the humble confines of our fair campus. This spring's special guest: the Indigo Girls.

Scheduled for April 8, the concert will be held in the fieldhouse and is expected to draw a sizeable audience. "We have always done better when we get big name bands," said Kari Conrad, assistant dean of students and staff representative for the Student Concert Committee (SCC). "Six years ago, the Indigo Girls played here and the students loved it. The concert sold out almost immediately."

The Girls are touring to promote their latest release, "Come On Now Social," that hit record stores last September. It is the ninth album of, arguably, the most prominent female band of the past decade and stays true to the acoustic nature of their work.

The move to get popular bands has been beneficial not only for the student population but for the University as well. The cost of facilitating a band alone can add up to more than $30,000, and that does not even include the money they use to pay the artist. In the past, when the University has hosted less popular bands, small turnout has crippled the SCC's resources. By attracting larger bands, the SCC keeps both the administration and the student body happy.

"A lot goes into trying to find a band for the show and trying to find a combination of the right band, available dates, and cost, so that we can have a successful show that appeals to the campus," Michele Lesh '00, chair of the concert committee, added.

The fact that the concert committee has gotten big bands on such a regular basis is somewhat remarkable, considering the complicated process involved. The SCC is given a certain amount of money to work with (this year it was $40,000), and in the initial stages take a survey of whom students want to see. Using the survey results they investigate whether or not the requested bands are actually touring. After tracking the band's tour, the SCC then has to juggle the responsibilities of attracting the band and coordinating a venue for the concert.

"Students have to understand how hard it is to get bands to play here," Conrad noted. "They get hundreds of different offers, securing them becomes even more difficult when you consider the routing and the money involved."

While the vast majority of people are excited, there have been some areas of concern. One has been the venue in which the artists play. Over the past year, Bela Fleck and Dave Matthews have electrified audiences in the Weis Center. Limited seating restricted the concerts to a small segment of the student population and in no way could facilitate the costs of production. Even with ticket prices at $30, the SCC lost a significant amount of money. The alternative venue is the Fieldhouse, a building that can support a larger crowd but does so at the expense of acoustics. But Conrad was quick to note that "99 percent of the places these bands play have similar accommodations."

Undoubtedly, there will also be some students who are critical of the SCC's selection, but they have to appreciate the fact that the SCC was working within certain perimeters. The Indigo Girls were the best fit for the concert committee out of their three main choices. Other tours that were considered were the Red Hot Chili Peppers-Foo Fighters show, and MTV's Bush show. The Chili Peppers were already playing shows at the Bryce-Jordan Center in State

Million Penny Drive wins Greeks national recognition

By Jim Leahy

Last weekend, the Greek system was recognized nationally for philanthropy as a result of the One Million Penny Project.

Dean Roy Baker accompanied a group of students from the University's Interfraternity Council (IFC) and Panhellenic Council to the Northeast Interfraternity-Panhellenic Conference in Pittsburgh to take part in the festivities and accept the award.

The One Million Penny Project, held last spring, was organized by the entire Greek system. As a result of the huge campaign, $14,700 was raised in sixty days to benefit the Elizabeth L. Glaser Pediatric AIDS Foundation. The foundation issued $10,000 in grants to researchers in the fight against AIDS in children.

The check was presented to T.J. Sullivan and Joel Goldman, AIDS awareness speakers who presented "Friendship in the Age of AIDS" to the campus last April and accepted the Greek donation.

The donation to the foundation was greater than the total raised by Goldman and Sullivan in one year of speaking at over 70 schools throughout the nation. The fundraiser marked the Greek system's largest philanthropic effort in its 144-year history.

The University was awarded the Gamma Phi Beta Award, which recognizes the Greek system "that has developed and implemented a program that enhances the Greek image on the campus, and in the local community."

The award is sponsored by the Gamma Phi Beta National Sorority whose national office is in Englewood, Colorado.

Alan accepted the award and a $250 check on behalf of the Bucknell Greek system at the conference on Friday, Feb. 18. That money will be donated to the National Panhellenic Foundation on behalf of the University's Greek System.

The Bucknell Greek system won this award in 1995 and hopes to make this a recurring event.

Meredith Alan '01, president of the Panhellenic Council, was present at the conference to accept the award on behalf of the University's Greek system.

"As you can imagine, we are very excited that we received this award, not simply for the recognition, but for the precedent we set by incorporating the entire University and Lewisburg communities into the One Million Penny Project," Alan said.

Alan added, "IFC and Panhellenic are constantly striving to build bridges between the Greek community and the larger community it is a part of. Receiving this award was, in a sense, recognition that we are successfully moving toward that goal."

Roy Baker, assistant dean of students and dean of Greek life, was also excited about receiving the award from the national convention. He was "very pleased" and happy that "we are being seen now as a leader."

Baker also added that our representatives to the convention were acting as leaders because we are "doing things that other programs are just starting to think about."

University ranked in top liberal arts schools

By Peter Van Emburgh

The University was recently ranked the 30th Best National Liberal Arts College by *U.S. News and World Report* magazine while the Engineering program was rated the ninth-best among schools whose highest degree is a master's.

The University fared well among the higher-ranked schools such as top-ranked Swarthmore and eighteenth-ranked Colgate. Bucknell was tied with the College of Holy Cross.

One of the many strengths of the University compared to other schools are the graduation and freshman retention rates. The 1998 graduation rate was predicted to be 77 percent, while the actual rate was 87 percent- an enormously underestimated performance. The graduation rate of 87 percent is the eleventh highest among liberal arts colleges. The freshman retention rate of the University is a stellar 93 percent, matching the rates of Colby College and Bowdoin College.

Another strength noted by *U.S. News* is that 96 percent of the faculty are employed full time, a statistic that outranks almost all of the top liberal arts colleges.

The most prominent weakness of the University in comparison to the other schools is the alumni-giving rate. Only 38 percent of Bucknell alums give back to the school. The alumni giving rank for the University among national liberal arts schools is a disappointing 72. And while the University was

Public Safety Log

February 15, 2000

LARCENY/THEFT FROM A MOTOR VEHICLE — A University student reported to Public Safety that unknown person(s) had forcibly broken into his vehicle while parked in the Gateway parking lot and removed numerous components of a stereo system. Lewisburg Police was notified. The incident is under investigation.

THEFT BY UNLAWFUL TAKING — A University student reported to Public Safety that unknown person(s) removed two pair of pants from a dryer located at Swartz Hall basement laundry room. East Buffalo Township Police was notified. The incident is under investigation.

February 16, 2000

THEFT— A University employee reported to Public Safety that unknown person(s) removed two parking signs from Fraternity Road near Phi Psi Fraternity. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to Coleman Hall for the report of an unconscious student. Student refused medical treatment but recovered.

UNIVERSITY PROPERTY DAMAGE — Public Safety responded to Harris Hall for the report of a broken stairwell window. No witnesses or suspects could be located in a search of the area.

MEDICAL ASSIST— Public Safety observed an injured student at the Fieldhouse. The student was transported by a Student Health Services driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

February 17, 2000

INFORMATION—Public Safety assisted Lewisburg Police at the Phi Gamma Delta fraternity house with a loud music complaint. Lewisburg Police cited the fraternity president for disorderly conduct.

INFORMATION—An employee reported to a Public Safety officer that a parking decal was missing from her vehicle. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to the Fieldhouse for the report of a student with a knee injury. Student refused medical treatment.

VEHICLE ACCIDENT — A University student reported to Public Safety that a minor vehicle accident had occurred at the intersection of 7th Street and Moore Ave. There were no injuries and the operators exchanged insurance information.

February 18, 2000

UNIVERSITY PROPERTY DAMAGE — Public Safety responded to Harris Hall for the report of a broken room window. No witnesses or suspects could be located in a search of the area..

NON EMERGENCY MEDICAL TRANSPORT — A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency room for treatment for a rash on her face. Student Health Services transported the individual who later returned to campus.

ACT 64 VIOLATION — Public Safety assisted Residential Life staff in searching a room in Roberts Hall West for marijuana. Two non University male juveniles were found in a female student's room smoking marijuana The juveniles were transported to Public Safety where other marijuana particles were found on tobacco paper. Both individuals were transported by Lewisburg Police to a local motel off campus. Charges are pending.

PUBLIC DRUNKENNESS — While on routine patrol, Public Safety cited a 21—year old female University student on Fraternity Road in an intoxicated condition for Public Drunkenness. Student had been drinking at Sigma Chi.

February 19, 2000

UNDERAGE CONSUMPTION/ DISORDERLY CONDUCT — Public Safety responded to the front of Sigma Chi Fraternity for a report of an unwanted person trying to enter a party. Upon arrival they found a male BU student under the age of 21. The male was transported to Public Safety and issued a university citation for Underage Consumption and Disorderly Conduct. East Buffalo Township Police also issued the male a citation for Underage Consumption.

ASSIST RESIDENTIAL LIFE / UNDERAGE CONSUMPTION — Public Safety responded to Larison Hall 2nd Floor to assist Residential Life staff in checking a room for possible underage drinking.

Public Safety found 2 University males inside the room who had consumed alcohol and were cited for Underage Consumption. University Citations will also be issued to 2 University females and a male University student who were also under the age of 21 and present in the room where alcohol was served.

INFORMATION — A female University student reported to Public Safety that a brother of the Sigma Chi Fraternity verbally harassed her while she was attending a registered party there. The incident is under investigation.

VANDALISM/TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm at Roberts Hall, ground floor. Unknown person(s) discharged a fire extinguisher near the laundry room. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to Sigma Chi Fraternity for the report of a student with an ankle injury. The individual was transported by Public Safety to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION/VEHICLE DAMAGE — Public Safety responded to Fraternity Road adjacent to Sigma Chi Fraternity for the report that a large tree limb fell from a tree causing damage to a University student's vehicle.

INFORMATION/UNWANTED VISITOR — Public Safety responded to Sigma Phi Epsilon Fraternity for the report of an intoxicated male, unwilling to leave the front door area. He was transported to Bucknell West, where it was confirmed he was over 21 years of age and a visitor for the evening. Charges are pending.

February 20, 2000

UNDERAGE CONSUMPTION — Public Safety responded to the Third Floor of Smith Hall to assist Residential Life staff in checking a room for alcohol violations. Three male University students under the age of 21 were cited for Underage Possession and Consumption.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm at Sigma Alpha Epsilon Fraternity House. Unknown person(s) had activated the first floor pull station. The incident is under investigation.

TRESPASS/POSSIBLE PROPERTY VIOLATION — Public Safety responded to Bucknell West, Mod 35, for the report of an unknown male who entered the Mod and attempted to remove a stereo speaker. The occupant of the Mod awoke and the male fled the Mod. The incident is under investigation.

February 21, 2000

INFORMATION — Public Safety responded to the outside of the front doors of the Music and Arts building for a report that unknown person(s) had pushed over two sculptures on display. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to the Fieldhouse for the report of a student with an ankle injury. The individual was transported by a Student Health Services driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

Mike Green discusses drinking with Greeks

By Tracy Thiffault

"The greatest problem is people don't know the difference between drinking and getting drunk." These were the words from Mike Green, a recovering alcoholic and Theta Chi alumnus from Westchester University who spoke to University Greeks at a mandatory program Sunday night in the Weis Center.

Green, nationally known as one of the most entertaining speakers on drugs and alcohol, spoke in a humorous tone and used audience participation to help students understand the scope of the problem.

He handed out his own Alcohol Assessment form and asked students to rate their alcohol consumption during the most popular drinking times of the year such as birthdays, holidays, Homecoming and finals.

Green's presentation appealed to students because, instead of strictly advocating drinking less, Green urged students to be cautious when choosing drinks and to have a friend 'spotter' look out for you. "He was realistic and down to earth," Robin Manning '01 said.

Students also felt that Green related to their drinking habits and behavior. "Each [student] had to think for themselves on what they can do if they want to change," Cate Cornell '01 said.

"I definitely thought his message of the conversion from college drinker to social drinker was very relevant," Jennifer Freedman '00 said.

Roy Baker, assistant dean of students and dean of Greek Life, was satisfied with Green's presentation. "I thought he did an excellent job engaging our students," he said.

"The emphasis was more on athletes, but it was a good program," Madeline Driscoll '01 said.

The presentation was sponsored by Sigma Chi fraternity.

Anna Shaw—The Bucknellian

Green used humorous anecdotes and real-life stories to relay his message.

The numbers add up...

1 - Number of times the Bison football team won the Orange Bowl
2 - Number of people at the football games every week
15 - Lewisburg's ranking in the list of best small towns in America
31.1 - Three point field goal percentage for the men's basketball team as of February 16
46 - Percentage of total arrests made by Lewisburg Police in January that involved University students (17 of 36)
52.75 - Hours during January Lewisburg police spent responding to University related calls
62 - Number of days left till the end of classes for the Spring semester
1846 - Year of the founding of the University at Lewisburg by the Pennsylvania Baptists
7,011 - Applications received for the class of 2004
29,435 - Bucknell University tuition and fees for 2000-01
162.6 million - Amount of money raised by The Bucknell Campaign as of January 31

This week in Bucknellian Headline History

A Convention Dance

February 22, 1898

The ball which Pennsylvania Zeta Chapter of Sigma Alpha Epsilon fraternity gave last evening in honor of the delegates to the Province Beta bi-annual convention, which convened here yesterday morning to continue until tomorrow afternoon, was concededly one of the most superb affairs ever held in the history of the chapter. A glance at the brilliant gathering revealed the fact that it comprised the cap-sheaves of the fashionables, not only of Lewisburg but also of the various other college towns represented by the delegates. Shortly after 9 o'clock the hall was comfortably filled with charming young ladies and debonair young men.

Cornell Fire

February 21, 1916

Cornell suffered a severe loss last week when Morse Hall, containing the University's valuable chemical laboratories and scientific equipment was destroyed by fire. The cause of the fire is unknown. The loss will probably total about $400,000. The danger of exploding chemicals and the lack of water pressure hindered the work of the firemen to a great extent. Valuable chemicals, which can not be replaced while the war is going on, were consumed. As a result of the fire, over 2500 students will have to rearrange their schedules, as every course at Cornell, except the course in law, requires a certain amount of chemistry.

Golf Course Planned; To Survey BU Land

February 28, 1930

Professor James P. Whyte, chairman of the golf course committee, has announced that Mr. Emil Loeffler, noted golf architect, will arrive at Lewisburg within the next few weeks to look over the land which has been purchased for the golf course.

Mr. Loeffler is one of the foremost golf course engineers in the country. At present, he is at work on the Oakmont golf course in Pittsburgh, where alterations of the course to the extent of $65,000 are being undertaken under his directions.

Mr. Loeffler is also working on three new courses near Pittsburgh. After his trip to Bucknell he will go to Colorado, where he will start work on two new courses. In the middle of April he is scheduled to go to Rochester, N.Y., where he will lay out a course for George Eastman, of Kodak fame.

While in Lewisburg, Mr. Loeffler will confer with Professor Frank E. Burpee, the chairman of the course construction committee, and it is possible that he will meet the members of the faculty committee in one or two conferences.

Leopards Top Herd, 89-77

February 21, 1956

Trailing Bucknell for sixteen minutes, the Lafayette College court combine grabbed the lead midway through the second period of Wednesday night's Davis Gym contest and came up with a late rally to hand Bucknell an 89-77 defeat. The decision was number twelve for both teams, the Leopard's twelfth win in nineteen starts and the twelfth loss in thirteen starts for the Bisons.

Again the Orange and Blue was "light in height," but with Dick Bradway and Barry Parker hotter than Fourth of July firecrackers, the Herd gave the Maroon a real scare. Bradway dumped five shots from the outside in a first quarter basket assault that found Ben Kribbs' aggregation leading, 23-21.

The lead changed hands four times in the second quarter, but after big George Young's one-hander swished the cords, the Leopards were never headed. They rested at intermission with a 42-39 bulge and had a 63-60 edge when the third period gun barked.

Bradway and Parker were the big guns for the Kribbsmen. Bradway played a terrific game both on offense, scoring 24 points, and on defense. He was deadly from the outside and hid drive-ins under the boards left little to be desired. Parker copped the evening's scoring honors with 28 counters and was a demon to his taller opponents. He blocked one Maroon shot after another before fouling out in the final period.

Lacrosse Club Recently Formed on BU Campus

February 23, 1962

This spring, Bucknellians will have a chance to observe firsthand America's fastest growing intercollegiate sport, lacrosse. Under the guidance and coaching of Ed Thomson, who is the head resident of Swartz Hall and a former college lacrosse player from Cortland College. Approximately 30 men have signed up for the sport.

Because of the difficulties of establishing the sport on a formal intercollegiate level during the first year, those interested have formed a club.

The chances for the success of the club have been greatly enhanced by a loan of equipment consisting of helmets, gloves, balls, and nets from the Huntington Public Schools on Long Island.

The club has already had several practices and is now trying to schedule games with Penn State, Cortland, Dickinson, Susquehanna, and Gettysburg for this spring.

News Briefs

New Sectarian Violence Erupts in Nigerian City

New outbreaks of violence erupted in the Nigerian city of Kaduna on Wednesday as security forces tried to prevent more riots between Christians and Muslims who are demanding the introduction of Islamic law.

Police said reinforcements had been rushed to the Agwan Sanusi district after reports of recent trouble between factions which have been fighting since Monday, leaving dozens dead and churches and mosques burned down.

"We are in absolute control now with the help of the soldiers but complete normalcy cannot be restored until we have mopped up the situation," the regional police commander, Assistant Inspector-General Tafa Balogun, told Reuters.

The violence in Kaduna has again raised questions over the long-term fate of Africa's most populous nation following the return of civilian rule under President Olusegun Obasanjo last May.

Rioting broke out on Monday after thousands of Christians marched in protest against Muslim demands for the divided Kaduna state to introduce sharia law—something the state government is studying.

KFOR Stages Surprise Weapons Search in Tense Kosovo City

American, French and British peacekeepers arrested at least eight people Wednesday for illegal weapons in a surprise sweep of the Serb-controlled northern enclave of Mitrovica.

About 300 U.S. paratroopers, wearing full combat gear, flak jackets, knee guards and visors marched across the main bridge dividing the Serb and ethnic Albanian sections of the city early Wednesday morning.

U.S. officials say they seized at least three Kalashnikov rifles, grenades and a shotgun in the three-hour house to house search.

It was the first time American peacekeepers had entered Serb territory since Sunday, when rock-throwing Serbs drove out U.S. and German KFOR troops conducting a weapons search.

"It's part of an ongoing effort to show our resolve and to show that (forces other) than French forces can go across the river and operate," Maj. Erik Gunhuss said.

Kosovska Mitrovica has the largest remaining Serb community in Kosovo, and clashes between Serbs and ethnic Albanians is common.

Thousands of ethnic Albanians were killed by Serb forces during Yugoslav President Slobodan Milosevic's 18-month crackdown against separatists in Kosovo. After NATO bombing forced the Serb troops to withdraw last spring, ethnic Albanians began attacking Serbs in revenge.

The latest flare-up of violence began after a grenade attack on a U.N. bus Feb. 2 killed two elderly Serbs south of the city. That triggered revenge attacks that have killed nine people and injured dozens more.

US Drug Agents Bust Ecstasy Ring

The Drug Enforcement Administration has disrupted what officials suspect was a multimillion-dollar ecstasy distribution ring run in part by Israeli organized crime, law enforcement officials said Wednesday.

The New York-Tel Aviv ring allegedly sold hundreds of thousands of ecstasy pills each month in the New York area.

According to sources, the pills were produced in the Netherlands at a cost of 50 cents to $1 per pill and eventually were sold in New York, particularly at so-called rave clubs, for $25 to $50 each.

The eight-month undercover operation resulted in more than 70 arrests. Officials said the Dutch and Israeli national police took part in the investigation.

The use of so-called "club drugs," especially synthetic ones, is a growing problem. According to the Drug Abuse Warning Network, the number of hospital emergency room visits involving such drugs more than quadrupled between 1994 and 1998.

Ecstasy is a stimulant with mild hallucinogenic powers. Nicknamed "the love drug," it became popular during the 1980s among American yuppies who bought the pills with credit cards at exclusive clubs. In 1985, it was banned in the United States.

McCain wins Arizona, Michigan with non-GOP support

The day after Sen. John McCain's bounce-back double victory in the Michigan and Arizona primaries, he and his Republican presidential rival, Gov. George W. Bush, moved Wednesday to new battlegrounds—McCain to Washington state; Bush to California.

Reinvigorated by his two victories on Tuesday, McCain claimed "a new majority" for his presidential cause. He urged Republican regulars to join him and not fear his reach for Democratic and independent voters.

We are Al Gore's worst nightmare," McCain said, shortly before giving a thumbs-up amid a burst of red confetti as he stood with his wife, Cindy, in a raucous rally at a Phoenix hotel.

McCain campaign officials and political analysts say the Arizona senator is getting a substantial boost from a growing sense—reflected in polls—that in November he could beat Gore, the Democratic front-runner.

"We are assembling a winning coalition of Republicans, conservatives, independents and Reagan Democrats," a McCain campaign official told CNN.

To repair damage among Republicans after weeks of pounding from Bush, McCain's camp says its candidate will tout his conservatism, his work to reduce spending, his pro-life position and his desire to be seen as a reformer.

News Briefs Compiled From CNN Interactive by David Arnold

Phi Psi is disciplined for hazing

Fraternity placed on probation until the end of the spring semester

By Anne Monoky

After the University's investigation into the pending hazing charges against the fraternity, the sanctions were released on Feb. 15. The Community Judicial Board found the fraternity responsible for disorderly conduct; hazing; and violation of institutional policy, regulations and/or procedures.

As a result, the chapter was placed on disciplinary probation from Feb. 15 to June 1. Also, the chapter membership is required to clean the entire campus on Saturday and Sunday morning of House Party weekend and again on the morning of Saturday, April 15.

Dean of Greek Life Roy Baker commented on the sanctions, "I am quite disappointed that any of our fraternities would be involved in any particular activity that could be construed as hazing, but I feel good that our system has worked and that the fraternity was held accountable for their actions," Baker said. "The real strength of any Greek system is measured by its ability to hold members of chapters accountable when appropriate, and this has happened."

Baker feels that the University has clearly stated by their actions that it will not tolerate any actions by any groups that could possibly be interpreted as hazing.

"We reiterate that Bucknell University regards any instance of hazing with the utmost seriousness, and we go to great lengths to educate students about our no-hazing policy," said Dean of Students Allen Schweinsberg in his campus-wide email in response to the sanctions placed on Phi Kappa Psi fraternity.

Members of Phi Kappa Psi fraternity feel quite different about the verdict. President Eric Fair '01 explained, "I understand the University investigating us, there was no reason not to, but the final decision that the University made does not respect the evidence of the case," Fair said.

The fraternity indicated that the individuals involved testified that nothing happened to them. The brotherhood feels the rules surrounding this issue are vague and ambiguous.

Dean Baker said, "The system has worked, it has worked well. The fraternity has accepted responsibility for what they were involved in, and I'm just glad that it wasn't more serious than it was."

Former Phi Psi president Mike Eisenstein argued, "This kind of a verdict and the repercussions that come with it really make a mockery of not only the University's authority but of the seriousness that attaches to a charge like this."

RANK From Page 1

ranked the 30th best liberal arts school overall, its selectivity rank stood at 38.

U.S. News loosely evaluates each institution on several issues including: academic reputation- such as the "worth" of the school's diploma, retention rates, faculty resources, selectivity, financial resources- such as endowment figures and the alumni giving rate.

These rankings provide a comparative measure of the quality of the academic program at each institution.

Indigo Girls to play spring concert

from page 1

College and in Scranton around the same time, whereas the Bush tour was too expensive and did not fit within the SCC's budget.

Michele Lesh pointed out that "the Indigo Girls were one of the top choices of the student body. It's really great to have another big name band on campus because the main goal of the CC is to bring in top names."

The announcement should add smiles to an already excited student body that is buzzing about this weekend's concert at Uptown. The new night spot will host The Brother's Creegan, a side project of current and former Barenaked Ladies band members. The concert starts at 11 p.m. Saturday night, with free admission to students with BUID.

Nearly 4500 tickets for the Indigo Girls go on sale March 6 and are $15 with a BUID.

Public Safety Log

February 15, 2000

LARCENY/THEFT FROM A MOTOR VEHICLE — A University student reported to Public Safety that unknown person(s) had forcibly broken into his vehicle while parked in the Gateway parking lot and removed numerous components of a stereo system. Lewisburg Police was notified. The incident is under investigation.

THEFT BY UNLAWFUL TAKING — A University student reported to Public Safety that unknown person(s) removed two pair of pants from a dryer located at Swartz Hall basement laundry room. East Buffalo Township Police was notified. The incident is under investigation.

February 16, 2000

THEFT— A University employee reported to Public Safety that unknown person(s) removed two parking signs from Fraternity Road near Phi Psi Fraternity. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to Coleman Hall for the report of an unconscious student. Student refused medical treatment but recovered.

UNIVERSITY PROPERTY DAMAGE — Public Safety responded to Harris Hall for the report of a broken stairwell window. No witnesses or suspects could be located in a search of the area.

MEDICAL ASSIST— Public Safety observed an injured student at the Fieldhouse. The student was transported by a Student Health Services driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

February 17, 2000

INFORMATION—Public Safety assisted Lewisburg Police at the Phi Gamma Delta fraternity house with a loud music complaint. Lewisburg Police cited the fraternity president for disorderly conduct.

INFORMATION—An employee reported to a Public Safety officer that a parking decal was missing from her vehicle. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to the Fieldhouse for the report of a student with a knee injury. Student refused medical treatment.

VEHICLE ACCIDENT — A University student reported to Public Safety that a minor vehicle accident had occurred at the intersection of 7th Street and Moore Ave. There were no injuries and the operators exchanged insurance information.

February 18, 2000

UNIVERSITY PROPERTY DAMAGE — Public Safety responded to Harris Hall for the report of a broken room window. No witnesses or suspects could be located in a search of the area.

NON EMERGENCY MEDICAL TRANSPORT — A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency room for treatment for a rash on her face. Student Health Services transported the individual who later returned to campus.

ACT 64 VIOLATION — Public Safety assisted Residential Life staff in searching a room in Roberts Hall West for marijuana. Two non University male juveniles were found in a female student's room smoking marijuana The juveniles were transported to Public Safety where other marijuana particles were found on tobacco paper. Both individuals were transported by Lewisburg Police to a local motel off campus. Charges are pending.

PUBLIC DRUNKENNESS — While on routine patrol, Public Safety cited a 21—year old female University student on Fraternity Road in an intoxicated condition for Public Drunkenness. Student had been drinking at Sigma Chi.

February 19, 2000

UNDERAGE CONSUMPTION/DISORDERLY CONDUCT — Public Safety responded to the front of Sigma Chi Fraternity for a report of an unwanted person trying to enter a party. Upon arrival they found a male BU student under the age of 21. The male was transported to Public Safety and issued a university citation for Underage Consumption and Disorderly Conduct. East Buffalo Township Police also issued the male a citation for Underage Consumption.

ASSIST RESIDENTIAL LIFE / UNDERAGE CONSUMPTION — Public Safety responded to Larison Hall 2nd Floor to assist Residential Life staff in checking a room for possible underage drinking.

Public Safety found 2 University males inside the room who had consumed alcohol and were cited for Underage Consumption. University Citations will also be issued to 2 University females and a male University student who were also under the age of 21 and present in the room where alcohol was served.

INFORMATION — A female University student reported to Public Safety that a brother of the Sigma Chi Fraternity verbally harassed her while she was attending a registered party there. The incident is under investigation.

VANDALISM/TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm at Roberts Hall, ground floor. Unknown person(s) discharged a fire extinguisher near the laundry room. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to Sigma Chi Fraternity for the report of a student with an ankle injury. The individual was transported by Public Safety to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

INFORMATION/VEHICLE DAMAGE — Public Safety responded to Fraternity Road adjacent to Sigma Chi Fraternity for the report that a large tree limb fell from a tree causing damage to a University student's vehicle.

INFORMATION/UNWANTED VISITOR — Public Safety responded to Sigma Phi Epsilon Fraternity for the report of an intoxicated male, unwilling to leave the front door area. He was transported to Bucknell West, where it was confirmed he was over 21 years of age and a visitor for the evening. Charges are pending.

February 20, 2000

UNDERAGE CONSUMPTION — Public Safety responded to the Third Floor of Smith Hall to assist Residential Life staff in checking a room for alcohol violations. Three male University students under the age of 21 were cited for Underage Possession and Consumption.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm at Sigma Alpha Epsilon Fraternity House. Unknown person(s) had activated the first floor pull station. The incident is under investigation.

TRESPASS/POSSIBLE PROPERTY VIOLATION — Public Safety responded to Bucknell West, Mod 35, for the report of an unknown male who entered the Mod and attempted to remove a stereo speaker. The occupant of the Mod awoke and the male fled the Mod. The incident is under investigation.

February 21, 2000

INFORMATION — Public Safety responded to the outside of the front doors of the Music and Arts building for a report that unknown person(s) had pushed over two sculptures on display. The incident is under investigation.

MEDICAL ASSIST — Public Safety responded to the Fieldhouse for the report of a student with an ankle injury. The individual was transported by a Student Health Services driver to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

Mike Green discusses drinking with Greeks

By Tracy Thiffault

"The greatest problem is people don't know the difference between drinking and getting drunk." These were the words from Mike Green, a recovering alcoholic and Theta Chi alumnus from Westchester University who spoke to University Greeks at a mandatory program Sunday night in the Weis Center.

Green, nationally known as one of the most entertaining speakers on drugs and alcohol, spoke in a humorous tone and used audience participation to help students understand the scope of the problem.

He handed out his own Alcohol Assessment form and asked students to rate their alcohol consumption during the most popular drinking times of the year such as birthdays, holidays, Homecoming and finals.

Green's presentation appealed to students because, instead of strictly advocating drinking less, Green urged students to be cautious when choosing drinks and to have a friend 'spotter' look out for you. "He was realistic and down to earth," Robin Manning '01 said.

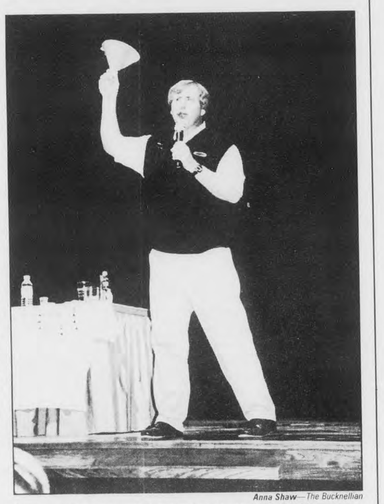
Students also felt that Green related to their drinking habits and behavior. "Each [student] had to think for themselves on what they can do if they want to change," Cate Cornell '01 said.

"I definitely thought his message of the conversion from college drinker to social drinker was very relevant," Jennifer Freedman '00 said.

Roy Baker, assistant dean of students and dean of Greek Life, was satisfied with Green's presentation. "I thought he did an excellent job engaging our students," he said.

"The emphasis was more on athletes, but it was a good program," Madeline Driscoll '01 said.

The presentation was sponsored by Sigma Chi fraternity.



Anna Shaw—The Bucknellian

Green used humorous anecdotes and real-life stories to relay his message.

The numbers add up...

1 - Number of times the Bison football team won the Orange Bowl
2 - Number of people at the football games every week
15 - Lewisburg's ranking in the list of best small towns in America
31.1 - Three point field goal percentage for the men's basketball team as of February 16
46 - Percentage of total arrests made by Lewisburg Police in January that involved University students (17 of 36)
52.75 - Hours during January Lewisburg police spent responding to University related calls
62 - Number of days left till the end of classes for the Spring semester
1846 - Year of the founding of the University at Lewisburg by the Pennsylvania Baptists
7,011 - Applications received for the class of 2003
29,435 - Bucknell University tuition and fees for 2000-01
162.6 million - Amount of money raised by The Bucknell Campaign as of January 31

This week in Bucknellian Headline History

A Convention Dance

February 22, 1898

The ball which Pennsylvania Zeta Chapter of Sigma Alpha Epsilon fraternity gave last evening in honor of the delegates to the Province Beta bi-annual convention, which convened here yesterday morning to continue until tomorrow afternoon, was concededly one of the most superb affairs ever held in the history of the chapter. A glance at the brilliant gathering revealed the fact that it comprised the cap-sheaves of the fashionables, not only of Lewisburg but also of the various other college towns represented by the delegates. Shortly after 9 o'clock the hall was comfortably filled with charming young ladies and debonair young men.

Cornell Fire

February 21, 1916

Cornell suffered a severe loss last week when Morse Hall, containing the University's valuable chemical laboratories and scientific equipment was destroyed by fire. The cause of the fire is unknown. The loss will probably total about $400,000. The danger of exploding chemicals and the lack of water pressure hindered the work of the firemen to a great extent. Valuable chemicals, which can not be replaced while the war is going on, were consumed. As a result of the fire, over 2500 students will have to rearrange their schedules, as every course at Cornell, except the course in law, requires a certain amount of chemistry.

Golf Course Planned; To Survey BU Land

February 28, 1930

Professor James P. Whyte, chairman of the golf course committee, has announced that Mr. Emil Loeffler, noted golf architect, will arrive at Lewisburg within the next few weeks to look over the land which has been purchased for the golf course.

Mr. Loeffler is one of the foremost golf course engineers in the country. At present, he is at work on the Oakmont golf course in Pittsburgh, where alterations of the course to the extent of $65,000 are being undertaken under his directions.

Mr. Loeffler is also working on three new courses near Pittsburgh. After his trip to Bucknell he will go to Colorado, where he will start work on two new courses. In the middle of April he is scheduled to go to Rochester, N.Y., where he will lay out a course for George Eastman, of Kodak fame.

While in Lewisburg, Mr. Loeffler will confer with Professor Frank E. Burpee, the chairman of the course construction committee, and it is possible that he will meet the members of the faculty committee in one or two conferences.

Leopards Top Herd, 89-77

February 21, 1956

Trailing Bucknell for sixteen minutes, the Lafayette College court combine grabbed the lead midway through the second period of Wednesday night's Davis Gym contest and came up with a late rally to hand Bucknell an 89-77 defeat. The decision was number twelve for both teams, the Leopard's twelfth win in nineteen starts and the twelfth loss in thirteen starts for the Bisons.

Again the Orange and Blue was "light in height," but with Dick Bradway and Barry Parker hotter than Fourth of July firecrackers, the Herd gave the Maroon a real scare. Bradway dumped five shots from the outside in a first quarter basket assault that found Ben Kribbs' aggregation leading, 23-21.

The lead changed hands four times in the second quarter, but after big George Young's one-hander swished the cords, the Leopards were never headed. They rested at intermission with a 42-39 bulge and had a 63-60 edge when the third period gun barked.

Bradway and Parker were the big guns for the Kribbsmen. Bradway played a terrific game both on offense, scoring 24 points, and on defense. He was deadly from the outside and hid drive-ins under the boards left little to be desired. Parker copped the evening's scoring honors with 28 counters and was a demon to his taller opponents. He blocked one Maroon shot after another before fouling out in the final period.

Lacrosse Club Recently Formed on BU Campus

February 23, 1962

This spring, Bucknellians will have a chance to observe firsthand America's fastest growing intercollegiate sport, lacrosse. Under the guidance and coaching of Ed Thomson, who is the fiead resident of Swartz Hall and a former college lacrosse player from Cortland College. Approximately 30 men have signed up for the sport.

Because of the difficulties of establishing the sport on a formal intercollegiate level during the first year, those interested have formed a club.

The chances for the success of the club have been greatly enhanced by a loan of equipment consisting of helmets, gloves, balls, and nets from the Huntington Public Schools on Long Island.

The club has already had several practices and is now trying to schedule games with Penn State, Cortland, Dickinson, Susquehanna, and Gettysburg for this spring.

News Briefs

New Sectarian Violence Erupts in Nigerian City

New outbreaks of violence erupted in the Nigerian city of Kaduna on Wednesday as security forces tried to prevent more riots between Christians and Muslims who are demanding the introduction of Islamic law.

Police said reinforcements had been rushed to the Agwan Sanusi district after reports of recent trouble between factions which have been fighting since Monday, leaving dozens dead and churches and mosques burned down.

"We are in absolute control now with the help of the soldiers but complete normalcy cannot be restored until we have mopped up the situation," the regional police commander, Assistant Inspector-General Tafa Balogun, told Reuters.

The violence in Kaduna has again raised questions over the long-term fate of Africa's most populous nation following the return of civilian rule under President Olusegun Obasanjo last May.

Rioting broke out on Monday after thousands of Christians marched in protest against Muslim demands for the divided Kaduna state to introduce sharia law—something the state government is studying.

KFOR Stages Surprise Weapons Search in Tense Kosovo City

American, French and British peacekeepers arrested at least eight people Wednesday for illegal weapons in a surprise sweep of the Serb-controlled northern enclave of Mitrovica.

About 300 U.S. paratroopers, wearing full combat gear, flak jackets, knee guards and visors marched across the main bridge dividing the Serb and ethnic Albanian sections of the city early Wednesday morning.

U.S. officials say they seized at least three Kalashnikov rifles, grenades and a shotgun in the three-hour house to house search.

It was the first time American peacekeepers had entered Serb territory since Sunday, when rock-throwing Serbs drove out U.S. and German KFOR troops conducting a weapons search.

"It's part of an ongoing effort to show our resolve and to show that (forces other) than French forces can go across the river and operate," Maj. Erik Gunhuss said.

Kosovska Mitrovica has the largest remaining Serb community in Kosovo, and clashes between Serbs and ethnic Albanians is common.

Thousands of ethnic Albanians were killed by Serb forces during Yugoslav President Slobodan Milosevic's 18-month crackdown against separatists in Kosovo. After NATO bombing forced the Serb troops to withdraw last spring, ethnic Albanians began attacking Serbs in revenge.

The latest flare-up of violence began after a grenade attack on a U.N. bus Feb. 2 killed two elderly Serbs south of the city. That triggered revenge attacks that have killed nine people and injured dozens more.

US Drug Agents Bust Ecstasy Ring

The Drug Enforcement Administration has disrupted what officials suspect was a multimillion-dollar ecstasy distribution ring run in part by Israeli organized crime, law enforcement officials said Wednesday.

The New York-Tel Aviv ring allegedly sold hundreds of thousands of ecstasy pills each month in the New York area.

According to sources, the pills were produced in the Netherlands at a cost of 50 cents to $1 per pill and eventually were sold in New York, particularly at so-called rave clubs, for $25 to $50 each.

The eight-month undercover operation resulted in more than 70 arrests. Officials said the Dutch and Israeli national police took part in the investigation.

The use of so-called "club drugs," especially synthetic ones, is a growing problem. According to the Drug Abuse Warning Network, the number of hospital emergency room visits involving such drugs more than quadrupled between 1994 and 1998.

Ecstasy is a stimulant with mild hallucinogenic powers. Nicknamed "the love drug," it became popular during the 1980s among American yuppies who bought the pills with credit cards at exclusive clubs. In 1985, it was banned in the United States.

McCain wins Arizona, Michigan with non-GOP support

The day after Sen. John McCain's bounce-back double victory in the Michigan and Arizona primaries, he and his Republican presidential rival, Gov. George W. Bush, moved Wednesday to new battlegrounds—McCain to Washington state; Bush to California.

Reinvigorated by his two victories on Tuesday, McCain claimed "a new majority" for his presidential cause. He urged Republican regulars to join him and not fear his reach for Democratic and independent voters.

We are Al Gore's worst nightmare," McCain said, shortly before giving a thumbs-up amid a burst of red confetti as he stood with his wife, Cindy, in a raucous rally at a Phoenix hotel.

McCain campaign officials and political analysts say the Arizona senator is getting a substantial boost from a growing sense—reflected in polls—that in November he could beat Gore, the Democratic front-runner.

"We are assembling a winning coalition of Republicans, conservatives, independents and Reagan Democrats," a McCain campaign official told CNN.

To repair damage among Republicans after weeks of pounding from Bush, McCain's camp says its candidate will tout his conservatism, his work to reduce spending, his pro-life position and his desire to be seen as a reformer.

News Briefs Compiled From CNN Interactive by David Arnold

Phi Psi is disciplined for hazing

Fraternity placed on probation until the end of the spring semester

By Anne Monoky

After the University's investigation into the pending hazing charges against the fraternity, the sanctions were released on Feb. 15. The Community Judicial Board found the fraternity responsible for disorderly conduct; hazing; and violation of institutional policy, regulations and/or procedures.

As a result, the chapter was placed on disciplinary probation from Feb. 15 to June 1. Also, the chapter membership is required to clean the entire campus on Saturday and Sunday morning of House Party weekend and again on the morning of Saturday, April 15.

Dean of Greek Life Roy Baker commented on the sanctions, "I am quite disappointed that any of our fraternities would be involved in any particular activity that could be construed as hazing, but I feel good that our system has worked and that the fraternity was held accountable for their actions," Baker said. "The real strength of any Greek system is measured by its ability to hold members of chapters accountable when appropriate, and this has happened."

Baker feels that the University has clearly stated by their actions that it will not tolerate any actions by any groups that could possibly be interpreted as hazing.

"We reiterate that Bucknell University regards any instance of hazing with the utmost seriousness, and we go to great lengths to educate students about our no-hazing policy," said Dean of Students Allen Schweinsberg in his campus-wide email in response to the sanctions placed on Phi Kappa Psi fraternity.

Members of Phi Kappa Psi fraternity feel quite different about the verdict. President Eric Fair '01 explained, "I understand the University investigating us, there was no reason not to, but the final decision that the University made does not respect the evidence of the case," Fair said.

The fraternity indicated that the individuals involved testified that nothing happened to them. The brotherhood feels the rules surrounding this issue are vague and ambiguous.

Dean Baker said, "The system has worked, it has worked well. The fraternity has accepted responsibility for what they were involved in, and I'm just glad that it wasn't more serious than it was."

Former Phi Psi president Mike Eisenstein argued, "This kind of a verdict and the repercussions that come with it really make a mockery of not only the University's authority but of the seriousness that attaches to a charge like this."

RANK From Page 1

ranked the 30th best liberal arts school overall, its selectivity rank stood at 38.

U.S. News loosely evaluates each institution on several issues including: academic reputation- such as the "worth" of the school's diploma, retention rates, faculty resources, selectivity, financial resources- such as endowment figures and the alumni giving rate.

These rankings provide a comparative measure of the quality of the academic program at each institution.

Commencement speaker selection draws mixed reviews

Each year, the announcement of the commencement speaker draws mixed reactions; this year is no exception. While many applaud the selection of renowned poet Eavan Boland, others feel that the choice leaves much to be desired.

The selection committee, comprised of three administrators, three faculty members and the three senior class officers worked diligently to sift through the wide range of selections made by the senior class to select a respectable list of suitable speakers. This list of approximately 15 speakers was then passed on to President Adams, who subsequently begins invitations starting at the top.

The eventual choice, as in most years, can not please all seniors. The disappointment comes in several forms: some may believe that the committee did not attempt to hire a prominent public figure; others may have been mislead to believe that such high-profile figures were realistic candidates; while many more may feel they cannot identify with a female Irish poet.

Last year's selection of Aung Sung Suu Kyi drew similar criticisms. The possibility of the Burmese Nobel Peace Prize winner coming to campus was slim. Fearing she would not be allowed back into the country, Suu Kyi did not even leave to be at her husband's side during a painful illness and eventual death. The majority of seniors felt the choice was inappropriate because she was not likely to deliver her own speech.

The 1998 speaker, former NAACP chairman Julian Bond, was an equally disappointing choice to the seniors. They did not feel that they could identify with Bond, much like they feel distanced from Boland.

The committee expressed its intention in finding a speaker that is both "realistic" in attaining and would speak directly to the students, instead of a popular figure is not likely to deliver a Bucknell-tailored speech. Based on her previous commencement speeches and participation in last semester's Irish Focus Seminar, committee members held Boland as an exceptional choice.

Committee members also noted the difficulty in booking prominent national figures and politicians. Many of these are not willing to commit until the last minute or require exorbitant payment for such a short speech. Because the University does not grant honorary degrees and is not willing to shell out large amounts of money to graduation speakers, it meets a greater challenge in attaining such popular icons.

Through their deliberations, the committee members attempted to find a speaker who fulfills a happy medium between the University's broad range of academic disciplines.

Universal satisfaction is practically impossible—finding a speaker that can appropriately address graduates in business, sciences, engineering, humanities and social sciences is obviously a formidable task. While humanities students will probably be more satisfied than those from other areas, these students may have objected to previous speakers.

Senior class members are generally misdirected in the selection of a speaker, left to believe that such "unrealistic" speakers are actually a possibility. Better steps need to be taken in the future to assure the students that they are fully informed about the particular criteria sought by the committee to reduce miscommunication and brace the senior class for a somewhat inevitable degree of letdown.

This is not to say that the committee should not be applauded for their efforts—the members put considerable energy toward selecting a suitable speaker who will appropriately address the graduates. The committee also utilized two senior surveys, via email, in compiling its list, a measure not taken in previous years. This certainly enhanced the senior students' input in the process.

Whether disappointed or pleased with the University's choice, graduation weekend is about much more than a 20-minute speech. It should be remembered as a time when the entire senior class meets for one final event, a chance to say goodbye to their friends, teachers and the University.

Many will value different speaker characteristics, hopefully most will be able to look back at their four years in Lewisburg with pride and happiness instead of dwelling on a speech that most likely will not be remembered in the long run.

Letters to the Editor

Bucknellian editorial attacked

To the editor,

On behalf of the Student Advisory Committee to the Presidential Search, I feel it id imperative to point out the factual errors of last week's editorial as well as addressing the other issues put forth.

In terms of factual errors, it is wrong of The Bucknellian to assert that there is "no representative for sports teams or the athletic department" on the committee. In fact, four members of the sixteen-person committee have participated in intercollegiate athletics on a varsity or junior-varsity level. Two members of the committee, Alex Russell '01 and Bridget O'Mara '02, are active members of varsity sports teams. Bridget also serves as captain of the women's golf team. Therefore it is clear that there are qualified student-athletes on the committee who are fully capable of articulating the student-athlete perspective.

Last week's editorial also stated that there is no direct representation of religious or academic organizations. While there are no created slots for these organizations, they are most definitely represented. The members of the committee do not exist in a vacuum; that is they do more on campus than participate in the organization that got them onto the committee. The committee is made up of members who are actively involved in all sorts of organizations, including ones that the editorial charges were lacking. Specifically, the committee is comprised of students who are active in the Catholic Campus Ministry (CCM), the College or Arts and Sciences Curriculum Committee, and even students who have served as contributing writers to The Bucknellian. Although the committee recognizes the importance of all deserving organizations not directly represented and acknowledges the great deal of good they do for both the student body and the University community in general, these groups could not be given direct representation on the committee. Why? Simply put-numbers. Sixteen students serve on the committee included the representatives that the paper mentioned then the group would swell from a manageable sixteen to at least an unwieldy twenty-two. At some point the decision had to be made what constituted ample representation of the student body. That decision was mine and I strongly believe it was the right one.

The most important aspect, I believe, to communicate is not who is lacking from the committee but who is on the committee and why they are on. The sixteen students on this committee are, in their hearts and minds, student advocates. They have taken on an active role on this committee because they care about student issues and want to ensure that the next president is deeply committed to the student body. The students serve not to improve their resumes or to cultivate a personal contact but to improve the student this school. For all their time, energy and enthusiasm, I would like to thank them.

To further elaborate on why the committee is composed as such, I would point out that the emphasis in the selection of the members was to incorporate students who are elected by the student body. In fact, half of the committee is composed of such students. These are students organization could be directly represented, please believe and know that the committee, in general, and especially your elected leaders are working in the best interests of every student and every student organization.

On an aside, since last week's editorial neglected to mention what the composition of the committee is, I would like to list the composition here for the student body's edification: the four members of the BSG Executive Board, the four class presidents, the Presidents of RHA, BAC, IFC and Panhellenic Councils, as well as two minority students, an international student and a representative for alternative lifestyle students. If anyone is interested in further information concerning the makeup of the committee and/or the selection process, please do not hesitate to contact me at bouchoux@bucknell.edu or 577-8753.

In closing, I would like to address the manner in which the editorial was presented. I feel that The Bucknellian would have better served the campus if an informative article about the Student Advisory Committee had accompanied or replaced the somewhat misinformed and slanted editorial. The lack of an article explaining the existence of a committee, its composition and what efforts the committee has been undertaking was, in my opinion, unfair to the student body. After all, isn't the goal of our student newspaper to provide all the relevant information to the student body and let them form an opinion based on this data?

Christopher Bouchoux '01
Chair of the Student Advisory Committee to the Presidential Search

Editor's note: The editor-in-chief will respond to these claims in next week's issue of The Bucknellian.

Phi Kappa Psi defends character

The Brotherhood of Phi Kappa Psi would like to educate the campus community as to what we consider a gross misrepresentation of our character and the circumstances leading to recent University sanctions. We would like to state the facts of the case and highlight withheld elements. These unmentioned factors served to taint our character, one that earned us the distinction of Most Outstanding Chapter last year.

* Pictures of brothers participating in our Paddle Presentation Ceremony were received by the Dean's office via anonymous submission.
* From three pictures, taken in late March 1999, the University decided to suspend the activities of Phi Kappa Psi during an investigation.
* Paddling is not a part of the presentation ceremony.
* Every participant is an initiated brother—not a pledge.
* The University's administration sent out campus-wide emails that have severely discredited Phi Kappa Psi.
* The Dean's office contacted the police, who conducted an official investigation. Several brothers were read their Miranda Rights during a six hour interrogation. No charges were filed.

The University investigation resulted in several charges including hazing. We were found responsible for violating the University's Hazing Policy (p. 12 of the student handbook). The conviction was based on the premise that the ceremony created an environment that had the potential to cause harm. The decision came despite testimony given by all participants in the pictures, before both the police and the University Judicial Board, indicating that there was no possibility for harm or fear therein.

We were wrongfully made into an example by the administration. This is especially apparent in the wording and depiction of circumstances by the administration's campus-wide emails: "The University has learned of a possible incident of hazing involving members of the Bucknell chapter of Phi Kappa Psi. Bucknell University and the Commonwealth of Pennsylvania regard any instance of hazing with the utmost seriousness, and we go to great lengths to educate students about our no-hazing stance."

During the investigation, our fraternity was placed on suspension and the University eliminated chapter functions. Contact with our pledges was prohibited, and their meals were transferred to the cafeteria. Our necessary financial obligations were impeded (i.e. our kitchen and house accounts).

Phi Kappa Psi feels that the University has poorly exercised its procedural discretion as a private institution, failing to protect individual rights, as do the police, legal entities and public institutions. No brother of Phi Kappa Psi questions the necessity of Bucknell University to investigate alleged hazing incidents. Yet the misleading email notices have unfairly damaged the reputation of last year's Most Outstanding Chapter.

Sincerely,
The Brothers of Phi Kappa Psi

Kicking puppies, stealing candy

A response to the question of morality vs. religion

By Michael Boland

In last week's *Bucknellian* Josh Guyan asked whether morality and religion are the same thing. He argued that they are not. Since certain religions (especially Christianity) hold teachings that he considers immoral, he believes that religion has forfeited the authority to dictate to individuals what right and wrong are. It must then fall upon each individual to determine for himself what is moral and what is not.

While I could go into detail about ways in which Josh's representations of Christianity were inaccurate, for the sake of brevity, just let me assure everyone who read last week's article that the Bible most certainly does not condone slavery, sexism, or any other such devaluation of any human being.

If you really don't believe me, check out Galatians 3:26-29 and let the Bible speak for itself. And the whole business with a certain Christian college barring interracial dating is, obviously, a mistake on the part of that University.

However, the policy in question is a human invention, not a Biblical dictate, and should not be used as a moral bludgeon against all Christians, the vast majority of whom have no problem with interracial dating.

So with that cleared up, what then is the relationship between morality and religion? My answer: religion places man in a certain position in relation to the rest of the universe. From this position, he acquires a sense of what is right and what is wrong, a sense that we refer to as morality. Christianity places man below God; man must do as He instructs. However, some people believe that humans get to determine individually what is right and what is wrong; this is called moral relativism. It is the policy Josh advocated in last week's *Bucknellian*. I must speak out against it.

We can demonstrate the futility of moral relativism fairly simply. Let's take Josh's example of "thou

shalt not kill" as a moral teaching. Now, let's take his advice and read this passage "thoughtfully and critically." Let's pretend that I do so, and, after much deliberation, sincerely decide that this doctrine is not "moral or good"? Do I have a right to walk around killing people and, while I'm at it, also beat up some old people, kick some puppies and steal candy from babies? No? Why not? Who's to tell *me* what's right and what's wrong? As long as I can justify my behavior to myself, I should be able to do whatever I please, including, in the extreme, murder.

If you too think this line of reasoning sounds weak, then congratulations—you just acknowledged that true moral authority must extend beyond the individual. And *this* is the most basic premise of Biblical morality.

Simply put, people do not get to say what is right or wrong—God does. Therefore, it is unacceptable to "take in information [from the Bible] and think about it before we decide if it's moral or good", as Josh suggests. Moral anarchy would reign!

Rather than applying man's standards to our dealings with God, I would suggest applying God's standards to our dealings with man. God is good; why would he give us moral instruction that would cause us to do evil? Shall we be so arrogant as to reduce His "Commandments" to mere "suggestions"?

People who criticize Christians for supporting the universal standards of right and wrong outlined in the Bible are misdirecting their aggressions. They're shooting the proverbial messenger. If they have a problem with what is in the Bible, they need to talk to God, not the Christians who obey His words.

In meantime, you can count me among those "people of faith out there who simply believe anything if it's in the Bible." While I can't prove 100% that God exists, I do know that every person has to have faith in something, if only because we humans do not know it all.

Either we have faith in ourselves—mortal, fallible, limited creatures who fail every single day—or we have faith in the God of the universe. Seems like an easy choice when you really think about it.

Online entrepreneurship may be the key to financial success in the future

By Scott Hagadorn

Wired magazine recently featured an article in which a young entrepreneur named Geoff Cook discusses the apathy and disparagements exhibited by universities toward entrepreneurship as it relates to the "New Economy" being built by Internet companies across the world. In his example, Cook reveals the obstacles he faced with two of his own Internet start-ups, CollegeGate and Cyberedit, both of which he began developing as an undergraduate at Harvard.

Cook set out as a freshman to earn some cash by developing an editing service for college and graduate-school applicants operated from an internet site known as CollegeGate. Over the next two years, this company grew exponentially from an initial $10K revenue per academic year to more than $50K. Cook edited every document himself during the first year of CollegeGate's existence while at the same time trying to complete his degree in applied mathematics.

Cook had never intended to create what was appearing to be an Internet start-up. However, by the end of his junior year, editing orders had increased so much that he sensed the possibility for something larger than his original intentions. With the ensuing demand for his services, Cook turned down an Internship on Wall Street.

Cook launched a larger web site, CyberEdit, which provided a complete document-production resource to all types of clientele. By October of that year, both sites were pulling in $50K a month and Cook was employing over 40 editors. At this point, Cook contemplated skipping his senior year at Harvard and foregoing his diploma. After much consideration and advice from mentors, Cook decided to remain at Harvard and receive his diploma.

This story leads to the point that Cook makes in his article, which applies to the Bucknell community. Likewise, I cannot understand how or why these opportunities are being missed. The point here is that college is not doing enough to foster the development of the "new economy," and potential entrepreneurs struggle with a lack of encouragement.

Given the number of talented individuals at this school, the entrepreneurial energy and support is shamefully lacking. A reactive stance to the market for Internet jobs and possible start-up companies is not the path that any higher learning institution should be taking.

The Internet has brought about this "New Economy," one in which you don't need a master's degree to encounter success. This is not the economy where you need to work 25 years of your life working up the corporate ladder, this is a different model, one in which a great idea can push you to the top of a progressive company within months.

The Internet is a revolution reshaping everything, as Cook put it, "the largest business transformation of modern times." Whether you believe it or not, every job in the future will require you to relate your skills to the web.

Given this thought, is it understandable for Bucknell not to provide any undergraduate courses on HTML, web design, e-commerce, or even, entrepreneurship? Classes to pursue the "New Economy" should find their way into the classical liberal-arts curricula. Now don't get me wrong here, not every one of us can create the next Cyberedit or grow a start-up Internet company out of our dorm room. Each of us, however, can and should have the chance to expand our entrepreneurial minds and make use of the opportunities the Internet has given our generation.

Cook states that according to a recent study commissioned by the Kauffman Center for Entrepreneurial Leadership, 7 out of 10 of the nation's teenagers want to become entrepreneurs, and a majority of US teens would rather own a small business than manage a large corporation. All college students are immersed in a tremendous community of bright and innovative thinkers, and a university should be the incubator to these great ideas. Yet this tremendous resource remains untapped because of inadequate support services for generating interest in just what the future is going to be. Now Bucknell is no MIT or Stanford where venture capital can be handed to students pursuing an entrepreneurial interest, but it also should not let this window of opportunity shut in the faces of would-be entrepreneurs--it won't last forever

Read WIRED 8/3/99, p. 230 for an article about the topic.

Cyber strangers become friends

By Nora Daniels

Last summer, I was working on campus and found myself with a lot of free time on my hands. Being a naturally social person, I, sitting at a lonely computer screen for hours on end, looked into chatrooms and bulletin boards, but these rather impersonal means of communication did not interest me much.

Then, one day in July, I stumbled upon Yahoo!'s personal ads site, and so began my hobby of meeting people—okay, let's be blunt, guys—over the Internet. Call me crazy, or stupid, or weird, but at the same time, realize that I am one of a hugely growing number of Americans of all ages who use this technological forum to meet and correspond with others throughout the world.

Yes, I have heard stories of netstalkers and psychos, of the freaks who meet unsuspecting women from the Internet for rape and torture. And yes, I have actually encountered some guys who have scared me in their replies or overtures. But at the same time, I have met guys I value as individuals, I enjoy talking to for hours on Instant Messenger, guys who know my innermost secrets and still value my friendship.

Let me pause right here and tell you that I am not a social misfit; I have friends, I've been in love and I know how to party. So why, you may wonder, am I meeting guys over the Internet? There are many answers to this question ... let me explain.

First, all sorts of people from all over the place use personal ads to meet others. I've met college students, professionals and military men. I've met a 32-year old from Slovakia with an intriguing take on world politics, a 20 year old college student in Arizona who is from New York, an unemployed science teacher who builds birdhouses in Pittsburgh ... the list goes on and on.

Second, the guys I've met don't know me or my family. They don't know I have red hair and a funny laugh. Often, they get to know me—and I, them—without any of the preconceptions that are inevitable in face-to-face interaction. This appeals to me and, it would seem, to many others, as the number of Internet personals users is skyrocketing.

I'm not advocating personal ad use for everyone. It can be a fun, different way to meet people; it can be an open door to a unique form of socialization. At the same time, though, it can be dangerous, and caution is needed—just as it is in the more socially accepted forms of meeting new friends and building relationships.

However, as Valentine's Day came and went, and as those without a significant other longed to be part of a 'we,' I offer my take on just another way to broaden horizons. Who knows, you might enjoy it as much as I do.

We feel your pain ... now feel ours!

Set a standard

Students create impression of university

By Jim Leahy

When was the last time you heard "Oh grow up" from like mom or dad? Or, better yet, the famous "What were you thinking?" Most people can remember times when they might have heard these and generally remember shrugging it off as just another attempt by a controlling parent or pain in the neck friend to shape them into something they don't want to be. But what they should have done was look internally at their *modus operandi* and possibly initiate a change for the better.

Today, many people seem to have not listened to that advice and criticism, as there is a rise in immaturity and lack of class and tact. We see that at the student level, the faculty level and at every other level of society these days. Wherever we go, acts of this character are seen and it is only going to get worse.

Class is defined in the American Heritage College Dictionary as "an elegance of style, taste, and manner." Tact is defined as "an acute sensitivity to what is proper and appropriate in dealing with others, including the ability to speak or act without offending." The French have a synonym in the English dictionary for this sort of thing, 'savoir-faire.' Literally, this means "to know how to do," but it has come to stand for the ability to say or do the right or graceful thing.

Abject stupidity and immaturity sometimes get mixed into discussions about class and tact. Abject stupidity is simply not knowing what you are doing and it implies, in my mind, a sort of uneducated quality. I sure hope that no one here falls into this category. Immaturity is someone who acts at a level that is lower than where he/she should. The people that fit here should be the ones to grow up and stop acting like children.

Sad to say, many students frequently fall into this category and while some of the situations where this occurs are understandable, it is still not really the acceptable course of action for a college age person.

Now you must be thinking that I am preaching a concept that doesn't matter or may be the problem of others. But, especially at a prestigious university such as ours, we should think about our actions and how they affect our great image. This doesn't mean stopping the partying and fun, but rather a more critical eye to how we go about partaking in these leisure activities. Also, some of the positive stereotypes about Bucknell people are kept up because we are nice and always smile. This goes for the faculty and staff as well. You are part of this wonderful institution and have an equally important role in keeping up the status quo.

This University is home to some of the finest people around. Its student body is upbeat, fun, beautiful and intellectually gifted. The faculty here is one of the best of any other institution. They make themselves available to their students and make it easy for us to approach them and learn from their vast knowledge. Our staff keeps the University running smoothly and soundly. All of us have a reputation to maintain to keep this University in a class by itself.

To leave you with a little idea about the reputation that Bucknell has, I leave you with a quote from the 2000 edition of The Fiske Guide to Colleges. "Bucknell University is a secluded slice of Utopia, drawing hard-working, hard-partying almost-Ivy preps to its idyllic location nestled in central Pennsylvania." That is your mission, maintaining the high reputation of Bucknell as a classy and important place, should you choose to accept it.

Glamour girls

Teen pop idols give girls skewed image

By Maren Johnson

Who did you look up to when you were younger? Chances are it was someone in the entertainment business. No doubt about it, entertainers are some of the most popular role models, and most impressionable minds want to emulate them. Problem is, today's entertainers are getting younger and sexier, and harder to ignore.

Ask anyone from 8-18 years old who's hot and they'll probably come up with names like Britney Spears, Christina Aguilera, Mandy Moore and Jessica Simpson. They are the Madonna and Tiffany of this generation. However, while they may not be crooning "Like a Virgin," their image is more provocative and more mature than their years. Almost all of the new high priestesses of pop are not even old enough to vote. My personal favorite is Mandy Moore's video for "Candy" that features her driving a brand new VW Beetle. Guess what folks? She's not even old enough to have a license!

Not only that, but their influence on fashion is making a statement that their mothers must be shaking their heads at. Britney seems to have no qualms about emphasizing her controversial breasts. The rest of them walk around in mid-drift baring shirts and painted-on pants on their most modest days. Maybe I'm beginning to sound a little dated here, but the effect that these icons have on their pint-size followers may be more powerful than they realize. Look closely at the appearance of these stars alone. Each one is some shade of blonde, no bigger than a size 2, and white. Their fans pick up on this, and make it their standard.

Now listen to their music. Almost every hit song they've put out is a tribute to making a man want you and the importance of this in your life. Their videos are filled with bronzed and built guys who would probably be arrested for dating the divas. Basically, what these pop princesses are preaching is that the yellow brick road to happiness is paved with unattainable beauty (can we say makeup artists, personal trainers, and airbrushing?) and men that don't exist in most of the continental U.S. falling at your feet. Maybe it's time for a new message.

FEATURES

CDC has become beneficial resource for students searching for job opportunities

By Chad Gillenberger

Recently you may have noticed an unusually large number of mailings, e-mails and posters around campus from the Career Development Center (CDC). The Center has become a powerful resource for students looking to investigate their career options.

Since its inception in the early nineties, the CDC has helped thousands of students find jobs in their fields of interest. The goal of the CDC is to promote self-sufficiency through educating students in the process of making well-informed and thoughtful decisions and prepare a resume, upcoming CDC speakers and events, available jobs and internships on the web, and links to sites like eRecruiting.com where employers may search student profiles for perspective employees.

Last semester, the CDC brought over 50 speakers to campus to discuss with students topics ranging from self-presentation during interviews to job opportunities in a wide range of fields. The CDC works closely with alumni to provide students with networking possibilities and actively seeks out new employers for recruiting on campus. The CDC also sponsors various job and career fairs here on campus and

Scott Solomon—The Bucknellian

Laura Denbow, Director of the Career Development Center.

by providing high-quality resources, diverse opportunities and meaningful experiences.

The CDC has recently taken up some new initiatives in their ever-continuing effort to provide students with a wide range of resources and possibilities. Embracing technology with open arms, the Center has implemented many online utilities to help students quickly and efficiently find the jobs they are looking for. You can check out the CDC homepage at www.departments.bucknell.edu/career_dev/. Here you will find information on how to in various cities such as Washington D.C. and New York City. These provide students with the opportunity to talk to professionals in their fields of interest so that they gain a better understanding of what to expect and what skills they will need

For the first time in its history, the CDC has begun an extensive program providing underclassman with internship information and possibilities. The goal is to create an infrastructure among underclassmen which will help them determine the direction they want to take in their professional lives.

"We want students to be informed about the options available before they become seniors. We believe this will better prepare them to make informed decisions about their futures when the time comes," said Laura Denbow, director of the CDC.

Before becoming director of the CDC in May 1998, Laura was a member of the Georgetown University staff for seven years. Since coming to Bucknell she has witnessed the efforts of the CDC's dedicated nine member professional and student staff blossom into impressive results. Students in all disciplines are finding the process of the job search far less intimidating and much easier than ever before. Of the 97% of seniors who responded to the 1998 Post-Graduate Placement Survey, 98% had been placed, with 75% finding employment and 23% continuing on to graduate school. A total of 40% of the class respondents secured employment through on-campus interviews, CDC job leads, networking, or offers from former employers. The mean salary for the Class of 1998 was $35,362.

A major component of the CDC is its student staff members. These students take away much of the intimidation and anxiety that can accompany searching for job or internship for the first time. These students are skilled in various processes of job searching and can quickly help pinpoint what is needed to get started in your search. Many of them have gone through the same process so they understand the problems encountered and can relate to the situation. They are always more than willing to help and answer any questions.

"I really enjoy working with people. I understand the problems students face trying to obtain internships or jobs. Having gone through the process myself, I think I offer students the opportunity to talk to someone who has already gone through what they are doing," said Andrea Tebay, a senior psychology/sociology major and student employee of the CDC.

If you are at all interested in researching the opportunities available to you through the CDC, you can check out the web page, call them at 577-1283, or stop in the CDC office located on the ground floor of the Botany building next to Taylor Hall.

Wink Thinks

Jacqueline Flicker—The Bucknellian

Dear Wink,

As is the case for most freshmen, during the first semester of college, people are a little passive and somewhat scared about making new friends. Some people have known their best friends since they were kids, and now that they are in a new place, they are forced to make a new set of friends.

As a freshman I went through the process of making an entire new group of friends last semester. My roommate is one of my best friends, and for some reason we hit it off right from the start. We are really cool with each other and have similar personalities.

Despite the fact that my roommate and I are good friends, he made some other new friends, one of which was a girl he met and started dating after a short while. She was a really cool girl, kind of alternative, but fun loving never the less. I think that is why my roommate really liked her, you see he was a competitive skateboarder back home. So my roommate and his girlfriend were essentially perfect for each other in my mind.

Unfortunately, earlier this semester their relationship came to an end, and my roommate was destroyed. I mean he has really been thinking about it a lot, and though they only went out for a little more than a semester, she was one of his best friends, other than myself.

Since the breakup his grades have gone down, he just isn't the usual west coast cool guy, and he is even thinking of dropping out of school to join the pro skateboard tour. Even though I know that my roommate would do well on the tour, I think that an education is important. I have tried to talk to my roommate about it, but he just says how he really doesn't want to think about it. I simply don't know how to make him listen or talk about it. I am afraid that if I don't force him to talk about it one day it may be too late.

In conclusion, I ask you, how do I get my best friend to realize how much I would miss him if he left, and how he would be making a huge mistake?

Sincerely,

Broken Hearted Buddy

Dear Broken Hearted Buddy,

The fact that your roommate lost a really hip chick is a total downer; I know that girls who like to have a lot of fun and mess around aren't too common around these parts. Just let him know that there are a lot of girls out there, and to think that there was just one for him is making a huge mistake. I am sure that he will find a really cool girl if he would just be himself.

From what you have said it definitely seems as though he was badly hurt, and in some ways he is letting this go way too far. I don't think your roommate should be as down as he is. As his best friend, you need to explain this to him. To cheer him up, go and do something fun—meet some people and have a blast.

Meeting new people and having fun should take your roommate's mind off of this girl, but you still need to talk to your roommate about his choices. Speak your mind to him and tell him all the things you feel he needs to know as a friend Ultimately he has to think things out for himself. However, I think that it would be wise to contact his parents to make sure that they are aware of this whole ordeal so that they could talk to him about it. Even though it seems like going behind his back, they may have no idea that he is considering dropping out.

You have to realize that if you tell his parents and they confront him on the issue, he could then freak out on you, but you just have to make him understand that parents are helpful in making decisions.

To sum it up just tell him to play it cool and not to let stupid things like relationships get him down and ruin his life. After all, good things come to those who wait. So in the words of Blink 182 "I took my time, I hurried up/The choice was mine I didn't think enough." Until next time relax, have fun, and let Wink's wisdom be your guide.

Campus Theater offers alternative to ordinary night out on the town

By Katie Hays

Planning to do something a little different this weekend? Want to venture off campus but not too far? We know that you've seen it. In fact, you may have even watched a movie or two there. Still, most of us fail to notice the quirkiness, beauty and charm of the Campus Theater. We usually glance past the old black and white signs that stand in the entrance window next to the flashy current movie posters but when we step in for a closer look, we see the details.

The Campus Theater, located along Market Street within five minutes walking distance from campus, combines the style of the 1940's with current movies and an updated sound system. Plus, it's just down the street from several restaurants, making a dinner-date convenient.

A glance around the theater itself is worth the walk.

The theater, with its handpainted mural ceiling, warm orange wood interior, and blue and orange carpeting, is reminiscent of Lewisburg and the University's entertainment history. Even as it runs current movies including *Scream 3* (now playing) and *The Talented Mr. Ripley* (coming soon), it hosts a history that extends far beyond the latest release.

On the day of its grand opening back in January of 1942, the Campus Theater's marquis entrance shone silver, drew crowds, and lit up Market Street. Now it's a reminder of its opening night. The theater seats 700 people, an impressive number, especially for the time in which it was built.

Mrs. Nettie Meachem, a child when the theater opened, said, "Harold Stiefel, the theater's first manager, passed away, but his wife is the current manager. Often, the theater is updated in little ways, like a new sound system or new snack machines. Still, they try to preserve its original style and honor the past. Mrs. Stiefel holds a benefit show every October in memory of her husband Harold. She gives the profits to different local charities each year, and last year the money went to build a childrens' playground in Lewisburg."

The theater's location also lends itself to a dinner-date; the many restaurants on Market Street provide a spectrum of price ranges and food selections to please just about any palate. Vennari's Pizza serves delicious breadbowl salads and pizzas for reasonable prices (about $5-$10 per person), as does the nearby Casa De Pizza. The cozy and dimly lit Towne Tavern provides a menu with a range of typical American cuisine at average prices ($10-$15 per person), and bustles with locals. The Lewisburg Hotel and Elizabeth's, also within walking distance of the Campus Theater, combine more elegant décor with richer cuisine (about $20 per person). All restaurants are located within walking distance, if not eyesight, of the theater.

So if you haven't strolled through Lewisburg in a few weeks or if you've never stood inside of the Campus Theater or seen a current movie in a historic place after eating "out on the town" walk down to the Campus theater—try it out. Sit in a 40s style setting, check out the black and white signs, and grin at the theater's sporty silver stripes that run vertically up its walls connecting to Bison insignias. Before the movie rivets your attention note the details. Take in the feel of the theater. Notice the sign positioned in the theater's front window that announces the arrival of Technicolor movies starring Rita Hayworth. Search for remnants of the 40s and 50s. Pay $5 for a ticket, step through the narrow entranceway beneath the silver sign, inhale the scent of buttery popcorn-and enjoy the atmosphere.

Anna Shaw—The Bucknellian

The Campus Theater on Market Street is a main attraction for all.

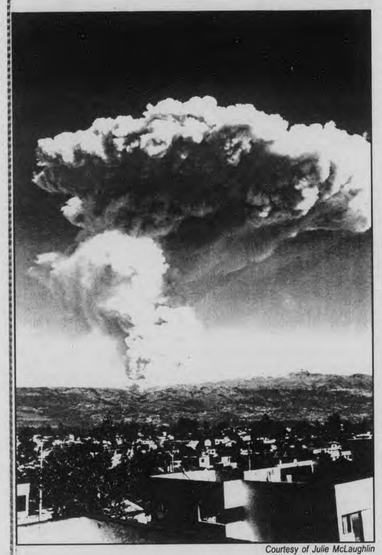
An abroad perspective: Ecuador, South America



Courtesy of Julie McLaughlin

Mount Guagua Pichincha, a volcano which erupted in October, 1999.

By Julie McLaughlin

Choosing to spend a semester abroad from Bucknell is nothing overly original or daring but rather an extremely normal and typical part of junior year. Whether it is the small-school environment or the rigorous academics that motivate students to spend a semester abroad, the trend grows with each class.

However, among the many juniors who go abroad, those who elect a South American destination are far fewer than those who travel to Europe or Australia.

I finally settled on Ecuador for a number of reasons. Spanish was a deciding factor in conjunction with my desire to do field studies in ecology or environmental sciences. The School for International Training's program on Comparative Ecology was an all-encompassing semester during which we learned about local and regional ecology, immersed ourselves in the culture, traveled to numerous locations, including the Galapagos Islands and the Amazon Jungle, and completed a three week individual study project. Looking back, I have no regrets about spending a semester in Ecuador. As it turned out, choosing to study in Ecuador was one of the best decisions I ever made.

When I headed to Quito on a flight out of Miami International Airport last August, I was completely frustrated with the course my life had taken since last spring. However, a combination of the wonderful people I met, both in my homestays and within the group itself, and the unreliable lifestyle of Ecuador taught me to accept my surroundings and those events which control it.

These often challenging lessons usually make the best stories once you have returned to the safety of your own home. There is almost nothing about my semester abroad that was normal by American standards.

For one, transportation strikes are a regularity in Ecuador and even on normal days, transportation can be hectic. Buses do not always stop for passengers, nor do they always stop to let passengers off, requiring them to jump off the bus at a reduced speed when their exit approaches. Simple transactions which we take for granted in the states—exchanging traveler's checks for instance—can take up to two hours. But these things were only moderately inconvenient compared to one catastrophic event I witnessed during my three-month stay.

During our trip to the Galapagos Islands we were informed that we had to relocate to a suburb of Quito and change homestay families because the Volcano Guagua Pichincha, situated directly behind the city, had moved into orange alert. An orange alert means that residents must prepare to leave the city, urging children and the elderly to evacuate immediately.

By October we had observed an enormous eruption, which mimicked pictures of a nuclear blast and showered ash for miles. This eruption, although a once-in-a-lifetime experience, was not the only source of amazement during my stay.

In the Galapagos Islands we walked inches from blue-footed booby birds, sea lions, gigantic tortoises, iguanas and Darwin's famous finches-all of which I found extremely unattractive in comparison to the exotic fauna. We also swam with sharks and sea turtles.

The Amazon Jungle proved to be just as exciting. With the help of the world's leading anaconda expert Jesus Antonio Rivas we wrestled a seventeen-footer. In addition, we encountered monkeys, tropical parrots, caiman and piranhas. Even Quito itself beheld new and different opportunities and I will venture to say that the animals in the jungle were just as different to me as the people and experiences in the city!

I attribute my intense enjoyment of my semester abroad to a few things: the overall geography of the country itself, the amazing people who became my friends, the general chaotic nature of South American culture and my own personal desire to experience something dramatically different from my "normal" lifestyle at home.

While I now have unbelievable stories to tell, the most important thing I walked away with was the ability to relate to people of a culture different than my own. I urge you to take the risk of an adventure abroad because such an opportunity may never present itself again.

Courtesy of Julie McLaughlin

Many animals roam the Galapagos Islands, such as this iguana.

Hazing violates University, police codes of conduct

By Rebecca Rowland

It has been on the news and on our campus. It has happened to your brother or cousin. You listen to their stories with horror and fascination - they were actually made to do that? You say you never want it to happen to you but deep down, you know it probably will.

While no one can or will admit to it, hazing is a fact of life. Greek organizations, athletic teams, any type of club can hold a new member "initiation" and, for the most part, these constitute hazing. The definition of hazing is unclear to most students; it is a violation of both the University and legal code of conduct. It generally falls under the category or "disorderly conduct" although "kidnapping" and "assault" have also been charges brought against those organizations that haze.

The University Student Handbook defines hazing as: "Any activity taken or situation created, on campus in property owned or controlled by the University or off campus, by members or pledges of any recognized student organization... that has the potential for causing or actually resulting in mental or physical discomfort, harm or injury." It then goes on to list several, but not all, hazing violations.

While many of the violations seem to be self-explanatory, some of them are less cut and dry as others. For instance, forcing someone to consume alcohol or drugs is, obviously, a violation. However, so is forcing someone to participate in calisthenics or depriving them of sleep. As far as the University is concerned, any activity that will "interfere or jeopardize good health and academic endeavors" is considered hazing.

The key thing to remember in the case of hazing is that the activity does not have to be illegal for it to be considered hazing, it just has to be forced. John Doe loves to do push-ups; he does a thousand every day. If one of his fraternity brothers forces him to do just 10, it is still considered hazing because he was forced.

Similarly, if a new member of a club is "forced" to watch a movie the night before a big test and she fails, a forced initiation activity of the club's has jeopardized her academic endeavors and her initiators are guilty of hazing. Even conspiring to haze violates the University code of conduct; the person who buys the handcuffs that other people then place on a pledge and then proceed to haze are also guilty of hazing whether they were an active, or even present, role in the hazing.

The Pennsylvania crime codes, although not specifically enumerating "hazing" as an illegal activity, lists many activities intrinsic in hazing as illegal. Forcing a pledge to run around naked is disorderly conduct. Forcing pledges that are under the age of 21 to drink is aiding and abetting underage consumption and providing alcohol to minors.

The police reduce initiation rites common to many clubs and teams to merely shoplifting, theft, malicious mischief and others. They do not care how many generations of club-members have run naked down Market Street grabbing real estate signs; those actions are illegal and will be punished.

Hazing violations are Category I violations and are under the jurisdiction of the Community Judicial Board (CJB). The CJB is a University run organization that punishes offenders of the Code of Conduct. Punishment can range from fines to expulsion from the University.

Some hazing violations also fall under the jurisdiction of the East Buffalo Township Police. While many times the police will chose not to prosecute due to the fact that the double jurisdiction of hazing has the potential to carry with it double sanctions, they have every legal right to and can if they so desire.

Many times those that are being hazed have no real problems with their situation; they are in no real danger, they understand why they are being hazed and they know that, eventually, it will be their turn to haze someone. Whether or not this is the attitude, the University regards hazing as a violation of their Code of Conduct and they will, and have, punish those that are in involved.

Senior Houck excels in her position as leader on the court

By Rebecca Rowland

A day isn't complete for senior Lori Houck unless she plays, practices or even thinks about basketball. And it has been that way for some time.

Houck, a four-year starter and two-year captain of the women's basketball team has been perfecting her sport since she was 10 years old. A varsity player all four years in high school, Houck also competed in the AAU league before making the transition to college.

"Even though Bucknell wasn't well-known for basketball, I really liked the staff here," Houck said. "I also liked the campus and location; basketball wasn't the only factor in my decision."

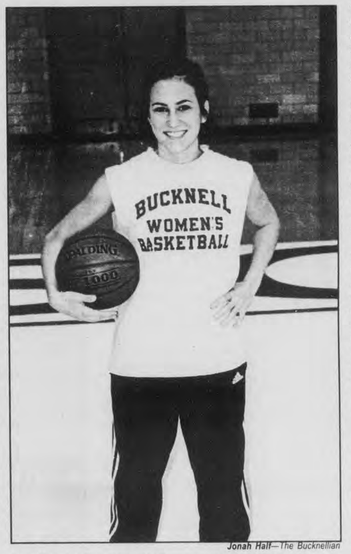
Despite missed classes and the time commitment of basketball, Houck will be graduating this May with a degree in accounting and already has a job with the finance department of General Electric. The leadership opportunities afforded to her through basketball clearly helped qualify Houck for a job at such a large corporation.

"Being a leader, going through the different roles ... basketball really helped me to grow and learn to interact with all types of people," Houck said. "I was able to meet many administrators and have relationships with people that, without basketball, I might not have had."

Houck has had ample opportunity to meet people through her athletic involvement since it lasts all year long; the official women's basketball season starts in early November and ends sometime in mid-to late-March. However, team workouts, practice sessions and tournaments are run with and without a coach for the majority of the remaining time.

Although basketball has played a large role in her life up until this point, Houck concedes that she has no immediate basketball goals after graduation. She does not, however, rule out the possibility of one day coaching at some level of play. Judging from the current women's team, she has a few good role models.

"The basketball program here is run very well," Houck said. "Coach [Kathy Fedorjaka] is a great recruiter, I expect this team to do well in the next four years."



Jonah Hall—The Bucknellian

Lori Houck '00, captain of the women's basketball team.

Indeed, since Fedorjaka came to the University in 1997 the basketball program has recruited some big talent including sophomore Vicky Quimby and freshmen Molly Creamer and Katie Franks.

Houck has truly dedicated a large part of her college life to her game. While it may seem strange to the average student, Houck has no regrets about weekends missed due to away games and nights spent going to bed early in preparation for a big game.

"Sure I have missed some parties over the years but there have just been so many positives to balance the negatives that I never even think about what I have missed," Houck said.

College-level sports are demanding both physically and mentally. It takes a special kind of person to withstand and flourish under the pressure. With her many leadership roles, her dedication to basketball, her excellent academics and her positive attitude, Lori Houck has shown she is that kind of person.

Now that her competitive basketball career is drawing to a close, Houck looks back on her four years as a Bison and recalls all of the special times she has had.

"My teammates are my best friends. I have learned so much from my experience on the team; I have really grown," Houck said.

And while she is saddened by the nearing end of the basketball season, Houck has found one thing to look forward to. Remember all of the missed weekends? Well, says Houck, "We seniors get to make up for them these last few months!"

Dayton Ballet performs *Romeo and Juliet*

Tim Choate—The Bucknellian

The Dayton Ballet wisitied the Weis Center this past Friday for a performance of *Romeo and Juliet*. This is their 61st year performance after first taking the stage in 1938.

By Kathryn Parker

Despite the horrible weather, the Dayton Ballet took the stage Friday night, performing *Romeo and Juliet*. The company was extremely professional, dedicated, and did a fabulous job performing to one of the most beautiful pieces ever written.

The set was grand and colorful, the costumes were elaborate and delicate and the dancers themselves were passionate and filled with life. Under the artistic direction of Dermot Burke, they performed a very traditional rendition of the ballet, which was wonderful considering the "new-age" vision of some choreographers.

The Dayton Ballet first took the stage in 1938, inspired by the vision of Josephine Schwarz. They have been performing for 61 years in both small and large arenas, and make their home in the elaborate Victoria Theatre, Dayton.

One of their primary goals is to focus on children, and they perform ballets in front of as many as 17,000 children throughout the Miami Valley each year through the Young Audience Program, DANCEPOWER, and The Muse Machine. They also run their own school, The Dayton Ballet School, which is "the only school in southwestern Ohio to be associated with a professional dance company."

Friday night's ballet was beautiful. Juliet (Rebecca Carmazzi) was perfect in that she appeared as innocent but as curious and passionate as Juliet is meant to be. Her scene with her nurse (Wendy Zimmerman), where she is skipping and dancing wild around her bedroom was comic and convincing.

Every cast member brought into his or her dancing the kind of roles Shakespeare had assigned them when he wrote the play. Paris (Kyle Thomas) was appropriately sulky, Tybalt (Justin Gibbs) was appropriately angry and Lord and Lady Capulet (Gregory Robinson, Anna Kirker) were both appropriately snobby.

The only small disappointment of the evening was Romeo (Richard Grund). Romeo was slightly off with his dance steps at times, which was very apparent when he danced the pas-de-deux with Juliet. He seemed awkward and disoriented, which definitely took away from what is supposed to be one of the more passionate dances in the ballet.

One small problem was that the stage was somewhat slippery, causing confusion during some moments of the play when performers would lose their footing and slip. Some people thought this was the highlight of the night however! It provided a little comic relief for what can sometimes be monotony on the stage.

Despite the weather, the Weis Center had a welcoming crowd and a very warm atmosphere. One of the audience members said, "It was a beautiful ballet ... really worth the trek through the snow!"

Gregg visits as Poet-in-residence

Beth Osterling—The Bucknellian

Gregg gave her first two readings this past Sunday at Bucknell Hall.

By Jennie Scheerer

Poet-in-residence Linda Gregg, recipient of such honors as a Guggenheim Fellowship, a Whiting Award, a National Endowment for the Arts grant and several Pushcart Prizes, gave the first of two readings this past Sunday in Bucknell Hall. She is the author of several poetry collections including *Chosen by the Lion*, *The Sacraments of Desire*, *Alma*, *Too Bright to See*, and most recently, *Things in Flesh*. Described as "one of the best poets in America" by poet Gerald Stern, Gregg's work has been published in several literary journals and anthologies including *Best American Poetry*, the *Paris Review Anthology*, and *One Hundred Great Poems by Women*.

During her stay at Bucknell, Gregg will teach an advanced poetry seminar, visit several area high schools, and serve as a faculty member this summer for the Bucknell Seminar for Younger Poets. If you are a poetry lover, or would simply like to try something different, be sure to check out what the Stadler Poetry Center has planned for the approaching months:

Sunday March 5th, 8 p.m., Bucknell Hall: An Evening of Experimental Poetry with poets Harryette Mullen and Hank Lazer. Mullen's reading honors Black History Month and Women's History Month.

Wednesday March 29, 7-10 p.m., Bison Cafeteria: The First Invitational Bucknell Poetry Slam, with Regie Cabico and Friends, of the Nuyorican Poetry Cafe, Manhattan.

Wednesday April 5, 8 p.m., Bucknell Hall: Poetry Reading by Linda Gregg, Bucknell Poet-In-Residence, 2000.

Friday April 20 & Saturday April 21: The 22nd Annual Bucknell Poetry Festival, featuring 14 Visiting Poets.

Gov't Mule brings new sounds to third album

By Campbell Gerrish

Courtesy of www.mule.net

***Life Before Insanity* offers same Southern rock snd rhythm and blues,while also offerring something more mellow.**

With the dawn of the new millenium, powerhouse rock and roll band Gov't Mule has released their third studio album, *Life Before Insanity*, introducing some new twists to their characteristic improvisational blues-rock sound. Comprised of drummer Matt Abts and former Allman Brothers Band members guitarist Warren Haynes and bassist Allen Woody, Gov't Mule's latest work includes a radio-worthy hit single, a powerful, heart-wrenching title song, a peaceful acoustic number, a guitar duet with guest Ben Harper, and various other tunes drenched in classic rock roots, straight out of Georgia.

"Bad Little Doggie," their new single, is full of punchy guitar riffs, cathartic time changes, subtle bass and tight percussion. Its base stems from Mule's traditional blues sound and is a promising favorite for live shows.

Haynes displays his devotion to and love for the slide on two songs in particular. "Wandering Child," the first track on the album, includes Haynes' distinctive "tremolo" effect, incredible slide guitar and melodic arpeggios. With Woody's thundering bass beneath Haynes, "Wandering Child" is a solid hit. Lay Your Burden Down, as stated in Wall of Sound reviews, is "a gospel tinged rhythm and blues barn burner that features Haynes dueting with guest Ben Harper, distills Southern rock down to its essence". LYBD is definitely reminiscent of the Allman Brothers, especially with their addition of an organ.

"Life Before Insanity," the title track, features Haynes at his best compositionally and singing like he never has before. It sounds a bit like Soundgarden's "Black Hole Sun" in the intro with Haynes' "throaty, growling" voice. But never fear, Mule explodes into a chorus and continue on earnestly with their heads up, playing some of their most impressive, original material yet.

Lastly, Gov't Mule tones it down with two beautiful acoustic songs. "Tastes Like Wine," the first of the two, isn't actually all acoustic. It starts out slow, peaceful and melodic and remains so as the base with a couple of electric chorus parts. The chorus does stay along calmer lines.

"In My Life" focuses entirely on acoustic guitar. For this tune, Haynes lays two guitar tracks over each other, one with vigorous plucking and the other with slide rhythm. Abts joins Woody and Haynes with some bongos, adding some percussion to this country-esque love song.

Although Gov't Mule's previous work has been noted as more or less an extension of their Allman Brothers Band experience-hard, Southern, improv rock—*Life Before Insanity* is a great addition to their discography.

The trio mixes it up with plenty of their usual hard-edged rhythm and blues, but includes two mellow pieces, one with gospel influence and one that might bring them out onto major airwaves.

Student run production this weekend

By Jenny Johnson

The Department of Theater and Dance is presenting its second mainstage of the year this weekend. This "Evening of Tom Stoppard" contains two one-act plays by the British playwright, and are part of Senior Directing Projects by David Carpenter and Jeremy Walker. By independently running a mainstage, these seniors receive first-hand directing experience that will be quite beneficial following their graduation.

"The Real Inspector Hound," directed by David Carpenter, is a modern classic comedy about two critics who go to the theater one evening to see a "whodunit" but end up mixed up in the plot.

The 2nd one-act play, directed by Jeremy Walker, is "Artist Descending a Staircase." This is a tragic comedy about three avant-garde artists who assess the shortcomings of perception and the vagueness of truth.

These plays will be performed on the same bill from Friday, February 25 through Monday, February 28 at 8pm in the Harvey Powers Theater. Tickets are available now for $5 at the Box Office of the Langone Center.

CORRECTION

Due to technical difficulties, two of our writers were not given credit in the Feb. 17 issue.

Andrea Beisser wrote "The unusual instrument of the week: the autoharp" and Jenny Johnson wrote "Weis Center continues Svard's series 150 Years of the Avant-Garde..."

We apologize for any inconvenience.

Game show frenzy takes over prime time TV

By Julie Mason

Millionaire shows; are we as a society becoming obsessed with them? Has the idea of having excessive amounts of money consumed American culture? Or is it the trivia? The possibility of becoming a celebrity or becoming rich without having huge brains is something appealing to many Americans.

"Who Wants to be a Millionaire?" a popular prime time game show on the ABC network, has had high ratings everywhere it has aired, gathering Americans from all walks of life around the television the way prime time sitcoms such as "I Love Lucy" once did. The "Millionaire" craze began in England, where it gained the popularity now seen here. Eighty-one million televisions were tuned to this show the first week it aired. It is a hit across all generations-kids, young adults, parents and grandparents alike, all seem to be enjoying this new craze.

The format of the show is similar to "Jeopardy," in that they both test the contestant's knowledge of trivia. However, the questions on "Who Wants to be a Millionaire" are not only more contemporary and amusing, but also easier for the average American to answer.

"Who Wants to be a Millionaire?" quizzes just one contestant with multiple choice questions ranging in difficulty from extremely simple to challenging. To assist them in answering a more difficult question, contestants are given three "lifelines"-they can poll the audience, phone a friend, or have the choices narrowed down to two rather than four. Once contestants have reached a certain point, they are given the option of continuing to play for higher dollar amounts (at the risk of losing what they have made so far) or taking home what they have accumulated up to that point. However, not many of them quit while they are ahead and risk losing what they have made so far in order to obtain a more significant amount of money.

The number of followers and avid watchers is quite large for a game show this new. Most people who enjoy the show cannot exactly put their finger why they enjoy it, but attribute its popularity to the ease with which they answer the questions along with the contestants, while critics credit its success also to the new American dream of instant wealth coveted by younger generations.

Courtesy of members.xoom.com/Lo/wwtbam.html

The Fox Network's "Greed" has a similar objective. However, unlike "Who Wants to be a Millionaire," "Greed" promotes competition between members of a team that starts out with six members. One member is eliminated instantly with a "qualifying question" that always has a whole number answer. The contestant giving the closest to correct answer is appointed captain. The remaining five players are then faced with the $25,000 question, which has one correct answer among four choices. The first contestant supplies an answer, which can be vetoed or accepted by the captain. If the answer submitted is correct, the captain can either split their winnings five ways between them or move on to the next question. If the answer is incorrect, the team is dismissed with nothing.

The game continues as so until the $100,000 question is answered correctly, when the host activates the "Terminator." This is an electronic device that selects a contestant at random who is offered $10,000 to challenge a teammate to a "Showdown," a one-question faceoff. The winner of this gets the other contestant's future earnings, while the losing contestant is dismissed from the show. After deciding to continue in these upper rounds, the team is faced with another "Terminator" to eliminate another team member. If the team answers the $1 million question correctly, each remaining member must secretly indicate whether he or she wants to double his or her money. If one member of the team elects to continue, the rest of the team must also go on.

What does the popularity of these fad TV shows mean? Larry Scheetz '02 said "these shows mark a change in the American dream in trading rags for riches overall, instead of the old standard we are used to. However, it's all fun and games ... I like 'Who Wants to be a Millionaire' because it's fun." The American ideal in pursuing money is made obvious in these shows and marks a change from the dreams we saw back in the 1950s and 60s.

However, not all Americans share this viewpoint. Some feel the popularity of these shows can also be attributed to the fact that the questions are fun to answer and are not as intellectually challenging as those used on mainstay game shows. Amelia Konesni '02 agreed: "The main appeal to me is the fact that the questions are all answerable in comparison to those on Jeopardy."

Upcoming Campus Events

- **Faculty Recital featuring Ella Forsyth on clarinet with the Lydian players, Feb 22, Bucknell Hall, 8 p.m.**
- **Duopianists Gloria Cheng and Vicki Ray, Feb 25, Weis Center, 8 pm**
- **Senior Recital featuring soprano Marissa Luciani, Feb 27, Bucknell Hall, 7:30 pm**
- **An Evening of Tom Stoppard: "The Real Inspector Hound," directed by senior David Carpenter, and "Artist Descending a Staircase," directed by senior Jeremy Walker, Feb. 25-28, Powers Theater, Coleman Hall, tickets $5, senior citizens $4, 8 pm.**
- **Open Mike night! March 3 at the 7th Street Café, 11 pm-1 am. Sign up ASAP to mainka@bucknell.edu**

Science & Technology

New theory poses little threat to Darwinism

By Matthew Trunnell

A British physicist is shaking up the scientific community with a new twist on the old evolutionary recipe. Dr. Johnjoe McFadden, a biologist from the University of Surrey, uses physics to explain his version of evolution in his recent book, "Quantum Evolution."

Using primarily physics rather than biology, McFadden takes a look at the fundamental particles of DNA to explain how mutations occur.

In traditional Darwinian Evolution, living things change over time to adapt to their environment. After a process of random DNA mutation, natural selection weeds out the best mutations to survive.

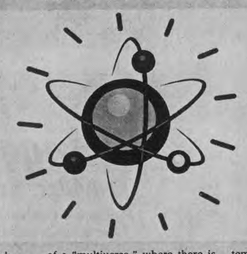
While natural selection is well established, the exact ways in which DNA mutates have been reexamined.

Looking at DNA from a physics perspective gives an unconventional view. Since all matter is made up of particles, quantum mechanics can explain the behavior of a DNA double helix.

The implications of quantum mechanics are arguably the strangest ideas to come from modern physics. In quantum mechanics, any given particle not interacting with its neighbors can be in several different states, or places, at once. This is called "superposition" and also applies to larger systems, like fullerene molecules or even your living room couch.

If the idea of your couch being in two places at once sounds bizarre, do not worry. Even Einstein, whose work in relativity laid the foundation for quantum mechanics, was skeptical of some of its implications.

While the practical realities of this field lead to some strange conclusions, the rules of quantum mechanics are very straightforward. In trying to interpret these rules, physicists sometimes use the idea of a "multiverse," where there is more than one universe, each expressing one possibility of the order of matter. In quantum mechanics, everything that is possible actually happens.



Since the idea of superposition applies to all particles in the universe, the multiverse contains an infinite number of universes.

In his book, McFadden asserts that DNA strands mutate when they have a superposition, slipping in and out of the multiverse. If the multiverse contains a universe for each possible DNA sequence, then a strand could slip into the multiverse and come back in a different configuration.

Genetic mutations are generally thought to be random. But DNA is made up of fundamental particles just like everything else. And if these particles in DNA can slip into the quantum multiverse, then they might be able to *choose* optimal states. From our point of view, the strand of DNA would mutate.

But not everyone agrees. Most biologists would call McFadden's theory an example of "directed mutation." "The outcome of experiments that have tested for directed mutation can be more easily explained by random mutation," Amy Whipple, post-doctoral fellow of biology, said. "I have not seen any strong evidence in support of directed mutation."

Quantum evolution is far from gaining wide acceptance. Even the principles this theory is built upon are somewhat questionable. The multiverse, for example, is only an attempt to apply the rules of quantum physics to a reality that humans can understand.

"The multiverse is not a very appealing concept, but it is possibly our best understanding at the present," physics Professor Ben Vollmayr-Lee said. "We're far from knowing the full meaning of the multiverse."

Even though quantum mechanics can provide an elegant solution to some of the most mind-boggling problems in physics, its application to other fields is a stretch. Because of this, the plausibility of McFadden's theory is likely to be disputed.

"I think a more natural explanation will be forthcoming," Vollmayr-Lee said.

iCraveTV.com Internet cast banned by US courts

By Scott Hagadorn

A U.S. District Judge has pulled the plug from the Canadian web-based television site iCraveTV.com. This site pulled television signals from broadcast stations and offered them for free on the web.

Broadcasts from iCraveTV's site ceased after U.S. District Judge Donald Ziegler issued a temporary restraining order on January 28. Before this ruling, iCraveTV's founder William Craig created an avenue for virtually anyone to watch TV on the Internet. The site used live signals from 17 stations that broadcast in Toronto—including US stations ABC and NBC—and streamed them in real time from his site, using Realnetworks streaming video software. With RealNetworks software and a browser, a user could view the channels on a small video screen that was surrounded by iCrave advertisements. Users of the iCraveTV streaming video were only required to log into Craig's site with a Canadian area code to "prove" that the program was being watched only in Canada. This inadequate security measure was one factor in the court's injunction.

Courtesy of iCraveTV.com

Major broadcasters viewed iCrave's product as "blatant copyright infringement." Many weeks of litigation continued prior to the termination of iCraveTV.com, and Craig's lawyers issued legal rebuttals to the broadcasters' cease and desist letters. Canadian law permits cable companies to retransmit broadcast signals without paying licensing fees, on the condition that they do not alter the signal in any manner. However, U.S. broadcasting agencies pointed out that the Canadian copyright board draws a very distinct line distinguishing between the freedoms of "cable transmissions" and "Internet broadcasts." Major broadcasters also claimed that their programming was being inherently altered by both the poor transmission quality and unsolicited banner ads. The Canadian government's passive attitude toward Internet regulation is in the limelight once again.

As the web continues to come under heat from severe digital copyright infringement, the wired world may be ignoring the inevitable. The web is a new medium, a means to facilitate and provide the world anything it wants. Video may no longer be available in the U.S. from iCraveTV's site , but another paradigm has been established for the future of television accessibility. Just wait and see.

Part II: Genetic homogeneity threatens endangered species

Part II of how DNA technology has helped the survival of endangered species.

By Alex Piel

Indisputably, the most significant innovation in DNA technology is polymerase chain reaction, or P.C.R. Created by Kary Mullis, the 1993 Nobel Prize Winner for Chemistry, the procedure allows scientists to efficiently replicate large amounts of DNA from finite quantities of organic material using an enzyme present in a microorganism that lives in the hot geysers of Yellowstone National Park.

The P.C.R. machine Mullis created allows researchers to magnify small fragments of DNA and produce sufficient amounts of genetic material for a detailed study of any species. This "genetic profiling" as it is often labeled, is being used in the Human Genome Project in Washington, D.C. and was used in the highly publicized murder trial of O.J. Simpson.

Mullis's discovery is so influential, some researchers say it has revolutionized molecular biology.

"For molecular biologists, history is divided into the world before P.C.R. and the world after P.C.R.," says George Amato, the director of the Joint Conservation Genetics Program, sponsored by the Wildlife Conservation Society and the American Natural History Museum. Initially these P.C.R. machines were so expensive that only major laboratories were using them. However, less than 2 years after their invention in 1995, they were portable and being used in hotel rooms.

The P.C.R. machine is not the only invention that has redefined DNA analysis. Following Mullis' discoveries arose the invention of a machine known as the "automated DNA sequencer." This creation uses laser and computer technology to read and analyze the exact sequences of tens of thousands of nucleotides in a single strand of DNA.

While such sophisticated machines usually remain untouched by those still learning, Melnick says that couldn't be farther from the truth, "What people used to do for their entire Ph.D. dissertation over two years, I can have an undergraduate do in a week."

How much do these machines really help? Such DNA sequences can then be used to construct genetic trees of complete species. For example, in the CERC laboratory at Columbia, a graduate student of Dr. Melnick has assembled the entire evolutionary history of the Macaque monkeys of Southeastern Asia on his computer-a process that five years ago seemed impossible. Now, it's not only possible but also accessible to students.

The advances in DNA research have opened doors to projects once seen only in movies. P.C.R. machines and automated genetic sequencing are already being used in what was first seen in *Jurassic Park* where scientists worked to reconstruct the DNA of extinct species. Though cloning dinosaurs may be unrealistic, researchers at the Natural History Museum in Sydney, Australia are trying to regenerate the long extinct Tasmanian tiger from the DNA of a tiger cub that has been preserved in a jar since the 19th century.

> *Studying the DNA of black lion tamarin monkeys, researchers are using the help of undergraduate and graduate students.*

Although such work is unlikely to produce significant results in the near future, the present technological breakthroughs are allowing scientists to use DNA from museum specimens to help conserve endangered species. Howard Rosenbaum at the Museum of Natural History in New York, for example, recently finished comparing the DNA of living examples of the Atlantic right whale, a nearly extinct species of whale that living off the coast of the Maine, and the DNA of whales that were hunted in the 1600's. Due to the trophy-like status of these whales upon being captured, there are databases and databases of genetic material from which to work.

By tracing the changes in DNA over the centuries, scientists try to compare the genetic diversity within the species at a time when there were millions of the whales to the diversity today, when there are only about 300 left.

This study is far from being finished. Initial results reveal that the genetic diversity of this species steadily dropped until the 1920's, but since then it has remained stable. Rob De Salle of the Natural History Museum notes that it appears that conservation tactics are working. "There was a moratorium right in the middle of the big whale slaughter in the 1930's. The fact that the genetic variability appears to have been preserved since that time tells us that whaling moratoriums and conservation efforts are good," he said.

North America and Europe are clearly leading conservation awareness into the next century, though other countries are slowly becoming aware of the conservation potential genetic technological advancement provides. Home to countless terrestrial and marine endangered species, Indonesia cannot afford to fund such elaborate projects as those discussed above. Mr. Palumbi of Harvard, however, is working with the government of Indonesia to help set up between 30 and 40 marine parks designated to preserve marine wildlife.

In trying to create a genetic map of various underwater populations, Palumbi is encouraging the Indonesian government to make wise decisions about preserving such precious, and sometimes endemic species. "Sometimes the boundaries in the sea are difficult to see," Mr. Palumbi says. "Once we have that genetic map, we can match it with the park map."

DNA technological development has transformed how scientists address the issue of endangered species in the world today. Such innovations as the P.C.R. machine have contributed to the creation of a new breed of researcher. No longer is a scientist only a field worker or only a lab researcher. Now both disciplines are taking advantage of modern techniques to show the world that saving endangered species is possible.

Mr. Amato began his evolutionary biology studies at Yale, but recently found himself on a boat off the coast of Madagascar shooting a crossbow at whales to get small amounts of DNA.

Amato received his Ph.D. in genetics, while his colleague, a wildlife biologist, has worked mostly in the field.

"I'm a wildlife biologist, too. He looks at rhinos through binoculars, and I look at these molecules of the DNA. But I still see a rhino. We are interested in the same things: Why is life the way it is? Why do the animals do what they do and how do they do it?" Hopefully with animal and wildlife conservation becoming a growing field, we will never stop asking these questions.

Gene therapy: Will we take things too far?

By Amanda Libengood

The Human Genome project will soon be complete. Every DNA base pair on every gene will be mapped by 2001, two years earlier than the original expected date. This extreme body of knowledge will open doors that have previously been closed to geneticists. With the increasing speed of the project, it is time to take the ethics of gene therapy into consideration.

Gene therapy is the modification of DNA to produce a different outcome than the one dictated by nature. Research on specific chromosomes is becoming more prominent to pinpoint physiological malfunctions from the cleft palate to Down Syndrome. Because this field of science is relatively new, very few regulations govern it.

HUMAN GENOME PROJECT

Gene therapy must be considered on two levels. Somatic cell gene therapy is the process of inserting a functioning gene into an individual so as to improve quality of life. In germ line gene therapy, a specific attempt is made to alter an individual's reproductive cells and thus change the DNA that is passed on to offspring. It is this germ line therapy that has stirred up such debate as of late.

The National Institute of Health has created a Recombinant DNA Advisory Committee and a Human Gene Therapy Subcommittee to tackle the ethical aspects of gene therapy. The current position held by these committees is to entertain proposals dealing with somatic cell therapy but to reject altogether germ line therapy. These regulations govern human research, but not necessarily animal research.

The natural progression of research is to begin and fully test all aspects of the experiment on animals that are closely related to humans genetically. From there, the amount of risk to humans is assessed and the decision must be made whether or not to test the experiment on humans. This "acceptable risk" has yet to be clearly defined.

Gene therapy in the human germ line can have serious effects on life as we know it in years to come. Genetic diseases could be removed from fetal DNA and eventually eliminated from the population. It will also be possible to dictate other aspects of the to-be child's life. Everything from hair color to intelligence can be altered through gene therapy. Anyone who has seen the movie *Gattaca* would agree that things could easily get out of hand.

Is a race of pre-programmed super humans what we have to look forward to? Chances are not. A comparison can be made with nuclear weapons. Though several nations currently have the power to destroy the world with nuclear war, we have managed to avoid it so far. We can hope that gene therapy will be a safety precaution, used when necessary, but not taken to extremes.

How Can You Get Back Into the Action?

"Staying off it for a while" isn't always the best rehabilitation program following an injury or surgery. The professionals from the Evangelical Sports Medicine Center have teamed up with Bucknell University to provide *on-campus* Physical Therapy Services to the Bucknell Community. For more information, or an appointment, call **577-1060**.

Services will be provided in the Field House Monday through Friday from **10 a.m. to 6 p.m.**
(A physician's prescription is required. Please check your insurance policy for restrictions and limitations.)

Women win Patriots; men finish second

By Sean Houston

The Patriot Leagues' top track and field athletes gathered in the Fieldhouse last weekend for the conference championship, which saw the Bison emerge as the premier track and field program in the league.

The women's team won its third straight conference championship, amassing a total of 216 points. This was more than enough to beat its closest challenger, Navy, by 36 points. The other schools' point totals were: Army (84), Lafayette (63), Lehigh (45), Colgate (38) and Holy Cross (2).

The men finished a respectable second overall with 120 points, as compared to Army's 230.

The third-place finisher was Colgate (83), followed by Lehigh (70), Navy (68), Lafayette (38) and Holy Cross (11).

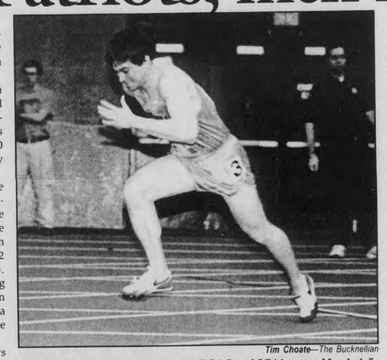
In last week's preparation for the championship, head coach Art Gulden stressed the importance of depth on a team.

This observation was amply substantiated over the weekend with key performances from every athlete on the squad.

For the women, the trio of Jen Hart '00, Carly Graystock '00 and Andrea Beisser '03 swept the 5000-meter race. Other event winners were the 4x800 relay team, the 4x400 relay team and the distance medley relay team.

Yetunde Daniels '00 captured the 400-meter (57.18) and 200-meter dashes (24.94), Kim McGrath '00 won the triple jump (11.97 meters), Stephanie Bango '02 took the 800-meter run (2:09.93) and Christina Crowe '02 seized the 3000-meter run (10:35.16). McGrath also took second in the long jump (5.69), Daniels finished second in the 55-meter dash (7.28) and Latonya McSwain '02 captured second in the 500-meter run (1:16.03).

Among the men, event winners included Bryan Schiding '00 in the long jump (7.28) and triple jump (14.56), Dave Pomfret '00 in the pole vault (5.26), the 4x400 relay team and Ron Hess '00 in the mile run (4:10.31). Schiding combined with teammates James Hollins '01 and James Johnson '03 to sweep the long jump event for the Bucknell.



Tim Choate—The Bucknellian
The Bison will be competing in the ECAC and IC4A meets March 4-5.

Scott Sehon '00 took second in the 5000-meter run (14:49.47), the 4x800 relay team finished second (7:35.20), James Whittaker '02 tied for second in the pole vault (4.80), Chris Nowakowski '00 was second in the 3000-meter run (8:31.72) and the distance medley relay team finished second (10:10.28).

The efforts of Pomfret (pole vault), Daniels (200m and 400m), McSwain (500m) and Bango (800m) all resulted in new school records, while Schiding's long jump set a Patriot League best.

Of course the meet was about more than just winning and losing. For many seniors this past weekend was a farewell to the Fieldhouse and their indoor track and field careers.

"Being able to compete and win in front of the home crowd for the last time was really special for me, the same goes for all the seniors like Brian (Schiding) and Ron (Hess), who all did well in their final meet," Pomfret said. "When it was time for me to jump, the meet was practically over, but everyone stayed to watch and cheer and it was great."

"I think the team exceeded the coach's expectations, I still haven't really gotten over the euphoria of everything," Pomfret said. "The win, the record, the spot in the nationals and everything else. I'm just glad that all my good friends were there to be able to share it with me."

Several athletes from both the men's and women's squads will be competing at the IC4A and ECAC championships being held at Harvard and Boston respectively the weekend of March 4th and 5th.

Bison drop Albany 72-61 to extend win streak to five

Peaking at the perfect time with seniors' final home game against Lafayette and Patriot League Championships approaching

By Chris Ellis

One week, two games. A tough, scrappy overtime road win against an always-pesky conference opponent. Then another relatively easy win in a sparsely-attended home game against a non-league foe in its first season of Division I basketball. What do the two games have in common?

For the Bucknell basketball team, they were both wins. The Bison defeated Colgate, 75-71 in overtime, and then captured another win at home Wednesday over albany, 71-62. More importantly, the helped to build on the team's five-game winning streak before its regular-season finale against Lafayette and the Patriot League tournament a week later.

While momentum isn't a sufficient condition to advance Bucknell deep into the Patriot League tournament, the importance of the five-game streak can't be dismissed either.

"If you're winning, you always talk about momentum being important. If you're losing, you say, 'it isn't important. It's the start of a brand new season,'" Bucknell head coach Pat Flannery said after Bucknell's 72-61 win over Albany last night. "At the same time, our kids knew what they had to do. We took Albany seriously and put forth the effort tonight for one reason: we needed momentum going into Sunday."

And while, barring a major upset, Bucknell's season-ending contest against league-leading Lafayette on Sunday will not have any relevance to the standings, it is vitally important to Bucknell's players—who lost by two to the Leopards earlier in the season and dropped all three meetings last season.

While the Bison (17-9, 8-3) have little chance of catching either Lafayette (20-5, 10-1) or Navy (21-5, 10-1), the win will give Bucknell a measure of satisfaction heading into the tournament. And, of course, momentum.

"For the seniors, this is probably the last opportunity we'll get to play in Davis Gym," Dan Bowen '00 said of Sunday's contest against Lafayette. "That, personally, is what is most important to me about this game. But there are a million reason why this game is important."

Chief among those reasons is an opportunity for the Bison to add a big win to the impressive end-of-season streak that placed the team squarely among the league favorites once again.

In Sunday's contest against Colgate, the Bison got clutch performances from two captains and used a pair of overtime runs to hold off the Red Raiders (4-8, 11-14).

The Bison handled Colgate, 62-45, in Davis Gym a month ago but had to fight to hold off the team in Hamilton. Colgate stars Pat Campioletta and Jordan Harris combined for 42 points to lead the Red Raiders into overtime.

The Bison scored the first seven points of overtime, though, as Shawn Asbury '00 nailed his fourth three-pointer of the game two minutes into the extra frame to give Bucknell a 67-60 cushion. After a Colgate rally cut the lead to 69-67, Bucknell ended the game on a 7-1 run to earn the win.

Bison senior captains Bowen and Brian Muckle carried the offensive load in the win.

Bowen continued his march toward another All-Patriot League selection, scoring 21 points and grabbing seven rebounds and Muckle played his best game of the season, scoring 18 points and corralling nine boards in the win. Muckle shot 5-8 from the floor and 8-11 from the free throw line in the win.

Against Albany, the Bison used strong shooting from a trio of players to earn the win. Bucknell, led by Bowen (8-9 from the floor), Muckle (6-8) and point guard Bryan Bailey '02 (5-5), trailed just once in the game and overcame some sloppy first-half play to win.

"It was a workman-like effort against a quality team," Flannery said. "We knew it would be a tough game, and the kids responded."

Bucknell opened leads of as large as 13 points in the second half. Bowen scored 18 points to lead five Bison players in double figures. Bailey (16), Muckle (12), Asbury (10) and Karavanic (10) also scored in double digits. Karavanic led the team in rebounds with eight.

With a five-game winning streak under its belt, the Bison will now prepare for Sunday's contest against Lafayette.

The Bison fell 75-73 in Easton earlier in the season when Karavanic's game-winning attempt fell off the rim.

"We've won 17 ballgames against some of the best competition in the country," Flannery said. "Our older guys have been there enough. We know what we have to do."

Bison Crew in top form at fourth-annual Erg Armageddon

By Jennifer Ciotta

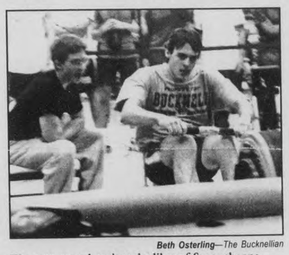
This past Sunday, the Bucknell men's and women's crew hosted the fourth annual Erg Armageddon at Davis Gym.

Every year, crew has a challenging six-week winter training session to gear up for the spring season. The Erg Armageddon lets the rowers see their accomplishments and measure where they are in regards to other schools.

This year's competitors were Susquehanna, SUNY Binghamton, Penn State, Franklin & Marshall and Patriot League rivals Lehigh and Lafayette.

Overall, the Bison women had a successful day with the men also putting forth a respectable effort.

On the novice side, Jenai Milliser '03 won the novice lightweight women's event. In the novice open women's event, Julie Engel '03 rowed her way into first place while Alyssa Paul '03 grabbed the silver medal. Engel also won the novice women's 500-meter dash with a record-breaking time of 1:41.8.



Beth Osterling—The Bucknellian
The crew rowed against the likes of Susquehanna, SUNY, Penn State, F&M, Lafayette and Lehigh.

Beth Osterling—The Bucknellian
Six Bison won medals Sunday to lead the men's and women's teams at the Erg Armageddon.

Mike Brooks-Williams '03 took second place in the novice men's event. Matt Giovine '03 grabbed a bronze medal in the novice men's 500-meter dash.

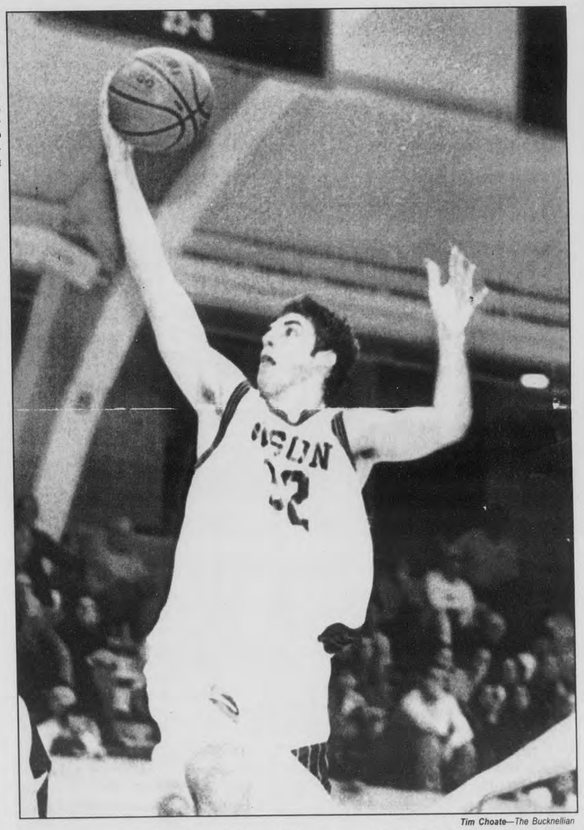
In the novice mixed doubles event, Paul and Brooks-Williams rowed together to take home the gold.

On the varsity women's side, Elizabeth Barrows '00 won the open women's event while Kelly Wanger '00 took the bronze.

The women had two major highlights. The first was senior lightweight captain Sarah Diegnan's record-breaking win in the lightweight women's event. Keri Heuberger '02 rowed beside her captain to grab the silver.

The second highlight was the three-medal sweep in the varsity women's 500-meter dash. Barrows, Wanger and open weight captain Annie Calcagni '00 captured spots one, two and three respectively.

Overall, the competition was a rewarding experience for everyone involved. "It was another tremendous effort by the team," head coach Steve Kish '92 said.



Tim Choate—The Bucknellian
Brian Werner '03 goes up for a finger-roll. He and the Bison prepare for their final home game of the season when Lafayette comes to town this Sunday. Lafayette defeated Bucknell, 75-73, in Easton earlier this season.

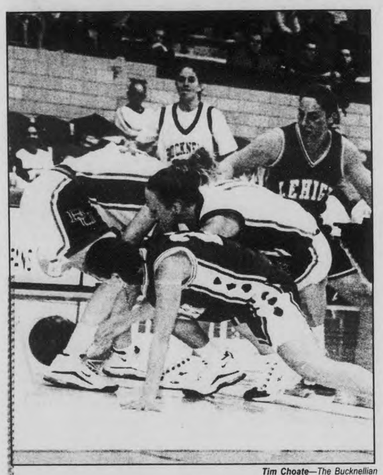
Bison "need a win" Sunday against Lafayette



Tim Choate—The Bucknellian
The women's last home game in '99-00 is this Sunday against Lafayette.

BASKETBALL from page 16

radic," Fedorjaka said.

Quimby led all scorers with 19, and Houck and freshman guard Molly Creamer added 16 and 10, respectively.

The Bucknell women's basketball team was looking to get back on the winning track against Colgate this past Saturday after suffering an emotional, double-overtime loss to Lehigh. Bucknell had already battled Colgate in a close contest early this season in which the Bison prevailed 59-57. In a game that stayed tight right down to the very end the Bison came up on the short end of the stick, losing 69-66 to the Red Raiders.

"Any road game in-conference is a battle, " Fedorjaka said. "We did a lot of good things in the game, but we did not have as an aggressive defensive effort as we would have liked."

Colgate opened up the game a little bit as the first half came to a close and went into the locker room with a five-point advantage, leading 36-31. Bucknell responded in the second half, and, with a minute to go, found themselves up three with possession of the ball. However, things proceeded to fall apart for the Bison as Colgate went on a 6-0 run to finish the game and earn the victory.

"The game came down to key possessions. We weren't able to seal the deal," Fedorjaka said.

Kate Franks was the leading scorer for Bucknell, tossing in 18.

"Kate Franks had the best ball game for our team. She played real tough and big for us," Fedorjaka said.

Houck and Creamer kept up their consistent play, scoring 17 and 12 points respectively, for the Bison.

The Bison got strong bench play from sophomore center Kate Rounsley. "Kate continues to improve for us. She is really starting to come into her own," Fedorjaka said. "She has become a big presence inside for us, especially in conference play."

"The players have to find strength in each other. We need to find the character to end this losing streak," Fedorjaka said.

The Bison look to end their three-game skid as they face Lafayette this Sunday at 1 p.m. in Davis gym in their final regular season game.

"We need a win," Fedorjaka said.

Get your tickets now!

If you're planning on going to the men's and women's basketball teams' contests against Lafayette this Sunday, get your tickets before they're sold out! With your Bucknell ID, you can get a ticket for both games in room 256 of the Langone Center until Friday at 4:00 p.m. After that, tickets will be availale at the box office in Davis Gym. They will be the final home games this season for both teams, as they prepare for the league championships.

Ice hockey gears up for playoffs

Seniors look to cap amazing careers with tournament victory

By Trip Sanders

This Friday the Bucknell ice hockey team squares off in a first round playoff game against an opponent to be named at the Sunbury Ice Arena at 7:00 p.m. This will mark the seventh consecutive year the Bison have qualified for the postseason and the fourth in a row as the number one seed in the league.

Even though Bucknell has struggled in the playoffs, failing to win the tournament each time—a tribute to the competitive nature of the league—the team has been nothing short of successful. Over the past four years the Bison have lost a scant five regular season games—and only one during the past two seasons. The team has won or tied 23 consecutive regular season games over the past three years and has gone 3-3 in playoff action. The success of the previous four years is given to the eight seniors who have guided this team. Over their tenure, these seniors have garnered an overall record of 32-7-3.

Co-captains Jeff Werring and Rocco Russo carry the leadership torch for the Bison both on and off the ice. Chris Ellis, playing in net all four years, anchored a defense also led by Ramsey "The Rammer" Wilcox, Ted O'Donoghue and Russo—which has given up a microscopic 1.07 goals per game.

All the while offensive players Werring, Alex Dixon, Trip Sanders and Will Holligan played on teams that averaged over eight goals per game during their four years. Dominating the Mason-Dixon League merits special recognition and the seniors have earned it. Each senior contributes in his own way playing a crucial role in the team concept contributing to its success.

The ice hockey team is a cohesive group that excels in the classroom and in other areas as well, another complement to the seniors. Tributes could be given to this team on its ability to play the game, but many seniors and other members on the team are make contributions to Bucknell in other ways as well. Included are some making the Dean's List some actively involved in other campus organizations such as Bucknell Student Government, *The Bucknellian*, engineering and investment societies and fraternal organizations.

The ice hockey team is proud of its undefeated record and domination of the Mason-Dixon League over the past four years, but it is equally proud to be a contributor in other facets of Bucknell life. The team would like to thank the many supporters who came out to cheer them on through the years. Come see the end of an era this Friday night, February 25th at 7:00 p.m. at the Sunbury Ice Arena when the seniors and the rest of the Bucknell ice hockey team skate to victory. Email rrusso@bucknell.edu for directions.

McSorley canned for malicious blow

Senseless act of violence overshadows heated division races, Brodeur's amazing feat

Courtesy of A.P.

Donald Brashear was carted off the ice after McSorley's vicious blow.

By Kevin Logan

The sport of professional hockey took a devastating blow last Monday night as Marty McSorley displayed the game's vicious side.

In an already decided game with only three seconds remaining on Monday night, Bruins scrapper Marty McSorley laid a vicious double-handed slash to the temple of Canucks tough guy Donald Brashear. The blow knocked Brashear unconscious for 30 seconds, twitching and bleeding, and set off a brawl between the two teams.

McSorley genuinely apologized, but he has been suspended for the remainder of the season and the playoffs by the league—the longest suspension in NHL history.

On the positive side, Martin Brodeur became the first goaltender in the history of the NHL to record a game-winning goal in a contest last Tuesday against the Flyers at Continental Airlines Arena.

A few years back, in the 1997 playoffs, Brodeur proved he could do more than just prevent goals—he could score them. And just last week he proved he can do more than just save games—he can win them.

With the Devils carrying a 2-1 lead into the third period, the Flyers pulled rookie goalie Brian Boucher on a delayed penalty to New Jersey. Due to persistent forechecking by the Devils, Philadelphia wound up getting stuck with the puck in their own zone, and as Daymond Langkow tried to weave his way up the ice, Sergei Brylin met him at the blue line.

He forced Langkow to get rid of the puck quickly, and Langkow turned and pushed the puck back into his end and into his own empty net. "I got a sick feeling to my stomach," Langkow said about the goal.

Brodeur, being the last player to touch the puck on an earlier save, was credited with the goal—the second of his career, which turned out to be the game-winner.

The scoring opened four minutes into the second period courtesy of New Jersey's Sergei Nemchinov, acquired from the New York Islanders last season.

Elias followed, taking advantage of a Craig Berube goalie-interference penalty to make the score 2-0. Langkow made the score 2-1, but then negated his goal by "scoring" the Brodeur goal in the third period. Philadelphia's Mark Recchi scored his 21st of the season to try and bring his team back, but it was to no avail, as New Jersey's Scott Niedermayer netted an insurance goal with under five minutes remaining.

With the win, New Jersey extended its Atlantic Division lead over the Flyers to 15 points. The Devils also remain undefeated in the month of February, stretching their unbeaten streak to six.

At the Pepsi Center in Colorado, two Western Conference division leaders squared off this past Sunday in a match between the Dallas Stars and the hometown Avalanche. The Stars struck first and carried a 1-0 lead into the third period thanks to a goal from Scott Thornton on a rebound off a Brett Hull slap shot. It was Thornton's first goal in a Dallas jersey—he was just acquired from Montreal earlier this season.

Mike Modano pushed the Dallas lead to two in the third period, taking a pass from Sergei Zubov and putting it past rookie goalie Marc Denis, playing in place of the injured Patrick Roy. The goal marked the third consecutive game in which Modano has scored.

The Avs tried desperately to come back and were given a prime opportunity to when Modano drew a holding penalty late in the third. They pulled Denis to gain a two-man advantage, and rookie Alex Tanguay managed to get his own rebound and bang it past Ed Belfour.

But it proved to be too little too late for the Avs, as the goal came with only 11 seconds left. The shutout would have been Belfour's fourth of the season.

For Colorado, the loss opened the door for Edmonton to pass them for the top slot in the Northwest Division, leaving only a point separating the two teams.

Notes from around the league:

—It's their game: One of only a handful of Canadian teams left, the Ottowa Senators have announced that they will be able to stay in their native Canada. The Senators had been facing economic difficulties, but due to the success of an aggressive ticket campaign, they were able to sell enough tickets to support their stay in Ottawa.

—Good as gold: This week marks the 20th anniversary of arguably the greatest event in all of sports history - the "Miracle on Ice" at the 1980 Lake Placid Olympics, which saw the U.S. upset the mighty Soviets to go on and win the gold.

Ravens' Ray Lewis arraigned for murder

Pro Bowler awaiting trial for two killings after an Atlanta post-Super Bowl party

By Mike Myers

Baltimore Ravens Pro Bowler and leading tackler Ray Lewis, 24, along with two acquaintances were indicted February 11 in the double-murder of two men found stabbed to death outside an Atlanta nightclub following a post-Super Bowl party. Lewis was held in the Atlanta City Detention Center for 15 days before being released on $1 million bail after a superior court judge ruled he posed "no significant threat" to flee the charges.

Lewis made his first public statement about his arrest on Wednesday, Feb. 16. He began by expressing his sympathy to the families of the victims and then proclaimed his innocence.

"You've heard it many times before from my attorneys and a lot of other people but now you get to hear it from me ... I am innocent," he said. Lewis declined to answer any questions as a court order restricts him to comment about the case.

Ravens owner Art Modell testified as a character witness on Lewis' behalf during his bond hearing and was at the news conference Wednesday at Ravens headquarters. Head Coach Brian Billick also attended the news conference in support of Lewis.

"He is a member of the football team and he will be afforded all of those rights, which includes the use of the facility," remarked Billick. "It's a unique set of circumstances but Ray is a member of this football team."

Under the terms of Lewis' bond he must remain in the state of Maryland until the trial, with special provisions to travel to Georgia in order to meet with his legal team. Lewis has the right under Georgia law to demand his trial start no later than April 28.

Lewis is charged with two counts of malice murder, two counts of felony murder and two counts of aggravated assault with a deadly weapon. His acquaintances, Joseph Sweeting and Reginald Oakley, will face similar charges. A murder conviction in the state of Georgia carries a sentence of either life imprisonment or the death penalty.

Lewis is coming off of a Pro Bowl season with the Ravens in which he led the team with 167 tackles while also recording three-and-a-half sacks and three interceptions. He has led the team in tackles each of the four seasons since he had been chosen by Baltimore with the 26th overall pick in the 1996 draft.

Lewis was the second NFL player charged with murder in six weeks. Rae Carruth was charged with the first-degree murder of his pregnant girlfriend. She was a victim of a drive-by shooting on November 16 and died three weeks later.

The race for the NBA MVP is on

Value to team is the most important criteria for these five mid-season candidates

By Rob Schmicker

With Michael Jordan retired and Karl Malone losing his touch, this year's NBA MVP race seems to be up in the air.

MVP stands for Most Valuable Player, but the meaning of valuable can have many different definitions in this case. A valuable player can be valuable to a team in many different ways. So which criteria should be emphasized when choosing a league MVP?

I give the MVP to the player who is a leader on and off the court; the player that will make the decisive shot at the end of a game; the player that is the foundation of the team. Here are my five candidates for NBA MVP:

Shaquille O'Neal—When Phil Jackson took over as Lakers head coach, a big deal was made about how he and Shaq would get along. In the off-season, Jackson challenged Shaq to become the team's leader and, in response, Shaq's numbers have gone up in every category. He is currently second in the NBA in both points and rebounds.

But Shaq has a weakness when it comes to shooting free throws. He is only a 50% foul shooter, and can never really be counted on to hit the crucial foul shots at the end of the game. Until he is able to, the MVP goes elsewhere.

Allen Iverson—Iverson is the first person since Michael Jordan to average 30+ points per game. He has single-handedly won—and lost—many games for the Sixers. They are currently in the playoff hunt, and without him they might only win 15 games a year.

His only downside is that he doesn't pass the ball enough. You can always count on him to take the final shot, but it's not his fault that Philly has no other scorer. I still think he needs a couple more years to mature before I grant him the title of league MVP.

Vince Carter—Carter is quickly becoming the NBA's top star with his all-world dunks. He is showing Toronto and the rest of the NBA that he is for real, but it seems that his dunks often overshadow the rest of his game. I think Carter needs a few more years to shed his dunking identity before he is awarded the MVP.

Tim Duncan—Duncan deserved the award last year but was edged out by Malone. Through 49 games this year he has 43 double-doubles, but does it so quietly. "We get to the end of a game against the Spurs, and I'm thinking, 'We've contained Tim Duncan.' Then I look up and realize he's got 25 points and 12 rebounds," the Mavericks Michael Finley said.

Even though he is so dangerous, Duncan does have very good players around him to help take the pressure off of him. For that reason, he finished a close second on my ballot.

Gary Payton—Ever since Shawn Kemp was traded, Payton has been the heart and soul of the Supersonics. Seattle made some off-season moves and brought in role players Horace Grant, Ruben Patterson and Brent Barry. But Seattle has been able to win and stay in contention this season thanks mainly to Payton.

He is doing it all this year, averaging 23.2 points, 8.6 assists and 6.3 rebounds per game. You can tell that he is the leader of the team just by the way he carries himself on and off the court. He takes the blame for the team's losses, and passes the praise on to his teammates when the Sonics win.

Therefore, I give the NBA MVP to Payton, although Shaq will end up winning it in the end.

Courtesy of A.P.

Others that deserve some consideration but are on losing teams are Dikembe Mutombo, Shareef Abdur-Rahim and Grant Hill. They are putting up some impressive numbers, but as long as their teams aren't winning, they won't win the MVP. That is why Payton is so special—he was able to take a mediocre team and turn it into a contender.

NBA Expert's Picks

By Justin McCarthy and Ali Ahmed

Utah at Portland

These two teams have split their two previous meetings, and in both Pippen was held to single digit point totals. If Pippen can break out of this cold streak against Utah, the Trialblazers are sure to win. However, Portland will still have their hands full with the trio of Stockton, Malone and Hörnacek. This game may eventually come down to a battle of the backcourts—advantage to the young and tal—ented Stoudamire and Smith.

Justin's pick: Portland by five

In last year's playoffs the most exciting one-on-one match-ups for me was definitely Karl Malone versus Brian Grant. The strength and passion Grant showed while competing with Malone the whole series was just incredible despite giving up the size and experience advantage to Malone. Too bad that this year Wallace will be starting at the four spot, but the blazers could start him at the five—giving way for Grant to matchup with Malone at power forward. In any case the Jazz will be out to prove themselves against the best team in the league but the frontcourt of the Blazers will still be too much for them to handle.

Ali's pick: Portland by 13

New York at Miami

This game may determine first place in the Atlantic Division and it certainly has playoff implications. The last time they met the Knicks won in fashion with double-doubles from Ward and Ewing and huge games from Sprewell and Houston. Although Ward is injured, the Knicks are on a recent three-game winning streak. This rivalry always promises to be entertaining, especially in the paint between Ewing and Mourning.

Justin's pick: New York by nine

Miami is having trouble playing consistently at the offensive side of the ball. Tim Hardaway although improving is not getting it done and Mashburn is not stepping up and being a legitamite number two option. Look for the Heat to make some roster moves soon and try and some punch especially fo the bench. John Starks might be an ideal candidate since he is not serving any great purpose in Chicago. The Knicks on the other hand need to get more consistent and get healthy for the playoffs where they should be the most talented team in the Eastern Conference. Look for Sprewell and Houston to have big games.

Ali's pick: Knicks by 15

Charlotte at Minnesota

Minnesota has lost five of its previous seven games, and its fortunes surely won't turn around against the blazing Hornets, who have won six of their last eight. In that defeat Garnett got a double-double, but he was held to under 20 points. If the Wolves hope to win they will need more points from their young leader. The Hornets will win a close one behind a very balanced attack led by their all-star Eddie Jones.

Justin's pick: Charlotte by four

Minnesota's youth is a factor in their inconsistent play. Szczerbiak is starting to get better with each game and once he finds consistency that should help take the pressure of Brandon and Garnett. Also, one of the frontcount players and one of the shooting guards, either Peeler or Sealy, need to step up their play for the Timberwolves to make more of an impact. Charlotte has a lot of talent and just needs more time for their players to get a feel for each other. Eddie Jones is probably the best two—guard these days and should have a big game against the Wolves as should Anthony Mason.

Ali's pick: Charlotte by two

Detroit at Indiana

The Pistons defeated the Pacers already this season by getting double figures from each of their starters and by shutting down the explosive Reggie Miller. They held him to a meager 3-18 from the floor—a feat that is very unlikely to occur again. Expect huge games from Miller and from Smits, who will easily dominate the paint against Terry Mills.

Justin's PICK: Indiana by eight

I'm still not sold on the play of Jerry Stackhouse. Somehow I don't think that he is the numebr two option that Grant Hill can depend upon to lead them deep into the playoffs. The Pistons desperately need a low-post presence and for Lindsey Hunter to start stepping up his game. Indiana, like Utah, is full of wily veterans who use their abilities to the fullest. If the Pacers can get Rik Smits going early, Detroit will have a long night.

Ali's pick: Pacers by six

LA Lakers at Portland

These teams are meeting for the final time this season before a possible matchup in the postseason. The Trailblazers have taken two out of the three games from the Lakers, even with Shaq averaging a double-double against them. The fortunes of the Trailblazers against the Lakers seems to rest on one player: Scottie Pippen. In the three meeting between these teams, when Pippen has scored double figures in points, the Blazers have been victorious. In the sole Laker victory, Pippen was held to a dismal five points. However, this game will not be determined by Pippen alone as the Blazers will need the support of Wallace, Smith and Stoudamire to counter the Lakers superstar trio of O'Neal, Bryant and Rice.

Justin's pick: Lakers by two

Sometimes you wonder about the executives at the TV stations who choose to show the Heat vs. Spurs instead of this game. Anyway, Portland should be in good shape going into the playoffs with an easier second half schedule. The Lakers on the other hand should be out for revenge after losing the last game to the Blazers. The key for the Blazers will be to limit Shaq and Kobe and rely on Pippen to take Glen Rice out of the game. The Lakers have to find a way to stop Wallace and Brian Grant from going off and disrupt Steve Smith, Portland's most consistent player. Look for Pippen to have great all-around game against his former coach.

Ali's pick: Portland by seven

There is enough space in here to write a manifesto, but i am not going to. a. i dont feel particularly passionate about anything. 2. i am not the Unabomber. and d. i have my doubts wheter the community would actually read it. Write for sports.

Zeigler stabilizes women's water polo program

Second-year program has gone through three coaches in past six months, but Bucknell grad has stepped in with high goals

By Brooke Rea

As the Bucknell women's water polo team kicks off its second varsity season, the players are getting used to new head men's and women's coach John Zeigler, their third coach in two years.

After one varsity season under former head coach Lynn Kachmarik, the women's team learned this summer that Kachmarik would not be returning to coach this year.

Within one week, however, interim athletic director Brad Tufts had already found a likely candidate for the position, and Zeigler was hired on January 10, 2000. A Bucknell graduate, class of 1991, Zeigler was a four-year letter winner in swimming and water polo, and he served as water polo captain during his junior and senior year seasons.

This is not the first time Zeigler has come through in a crunch for BU Water Polo. During the 1992-1993 season, he stepped in at the last minute when their coach left unexpectedly. To do so he took a one-year deferment from law school at Widener University, but returned there to earn his J.D. once the season ended. He also served as the women's assistant coach during that time.

James Mianti—The Bucknellian

John Ziegler has brought experience and stability to the women's team.

Former men's coach Mike Wooster took over the women's coaching duties this fall and was slated to continue coaching through the spring season-and possibly longer. In late December, Wooster told team members and the athletic department that he would not be returning to Bucknell. Many of the women were crushed and frustrated.

"Since that time I have always thought about how much I miss coaching," Zeigler said. "But even after graduating, I have tried to remain active in water polo- whether through playing, coaching or reffing."

Zeigler has played for the Harrisburg Area Water Polo Club since 1985, and he started the Pennsylvania Water Polo Club—where he is a player and a coach. He has coached swimming and water polo at the high school level and will serve as the Assistant Coach for the U.S. Water Polo Men's Northeastern Premier League Team this spring. He was also a referee for the 1999 NCAA men's and women's seasons.

Players hoped the transition wouldn't be too difficult, and after nearly six weeks of training, they admitted that things couldn't be going more smoothly. "Thanks to John we've had an incredibly smooth transition from Mike into this season," senior captain Emily McKnight said. "Our first weekend traveling was a great bonding time for us and for him. We're lucky to have him; he is a great motivator and he knows more about the game than anyone."

Zeigler is still adjusting to the sudden career move and commutes between his law office in Harrisburg and Bucknell. "It's a little bit difficult with me commuting," Zeigler said, "but it could have been worse. Luckily, I've done this before at Bucknell so I know how to handle a quick transition."

So far the women's season is off to a great start. After traveling to Indiana University last weekend, the team feels ready to host several league foes this weekend at the Bucknell Inviational.

"I am very impressed with the team," Zeigler said. "There is a mix of experienced veterans and an equal number of young talented players, and everyone has the intensity and desire to succeed. I expect us to be in the running to win our conference and place well at ECAC's and Easterns."

His favorite thing about being a head coach is the opportunity to utilize his legal skills while doing something that he loves. "There is more to coaching than just being on the pool deck," Zeigler said. "You have to know the rules and be ready to handle the organizational aspects of putting a team and season together."

Zeigler has had to tie up loose ends left by Kachmarik and Wooster, who had both put time into recruiting and planning the spring break training trip to Southern California. Everything has come together as planned, and the team looks to take on three early decision recruits next fall as well as up to a dozen more solid players. Zeigler has also finalized plans for spring break, when the team will travel to Southern California for tournaments and training.

The athletic department is required to conduct a formal search for a permanent men's and women's head coach after this season, but Zeigler has submitted himself as a strong contender for the future position. If hired, he and wife Lisa, a personal trainer in Harrisburg, will move permanently to Lewisburg this summer. Zeigler is also excited about other opportunities this job offers, and is considering teaching or going back to school if hired at Bucknell.

The strength of the women's team seems to be that they can transcend any setback-even two coaches leaving in one year.

The players look forward to the contributions Zeigler will make to the program. Sophomore Adrienne Schober was recruited by Kachmarik and played under Wooster this fall, and she admits that three coaches in two seasons is not the ideal situation for any varsity team. But she is also confident in the capabilities of her fellow players and Zeigler to adjust to the new team dynamic.

"John has done his best to make this go smoothly," she said. "With his water polo background, he is one of the most experienced people out there. And with his history as a referee and a coach he brings some valuable assets to the team. I'm excited to see what we can do this season."

Bison gain experience against nation's best

Fall to Michigan, Michigan State, and Indiana University to open spring season

By Allison Kuhn

The Buckell women's water polo team started off its season against tough competition last weekend.

The Bison traveled to Indiana University, where they fell, 17-7, to the University of Michigan, who is currently ranked 16th in the nation, and by the same score to Indiana University, currently 17th in the nation. Finally, the Bison gave Michigan State University a run for its money but were unable to come out on top, losing 9-5.

"The third game against Michigan State was the best one we played. In that game we played with intensity for most of the game however were never able to overcome a 3-0 deficit from early in the 1st quarter," said first-year coach John Ziegler.

Although the Bison weren't victorious, they did make progress.

"We started out rusty, but everything came together throughout the weekend. We accomplished our goal to play as a team and we came a long way," co-captain Emily McKnight '00 said.

"We started out rusty, but everything came together throughout the weekend. We accompllished our goal to play as a team and we came a long way."
—Emily Mcknight '00

Brooke Rea '02, a transfer from Middlebury, stepped into the team and has proven to be a strong asset. Rea had a total of five goals and eight points throughout the weekend. "She was a big part of our offense and will continue to be throughout the season," McKnight said.

Jennifer Rupert '03 and Adrienne Schober '01 also added to the team effort by scoring four and three goals respectively.

"Rupert and Paige were also active with counterattack and driving goals, and Paige led the team on defense with five steals," Zeigler said.

Goalie and co-captain Kristin D'Agostino had three terrific games with a total of 28 saves over the weekend. "Kristen played well particularly in the Michigan State game-recording 11 saves," Ziegler said.

The Bison will be at home this weekend facing Slippery Rock, Salem Teikyo and Penn State.

They are looking forward to facing teams in their conference and seeing how they fare against them before the league tournaments begin.

"All in all, we had a great weekend," D'Agostino said. "It was a learning experience, and we were able to see our strengths and weaknesses. Now we need to concentrate on those aspects to get ready for this coming weekend."

The Bison look forward to a successful season and hopefully a conference title.

"The weekend helped us to prepare for our home tournament and the Allegheny conference games ahead-where we will be right in the running to win the conference," Zielger said.

Sports

It can happen here—and did

The sport of NCAA ice hockey was rocked January 15 with the news that the University of Vermont Catamounts, a perennial national powerhouse, had the remainder of their '99-00 cancelled due to hazing violations. It forced college administrators all over the country to re-evaluate their athletic programs and take a hard look at sports hazing. But not Bucknell, who did a similar re-evaluation just five years ago after the University suspended its men's water polo program for a large part of the 1994-95 season because of hazing.

Freshman goalkeeper Corey La Tulippe, who grew up in a neighboring suburb of Burlington, Vt. (the location of the University of Vermont) and had boyhood ambitions of playing hockey for the university, was the one man who took a stand and brought the program down.

After being awoken several September nights to drink hard shots of liquor and run naked outside and being told of degrading pranks that would occur on "the big night"— including sexual intercourse with a sheep—La Tulippe contacted a school lawyer on Sept. 13 and then an assistant athletic director a few days later.

Athletic director Rick Farnham and head coach Mike Gilligan responded with a strong message to the team: no hazing would be tolerated.

Commentary

Carmen Mauriello

Sports Editor

But on October 2, LaTulippe and the other freshman were told to arrive at a party wearing women's thongs and forced to perform several humiliating initiation rituals, including an "elephant walk" where the players walked in a line while gripping each other's private parts.

LuTulippe was told by Gilligan 11 days later that he was the squad's fourth-best goalie and that he would only carry three, but the coach did leave open the possibility that LaTulippe could practice occasionally with the team and compete for a spot the following season.

In late October, LaTulippe's lawyers informed university president Judith Ramaley of LaTulippe's desire to leave school, suggesting a financial settlement for his emotional distress. The school opted to hire an outside law firm to investigate the hazing in early November and the entire team was found guilty of participating in the hazing; Gilligan instituted a plan of rotating one-game suspensions and probationary status.

LaTulippe filed suit December 10, and Vermont Governor Howard Dean demanded action by the university, ordering an investigation by the state's attorney general, William Sorrell. As players testifying during early January, their stories changed and the truth finally started to surface.

"We're not going to lie under oath," junior goalie Andrew Allen said. "We may as well come clean."

With the news that many team members were untruthful during the university's investigation, Ramaley cancelled the final 15 games of the Catamounts '99-00 season, taking a $200,000 dollar financial loss from refunding tickets, as the 4,000-seat Gutterson Field House has a 20-year waiting list for season tickets.

On February 2, Sorrell announced the results of his office's six-week investigation, which found that virtually all of LaTulippe's allegations were true, that the university's investigation was "insufficiently thorough" and that similar—if not worse—hazing had taken place on the team since 1996.

Although team captain Kevin Karlander is facing misdemeanor criminal charges of providing alcohol to minors and other Catamounts' upperclassman may face similar charges, hazing charges are not possible because the state has no laws prohibiting hazing—something Sorrell is recommending the Legislature to change.

"We look upon hazing very differently than we did (before the incident)," Sorrell said. "What happened to Corey LaTulippe is a crime."

As for the players, several are considering transferring or joining a minor league team, while LaTulippe is playing junior hockey in Rochester.

Burlington may be hundreds of miles away from Lewisburg, but Freas-Rooke Pool is not. That was the home of the '94-95 Bucknell men's water polo team until its season was cancelled on October 19, 1994 due to hazing.

Former athletic director Rick Hartzell cancelled the final month and a half of the team's fall season for, "continuing activities by members of the water polo team that were disrespectful and condescending to other members of the team."

The same day as the team's suspension, second-year coach Alan Huckins resigned. Hartzell was deeply troubled that Huckins, a 1992 graduate of Slippery Rock, didn't put a stop to his team's "clearly improper" behavior.

The Bison, who were ranked ninth in the nation when the season began, had a record of 7-10 at the time of the suspension. Freas-Rooke Pool was slated to host the Eastern Water Polo Association Southern Section Championships on October 29-30, but the event was forced to relocate.

A task force representing a cross section of faculty members and chaired by Steve Stamos, professor of international relations, was formed on November 3 to investigate the team's alleged hazing activities and determine if the suspension was a sufficient penalty. After interviewing nearly a dozen underclassmen members of the team, the committee filed a confidential report and set of recommendations with dean of students Richard Chapman.

A second committee, which included President Gary Sojka, discussed the committee's recommendations and decided on December 22 to cancel the team's 1995 spring season and place it on probation through the 1996-97 academic year.

"Any evidence that the 'traditions' of hazing (as defined by Bucknell's policy on hazing) have continued will result in the immediate, permanent elimination of the water polo program," read a memo from the second committee to Hartzell.

Stamos said that the committees had enough evidence to implicate certain members of the team on charges of misconduct, but the victims of hazing were not willing to testify because of the "climate of fear that was brought by upperclass players."

The University hired Mike Wooster to be the team's coach that spring, and the Bison have swum in calm waters ever since.

So given the fact that hazing is out there, and it can, did and still does happen here (see p.7), how can the University identify and eliminate instances of hazing—specifically on athletics teams?

I think the point here is that you can't wait until after its already become a major problem; you have to catch it early and crush it—unlike UVM, who was slow to identify hazing and feeble in its response and punishment.

It all comes down to the coaches. They know—for the most part—what goes on in their teams and can put their feet down against hazing. And if they have doubts about their players' behavior, they need to probe their younger players for the truth, find out who are the instigators and issue stern and appropriate penalties. If they command the respect of their players and their punishments invoke fear, they can influence their athletes' conduct.

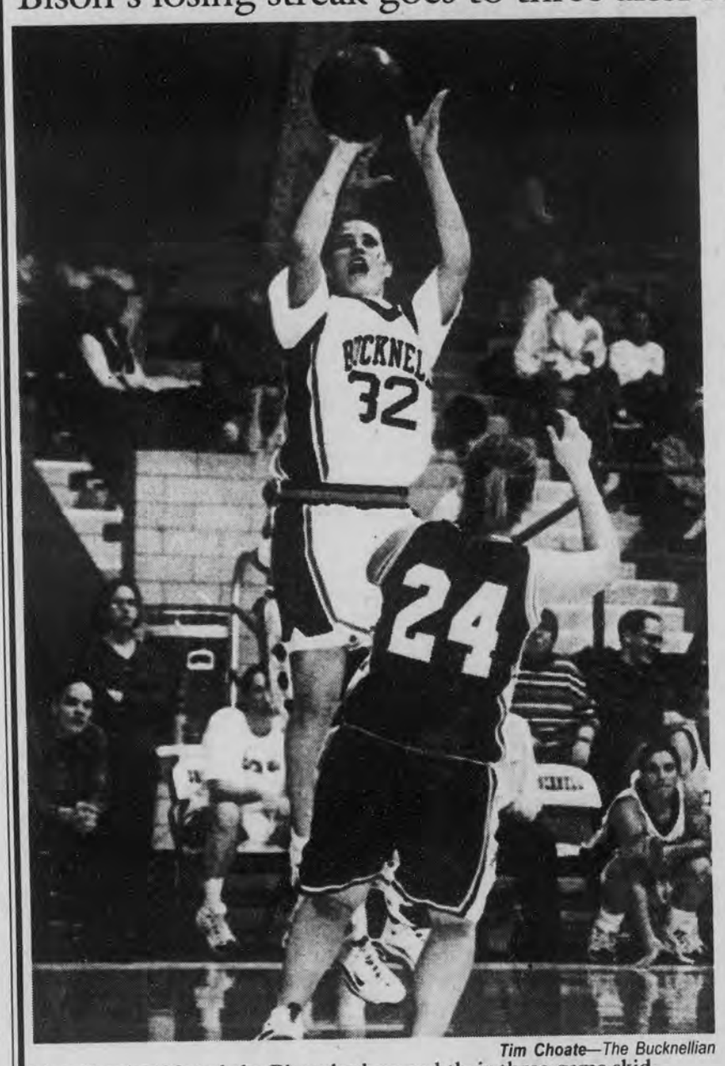
The University must make a special effort to hire experienced coaches who stress discipline and command the most of their athletes both on and off the playing field. It needs to make sure that all athletes and coaches are familiar with its strict no-hazing policy and that they understand the repercussions.

Its action must be swift, as it was with the water polo team, if it hopes to eliminate hazing from Bucknell.

If not, our next violation will not only make the front page of *The Bucknellian*, it will be alongside UVM on the front page of the *New York Times*.

Struggles continue for women

Bison's losing streak goes to three after losing squeakers to Colgate and Albany



Tim Choate—The Bucknellian

Kate Franks '03 and the Bison look to end their three-game skid.

By Andrew Bevan

Close games have become a common thing for the Bucknell women's basketball team this season. This past week was no different as the Bison lost two close games and saw their losing streak stretch to three with one regular season game left. This past Saturday the Bison fell to conference foe Colgate, 69-66. On Wednesday they saw their woes continue as they lost a squeaker to Albany, 64-63.

The game started slow for both squads. At 11:49 of the first half, the game was knotted at six.

"They made a conscious effort to shorten the game," head coach Kathy Fedorjaka said."

The Bison played strong defense in the first half, getting their hands on a lot of Albany passes, however they were never able to force enough turnovers. Also, Albany seemed to have an answer for the Bison every time throughout the contest. When Bucknell took a 10-6 lead with about 11 minutes to play in the first half, Albany countered with two three pointers to take a 12-10 lead.

With just over three minutes to go in the first half, Albany went on a 10-0 run to gain a six point advantage over the Bison, 29-23. Bucknell ended the run with about a minute to play on a free throw from sophomore forward Monique LeBlanc. Albany added another basket and senior tri-captain Lori Houck hit a three-pointer with 15 seconds remaining to cut the Golden Dane's lead to five, 31-26, heading into the locker room.

The Bison battled back in the second half, taking the lead by one, 35-34, just over two minutes into the half. Albany recaptured the lead for good 30 seconds later and never relinquished it. The Great Danes extended their lead to as large as eight, 62-54, with about six and half minutes to go in the game.

The Bison clawed back to cut Albany's lead to three, 64-61, with just over a minute to play. Sophomore forward Vicki Quimby then had a key steal and was fouled. After the Albany timeout, Quimby sank both of her free throws to get the Bison within one. After another Albany turnover, the Bison called timeout with twenty seconds left to set up their final play. Unfortunately, the play did not go as well for the Bison as they would have hoped as Quimby missed a jumper with seven seconds left. After a quick Bucknell foul, Albany went to the line in a one-on-one situation. They failed to make their first shot but as Bucknell got the rebound and moved it upcourt, they were unable to get off a final shot, falling by one.

"We we're unaggressive from the perimeter, " head coach Kathy Fedorjaka said.

"Our offensive looks were spo-

Bison swimmers successful at Patriots

Men finish in third, women in fourth; Bison 200-yd medley breaks League mark

By Chuck Vicente

The men's and women's swim teams have endured a long season—which began in late October. Their schedules have included eight meets and two tournaments. However, none of those mattered in this past weekend's Patriot League Championships—where Bucknell swimmers put everything on the line.

Last Thursday marked the beginning of the three-day championships, which were hosted by Army. They were the ultimate competition for the Bison swim teams—a chance to prove their individual and team abilities. In the end, coach Jerry Foley said his swimmers were "physically and emotionally exhausted."

The men's competition consisted of six teams; Army, Lehigh, and Bucknell were the top teams which fought for first. They were also the only teams to win individual events.

Army tallied 867.50 points to win, Lehigh had 838 in second, and Bucknell ended up in third with 610.50. The men's team just about reflected last year's performance, which was somewhat disappointing.

The women's competition was an extremely tight race for third and fourth place between Army and Bucknell. Unfortunately Army prevailed with a score of 590.50. Bucknell notched 538.50 points, 100 more than last year. First and second place went to Lehigh and Navy respectively.

Sophomore Chris Neary, one of Bucknell's premier swimmers, had a great weekend. He won both the men's 50-yard free with a time of 20.70 and the 100-yard fly with a time of 50.22. In addition to his two impressive wins, Neary was also a part of the winning 200-yard medley relay.

The relay team, consisting of Neary, Tyler Wynn '02, Mike Guskey '03 and Jeff Sharpe '01, captured first place with a time of 1:32.24—a new meet and league record. Coach Foley described them as "one of the best [relay teams] on the East."

"There were no seniors [on the 200-yard medley], which proves to be even more promising for the future of the team," Guskey said. Guskey also put forth a great effort in the 100-yard breast. His time of 57.53 set a new Bucknell record.

Another strong relay performance by the men was from the 200-yard free team. Neary, Sharpe, Doug Hill '00 and John Ferriter '01 seized first place with a time of 1:22.80. Wynn also won a close race, placing first in the 100-yard back event with a time of 51.93. He showed great effort by beating his Lehigh opponent by two milliseconds.

The Bucknell women's team won two events. The 400-yard medley, composed of Darby Golino '03, Kelly Wilson '00, Molly Lowe '01, and Abby Weaver '02, easily seized first place.

Wilson will leave an impressive mark on Bucknell. She set a school record in the 100-yard breaststroke with a first place time of 1:07.16. She had her eyes on the record for a long time until Foley thought it might be hindering her performance. "I diverted my tension and took my mind off of it," Wilson said.

A major challenge of a long tournament like this is keeping a good pace and conserving energy. Foley explained that the "spirited" men's and women's teams gave it their all. "We swam well, and it really paid off," Guskey said.

For some Bison, the swimming season continues at the ECAC championships this weekend. Only a few select swimmers will compete, and Foley said that "individual performance is the primary focus."

Wrestling crushed by Lock Haven 40-6

By Justin White

The Bucknell wrestling team's schedule this season has been tough. Very tough.

The Bison have had dual meets and tournaments against the best the nation has to offer. Their most recent match took them to Lock Haven to face the 31st ranked team in the country, according to the latest National Wrestling Coaches Association poll. The Bison were only able to manage one win in a 40-6 drubbing.

Playing such high quality teams has its advantages and its disadvantages. By facing stiff competition, the team gains valuable match experience. But the downside is that the team's record suffers as a consequence. Thus, the Bison's 4-9 dual meet record should be viewed in a different light.

Lock Haven defeated the Bison by a final score of 40-6. It was not until the final match of the day that Bucknell was able to spoil the Bald Eagles' hopes of a shutout, as senior Gbenga Akinnagbe was able to win by a fall. It took the 184-pounder only 2:16 in the first period to overpower and pin his opponent.

Bucknell has only one dual meet remaining this season. This Saturday, Navy travels to the confines of Davis Gym for each team's final showdown of the season.

The match will be televised on CCN-Cable Channel 8 or CATV8. It will beavailable to viewers in the Lewisburg, Milton, Watsontown and Danville areas and will also be replayed on Monday, February 28 at 7:00 p.m. and Tuesday, February 29 at 2:00 p.m.

The following weekend is the team's biggest weekend of the season. They put the entire season on the line at the EIWA Championships at Navy.

Students commemorate Black History Month

By Jennifer Jenchura

Each year, February commemorates Black History Month in the United States, and the University celebrated the event with a host of activities ranging from theme movies, cultural exhibits and speakers. Hundreds of students of all races attended last month's events.

Preparations were made at the start of the spring 2000 semester by student organizations that "focus on African Americans in any sense" said Cheri Skipworth '01, president of two such groups, Essential and Jelani, a newly formed dance group.

Essential's goal is to focus on issues confronting African-American and Latino women at the University and in the world. Essential kicked of this month's events by distributing a Black History Month calendar over campus. On Feb. 8th, 15th, and 22nd, Essential showed free movies that included "The Color Purple," "Imitation of Life" and "A Raisin in the Sun," respectively.

On Feb. 17, black students met to discuss "The Importance of Black Greeks on campus." Currently there is just one black fraternity on Campus, Kappa Alpha Psi. The group expressed an interest in expanding the black Greek program with the possible addition of a black sorority and more fraternities.

Essential's activities continued on Feb. 24 by hosting Jim Hill in "Rebuilding our Black Community." Although not directly related to Essential's mission statement, Hill came to speak to the campus community about his work in homeless shelters throughout New York City. Approximately 20 enthusiastic students attended this lecture in the Gallery Theater. Hill also showed off his artwork, which he sells in order to help fund his shelter. Skipworth believes Hill was extremely motivational and afterward. "He was bombarded with a crowd of people who didn't want to leave.," she said. With the help of those who attended, the University was able to donate about $300 to the Jim Hill Homeless Shelter.

Voices of Praise, Bucknell's Gospel Choir, invited Unity Christian Fellowship of Williamsport to share their music ministry with the Campus Community on Feb. 26. "We thought it would be a good idea to join together in celebration of Black History Month and promote unity," Voices of Praise secretary NaKhia Hopkins '01 said.

Other events included "Black History Talent Showcase." Advertised as a must see event, The Jelani Showcase was perhaps one of the most vibrant and energetic shows of the semester, with over 100 students in attendance this past Saturday night at 8 p.m.

In just their 3rd performance, Jelani was definitely a crowd pleaser. As well as performances by Jelani, the Bison Girls dance team performed to the musical group Salt 'N Pepa, students Hopkins and Melissa Moffett '01 sang a rendition of Whitney Houston's "One Moment in Time" and Kellen Smith '03 read her original poetry. After the countless hours of rehearsals and planning such a show, Skipworth stated that "the show was a success and Jelani has had nothing but positive feedback. .. and the long hard practices paid off."

Another must-see event involved the Seventh Street House of African American Studies on Feb. 27. For the second year in a row, the house was transformed into a display of different eras of black life in America.

Tours began in the house's basement with a look at slave life, and then students were led through a stimulated version of the Underground Railroad via the house's back stairwell. Following a look at the Harlem Renaissance on the third floor, participants moved to the second floor to learn about black involvement during the Civil Rights Era. The tour was filled with autobiographies and pictures of well-known African Americans as well.

At the conclusion of the tour, students were treated to a true soul food dinner prepared by a cafeteria volunteer. Students enjoyed fried chicken, collard greens, catfish, and candied yams as a taste of an authentic home cooked southern meal.

The program continued on with a show in which performers sang a medley of traditional African-American songs and recited poems. Krystal Buhr, who helped organize the House's event, noted that it was the house's goal for everyone to "reflect upon the program, its meaning and why it is imperative that we have it year after year."

The student organizations also worked in conjunction with Bucknell's Multicultural Office. "The goal of diversity at Bucknell is to make the campus more dynamical. When we speak of diversity it is not just ethnic diversity," says Eric Polite '97, interim coordinator of multicultural programs.

"Not much [in terms of the amount of Black History Programs] has changed from last year to this year," Polite said. Next year promises no major changes either, unless there is an increase in funding or support. "The budget is not constructed to do this type of programming; student groups have the funding."

Courtesy of Krystal Buhr

Students enjoy exhibits at 7th St. House promoting Black History Month.

Nadra Nash '03, Jelani's treasurer, believes that, "if more RA's made hall programs out of the cultural events Black History Month offered, more people would come to the events." She also supports the idea of teachers in culture-oriented classes giving extra credit to students who attend the events in order to motivate attendance.

Polite realizes that "students initiate what we have." Although he supports teachers giving extra credit to students attending the programs in the short term, he would like to see more students at the events in the long run. "We genuinely want people to go to the events and appreciate the programs," Polite said. " Research shows that all students benefit in diversity, not just minority students."

Paige Cull—The Bucknellian

Valter's parents come to town

Visit America for first time to see son play

By Craig Kimball

Dan Bowen '00, Brian Muckle '00, Dyrika Cameron '00, Shaun Asbury '00, and Valter Karavanic '00—the list of reads like a Patriot League All-Star team. All of these extraordinary athletes are accomplished on the court.

However, Valter Karavanic '00 has been nationally recognized for his work, not only on the court, but also in the classroom. His grade point average, basketball skills and hard work have earned him the distinguished honor as Bucknell's only academic All-American last year. The incredibly talented student athlete also shows he has a tremendous soft side. He worked all summer for Bell Atlantic in Maryland to save enough money to fly his mother and father from Pula, Croatia, to see him play basketball.

His father Mladen, and mother, Dolores flew over 10 hours from Pula to see their son play basketball. Karavanic had not seen his parents in two years, and they use the telephone as their sole means of communication with their son. Karavanic was given the opportunity to leave Croatia and attend high school in America as a result of both his intelligence and basketball skills. He boarded at St. Benedict's High School for four years. He came to America seeking the opportunity to play basketball and attend college.

During this time he began to improve his basketball skills and became self-sufficient. He made the most of his time at St. Benedict's and his hard work was rewarded when he was accepted to the University. Karavanic's summers have been spent earning money and learning. They have included interning at the Institute for Leadership and Technology (ILTM) and studying electrical engineering for Bell Atlantic in Maryland. The money he earned was spent sparingly in order to accumulate enough funds to finally bring his parents to visit. Mladen and Dolores finally got the chance to see their son play basketball and meet all of the friends he has made.

During the course of his four varsity seasons, Karavanic played in 112 games and has amassed a total of 962 points, 123 three

Chi Omega joins Greek community

Local Kappa Chi Delta becomes a colony of world's largest sorority

By Chrissy Hnetinka

The women of Kappa Chi Delta sorority (local) and the Panhellenic Council announced Wednesday that they have decided to affiliate with the Chi Omega national sorority. This decision completed a three year- long goal of becoming affiliated with a national sorority.

In fall of 1997, four women came together to create Kappa Chi Delta Sorority in the efforts to strengthen the University Greek system while at the same time providing women with an alternative sorority experience.

While the group began as a local chapter, national affiliation was, from the beginning, a goal. For the past three years, the women of Kappa Chi Delta have striven to create an organization based on values of friendship, sisterhood, education and community.

The women of Kappa Chi Delta have continually aspired to meet these goals while facing the difficulty of not having a national affiliation and overcoming the challenge of being a new organization in an established Greek system. The process has been long and, at times, trying, but has proven to be a rewarding experience overall.

The greatest reward came on Wednesday when the women of Kappa Chi Delta achieved their greatest accomplishment.

"We are honored to welcome Chi Omega as the newest addition to our Greek community," said Meredith Alan '01, president of the Panhellenic Council.

After months of planning and research, four national sororities visited campus to propose affiliation with Kappa Chi Delta. The selection process began with an extensive meeting with the local chapter.

The visits were capped by an evaluation, conducted by the Panhellenic Extension Committee, comprised of Alan, Chrissy Hnetinka '00, founder of Kappa Chi Delta, Nikki Katz '00, former Panhellenic recruitment chair and Marnie Yorke '00, former Alpha Chi Omega president. A final vote of the Panhellenic Council brought the four-month process to an end.

Chi Omega Sorority is the largest women's fraternal organization in the world with over 240,000 initiates and over 170 collegiate chapters.

The National Chi Omega sorority values are friendship, high standards of personnel, sincere learning and creditable scholarship, participation in campus activities, career development, and community service, according to their national website.

"Chi Omega was founded on beliefs and values similar to the Kappa Chi Delta sorority and will be an addition that brings strength and energy to the chapter and the Greek system as a whole," Alan said.

Public Safety infringes on student's property

By Jim Leahy

Public Safety exists on campus to protect the interests of the students and staff. However, on Feb. 18, Jason Tu '00 returned to his illegally parked car to find a ticket not on the windshield of his car but inside. The officer felt that the bad weather conditions would ruin the ticket or hide it from Tu's view.

His initial reaction was one of shock. "I didn't think the first time [my personal space would be violated] would be an issue with Public Safety," Tu said. "We should have to hold them to a higher standard."

Tu reacted to the situation by taking action. He went to Public Safety and demanded and apology from the officer and the Department.

Looking for better justice, he also visited the District Attorney of Union County to find out if something could really be done in this situation. The DA told him that since this was not criminal trespassing, his hands were tied.

In the end, he did get something from Public Safety, but it was not all that he had expected.

Officer Joseph Costanzo sent a letter of apology to Tu. The letter was not printed on University stationary and the apology was contained in one sentence. "I apologize for placing a parking ticket on the seat of your car instead of on the windshield, because of the bad weather conditions."

Feeling the original letter was not acceptable Tu went back to Public Safety and demanded more from them.

Director of Public Safety Vincent DeCerchio responded with a more formal letter stating, "I extend the apologies of the Public Safety Department for the situation. This is not our policy. The officer has been reprimanded and this will not occur again."

Public Safety also voided the parking ticket that Tu and DeCerchio agreed was issued correctly.

"While Public Safety does fulfill a necessary role on campus, this is an example of something it does to perpetuate its bad reputation," Tu added.

The officers of Public Safety are here to protect our Constitutional rights and not to break them. Tu was unhappy enough about this to do something. He got them to admit their mistake and apologize personally.

Super Tuesday: Republicans

McCain poses serious threat

Arizona Senator's no-nonsense politics may lead to nomination

By Brian Watson

Over a year ago, Republican leaders were planning to retake the Oval Office, anointing George W. Bush as their savior. With Election Day creeping up on them, Republicans are now faced with a possibility they never expected-they might be forced to support a candidate they simply can't stand. The senator who challenged the party's views and gained the ire of the establishment is now poised to challenge Bush to the end.

Meanwhile, Arizona senator John McCain ignores the Washington hierarchy as he continues his run, winning over independents and democrats and still vying for his party's support.

"All the kings' horses and all the kings' men can't put inevitability back together again," said Mike Murphy, a former spin doctor and now McCain's head media consultant. McCain, deemed a "maverick reformer," was seen as a long shot since the day he announced his candidacy. But with strong campaigning and several primary victories, he poses a serious threat to the nomination Bush expected to win without much effort. His no-nonsense politics and straight shooting have landed him on the covers of every major magazine and newspaper and has voters rethinking their favorites.

McCain's integrity and straightforward politics have many Americans believing that he is the best candidate to help them forget the scandal-ridden Clinton era and restore trust to the White House.

The Beginnings

McCain, a former navy helicopter pilot, was shot down in Vietnam in October 1967. He was promptly imprisoned in the "Hanoi Hilton," jailed for over six years a tortured prisoner of war. Offered an early release, McCain opted to stay, allowing his fellow POW's to be released; he decided he would rather continue his sentence so he would not disgrace the Armed Forces or his military family. His prison term left him with numerous permanent injures; You'll never see him raise his arms in victory-they were broken so many times that he can no longer lift them above his head.

But the torture he endured did not slow McCain. After retiring as from the Navy as a Captain in 1981, McCain campaigned and won a seat in the House. He served two terms for Arizona before entering the Senate in 1986, where rose from relative obscurity to serve as chair to the Senate Commerce Committee and lead powerful campaigns against the tobacco industry and campaign financing.

The issues

Abortion—McCain supports abortions only in cases of rape, incest or risk to the mother's life. He opposes nominating Supreme Court justices who are opposed to abortion.

Budget Surplus—The senator would allot $230 billion for tax cuts, $100 billion toward Medicare and $50 billion to help reduce the national debt. He would also use surpluses to fund private retirement funds.

Campaign Finance—McCain, despite several unsuccessful efforts toward reform, is the unprecedented leader in this field. Will continue to push Congress to adopt a ban of "soft money" donations.

We're going to take those big money and fat cats and establishment people and knock them on their ... ear," McCain told students at a rally at Dartmouth.

Defense—Despite his military background, McCain would close bases in order to save over $4 billion. Also supports development of missile defense systems and is againstshared or foreign command of US troops.

Taxes—He would aim to expand the lowest tax bracket and favors cuts, but not as drastic as Bush's.

The man behind the myths

The various reporters who have entered McCain's "Straight Talk Express" have come out overwhelmed. The senator will not turn down any question, and actually looks forward their challenges; he has had no problems answering questions ranging from foreign policy to his preference in boy-bands. McCain has become the darling of the media, who profile new aspects of the candidate each week. His character and message are intriguing the country more than any candidate in recent memory.

The overriding criticism posed on the candidate questions his temper and ability to compromise with opposing views. Often accused of being overzealous and even wrathful in his crusades for campaign finance reform and tobacco legislation, McCain counteracted the rising "whisper campaign" over his mental competency by releasing 1,500 pages of comprehensive health records, dating back to his release from war prison in Vietnam in 1973.

The overly detailed records told of the severe wounds McCain suffered while serving his prison term. They did not, however, give any credence to claims that the candidate is mentally unfit to hold office. The one time the senator exhibited even remotely unstable mental behavior was a brief contemplation of suicide during his holding, which experts claim as common for POW's.

The release came after published reports over his not-so-warm relationships with fellow politicians have led critics to question his temper and establish it as a prominent factor in his campaign. Even the *Arizona Republic*, his state's largest newspaper, ran an editorial calling McCain's temper "volcanic," stating "If McCain is truly a serious contender for the presidency, it is time the rest of the nation learned about the John McCain we know in Arizona."

Others skeptics recall a Senate floor confrontation with Massachusetts senator Ted Kennedy, where many pols thought McCain was out for blood. McCain shrugged it off, pointing out that the pair joked about it when the Kennedy family paid him tribute for his efforts in campaign finance reform.

The McCain 2000 camp has spun these accusations effectively thus far, and although he feels that most reports are exaggerated, the candidate doesn't claim he's an angel. McCain offers a different perspective: "I have gotten angry at people. And I will continue probably to get angry when I see an injustice done," McCain told "Good Morning America." "I feel that, as I say, people who aren't represented and people who are not well treated, particularly in the legislative process, deserve that kind of attention. And I'll continue to give it."

Can McCain win?

The Arizona senator has successfully spun accusations of brutal "overzealous" behavior and initial doubts of his competency. He, like Democratic contender Bill Bradley, believes that he is the best man for the job. His confidence shines through in every interview and debate; his no-nonsense style displays the workings of a talented, able leader.

While Al Gore is creeping up on Bush in numerous national polls, McCain still ranks as the most electable candidate. His character appeals to all voters, a quality neither Bush nor Gore possess. McCain is the better general election candidate for the Republicans because he will pull democrats and independents alike away from Gore. Both frontrunners appeal strongly to their respective parties, but polls have shown that more independents favor McCain and Bradley. The most votes will determine the victor, and McCain clearly stands to receive the best all-around support.

Losses in this week's Virginia and Washington primaries make his task more daunting, but he has been able to recover from defeat well thus far. Before he works toward challenging the democratic nominee, McCain must move right and win over more Republican support. If he can't convince his own party that he is a dedicated conservative, he won't have that opportunity.

Bush still the man to beat

Despite McCain's efforts, Bush remains the party favorite

By Gretchen Schrock

A year ago, even before the presidential primaries began, Texas Governor George W. Bush was declared the inevitable Republican Party presidential nominee with his large chest of campaign donations and the backing of numerous influential politicians in his party. Now, after Bush won the primaries in Delaware and South Carolina, but lost in New Hampshire, Michigan, and Arizona, some Republicans are questioning his ability to win in the November general elections. Why were Republicans so quick to jump on the Bush bandwagon? Who is this man from the state of Texas and what does he stand for? The truth is Bush has several notable accomplishments, but several faults as well. The question of whether his strengths outweigh his weaknesses will be left to the voting public.

His Character

George W. Bush uses conservative principles to help the poor and the rich. He is in favor of an activist government unlike hard-line Republicans. "Too often my party has confused the need for limited government with a disdain for government itself," he noted. Therefore, to many members, it seems like he is attacking the base of the party. In his defense, a top Bush advisor told *TIME*, "What we're saying is that conservative principles are right, but what you derive from those principles, the focus you take, has been wrong." Bush is proudly incurious and anti-intellectual. He has said that too much knowledge can clutter his vision for America and that his team of experts can sort out the details. "The only thing I know to do is be myself, and ya know, if people like it, fine: if they don't like it, that's the way it is," answered Bush when asked by a *TIME* reporter if being labeled lightweight bothered him. Essentially, George W. Bush is what one reporter labeled him—"A nimble leader who bonds with the players, exploits his charm and energy, but also takes what he can get, sees what he wants to see and has no problem getting along with entrenched power."

His Gubernatorial Career

Bush ran for Governor of Texas in 1994, campaigning on four reform issues—welfare, public schools, the juvenile justice system, and "frivolous" civil lawsuits, all of which were popular in Texas. He took office in Jan. 1995 after ousting a favored incumbent governor.

In Feb. 1999, Bush declared that he had taken on the trial bar and saved Texans almost $3 million in lowered insurance rates. Insurance experts in Texas call the claim preposterous.

Since Bush took office in Texas, the welfare rolls have been cut in half, from 760,000 to 380,000, but poverty remains a major problem in the state. Texas ranks near the bottom in almost every category of social well being—poverty, hunger, pollution, and children without health insurance. Bush has always been preoccupied with further restricting access to the welfare system, which pays an average of $188 a month to poor families, making it one of the harshest in the country. In 1995, he pushed for a two-year time limit on welfare recipients, with no opportunity to reapply. In 1995 and 1997, he wanted to institute family caps, in which those with two or more children would not receive additional assistance if they had another child. Last year, he opposed a large expansion of the federally funded Children's Health Insurance Program and called for two more hard-line welfare proposals. The first would have required anyone committing a felony or getting caught with drugs to be kicked off welfare permanently. The second proposed that if a mother receiving welfare benefits failed to cooperate with authorities, her entire family would be cut off, even the children. None of these measures got out of the Texas senate.

The issues

Abortion—George W. Bush is definitely anti-abortion. He would prohibit the late-term abortion procedure known as partial-birth abortion. Except in cases of rape, incest, and when the mother's life is in danger would abortion be allowed. Bush would not make an anti-abortion constitutional amendment a priority.

Budget Surplus—Bush would establish private investment accounts within the retirement system using the surplus from Social Security and would enact a tax cut of $483 billion over five years with the other surplus. He may also propose an increase in Pentagon spending and cuts in other areas of the government.

Campaign Finance—Bush would ban soft money, the unlimited funds from corporations, lobbyists, and labor unions and would raise the $1,000 limit for individuals. He would also require full disclosure by politicians of the origin of their campaign donations. Most striking of all his proposals is the ban on lobbyist donations to members of Congress during legislative sessions.

Defense—Bush would increase weapons research and development spending by $20 billion over five years. He would allot $1 billion to raise military salaries. The building of a missile defense system would also be a priority, which would force him to abrogate the 1972 Anti-Ballistic Missile Treaty. He is opposed to any treaty that would ban nuclear tests.

Taxes—Bush's plan would reduce the top two federal income tax rates (39.6% and 36%) to 33% and reduce the middle rates (28% and 31%) to 25%. The 15% rate would remain. The child credit would be doubled to $1,000 per child. His plan also calls for a phasing out of the inheritance tax on large estates and gifts over eight years. Any companies engaged in research would also receive a tax credit. However, outside analysts predict that less than one-third of the benefits would flow to Americans earning less than $300,000. In contrast, the lower- and middle-income Americans would see their taxes reduced more in percentage terms than the rich. In governmental monetary policy, he approves of Alan Greenspan's overall performance as head of the Federal Reserve.

Bush supports NAFTA and would seek more liberalized trade, which is opposed by the labor movement. He wants to admit China to the World Trade Organization. "The fearful build walls, the confident tear them down," he said, meaning that trade with China is a priority and the human rights abuses are just an afterthought. He favors a $1 minimum wage increase but would let states opt out if they choose.

Bush is pushing for his $8 million plan to get religious and volunteer organizations to help the needy, which would lessen the burden of the federal and state governments. "We must apply our conservative and free-market ideas to the job of helping real human beings," he said, "because no ideology, no matter how right in theory, is sterile and empty without that goal." He supports welfare time limits and work or educational requirements for the able. He wants unwed mothers to live at home or group homes in order for them to receive welfare benefits.

Crime—Bush's policies propose to increase state funds for prison construction and for hiring prison staff and to end parole for repeat violent offenders. He supports the death penalty and the notifying of communities when convicted sex offenders move in to the neighborhood. Bush also desires to lower the limit defining drunk driving to .08 blood alcohol content. He opposes any hate-crimes legislation protecting minorities, gays and women.

Conclusion

Governor George W. Bush calls himself a reformer with results and reminds the voting public that he uses conservatism to achieve those results. He even admits to some of his weaknesses in the office of governor and in campaigning for the presidency. "I'm a competitor," he told *TIME* in early January 2000. "I want to win. And I'm wise enough to understand that all of us need to improve in life."

Voter Registration Information

If you have not already registered to vote in the spring primary, don't forget to do so before the deadline of March 6. Mail-in registration forms are available in the Bucknell Library by the turnstile and the reference desk. Use the forms to change address, party or name also. Pennsylvania has a closed primary; you may vote only for the candidates in the party in which you've registered.

The General Primary is April 4 and will include candidates for U.S. president, senators and representative, PA attorney general, treasurer and auditor, and PA senator and representative.

Super Tuesday: Democrats

Vice President Gore poised for Democratic nomination

By Josh Guyan

"We raised him for it," is what Albert Gore Sr. said as the younger Al joined Bill Clinton's ticket in 1992. It is truly the best expression of the life of Al Gore and why he is running for the highest office in the land. Al Gore has the intellect, education, experience, and drive to be our next president.

Background and Education

Al Gore Jr. was born on March 31, 1948 to Albert and Pauline Gore and grew up the son of a Senator. According to a *Newsweek* article entitled "Inventing Al Gore," the future vice-president was always a politician.

Al Gore grew up both with the privilege and the responsibilities of being a Senator's son. He grew up bouncing on President Nixon's knee but also with his father expecting him to grow up to be president himself. Albert Gore used to take "Little Al" to the farm in Carthage, Tennessee in the summers for his own version of boot camp. Gore's privileged son would work dawn to dusk in the tobacco fields so as not to take his life for granted. One day Mrs. Gore voiced opposition to Al working on a particularly steep cliff and when Albert Sr. insisted she said, "Yes a boy could never be president if he couldn't plow with that damned hillside plow."

Continuing his need to impress adults and his passion for politics he graduated from Harvard in 1969 with a degree in government with honors. He was somewhat of an activist against the Vietnam War in college but enlisted in the army after school to help his father's political career.

Albert Gore was seen as too much of a dove for a Tennessee Senator and so young Al went to fight in Vietnam. There he became a journalist and covered the war for the army's news agency while fighting.

When he returned from Vietnam he enrolled in Vanderbilt Divinity School and worked nights as a reporter for *The Nashville Tennessean*. As he covered politics for *The Tennessean* he began to realize he couldn't avoid political life, that public service was his calling. He entered Vanderbilt Law School but didn't receive his degree because an opportunity to run for the House of Representatives came in 1976.

He won the seat and began his career in politics just like he had been raised to do. He ran for the Senate in 1984 and won. In 1988 he ran for president, picking up seven states in the primaries before dropping out. He was re-elected to the Senate, but cut his term short to become Bill Clinton's running mate in 1992. For the past seven years he has served as the most active and involved vice president in history under President Clinton.

Personality

Vice President Gore is very much seen as an aggressive campaigner. He learned to do this from Richard Nixon's relentless and eventually successful drive to push his father out of the Senate.

A good example of this as well as an example of his notorious truth twisting is a comment he made to Bill Bradley at an Iowa debate. He accused Bradley of abandoning Iowa farmers when they needed disaster relief. The fact was that Bradley had voted for the disaster relief bill, but voted against a later amendment for even more funds. Unfortunately for Bradley, he didn't counter this accusation effectively at the debate.

Another example is Gore's constant criticism of Bill Bradley's health care plan. The Vice-President, taking a page out of the Clinton book, asks someone to stand up in the audience and then proceeds to say that Bradley's "vouchers" would not cover health care for the person standing. This is untrue because Bradley's "vouchers" are based on a weighted average and would pay more to those who live in state where health care is more expensive.

That last example also illustrates a problem that has plagued Gore since he entered politics. He has a propensity to overstate his own accomplishments, even when those accomplishments are perfectly worthy of respect. He could have very easily argued the points of his own health care plan against Bradley's by saying that we cannot yet afford to have universal health care and that such a large undertaking must be done incrementally. He would be right, but instead he feels the need to mischaracterize his opponent's plan.

He had the same problem in Congress when he said that he "invented the Internet." That is of course false. He saw the revolutionizing power of the Internet when it was just a fledgling army program. He was instrumental in getting further funding for what he called the "Information Superhighway." This is an extremely respectable accomplishment, but he ruined it by overstating his involvement.

Possibly stemming from his political upbringing, Al Gore has a command of the issues and is known for his debating skills. It is widely felt that either Republican candidate would have great difficulty not being outmatched by Gore in a debate just as Ross Perot was in an earlier debate over free trade.

The Issues

Environment— This is Al Gore's most recognizable issue. He is very much seen as an environmentally aware and environmentally friendly politician. Much of this stems from a book he wrote called *The Earth and the Balance* in which he expressed some of the most important environmental issues that we will be facing in the years to come.

The League of Conservation Voters gave Gore a 64% approval rating for his recorded votes on the environment in Congress, contrasted with an 84% approval rating for Bill Bradley. He was also unable to get the U.S. to ratify the Kyoto agreement on global climate change, which he fought for fervently. That aside, he is currently fighting for restrictions on offshore drilling rights and continues to work towards solttions for global warming. He also wants to spend $2 billion over 10 years to set aside parkland. He would raise this money through federal taxes on mining companies for extracting minerals from federal lands.

Abortion—Despite a shaky Congressional record on abortion he now believes it to be a "fundamental personal right." He supports Medicaid funding of abortions despite past statements to the contrary. He would not, however, have a pro-choice litmus test for his nominees to the Supreme Court. The vice-president also recently picked up the endorsement of several abortion rights groups.

Affirmative Action and Civil Rights— The vice-president supports affirmative action and is a key member of an administration seen as the most friendly to minorities since JFK. After being criticized by Bradley for not asking President Clinton to issue an executive order banning racial profiling, the vice-president recieved enthusiastic applause for calling to attention that President Clinton doesn't need a lecture from Bill Bradley on the rights of minorities.

Child Care—The vice-president backs a $21 billion Clinton Administration proposal to subsidize stay-at-home mothers and low-income families. He also favors preschool for all children and allowing workers to choose between overtime pay and time off. He would also expand the family leave law to cover firms with 25 workers or more and let parents take off for teacher visits and routine child medical appointments.

Education—Gore wants tougher testing for teachers. He has also called for $10,000 bonuses for those who switch to teaching from another profession. He would extend $10,000 for college for students who promise to teach at poor schools after graduation. One of his goals is to reduce class sizes nationally to no more than 20 students. He does not support vouchers, but does support more public school choice.

Polls

Nationally, Al Gore is pulling far ahead of Bill Bradley for the Democratic nomination. According to a *NY Times*/CBS News) poll Gore now leads with 64% to Bradley's 25%. He has also pulled ahead in the major state of New York where he now leads 59% to 28% according to *The New York Times*.

The picture is much different when Mr. Gore is pitted against the Republican candidates. Most polls have the vice-president losing to both Republicans, but losing to Senator McCain by a much wider margin. "Meet the Press" on Sunday reported Governor Bush beating Gore 50% to 45% and Senator McCain beating Gore 59% to 35%. I also found a *Wall Street Journal*/NBC News poll, which showed a statistical dead heat between Bush and Gore and Gore beating Senator McCain 46% to 39%. However, it does seem clear that Vice-President Gore would have more trouble with Senator McCain than with Governor Bush.

Outlook

Both Gore and Bradley are both extremely intelligent men with extensive political experience. What separates the two is Al Gore's experience as vice-president under Bill Clinton and his political abilities.

While the personal behavior of President Clinton has certainly been deplorable, the people of this country (as shown in numerous polls) agree that as far as policy goes, his administration has been extremely successful. The biggest question to ask when it comes voting time is, "Are we better off now than we were?"

If Americans want to continue down the path we're on with the fewest diversions, Al Gore is the one to lead the way.

Bradley's liberal campaign nears end

By Tim Scheu

What is a liberal these days? In Al Gore's case it appears to be someone who votes in association with the NRA and supports military intervention in Kosovo. With the Clinton administration in office the line between Republican and Democrat has been blurred, and "liberalism" has been injected with a shot of lassiez-faire.

There is, however, one candidate that maintains a clear liberal stance on most issues. In his 19-year run as a senator from New Jersey, Bill Bradley helped pioneer policy ranging from the Medical and Family Leave Act to Megan's law, that dealt with convicted sex offenders. He has consistently stood up to conservatives on issues of abortion and immigration, and has worked doggedly to support minority interests, rather than posing for pictures with their token representatives.

But much to the disgust of mainline liberals, Bradley's campaign has stalled as of late. Since his initial upsurge before the New Hampshire primary, Bradley has been struggling to keep pace with a newly overt opponent. And this has been the biggest criticism about Bradley - that he refuses to open up to voters.

"While core democrats may like what Bradley stands for, they're still not sure just who he is," said Matt Bai, a columnist for Neusuvek. "Bradley campaigns as if he completely missed the Clinton era and its boxers vs. briefs dynamic; he just doesn't understand why voters need to know anything personal about him."

While this may be true, he has a solid liberal foundation that he hopes will propel him into office:

* In terms of abortion, Bradley stresses the necessity to protect the privacy of the decision between a woman and her doctor. He has also been very critical of Gore, saying, "...you should not campaign saying that you've always been for a woman's right to choose because the record shows you have not."

* He believes that there should be no mandatory sentencing for first time drug offenders, and stresses the flaws existing in our drug-enforcement system. "The first thing I would do (to address unequal justice for young African-American males) is bring the difference between crack and cocaine (sentencing) much closer together," he said. "Then I would look at first-time non-violent drug offenders. Does mandatory sentencing make sense there? I don't think so."

* Bradley is the only mainstream candidate who favors a decrease in defense spending. "Because we are heading into a new age we don't have to fight the cold-war," he said. "We don't have to protect Europe against the possibility that Soviet tanks would move across the north German plain."

* He is particularly passionate about campaign finance reform, saying, "Money distorts the democratic process in the most fundamental way. The rich in this country should be able to buy as many vacations, homes, and cars as they want, but they shouldn't be able to buy our democracy."

* Bradley is also a stickler when it comes to gun control. "I have offered the strongest gun control proposal of any presidential candidate in history. I want registration and licensing of all handguns. I want to make sure that there are trigger locks on guns, no gun dealers in residential neighborhoods, and we have background checks at gun shows as well as gun dealers."

The Issues

* In his most contentious idea, Bradley suggests that the "wet foot, dry foot" policy should be extended to immigrants outside of Cuba. "People who come to our shores as refugees should have a right to remain, because they're fleeing tyranny, not just communist tyranny. We ought to ensure that they have the same legal rights as everyone else."

* Bradley voted against the Clinton administration '96 welfare reform plan. Gore has been critical of this, citing the seven million people that were taken off welfare started working. Bradley, however, has been quick to respond. "Although the welfare rolls have dropped, the number of people in deep poverty have increased. The next four years required attempts to correct a bad bill... and the bill I voted against is not the bill now." But, the type of reform Bradley has proposed has been nonetheless controversial. He proposes a plan that will introduce $150 vouchers to replace the existing system of Medicaid. "I pledge that any health care bill I would sign would have every Medicaid patient on a better plan than they are today." Gore suggests that such a statement is not realistic, and would require a "magic wand."

* The former New Jersey Senator has also taken quite a bit of heat for his position on public school reform. Every time reform was proposed in senate, Bradley voted for a plan involving vouchers. These, ideally, would give parents the right to move their kids from one school to another if one school is a better performing school. Critics suggest that this fails to solve the problem at hand, rather it intensifies the disparity between schools. Since the voucher idea did not catch fire on a large scale, Bradley has developed a new plan that calls for a drastic restructuring of schools. He believes that impoverished schools should receive the bulk of federal funds, and should they not improve, be closed down. Then, new "charter schools" would be set up.

Despite the disagreement on many policy issues, the Democratic race has been one of relatively little controversy. While McCain and Bush are caught up in mudslinging, Bradley is calmly sticking to the issues, and shuns any chance at belittling Gore.

With Super Tuesday right around the corner, Bradley is making his last run at the Democratic nomination. Though he trails Gore in some polls by nearly a 40 percentage points, he feels that a strong showing on March 7th can turn the tables. This week he is outspending Gore nearly two to one on advertisements, and is focusing heavily on the California and New York.

"He's got to make a last stand," said Evan Tracey of Campaign Media Analysis, who tracks ad spending. "There's no tomorrow if he gets routed on Super Tuesday."

If Bradley does, in fact, lose big on March 7th, the concept of LBJ liberalism will be left behind, and centrists will applaud as Gore and the Clinton democrats fail to a mudslinging Republican candidate... one which bears little difference from the Democrat he defeated.

Freshmen Win: Interesting Game Between the Underclasses Results in a Victory for '11

March 4, 1907

The annual inter-class basketball game between the Sophomores and Freshmen was played on Tuesday evening, the Freshmen winning by the score 31-20. The game was an interesting one from the start-off and its final outcome was in doubt until the latter part of the last half. The Freshmen, however, always retained the lead and clearly out-pointed their opponents. Their final score would have been considerably larger but for the fact that many of their tries for the basket were hard luck shots.

A feature of their play was their dribbling and all-around teamwork. Because of this they kept the ball in their own territory most of the time. Both teams did some pretty long distance shooting and their failure in making comparatively easy goals may be traced to over-anxiousness on their part.

Baseball is Canceled from Spring Sports

March 4, 1918

Bucknell will not be represented on the diamond this season. At a recent meeting of the Advisory Athletic Board it was decided that in view of the scarcity of baseball material it would be better to give up the national sport altogether for a time, rather than run the risk of lowering Bucknell's good reputation by putting out an inferior team. As in every other branch of athletics, the trouble across the water has robbed the institution of all its last year's players. "Buck" Elliot is the only B man back this year, and at the recent call for candidates a discouragingly small number of men reported.

It is not thruough ck of financial resources that the baseball schedule has been given up, as Assistant Comptroller Boyer is authority for the statement that the Athletic Association is in better financial condition at present than it has been for some time, despite the lack of support of the budget of the student body, and could easily stand the expense of a good baseball schedule.

A fraternity league or some similar arrangement will probably take the place of the Varsity baseball.

Enrollment Reaches 1586 in Spurt that Breaks all Records

March 14, 1946

As a result of an unexpected amount of veteran registration typical throughout the nation, Bucknell's enrollment, surpassing the former record of 1300, has reached a high of 1586 students in a climb that will not reach its peak until September.

Of these 1586 students, there are 681 women and 905 men (785 of whom are veterans). The administration estimates that it will be at least two years before there is hope of return to the precedented enrollment of 1200, with a three to one ratio between men and women.

The veterans who registered here this term number 276, five of whom are women. And only 14 non-veteran students have entered this month.

Flood Waters Harass Town Residents

February 28, 1975

Substantial flooding of the Susquehanna River hit Lewisburg early this week.

Heavy rains over the weekend combined with an early spring thaw caused river water to crest over the flood level of 18 feet. Waters hit a peak of 21.98 feet at 4:00 p.m. here on Tuesday.

Extensive flooding submerged Old Evan Road at the baseball field and Water Street. No serious damage resulted although many houses along the river had flooding in basements. Residents on Brown Street had backed up sewers due to the high water level.

The campus received no flooding by the Susquehanna River. However, the stream flowing under the Music and Arts Building and running by St. George Street caused minor flooding.

Campus Security advised owners of cars parked along the street to move them. Water was as high as six inches above the street at 11:00 Tuesday morning.

Tuition, Fees Hit $9,555

March 4, 1981

The Executive Committee of the University Board of Trustees has voted unanimously for a $1,120 increase in tuition and fees for the next academic year, but at the same time they have delayed action on finalizing the full budget. The increase brings comprehensive fees to $9,555.

The decision to increase tuition, room, and board by 13.3 percent — a slightly smaller increase in percentage and a significantly larger increase in dollars from last year's $1,106, 15.2 percent hike — was made by the trustees' principal financial decision making body during a giant conference call committee meeting Feb. 22.

Scarpo brings message of hope to Weis Center

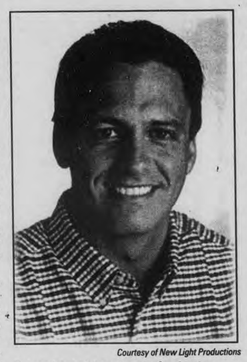
By Anne Monoky

Dean of Greek Life, Roy Baker explained, "The topic presented during 'Journey Towards a Hate-Free Millenium' was powerful, and one that is difficult to discuss. I think that by bringing this outstanding program to Bucknell, the Greek community stated in its own way that hate speech, crimes of hate, and homophobia will not be tolerated." On Tuesday evening, speaker Brent Scarpo led a discussion and showed a documentary that aimed at combating hatred and violence.

Scarpo worked in Hollywood in film for over 15 years. In 1998, he attended a memorial service for University of Wyoming student Matthew Shepard, whose brutal beating death was a result of a hate crime. Scarpo was inspired to produce a program that celebrated diversity and opened the doors to confront the issues of hatred.

The program began with Scarpo asking the members of the audience to close their eyes. He told everyone to dream a world without violence, a world without hunger, rape, murder, sexism. He asked the audience, "How is your world different now that it is hate free?"

Scarpo then told his own story, a story that began many years ago when he graduated from college and decided to travel to Los Angeles. Upon his departure, his mother gave him a gift that came to represent a lot to Scarpo. She gave him a thimble and told him to fill it with love, care, and self respect. Since then, Scarpo has adhered to this wish and has carried the thimble with him throughout the world. He indicated that the people who commit hate crimes do not love themselves. Scarpo reiterated that his presentation served to empower society to be aware of such hate and to teach people to manage their fear.



Courtesy of New Light Productions

Scarpo began his program after leaving a successful career in Hollywood

Ignorance, hate, fear, suffering, and anger: for Scarpo, these words signify important issues in the dialogue about hate. In his presentation, Scarpo called volunteers on the stage to talk about what each of these words means to them. He feels that the more we talk about these words and the issues that surround them, the more we are able to eradicate our society of such ills.

The majority of his presentation focused around a documentary that Scarpo created that highlighted the presence of hate in the world today. The film centered around the events of the incident at Columbine, the death of James Byrd Jr., and the beating of Matthew Shepard.

The documentary presented a series of images of suffering and death that have occurred within the past years. Judy Shepard, Matthew's mother, read a letter that explained her son's condition at the hospital after he had been beaten by two men because Matthew was a homosexual. She cried, "There was just no twinkle in his eye."

Next, James Byrd's sisters told the story of there brother's death, as he was severely beaten and then dragged behind a pick-up truck for nearly two miles. His sister explained, "He was chosen at random because he was a black man."

Finally, Rachel Scott's father spoke of the pain that has been inflicted upon his life because of the loss of his daughter in the Columbine High School killings.

Scarpo concluded the program with a series of suggestions, including, "Identify a problem so that you can actively change it." He said that hatred is such a senseless emotion, rather people should take the opportunity to try to educate themselves.

Meredith Alan '01, President of Panhellenic Council, said, "I think the benefit of this program lies in the fact that it will touch upon issues we don't usually see brought up within a Greek forum. This program addressed an important topic on an individual level, and reminded us that the Greek and University community is make up of people with different backgrounds, interests, and lifestyles, and that being cognizant of that fact will only make us stronger."

At the end of the program, Scarpo passed out thimbles to everyone in the audience.

Valter From Page 1

pointers, and more impressive then his basketball statistics, a 3.8 grade point average in Electrical Engineering. This season he is averaging 1.7 three pointers per game, 2.2 assists, 1 steal, and four rebounds per game. His overall ability is astounding.

When asked about his goals Valter said, "I've improved on my rebounding and established myself as a leader on the team" Even with the time commitments of basketball and school, Valter still manages to be even further involved in the school. He is a member of BAAD, Bucknell Athletes Against Drugs, and he is a research assistant in Electrical Engineering. He is currently deciding between a job in Croatia and one in the United States.

Valter and the rest of the Bison are eager to journey far in the NCAA tournament. With five returning seniors the team's chances are promising for a rematch with last years victor, Lafayette. The inside play of Danny Bowen and Dyrika Cameron combined with the strategic shooting of Valter and Brian Bailey will make the Bucknell Men's basketball team a tough match for any Patriot League team.

Public Safety Log

February 21, 2000

INFORMATION— Public Safety responded to the Music & Arts Building for the report of two sculptures that were pushed over but not damaged. No witnesses or suspects could be located in a search of the area. The incident is under investigation.

MEDICAL ASSIST/TRANSPORT— Public Safety responded to the Fieldhouse for the report of a student with an ankle injury. The Student Health Services driver transported the student to Evangelical Community Hospital for treatment and the individual later returned to campus.

INFORMATION/MEDICAL AIDED— Public Safety responded to Gateway Silberman for the report of an ill person. The employee was transported by Public Safety to Student Health Services for treatment.

February 22, 2000

NON—EMERGENCY MEDICAL TRANSPORT— A student requested Student Health Services transportation to Evangelical Community Hospital Emergency room for treatment of flu symptoms. The individual later returned to campus.

February 23, 2000

INFORMATION/VEHICLE DAMAGE— Public Safety responded to Lambda Chi Alpha Parking area for the report of a vehicle damaged while parked in that area. No witnesses or suspects were located in a search of the area. Lewisburg Police was notified.

INFORMATION/UNFOUNDED ACT 64 VIOLATION— Public Safety responded to Larison Hall for the report of the odor of marijuana. No evidence was found in a search of the area and the report was listed as unfounded.

February 24, 2000

MISSING PROPERTY— Public Safety responded to Coleman Hall for the report of a wallet found in one of the rooms. The owner was contacted and reported that money was missing from it. The incident is under investigation.

NON—EMERGENCY MEDICAL TRANSPORT— Public Safety contacted Student Health Services to transport a student to Evangelical Community Hospital Emergency room for treatment of an eye injury. The student later returned to campus.

INFORMATION— Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a sorority composite picture found in a room. The incident is under investigation.

February 25, 2000

UNDERAGE DRINKING/PROPERTY VIOLATION— Public Safety responded to Coleman Road for the report of an intoxicated student attempting to steal a barricade. Citations were issued for underage consumption and the presence of alcohol in the room.

MISSING PROPERTY— Public Safety responded to Coleman Hall for the report of money missing from a room. No witnesses or suspects could be located in a search of the area. The incident is under investigation.

MEDICAL ASSIST/TRANSPORT— Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a student with a wrist injury. Student Health Services transported the individual to Evangelical Community Hospital Emergency room for treatment. The student later returned to campus.

TAMPERING WITH FIRE EQUIPMENT— Public Safety responded to a fire alarm at Gateway Malesardi. Unknown person(s) had activated the first floor pull station. The incident is under investigation.

February 26, 2000

PUBLIC DRUNKENNESS/UNDERAGE DRINKING— While on routine patrol, Public Safety observed an intoxicated student at the rear of Vedder Hall. Citations for public drunkenness, underage consumption, and failure to comply with the instruction of a university official were issued.

SCIENCE & TECHNOLOGY

And you thought no one was listening...

By Alex Piel

When George Orwell first published his novel, *1984*, over 50 years ago, it was received as a bizarre combination of futuristic phenomena and ultramodern innovations. Predicting a society with high-tech surveillance and continuous supervision, Orwell's prophecies ring more true every day.

The following is not Part II of *1984*, but instead the uncovering of what most people fear more than anything else: the government's inspection and invasion of our bodies and minds.

The post-Cold War technological wave has transformed the West's leading spies into menacing shadows controlling a massive surveillance system that can capture, record and study every telephone call, fax and e-mail message sent from anyone to anywhere in the world.

What we used to see on Mission Impossible is now being done underground and in protected facilities established throughout the world in an attempt to improve national defense, capture elite criminals and protect private business monopolies.

High tech agents from Canada, the United States, Britain, Australia and New Zealand—supported by a network of ships, planes and radar, and communication interception sites dispersed throughout the solar system—have established the greatest spy network in history. This sophisticated coordination of vast networking prodigies has been labeled Echelon and is causing increased trepidation throughout the world.

Initially designed to scrutinize military and diplomatic communications of the Soviet Union and its East Bloc allies, today Echelon is used to follow and seize terrorist plots, drug deals, and political and foreign intelligence.

But Echelon is criticized for uses other than national defense. Many say that this vast international system is used for illegal commercial theft and an invasion of privacy on a shockingly immense level.

Last week, the European Union's parliament began a major international debate on the detective practices of the world's five leading English-speaking nations, accusing the United States and Britain, who are leading this espionage ring, of unethically and illegally going where they have no right to go.

Accused of economic and commercial espionage, the U.S. and Britain are said to be using their technology to destroy their international competition from the inside.

A recent document exposing the spy network affirmed that Echelon presents "a serious threat to the civil liberties in Europe" with "awesome implications."

"There is wide-ranging evidence indicating that major governments are routinely utilizing communications intelligence to provide commercial advantage to companies and trade," declared Duncan Campbell. Campbell, a Scottish physicist and researcher, has devoted 20 years to studying electronic espionage and is also the author of the analysis.

The European Union is expected to release even more information documenting the extent to which Echelon has penetrated Europe and will attempt to devise methods of defense for such invasiveness by the United States and Britain.

Many specialists think that the attempt by the European Union to combat this problem is hopeless since they do not have the financial or technological resources to compete with the rest of the world.

"The EU hearings are a bit of a joke," said Wayne Madsen, a former NSA employee and senior fellow at the Washington-based Electronic Privacy Information Center (EPIC). "It's going to be a bit like that scene in the movie *Casablanca*, where Inspector Renault declares: 'I'm shocked to find gambling in this establishment.' The fact is the German Greens and the French Socialists and Gaullists can pull their hair out and say, 'This is terrible,' but their countries are involved in this stuff. The French have an extensive signals intelligence network of their own. I think what is going to happen is there will be a lot of wringing of hands and gnashing of teeth, but then business is going to go on as usual."

The design of Echelon is rather simple. All members of the English-speaking alliance are part of the intelligence alliance that has maintained ties since the Second World War. These countries have positioned electronic-intercept stations and deep-space satellites to intercept all satellite, microwave, cellular and fiber-optic communications traffic. The intercepted signals are then relayed through a series of supercomputers known as dictionaries that are programmed to search each communication for specific addresses, words, phrases or even individual voices.

Each country participating in this network is responsible for a specific region of the world: the United States, with its multitude of spy satellites and listening posts, monitors most of Latin America, Asia, Asiatic Russia and northern China.

Watching other regions, Britain listens in on Europe and Russia west of the Urals as well as Africa.

Australia follows communications originating in Indochina, Indonesia and southern China. New Zealand scopes the western Pacific. Working together, this pact of westernized superpowers monitors the transactions of the entire world through the uses of highly developed and superior technology. How can anyone except these countries possibly expect to counter such an elite operation?

It is not only developing countries that are concerned about such operations, however.

"Most people just don't understand how pervasive government surveillance is," warns John Pike, a leading military analyst with the Washington-based American Federation of Scientists.

"If you place an international phone call, the odds that the [U.S.] National Security Agency are looking is very good. If it goes by oceanic fiber-optic cable, they are listening to it. If it goes by satellite, they are listening to it. If it is a radio broadcast or a cell phone conversation, in principle, they could listen to it. Frankly, they can get what they want," said Pike.

As easy as it is to assess blame to the participating countries, it would not be a real operation without the United States insisting on majority rule. The trade—offs for such control? Money. America dominates the UK—USA alliance, supplying most of the computer expertise and frequently much of the personnel for global interception bases.

The National Security Agency, headquartered in Fort Meade, Md., just outside Washington, has a global staff of 38,000 and a budget estimated at more than $3.6 billion. Canada's staff is under 900 and they budget less than $110 million for such an operation.

The largest criticism against this design comes not from military threatening states, but from commercial business owners in Europe and rival politicians.

"Since the demise of Communism in Eastern Europe, the intelligence agencies have searched for a new justification for their surveillance capability in order to protect their prominence and their bloated budgets," says Patrick Poole, deputy director of the Center of Technology at Washington's Free Congress Federation. "Their solution was to redefine the notion of national security to include economic, commercial and corporate concerns. By redefining the term 'national security' to include spying on foreign competitors of prominent U.S. corporations, the signals-intelligence game has gotten ugly."

"It should hardly be surprising that Echelon ends up being used by elected and bureaucratic officials to their political advantage or by the intelligence agencies themselves for the purpose of sustaining their privileged powers and bloated budgets," Poole said. "The availability of such invasive technology practically begs for abuse."

Echelon critics continue to caution that potential abusers will forever be a threat to such a system.

"This whole thing is so bizarrely powerful that the opportunity or temptation for abuse is fairly substantial," says Mr. Pike of the American Federation of Scientists. "How many people in your organization always obey the rules? The role of President Clinton is still not established as American officials have yet to address this issue publicly. For now, the violated countries are holding conferences in a desperate attempt to protect what little privacy remains.

Big Brother is watching, reading and listening.

NASA AWARDS EDUCATIONAL RESEARCH GRANTS

The NASA Office of Equal Opportunity Programs has awarded 20 educational research grants and cooperative agreements totaling more than $2.9 million to 18 minority institutions. The NASA Office of Equal Opportunity Programs has awarded 20 educational research grants and cooperative agreements totaling more than $2.9 million to 18 minority institutions.

The awards provide opportunities for minority colleges and universities to build upon their NASA-sponsored research across disciplines by creating innovative approaches to the interdisciplinary study of mathematics, science, engineering, and technology.

Each university will receive up to $300,000 per year for a maximum of four years based on performance and availability of funds under the program.

AGENCIES WORKING TO IMPROVE AIR TRAFFIC SAFETY AND EFFICIENCY

NASA and the Federal Aviation Administration (FAA) are studying ways to reduce the concerns and inconveniences of the flying public by reducing airline delays, improving efficiency and making flying safer.

Free Flight is a new FAA and aviation industry concept designed to increase operational flexibility and reduce restrictions in the National Airspace System.

The Free Flight concept is intended to allow pilots more authority to choose and modify their own routes, in cooperation with controllers. This should result in more efficient aircraft routing and reduced delays. The Free Flight concept, however, is intended to allow pilots more authority to choose and modify their own routes, in cooperation with controllers. This should result in more efficient aircraft routing and reduced delays.

SOHO SPACECRAFT BAGS 102 COMETS

In just four years of operation, the Solar and Heliospheric Observatory (SOHO) spacecraft has found 102 comets, making it by far the most successful comet-hunter in history.

A cooperative project between the European Space Agency and NASA, SOHO has revolutionized solar science. It also revealed an amazing number of suicidal comets plunging into the solar atmosphere.

NEXT SPACE STATION COMPONENT TO LAUNCH BETWEEN JULY 8-14

Launch of the International Space Station's next component — the Zvezda service module — is scheduled to occur between July 8 and 14 from the Baikonur Cosmodrome in Kazakhstan, NASA and the Russian Aviation and Space Agency announced today.

The 42,000 pound Zvezda (Russian for "star") not only provides the early living quarters for astronauts and cosmonauts, but also the life support system, electrical power distribution, data processing system, flight control system, and propulsion. Zvezda will remain the structural and functional center of the Russian segment of the International Space Station.

Launch of Zvezda sets the stage for the launch of other ISS components undergoing final testing at NASA's Kennedy Space Center in Florida.

NASA BEGINS BUILDING NEXT MISSION TO STUDY COMETS

NASA's Comet Nucleus Tour, or CONTOUR, mission this month took a giant step closer to its launch when the project received approval to begin building the spacecraft. The launch is planned for July 2002.

This is a rare opportunity to conduct a close-up examination of these mysterious, ancient objects, which normally reside in the cold depths of interstellar space.

CONTOUR will fly past at least two comets and take higher resolution images. It will also collect and analyze gas and dust to reveal the comet's makeup. CONTOUR also will clear up the many mysteries of how comets evolve as they approach the Sun and their ices begin to evaporate.

Third worst oil spill threatens ecological disaster, relief volunteers are mobilized

By Marion Bouju

December 12 will forever remain one of the most heartbreaking days for environmentalists around the world.

The Maltese oil tanker *Erika* (belonging to the oil company TotalFina) spilled its 20,000 tons of oil off La Pointe de Penmarc'h on the French Atlantic coast. That same week, a tremendous storm reaching winds of almost 100 miles/hour, swept across the coastline spreading oil sheets along the coast from the northern to the southern tip of France.

On the morning of the new millennium, not even three weeks after the spill, it had affected thousands of birds, fish and other wildlife. Most birds were in the process of migrating, resting on a small group of islands famous for their natural reserves for endangered species.

In terms of ecological consequences, this shipwreck was the 3rd most devastating spill for this part of Europe during the past 4 decades.

In 1967, the Liberian oil tanker *Torrey-Canyon* spilled 123,000 tons of oil in the Atlantic Ocean, affecting the South of Great Britain.

In 1978, the *Amoco-Cadiz* spilled 230,000 tons of oil. This wreck was considered by French fishermen and the members of the LPO (an organization created for the protection of birds) as the most catastrophic ecological disaster ever the western Atlantic.

Courtesy of canalplus.fr

The *Erika* spill, only three months ago, forces us to question the extent to which humanity will go in destroying our natural resources.

Is there any hope that the new millennium will see the emergence of a real political and ethical will devoted to the protection of the environment? If this recent spill by the *Erika* is any indication of the direction of environmental protection, we are in trouble.

The owner of the *Erika*, TotalFina, has taken the responsibility for the accident and has agreed to pay $6.5 million, the same amount being paid by the French government. This money will cover both anti-pollution action costs and damages suffered by all those affected by the oil spill. Many experts of the FIPOL (an international compensation fund for pollution due to hydrocarbons) were sent to the Atlantic Coast to evaluate damages and organize oil removal.

Though efforts are still being made to clean up the spill, oil-covered birds, fish and other wildlife still blanket the coast of Brittany, leaving a deep scar that oil companies will never be able to remove.

In 1978, after the shipwreck of the *Amoco-Cadiz*, nearly 4000 birds had been rescued along the Atlantic coastline for treatment in specialized animal clinics. Veterinarians said that among the 1400 penguins they found, 820 were already dead and only 136 of the remainder survived despite rescue efforts. The other affected birds, pelicans and seagulls, historically were the main population of birds on the "seven islands".

Nowadays, because of the repeated oil spills, these birds are all locally endangered species and may soon be extinct. Among the highly protected species of those regions, two of these sea bird species have never recovered fully from previous oil spills. Such a loss would affect not only the animal kingdom but also local researchers and observers.

But what is the real impact of the oil spill on those birds and why is it almost impossible for veterinarians to save them? According to bird specialists, once covered with oil, birds' feathers can no longer act as thermal insulators. Therefore, the body temperature decreases and the birds are incapable of feeding themselves, using only their internal fat-reserves to stay alive.

Besides temperature drops, birds often ingest oil deposits which make it nearly impossible for the trainers to determine if birds have damaged internal organs.

As if the animals have not been tortured enough, using an intubation system, the birds will be given a glucose-based fish mash in order to dehydrate and then rehydrate them and help improve blood flow.

Within a few days after the shipwreck of the *Erika*, 10,000 birds had been rescued and transported to clinics of the local regions. No one knows how many will survive.

Facing this emergency, the French government immediately set up its $6.5 million plan.

A few days after the shipwreck, 5 departments of the Western part of France recruited a total of almost 3,000 people in order to help remove oil waste and to rescue what wildlife remained.

Despite these efforts, most of the fishermen, local inhabitants and tour guides remain as devastated as they are angry. In spite of the establishment of such a plan, public opinion is skeptical about this governmental action, saying that $6.5 million will not be enough to cover damages to the environment.

It is obvious that the *Erika*'s shipwreck led to spontaneous participation from students, fishermen and unemployed. These volunteers have devoted their energy and sacrificed their time to restore what was once a beautiful seashore.

With their efforts and governmental funding, there remains hope that life can be restored to this magnificent coastline.

This Week in Bucknellian Headline History

Freshmen Win: Interesting Game Between the Under classes Results in a Victory for '11

March 4, 1907

The annual inter-class basketball game between the Sophomores and Freshmen was played on Tuesday evening, the Freshmen winning by the score 31-20. The game was an interesting one from the start-off and its final outcome was in doubt until the latter part of the last half. The Freshmen, however, always retained the lead and clearly out-pointed their opponents. Their final score would have been considerably larger but for the fact that many of their tries for the basket were hard luck shots.

A feature of their play was their dribbling and all-around teamwork. Because of this they kept the ball in their own territory most of the time. Both teams did some pretty long distance shooting and their failure in making comparatively easy goals may be traced to over-anxiousness on their part.

Baseball is Canceled from Spring Sports

March 4, 1918

Bucknell will not be represented on the diamond this season. At a recent meeting of the Advisory Athletic Board it was decided that in view of the scarcity of baseball material it would be better to give up the national sport altogether for a time, rather than run the risk of lowering Bucknell's good reputation by putting out an inferior team. As in every other branch of athletics, the trouble across the water has robbed the institution of all its last year's players. "Buck" Elliot is the only B man back this year, and at the recent call for candidates a discouragingly small number of men reported.

It is not thruough ck of financial resources that the baseball schedule has been given up, as Assistant Comptroller Boyer is authority for the statement that the Athletic Association is in better financial condition at present than it has been for some time, despite the lack of support of the budget of the student body, and could easily stand the expense of a good baseball schedule.

A fraternity league or some similar arrangement will probably take the place of the Varsity baseball.

Enrollment Reaches 1586 in Spurt that Breaks all Records

March 14, 1946

As a result of an unexpected amount of veteran registration typical throughout the nation, Bucknell's enrollment, surpassing the former record of 1300, has reached a high of 1586 students in a climb that will not reach its peak until September.

Of these 1586 students, there are 681 women and 905 men (785 of whom are veterans). The administration estimates that it will be at least two years before there is hope of return to the precedented enrollment of 1200, with a three to one ratio between men and women.

The veterans who registered here this term number 276, five of whom are women. And only 14 non-veteran students have entered this month.

Flood Waters Harass Town Residents

February 28, 1975

Substantial flooding of the Susquehanna River hit Lewisburg early this week.

Heavy rains over the weekend combined with an early spring thaw caused river water to crest over the flood level of 18 feet. Waters hit a peak of 21.98 feet at 4:00 p.m. here on Tuesday.

Extensive flooding submerged Old Evan Road at the baseball field and Water Street. No serious damage resulted although many houses along the river had flooding in basements. Residents on Brown Street had backed up sewers due to the high water level.

The campus received no flooding by the Susquehanna River. However, the stream flowing under the Music and Arts Building and running by St. George Street caused minor flooding.

Campus Security advised owners of cars parked along the street to move them. Water was as high as six inches above the street at 11:00 Tuesday morning.

Tuition, Fees Hit $9,555

March 4, 1981

The Executive Committee of the University Board of Trustees has voted unanimously for a $1,120 increase in tuition and fees for the next academic year, but at the same time they have delayed action on finalizing the full budget. The increase brings comprehensive fees to $9,555.

The decision to increase tuition, room, and board by 13.3 percent — a slightly smaller increase in percentage and a significantly larger increase in dollars from last year's $1,106, 15.2 percent hike — was made by the trustees' principal financial decision making body during a giant conference call committee meeting Feb. 22.

February 24, 2000

MISSING PROPERTY— Public Safety responded to Coleman Hall for the report of a wallet found in one of the rooms. The owner was contacted and reported that money was missing from it. The incident is under investigation.

NON—EMERGENCY MEDICAL TRANSPORT— Public Safety contacted Student Health Services to transport a student to Evangelical Community Hospital Emergency room for treatment of an eye injury. The student later returned to campus.

INFORMATION— Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a sorority composite picture found in a room. The incident is under investigation.

February 25, 2000

UNDERAGE DRINKING/PROPERTY VIOLATION— Public Safety responded to Coleman Road for the report of an intoxicated student attempting to steal a barricade. Citations were issued for underage consumption and the presence of alcohol in the room.

MISSING PROPERTY— Public Safety responded to Coleman Hall for the report of money missing from a room. No witnesses or suspects could be located in a search of the area. The incident is under investigation.

MEDICAL ASSIST/TRANSPORT— Public Safety responded to Sigma Alpha Epsilon Fraternity for the report of a student with a wrist injury. Student Health Services transported the individual to Evangelical Community Hospital Emergency room for treatment. The student later returned to campus.

TAMPERING WITH FIRE EQUIPMENT— Public Safety responded to a fire alarm at Gateway Malesardi. Unknown person(s) had activated the first floor pull station. The incident is under investigation.

February 26, 2000

PUBLIC DRUNKENNESS/UNDERAGE DRINKING— While on routine patrol, Public Safety observed an intoxicated student at the rear of Vedder Hall. Citations for public drunkenness, underage consumption, and failure to comply with the instruction of a university official were issued.

SCIENCE & TECHNOLOGY

And you thought no one was listening...

By Alex Piel

When George Orwell first published his novel, *1984*, over 50 years ago, it was received as a bizarre combination of futuristic phenomena and ultramodern innovations. Predicting a society with high-tech surveillance and continuous supervision, Orwell's prophecies ring more true every day.

The following is not Part II of *1984*, but instead the uncovering of what most people fear more than anything else: the government's inspection and invasion of our bodies and minds.

The post-Cold War technological wave has transformed the West's leading spies into menacing shadows controlling a massive surveillance system that can capture, record and study every telephone call, fax and e-mail message sent from anyone to anywhere in the world.

What we used to see on Mission Impossible is now being done underground and in protected facilities established throughout the world in an attempt to improve national defense, capture elite criminals and protect private business monopolies.

High tech agents from Canada, the United States, Britain, Australia and New Zealand—supported by a network of ships, planes and radar, and communication interception sites dispersed throughout the solar system—have established the greatest spy network in history. This sophisticated coordination of vast networking prodigies has been labeled Echelon and is causing increased trepidation throughout the world.

Initially designed to scrutinize military and diplomatic communications of the Soviet Union and its East Bloc allies, today Echelon is used to follow and seize terrorist plots, drug deals, and political and foreign intelligence.

But Echelon is criticized for uses other than national defense. Many say that this vast international system is used for illegal commercial theft and an invasion of privacy on a shockingly immense level.

Last week, the European Union's parliament began a major international debate on the detective practices of the world's five leading English-speaking nations, accusing the United States and Britain, who are leading this espionage ring, of unethically and illegally going where they have no right to go.

Accused of economic and commercial espionage, the U.S. and Britain are said to be using their technology to destroy their international competition from the inside.

A recent document exposing the spy network affirmed that Echelon presents "a serious threat to the civil liberties in Europe" with "awesome implications."

"There is wide-ranging evidence indicating that major governments are routinely utilizing communications intelligence to provide commercial advantage to companies and trade," declared Duncan Campbell. Campbell, a Scottish physicist and researcher, has devoted 20 years to studying electronic espionage and is also the author of the analysis.

The European Union is expected to release even more information documenting the extent to which Echelon has penetrated Europe and will attempt to devise methods of defense for such invasiveness by the United States and Britain.

Many specialists think that the attempt by the European Union to combat this problem is hopeless since they do not have the financial or technological resources to compete with the rest of the world.

"The EU hearings are a bit of a joke," said Wayne Madsen, a former NSA employee and senior fellow at the Washington-based Electronic Privacy Information Center (EPIC). "It's going to be a bit like that scene in the movie *Casablanca*, where Inspector Renault declares: 'I'm shocked to find gambling in this establishment.' The fact is the German Greens and the French Socialists and Gaullists can pull their hair out and say, 'This is terrible,' but their countries are involved in this stuff. The French have an extensive signals intelligence network of their own. I think what is going to happen is there will be a lot of wringing of hands and gnashing of teeth, but then business is going to go on as usual."

The design of Echelon is rather simple. All members of the English-speaking alliance are part of the intelligence alliance that has maintained ties since the Second World War. These countries have positioned electronic-intercept stations and deep-space satellites to intercept all satellite, microwave, cellular and fiber-optic communications traffic. The intercepted signals are then relayed through a series of supercomputers known as dictionaries that are programmed to search each communication for specific addresses, words, phrases or even individual voices.

Each country participating in this network is responsible for a specific region of the world: the United States, with its multitude of spy satellites and listening posts, monitors most of Latin America, Asia, Asiatic Russia and northern China.

Watching other regions, Britain listens in on Europe and Russia west of the Urals as well as Africa.

Australia follows communications originating in Indochina, Indonesia and southern China. New Zealand scopes the western Pacific. Working together, this pact of westernized superpowers monitors the transactions of the entire world through the uses of highly developed and superior technology. How can anyone except these countries possibly expect to counter such an elite operation?

It is not only developing countries that are concerned about such operations, however.

"Most people just don't understand how pervasive government surveillance is," warns John Pike, a leading military analyst with the Washington-based American Federation of Scientists.

"If you place an international phone call, the odds that the [U.S.] National Security Agency are looking is very good. If it goes by oceanic fiber-optic cable, they are listening to it. If it goes by satellite, they are listening to it. If it is a radio broadcast or a cell phone conversation, in principle, they could listen to it. Frankly, they can get what they want," said Pike.

As easy as it is to assess blame to the participating countries, it would not be a real operation without the United States insisting on majority rule. The trade—offs for such control? Money. America dominates the UK—USA alliance, supplying most of the computer expertise and frequently much of the personnel for global interception bases.

The National Security Agency, headquartered in Fort Meade, Md., just outside Washington, has a global staff of 38,000 and a budget estimated at more than $3.6 billion. Canada's staff is under 900 and they budget less than $110 million for such an operation.

The largest criticism against this design comes not from military threatening states, but from commercial business owners in Europe and rival politicians.

"Since the demise of Communism in Eastern Europe, the intelligence agencies have searched for a new justification for their surveillance capability in order to protect their prominence and their bloated budgets," says Patrick Poole, deputy director of the Center of Technology at Washington's Free Congress Federation. "Their solution was to redefine the notion of national security to include economic, commercial and corporate concerns. By redefining the term 'national security' to include spying on foreign competitors of prominent U.S. corporations, the signals-intelligence game has gotten ugly."

"It should hardly be surprising that Echelon ends up being used by elected and bureaucratic officials to their political advantage or by the intelligence agencies themselves for the purpose of sustaining their privileged powers and bloated budgets," Poole said. "The availability of such invasive technology practically begs for abuse."

Echelon critics continue to caution that potential abusers will forever be a threat to such a system.

"This whole thing is so bizarrely powerful that the opportunity or temptation for abuse is fairly substantial," says Mr. Pike of the American Federation of Scientists. "How many people in your organization always obey the rules? The role of President Clinton is still not established as American officials have yet to address this issue publicly. For now, the violated countries are holding conferences in a desperate attempt to protect what little privacy remains.

Big Brother is watching, reading and listening.

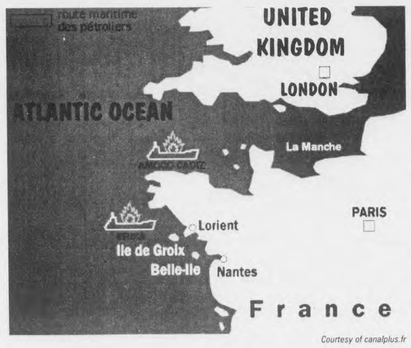
Third worst oil spill threatens ecological disaster, relief volunteers are mobilized

By Marion Bouju

December 12 will forever remain one of the most heartbreaking days for environmentalists around the world.

The Maltese oil tanker *Erika* (belonging to the oil company TotalFina) spilled its 20,000 tons of oil off La Pointe de Penmarc'h on the French Atlantic coast. That same week, a tremendous storm reaching winds of almost 100 miles/hour, swept across the coastline spreading oil sheets along the coast from the northern to the southern tip of France.

On the morning of the new millennium, not even three weeks after the spill, it had affected thousands of birds, fish and other wildlife. Most birds were in the process of migrating, resting on a small group of islands famous for their natural reserves for endangered species.



Courtesy of canalplus.fr

In terms of ecological consequences, this shipwreck was the 3rd most devastating spill for this part of Europe during the past 4 decades.

In 1967, the Liberian oil tanker *Torrey Canyon* spilled 123,000 tons of oil in the Atlantic Ocean, affecting the South of Great Britain.

In 1978, the *Amoco-Cadiz* spilled 230,000 tons of oil. This wreck was considered by French fishermen and the members of the LPO (an organization created for the protection of birds) as the most catastrophic ecological disaster ever the western Atlantic.

The *Erika* spill, only three months ago, forces us to question the extent to which humanity will go in destroying our natural resources. Is there any hope that the new millennium will see the emergence of a real political and ethical will devoted to the protection of the environment? If this recent spill by the *Erika* is any indication of the direction of environmental protection, we are in trouble.

The owner of the *Erika*, TotalFina, has taken the responsibility for the accident and has agreed to pay $6.5 million, the same amount being paid by the French government. This money will cover both anti-pollution action costs and damages suffered by all those affected by the oil spill. Many experts of the FIPOL (an international compensation fund for pollution due to hydrocarbons) were sent to the Atlantic Coast to evaluate damages and organize oil removal.

Though efforts are still being made to clean up the spill, oil-covered birds, fish and other wildlife still blanket the coast of Brittany, leaving a deep scar that oil companies will never be able to remove.

In 1978, after the shipwreck of the *Amoco-Cadiz*, nearly 4000 birds had been rescued along the Atlantic coastline for treatment in specialized animal clinics. Veterinarians said that among the 1400 penguins they found, 820 were already dead and only 136 of the remainder survived despite rescue efforts. The other affected birds, pelicans and seagulls, historically were the main population of birds on the "seven islands".

Nowadays, because of the repeated oil spills, these birds are all locally endangered species and may soon be extinct. Among the highly protected species of those regions, two of these sea bird species have never recovered fully from previous oil spills. Such a loss would affect not only the animal kingdom but also local researchers and observers.

But what is the real impact of the oil spill on those birds and why is it almost impossible for veterinarians to save them? According to bird specialists, once covered with oil, birds' feathers can no longer act as thermal insulators. Therefore, the body temperature decreases and the birds are incapable of feeding themselves, using only their internal fat reserves to stay alive.

Besides temperature drops, birds often ingest oil deposits which make it nearly impossible for the trainers to determine if birds have damaged internal organs.

As if the animals have not been tortured enough, using an intubation system, the birds will be given a glucose-based fish mash in order to dehydrate and then rehydrate them and help improve blood flow.

Within a few days after the shipwreck of the *Erika*, 10,000 birds had been rescued and transported to clinics of the local regions. No one knows how many will survive.

Facing this emergency, the French government immediately set up its $6.5 million plan.

A few days after the shipwreck, 5 departments of the Western part of France recruited a total of almost 3,000 people in order to help remove oil waste and to rescue what wildlife remained.

Despite these efforts, most of the fishermen, local inhabitants and tour guides remain as devastated as they are angry. In spite of the establishment of such a plan, public opinion is skeptical about this governmental action, saying that $6.5 million will not be enough to cover damages to the environment.

It is obvious that the *Erika*'s shipwreck led to spontaneous participation from students, fishermen and unemployed. These volunteers have devoted their energy and sacrificed their time to restore what was once a beautiful seashore.

With their efforts and governmental funding, there remains hope that life can be restored to this magnificent coastline.

NASA AWARDS EDUCATIONAL RESEARCH GRANTS

The NASA Office of Equal Opportunity Programs has awarded 20 educational research grants and cooperative agreements totaling more than $2.9 million to 18 minority institutions. The NASA Office of Equal Opportunity Programs has awarded 20 educational research grants and cooperative agreements totaling more than $2.9 million to 18 minority institutions.

The awards provide opportunities for minority colleges and universities to build upon their NASA-sponsored research across disciplines by creating innovative approaches to the interdisciplinary study of mathematics, science, engineering, and technology.

Each university will receive up to $300,000 per year for a maximum of four years based on performance and availability of funds under the program.

AGENCIES WORKING TO IMPROVE AIR TRAFFIC SAFETY AND EFFICIENCY

NASA and the Federal Aviation Administration (FAA) are studying ways to reduce the concerns and inconveniences of the flying public by reducing airline delays, improving efficiency and making flying safer.

Free Flight is a new FAA and aviation industry concept designed to increase operational flexibility and reduce restrictions in the National Airspace System.

The Free Flight concept is intended to allow pilots more authority to choose and modify their own routes, in cooperation with controllers. This should result in more efficient aircraft routing and reduced delays. The Free Flight concept, however, is intended to allow pilots more authority to choose and modify their own routes, in cooperation with controllers. This should result in more efficient aircraft routing and reduced delays.

SOHO SPACECRAFT BAGS 102 COMETS

In just four years of operation, the Solar and Heliospheric Observatory (SOHO) spacecraft has found 102 comets, making it by far the most successful comet-hunter in history.

A cooperative project between the European Space Agency and NASA, SOHO has revolutionized solar science. It also revealed an amazing number of suicidal comets plunging into the solar atmosphere.

NEXT SPACE STATION COMPONENT TO LAUNCH BETWEEN JULY 8-14

Launch of the International Space Station's next component — the Zvezda service module — is scheduled to occur between July 8 and 14 from the Baikonur Cosmodrome in Kazakhstan, NASA and the Russian Aviation and Space Agency announced today.

The 42,000 pound Zvezda (Russian for "star") not only provides the early living quarters for astronauts and cosmonauts, but also the life support system, electrical power distribution, data processing system, flight control system, and propulsion. Zvezda will remain the structural and functional center of the Russian segment of the International Space Station.

Launch of Zvezda sets the stage for the launch of other ISS components undergoing final testing at NASA's Kennedy Space Center in Florida.

NASA BEGINS BUILDING NEXT MISSION TO STUDY COMETS

NASA's Comet Nucleus Tour, or CONTOUR, mission this month took a giant step closer to its launch when the project received approval to begin building the spacecraft. The launch is planned for July 2002.

This is a rare opportunity to conduct a close-up examination of these mysterious, ancient objects, which normally reside in the cold depths of interstellar space.

CONTOUR will fly past at least two comets and take higher resolution images. It will also collect and analyze gas and dust to reveal the comet's makeup. CONTOUR also will clear up the many mysteries of how comets evolve as they approach the Sun and their ices begin to evaporate.

Imminent changes to occur

When the new year was approaching, "millennium fever" took over, with many began thinking a new era was at the door. As the calendars have now changed to March, the campus is only one week away from break, a respite from the long winter months and a welcoming of the spring season.

While the University will slow down during this break, students may return to find major changes already in place.

With the imminent departure of President Adams to take up that role at Colby College, the Trustees will soon name a new leader for our community. The selection of our new president may have an enormous impact on the campus, as Adams' successor will step onto a role in which he/she must take a decisive stance on the Greek system, student affairs, and the ongoing fund—raising efforts. Adams' capital campaign will have a lasting effect on the campus, and, to continue the University's progression, the incoming president will have to make his/her best efforts to maintain the level of growth. The much—scrutinized selection process has raised questions about student and faculty involvement in the University's decision-making processes, and this new administrator must work to the greatest extremes to alleviate these arising problems.

Along with the naming of a new president, the University will also welcome a new dean of students. This new administrator is vital to student interests, as he/she must continue the hands-on work of former Dean Richard Chapman and current Interim Dean Allen Schweinsberg and work accordingly to uphold the crucial student—administration relationship.

The University has already ushered in John Hardt as our new athletic director (*see page 14*). Hardt plans to use his extensive expertise to help push for the new athletic complex, compliance with NCAA sanctions and facilitating the gender equity program.

The continuing improvements to the University's infrastructure is the foremost issue that these new appointments must deal with, and hopefully our future administrators will continue to push forward the necessary alterations. With plans in progress to complete construction of a new dormitory as well as build new music, art, geology and psychology and athletic buildings, the University will take on a new look that will help it maintain the recent growth in student population and national reputation.

On the national front, we will watch as several competent contenders vie for their party nominations for the race to the presidency (*see pages 2-3*). As four politicians progress in their campaigns for the White House, the nation must pay close attention to all the issues and select the best-suited candidate for the position. The student body, long considered to be apathetic toward such issues, can change this stereotype by becoming more informed and more involved in the races.

As another new year bypasses us and we enter the third millennium, we have the chance, though a seemingly futile effort, to take a look at ourselves and reexamine what we believe in and strive for in the future. We must look to our administrators and student leaders for guidance and leadership in the advances in our much-needed improvements. Bucknell can make giant strides toward the future and it will take everyone's energy and input to efficiently continue this progression. This is the time where everyone must step forward—every single member of the campus community, from the shiest underclassmen to the most talented student-athletes to the most dedicated administrator, can make a difference at the University, and it will take these collective efforts to ensure that all needs are met, that all voices are heard, and that all campus member can leave a lasting effect on the University.

Is the University's construction beneficial to the campus?

Yes

By Rebecca Rowland

Two new buildings are being put up behind Swartz Hall and, whether the campus community likes it or not, they are the future of the University. While it has become fashionable to declare any attempt at progress detrimental, simple logic shows that the current construction programs are, in fact, beneficial.

There are not enough dorm rooms to accommodate the student body; the incidences of "dingles"—turning singles into doubles—has risen sharply over the past three years. The admissions office only expects enrollment to grow, so it makes sense to build a new dorm. There is no simpler way to put it-the University needs this building.

Across from Vedder Hall is a little, old, dilapidated building. It is the music building and anyone who has been in it knows just how desperately the music department needs new quarters. With the Bucknell Campaign funds reaching into the millions there is no excuse as to why this would not be feasible.

The first thing that should strike people about the University's construction plan is that it is totally warranted; both buildings increase the school's ability to function properly. The next factor is that the placement of the two structures is perfect. The new dorm will augment Swartz and the social lives of those who live there, creating a dorm "quad" reminiscent of the one Hunt, Vedder, Smith, Larrison and Harris create. The music building is being constructed right next to the Weis Center; with this location student musicians can easily travel between practice rooms and the stage, increasing their preparation and familiarity with the Weis Center and, therefore, their confidence in the building and quality of their performances.

The most popular opposition to the University's construction program involves the loss of Swartz Field. Many people lament that loss as not only a blow to students but to the aesthetic nature of the University. Unfortunately for them, that view is wrong.

In the first place, while the construction takes away the field, students can still sunbathe on the quad and, as for sports, the Mod fields are available for independent student use. Secondly, while three more buildings does not sound like it will help beautify the campus, the landscaping opportunities are more than plentiful. There is the potential to create a very nice quad out of the Weis Center, Swartz and the new dorm. The new construction plan is not only beneficial but also necessary for the continuance of the quality education at Bucknell.

No

By Ryan Delahanty

While many students here at Bucknell participate in athletics, many do not. Until recently, these students had their own fields to play on. Although Bucknell is growing in number, it isn't growing in size; what are we sacrificing by using the University's construction plan?

Parking, as I am sure everyone here knows, is a problem. Professors get the spots closest to the dorms while students are left to park on the periphery. Well, the periphery just got a little smaller because in order to build the new dorm and music building, a very large parking lot was taken out. So although the school making room for a couple hundred new students, it's taking away parking - where are these students going to park?

There are three designated sports fields on this campus: Mathewson Stadium, the lacrosse and soccer field and the Mod fields. While these are all nice facilities, they are for team play only. Yes, students can play on the Mod fields but only until they are kicked off by one the many teams that are sanctioned to use them. The only place non-varsity and non-intramural students could play was Swartz field. Unfortunately, Swartz field no longer exists. This school has always been good to student-athletes so I feel badly criticizing its lack of field space however, if some people want to throw a lacrosse ball around or play baseball, the only expanse of grass big enough is the sloping hill between the field house and the quad. Playing on the actual quad is out because so many people walk through it.

Locking Horns

While Bucknell has been increasing its prestige, it hasn't been increasing its size. We are a small liberal arts school; do we really need all of these buildings? I can understand moving departments to newer, nicer facilities as is the case with the music building but instead of building a completely different building, the old one should be renovated or torn down and a new one built on the same spot. There is no room on this campus for any more construction.

Not only does the current construction take away field space, create parking problems and crowd the campus, it destroys the historic quality many find so appealing in our University. Alumni return to the campus and do not recognize it; keep up this building and it won't be "Bucknell 1846," it will have to be "Bucknell 1970-2000." The construction is certainly not beneficial to the University.

Bucknellian editor responds to comments

Brian Watson
Editor-in-Chief

In our Feb. 17 editorial, *The Bucknellian* addressed the groups excluded by the Student Advisory Committee for the presidential search. We agree that the representatives to the committee are student advocates; were they not, then our editorial would have expressed direct criticism of the committee's function. The editorial did not label the committee as incompetent; any other interpretation is incorrect.

Factual errors did not exist in the piece. A certain level of miscommunication between the author and myself may have led to conflict in opinion, but in no way did *The Bucknellian* skew the facts. Miscommunication arose due to the element of secrecy so tightly enforced within the entire search process.

Mr. Bouchoux stated that *The Bucknellian* would have served the campus community more efficiently by providing a detailed article on the committee and its particular composition. This coverage was not provided because of the strict stipulations put on myself as *The Bucknellian*'s representative to the committee, requiring my vow that all information received within committee meetings would not be used in any future *Bucknellian* article. This information, to my knowledge, was inclusive in this promise of confidentiality. If the committee wanted a profile piece to be submitted to our paper, they simply should have informed us that it would not violate the secrecy under which the entire presidential search has thrived on.

A detailed article would be impossible because we would only be able to report on its composition and not on the efforts they have put forth—this would be a clear violation of the spirit of confidentiality and probably would have ended our consequently short-lived representation on the committee.

The purpose of our editorial was not to criticize the board but point out important constituencies that were not addressed. I do not wish to sit here and argue each of Mr. Bouchoux's points, but simply to state that our article was written after obtaining the greatest amount of information possible at that time.

The editors of *The Bucknellian* do not apologize for the Feb. 17 editorial. The purpose of this work was, as always, to express opinions voiced by the entire staff. While the rest of the paper reports objectively on campus issues, the editorial column exists to let us voice our views on pertinent issues. We do not believe that the editorial was "slanted," and most certainly not in direct criticism of the committee or its members' credentials. We expressed our opinion and for that, my staff and I believe *The Bucknellian* served our purpose.

New York police open fire

NYPD action questioned in immigrant death

By Michael Boland

Sharp-eared Bucknell news-watchers probably have heard about the four white police officers from New York City who were recently acquitted of murder charges following the shooting of unarmed young immigrant Amadou Diallo. The police approached Diallo late one night in the Bronx and asked him what he was doing out on the streets at that hour. For some unknown reason, Diallo chose that instant to reach for his wallet and the police, thinking Diallo was reaching for a gun, opened fire on him, hitting him with 19 of 41 shots before realizing that he was actually unarmed.

The shootings were ruled accidental by a racially mixed jury. The jury refused to hold the officers criminally responsible for actions that were, simply put, a tragic mistake. No one's fault. Not a "hate crime," not a "racially motivated assault on a defenseless black man," and certainly not "police brutality." A mistake.

Unfortunately, certain political leaders refuse to recognize this and instead use the shooting to enhance their own visibility. Those bitter peas in a left-wing pod, Al Sharpton and Jesse Jackson, come to mind. Their flamboyant, self-important grandstanding would be laughable, except their actions do nothing to bring back Diallo and do everything to inflame race relations in NYC. There's nothing funny about that. Those who are protesting the Diallo verdict seem to be ignoring the legal standards that are applicable in a criminal case like this. The four cops were defendants; as such, the prosecution had to prove, beyond a reasonable doubt, that these officers shot Diallo irresponsibly or maliciously. They did not do so; in fact, most legal experts have said that they weren't even close. The jury that acquitted the officers acted properly, rendering their verdict based on evidence, not emotional pleas. Legal criminal justice procedures were followed.

Case closed, right? Not so, Jackson and Sharpton would say; the "fair trial" was conducted within a system that is biased against minorities. Therefore, the "not guilty" verdict produced by that system is meaningless. The cops got off because they're white and the victim was black.

While I'm in no position to judge whether or not our legal system is unfairly biased against minorities, I do know that "The System" was not on trial in the Diallo case. Four human beings were. Now, by all accounts, these cops followed standard procedure and used an acceptable level of discretion in approaching Diallo on the night of the shooting. The cops did exactly as they had been trained to do. The shooting of the innocent person was not the fault of those individual officers. If there is a flaw in The System, cops should not be scapegoated for it. The remedy in that situation is to file a federal civil suit against the NYPD, literally put it on trial and prove that it is racially biased.

To punish four individuals out of frustration with "The System", as Sharpton and Jackson want to do, would be highly unjust. If Sharpton and Jackson scream loud enough, they'll probably get at least some of the 'reforms' that they want, including racial quotas in police departments, "sensitivity training" for all cops and worse, a severe rollback on police officers' discretion as they walk the streets. Realistically, such measures would probably do more harm than good.

Jackson and Sharpton must realize that the more they protest this verdict, the more the fuss over the Diallo case will stick in the mind of each and every cop, causing them to hesitate on the job out of fear of political consequences of their sometimes unpleasant but necessary responsibilities. In a profession that requires split second reactions and life-or-death decisions, that hesitation is going to end up costing officers' lives.

Newpaper ads send negative messages

By Kristen Jancuk

Everyday you go to the Bison, you see that same girl sitting at a table near yours and it's hard not to notice what she's eating, or rather, what she's not eating. Her meals seem to bare a striking resemblance to what you used to feed your pet bunny and wonder how she can survive on a plate of lettuce, a cup of grapes and a diet coke. But then again, maybe she can't, since every day she seems a little bit thinner, a little paler and little less healthy.

It's no secret that we Americans are obsessed with our weight. We like our movie stars thin and our models even thinner. These ideals are filtering into society as we find healthy teenage girls starving themselves in an attempt to look like Kate Moss (Calvin Klein model, 5'7," 105 pounds) or another model or actress whose body is unrealistic and unhealthy. Add to this scene a college campus, where students struggle to fit in and the watchful eye of parents is suddenly MIA and the instances of eating disorders rise dramatically.

It is important for colleges to take eating disorders seriously. Any and every aspect of student life is shaping impressionable minds. Therefore it is important to increase awareness and take precautions against the climbing rate of eating disorders, creating a positive environment for students.

In recent months, *The Bucknellian* has run several articles addressing eating disorders. As the primary source of student news and information, it is admirable that the newspaper addresses these issues. But what you may not have noticed running along the bottom of various pages are ads for diet pills and other miracle weightloss aids.

Newspaper ads, not just those for *The Bucknellian*, but all campus newspaper, are a vital source of income and in small towns like Lewisburg, they can be hard to come by. Therefore, it is important to take advantage of every opportunity to obtain and run ads in order to remain financially sound. However, I believe these diet pill ads are inconsistent with the message we should be sending to the community. They are a challenge to the hard work that has gone into establishing multiple eating disorder support groups and resource centers for victims of these diseases.

I am not targeting *The Bucknellian*, rather using it as a local example, to represent college newspapers as a whole. Campus newspapers set a precedent for student behavior and help to shape the campus environment. Ads such as these help to reinforce negative body images and substantiate the obsession with thinness that seems to be spreading like wild fire.

While I understand that ads are a necessary component of college newspapers, I think we need to be more selective and pay more attention to the messages we are inadvertently sending.

Marrying for money

By Maren Johnson

Though some may consider it a myth that love and marriage go hand in hand, I think that most will agree that love, marriage, and network ratings are a trio that should have never been made a reality. Anyone who has been following the controversy over Fox Network's "Who Wants to Marry a Multi-Millionaire?" knows what I'm referring to. Fox, like most other networks, was eager to jump on the success bandwagon that is being driven by ABC's game show, "Who Wants to be a Millionaire?"

While ABC's version has been both lauded and criticized (not to mention parodied so many times it's become a cliche), Fox drew only negative press on their attempt to combine the millionaire dream with matrimonial bliss. Completely disregarding the supposed sanctity of marriage, Fox execs decided to make a TV event out of one of the most perverted formsof marriage: marrying for money. Out here in the "real" world, marrying for money often brings on a deluge of snide remarks and lectures on the importance of love and companionship. Apparently in TV land, it's a cause for more than 20 million viewers to tune in and applaud, maybe even shed a tear, for such a superficial and meaningless marriage. Unfortunately, the bride and groom were the last to realize the fact that the marriage had little chance of ever becoming more than that: meaningless. It often takes years for people to get to know each other and find out the intimate details of each other's lives. On the show, all it took was a flattering bathing suit and some rehearsed answers to dating game type questions. It's my feeling that nothing you can ask on television will provide the insight needed to make a love match. Now, let's say that Fox was merely trying to put a new spinon match-making. Let's say that their only intent was to throw two people together who may or may not have the potential to fall in love with each other, and see if they can produce some positive results. Wouldn't that alone be a complete insult to the institution of marriage? The show was Blind Date, only with higher stakes. What if it doesn't work out (and as we all know by now, it most certainly didn't)? Oh, don't worry, you can just get it annulled. It took more effort to get on the show and be chosen than it would to dissolve the marriage itself. Finally, I would like to know why, if this Rick Rockwell character was the most impressive applicant for the part of the millionaire, what in the world were the other contestants like? He was by no means an attractive bachelor, he doesn't reside in a fancy house, he lacks a substantial, successful career (if he even has one), most of his supposed millions are tied up ininvestments, and he has a restraining order against him. If Fox had truly done their research, I can't imagine that it was that difficult to find out about his legal past. Unless the other millionaire hopefuls were known felons or murderers, I find it hard to imagine why Rockwell seemed like such an obvious choice. It's my opinion that the only thing Fox put much thought into, and subsequently did right, was making contestants sign a pre-nuptial agreement.

Then again, if you're truly going to marry for money, doesn't that sort of defeat the purpose as well?

Letters to the Editor

Commencement suggestion

To the editor: I am writing in hopes of saving the school and senior class a lot of money by requesting that we cancel the "renowned poet" Eavan Boland as our graduation speaker. In her place I would like to recommend we hire a figure that is not only more prominent in my mind but also more closely related to the Bucknell Community as a whole. I would like to argue that it is unnecessary to shell out any money to have a "Bucknell-tailored" speech delivered at our graduation ceremony in May. In hindsight, we need look no further than our own campus to locate a speaker who could convey a message that would connect to a majority of the senior class. I wholeheartedly agree that it is impossible for the selection committee to appease everyone when making the major decision of choosing a commencement speaker. However, I also truly believe if the selection is made for the benefit of our senior class the committee should rethink its decision and look around at all the incredibly intelligent and insightful professors we boast about to our prospective students daily.

To name a few of the professors that come to my mind would be Prof. Richard Peterec in the Geography department and Prof. Gary Sojka in the Biology department. I took Political Geography with Prof. Peterec my sophomore year. Once I was able to decipher his lectures that are spoken at a mock 10 speed, I grew fascinated by all the experiences this man had encountered throughout his life. For those of you who have never had the opportunity to take a class with Prof. Peterec I will tell you, without much exaggeration, that this man has either visited or lived in what seems like every country in the world, right around the time that that particular country was experiencing some major political upheaval or revolution. While my grade was nothing to brag about at the end of my semester in Political Geography, I think I learned more in that class than any other at Bucknell. Prof. Peterec has been a vital asset to the Bucknell faculty for quite a while now. My father had Prof. Peterec when he was a student here. I don't mention this little fact to try to make Prof. Peterec seem old. His energy and enthusiasm in the classroom will make you think otherwise. I only mention it to illustrate Prof. Peterec's evident devotion to Bucknell. I am confident that Prof. Peterec would be an extremely fascinating and respectable commencement speaker.

My second nomination for a graduation speaker would be Prof. Gary Sojka. In last week's *Bucknellian*, the Editorial stated, "Universal satisfaction is practically impossible in finding a speaker that can appropriately address graduates in business, sciences, engineering, humanities and social sciences." Prof. Sojka teaches Biology 121 and 122 (AKA "baby bio"). This is a science curriculum geared to a student who is stronger in the humanities. Prof. Sojka was also the President of Bucknell for 10 years. I think this proves that Prof. Sojka is a man with many qualifications but also a very visible dedication to our school and our students. After all I see Prof. Sojka in the Bison, at many athletic events with his wife and son always cheering for the orange and blue.

So to any seniors reading, it's not too late! The email suggestion list the selection committee started was a nice effort but very misleading. I recommend starting another one where seniors can nominate faculty or administrators who have made a difference in their four years here at Bucknell. We already know who my two nominations would be. I would just like to conclude by saying I have absolutely nothing personal against Ms. Boland. I am sure she was and would be a great speaker. But at graduation, a time for reflection and summation of the past four years, I would rather hear from someone who has been here with me through the unforgettable experience of college. Someone who can relate to me not only on an academic level as a student, but on a personal level, heart to heart, as a Bucknellian.

Thank you,
Meredith Elliott '00

Off-campus housing unfair

To the editor: If you are planning to live off-campus for the 2000-2001 school year, I would strongly suggest you continue reading my letter. I am writing to explain why the Off Campus Living Review Board (OCLRB) is currently an unfair system that must be changed.

During the past few weeks I have been personally involved with the OCLRB. Based on this firsthand experience I realized that the Board has two fundamental flaws: (1) There is no requirement that a "student" be on the board for a hearing; and (2) The board only has one choice in terms of sanctions.

(1) No requirement that a student be present at the meeting.

The OCLRB claims to be a joint student-faculty judicial panel. However, I was informed that only a certain number of "people" need to be at the board's hearings. Thus if a student-panelistfails to show up for his/her duty, or is not properly notified of the hearing, then there is a very real possibility that there will be NO student voice on the panel. This is exactly what happened to two of my housemates. Clearly, a student voice on the panel is critical because students have a keener insight into life in the "student areas" off campus than do our professors.

Allowing the OCLRB to slyly parse the language of the rule to defeat the very purpose of a "joint" student-faculty board is simply wrong.

(2) There is only one sanction available to the board.

I indeed signed that form to live off-campus, acknowledging "Students living off campus who are cited by the local authorities for disorderly conduct, excessive noise, underage drinking, etc., may be required to return to campus if their misconduct is judged serious enough by the OCLRB to warrant forfeiting the privilege of living off campus." However, what the handbook and that paper with my signature fail to mention is that the *only* sanction the OCLRB may give out is forcing students to return to campus. This leads to the obvious problem of a board of faculty (and sometimes students) being faced with either doing nothing or forcing the student before them to break their contract with their landlord and move back on campus.

Imagine if our judicial system worked this way? What if a jury was only able to give out 20 years prison time or nothing? The need for an array of sanctions in the OCLRB's arsenal (warnings, community service, etc) is necessary to allow for proper punishments. Does anyone else find a problem with this?

I urge those of you who currently live or plan to live off-campus to challenge the way this particular body works. Do not just accept it and say, "well, the system is the system". I wouldrather believe that you, as students with the right, excuse me, "privilege", to live off-campus will recognize the undeniable flaws in this system and stand up to the powers that be here at Bucknell.

SAMS dance all night for a cure

By Chad Gillenberger

Multiple Sclerosis (MS) is a neurological illness that affects over 350,000 people today in the United States alone. It is caused by inflammation or scarring of myelin, a protective covering of nerve fibers in both the brain and spinal column. No one knows what triggers Multiple Sclerosis. It usually strikes between the ages of 30 and 50, is most commonly found in Canada, the United States, South America and Europe and is nonexistent near the equator. Those afflicted with the illness struggle with daily activities. Fatigue, muscle weakness, spasms, numbness, slurred speech, difficulties with vision, and memory loss are all common symptoms of multiple sclerosis. Extreme cases may result in paralysis, muscle cramps, loss of bladder and bowel control, and sexual dysfunction. Between 25 and 30 percent of all MS victims require the aid of a wheelchair. Because so little is known about this devastating disease, there is a great need for public support.

Jonah Half—*The Bucknellian*

Leigh-Anne Cook '01 and Tom Egan '00, active members of SAMS

Here on campus, Students Against Multiple Sclerosis (SAMS) is striving to raise support and awareness about MS within the general public. The current co-presidents of SAMS are Nicolas Karabe, a senior international relations and political science major, and Michelle Payne, a sophomore psychology major. Along with eight other volunteers, these two dedicated leaders work together to spread the word around the campus about MS.

SAMS holds two main awareness and fund-raising events every year. The first, held on Parents Weekend, is "The Mile of Quarters." This event helps raise awareness about MS, and more importantly, it helps raise funds to support research working toward finding a cure for MS. The goal of the event is simple, get a string of quarters to extend a mile. While a single quarter may not seem to do much good, a mile of quarters adds up to $15,840 showing that every little bit helps.

The other event that SAMS sponsors each year is the "24-Hour Dance Marathon." Being the larger of the two SAMS events, the marathon is instrumental to the success of SAMS goals. The Dance Marathon will begin in the Bison at 6pm tomorrow night and last until 6pm the next day. Each hour of the marathon will have a different theme, determined by the group supporting that hour. The Silhouettes will be sponsoring the first hour of the marathon and will perform for the first half of their hour. Other organizations sponsoring hours include: Pi Beta Phi, Alpha Phi Omega, SEAC, BAC, Phi Mu, Calvin & Hobbes, Ultimate Frisbee and Kappa Alpha Theta.

In addition to organizations coming to sponsor their hours, some individuals and couples will attempt to dance throughout the entire marathon. These students have procured pledges from businesses, organizations and other individuals for each hour they dance. The marathon is not limited to these individuals and groups-any student wishing to participate may attend at any time for a one-dollar donation. At the end of each hour there will also be a raffle awarding prizes that were donated through the generosity of local businesses. Past prizes have included fine jewelry, gift certificates at local businesses and even round-trip plane tickets to anywhere in the United States. SAMS will also be selling t-shirts to help support their cause.

Last year the number of dance marathon participants dwindled and SAMS were unable to hold their marathon so come out this Friday and show your support for a great cause. Volunteers are still needed to help set up for the marathon Friday at 4pm, and SAMS encourages anyone interested in working for this outstanding cause to join the group.

"Helping others is a great feeling, people need to know about this horrible illness, it could affect any one of us at anytime. The SAMS marathon is not only a great way to support an excellent cause, it is also a lot of fun and a great way to meet new people," Payne said.

Any local businesses interested in supporting SAMS as well as any individuals or groups wishing to help support or participate in the marathon are encouraged to call Nicolas Karabe at 577-5767. All questions are welcome, and SAMS is always looking for new members.

Wink Thinks

Jacqueline Flicker—*The Bucknellian*

Dear Wink,

I am sure I don't need to tell you that dorm life is rough. Even the people who have huge rooms still lack many of the comforts of home. This year, as I entered college, I knew that my room would be far from the Ritz and I accepted that. Thankfully my room and roommate have been good to me for the most part. To be honest, I guess I have had the typical freshman living experience—noisy halls and lifelong friends. However, there has been one aspect of my dorm experience that I didn't foresee.

My problem began when my good friend who lives next door got a new boyfriend. He is a nice guy, and I love the girl to death, but when he spends the night, I don't sleep. This is somewhat awkward for me to say, but I feel it is something that I need help with and simply don't know who to ask.

You see, when they have these "slumber parties" the two of them engage in what I consider to be normal behaviors of any adult—they are sexually active. However, while every individual has the right to express him or herself in such a manner, I hear every little thing that goes on during these episodes due to the fact that our dorm room walls are paper-thin! I have tried everything-even moving my bed-but nothing seems to work.

I have to see this girl every day and, honestly, what am I to think? I would like so much for this to end. It is getting to the point where I feel really awkward and need to say or do something but I just don't know how. Is there any way that I can stop the insanity without making myself look like a jerk and ruining my relationship with my neighbor?

Sincerely,

Still Sleepless

Dear Still Sleepless,

Just to make you feel a little bit better, I know for a fact that this is not as rare an occurrence as you may perceive it to be. Nevertheless, it is a situation I don't think anyone should be subjected to. I definitely think you owe it to yourself to do something because you shouldn't have to deal with this kind of "distraction".

Off the top of my head, I can think of a few options, without having to tell the girl personally, that should fix your little problem with her late-night activities. The first option you have is to tell your RA. It may be a little odd explaining the situation to him or her, but nevertheless it is their job to deal with such issues in a professional manner.

If you choose to take this route, your neighbor should never find out it was you who made the complaint, and furthermore, it will take all of the pressure off of you in terms of having to confront this girl. Something that you also have to realize is that she may have no clue that her actions are that audible, and therefore could be incredibly embarrassed and apologetic for the whole situation. After all, these are very personal actions that are not meant to be shared with a large population.

The second easy option that you have is to invest in a Discman. This way you can listen to some tunes while you go to bed, and are able to avoid a confrontation. However, if I were you I would just handle the situation myself. To tell you the truth, you are the one who has nothing to fear and should just speak your mind.

Why not go over at a time when you see fit-maybe when you are being bothered-and in a polite voice just tell the two of them to shut up. In the worst case scenario, you get slapped. A little thing like this is not going to ruin your friendship, and you deserve your sleep, so take a stand and go get it. Who knows, in the end she may thank you for saving her from some future embarrassment.

If ever faced with an uncomfortable situation the worst thing that you can do is avoid it, it will only prolong the matter and drive you crazy. It's better to find the root and simply end it, no strings attached. As Vertical Horizon says, "Somewhere there's speaking and it's already coming in, oh and it's rising at the back of your mind." Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-allquestions are confidential and answers are always thorough. However,please write questions that are decent because we can't include materialthat is libelous or an invasion of privacy. Questions or comments can besent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling.

Non-traditionally aged students: They're just like you, only older

By Catherine Crews

On a typical day around campus, you might see Ellen Campbell making her way through the academic quad on her way to class, or you might see Mike Niebauer sitting in the caf discussing politics with his "peers". While these situations may sound typical, they aren't. Students like Ellen Campbell and Mike Niebauer make up a unique group of people within the Bucknell community known as non-traditionally aged students.

According to Betty Tufts, associate director of admissions, there are numerous students attending Bucknell who don't fit the mold of a traditional student. "Our non-traditional group consists of transfer students, Bucknell employees on a part time basis, and others from the community who are also attending part time," said Tufts. "The transfer students usually hail from Penn College of Technology, Harrisburg area community colleges, and The Community College of Philadelphia."

"The important thing to understand is that learning doesn't have to fit a prescribed time frame."

Although Tufts estimates that there are 20 full time non-traditional students, the exact number of non-traditional students is hard to gauge. This is due in part to employees attending a semester or more of classes without informing the Registrar's office.

The admissions process for these students is slightly different than for students coming from high school. If a student has been out of school for at least ten years, SAT scores are not required. The Admissions office looks at the student's most recent academic data, which usually consists of college experience. Students who have not completed any college coursework are not considered for admission and instead are given the suggestion to attend a community college first. An integral part of the admission process is an interview, which also includes input from the admission officers at the perspective student's previous college[s].

There are many reasons as to why older people choose to return to school. For Ellen Campbell, it was an opportunity to enrich her life with learning and attain her goal of becoming a preservationist of old homes. Campbell has attended numerous other colleges including Boston University and the University of Massachusetts. "College has been a discovery process for me," said Campbell. "When I first attended, I want didn't to commit to the four year plan. I was in the midst of trying to figure out what I really wanted to do with my life."

Another non-traditional student, Mike Niebauer, returned for medical reasons. Mr. Niebauer has gone through multiple eye operations, which he credits with helping him to realize that he "would rather do something with [his] brain than with [his] back." He transferred here after attending Penn College.

Both Campbell and Niebauer have developed new goals for their future. Campbell would like to work in a field that contributes to society. Niebauer has several goals, one being to become involved international union organizing. For these students, school is a chance to work toward their goals and become more complete people.

In general, the traditional students' reception towards their older counter parts has been positive. Yet, Niebauer and Campbell both agree that they do occasionally receive odd looks or glances in their direction. Campbell feels that one of the reason why a student may not be receptive towards her is simply because she is an adult.

"Students leave home to get away from their parents, to be on their own, and they end up having another 'mom' in one of their classes," said Campbell. "They think they can't swear etc. ... see, they don't know me."

Having friends that are half your age is also interesting. Niebauer says that he has found a group of people that accept him for what he brings to the group. His main problem isn't the friends, it's the lack of activities for him on campus. "There is only so much I can do....I would go out more often but by the time I get to the weekend, I'm wiped from the previous week," said Niebauer. "I do enjoy activities such as the Middle Eastern Dinner and I have done the coffeehouse thing but it is a problem for non-traditionally aged students."

A huge goal of colleges around the nation has been diversification. The non-traditional student brings tremendous diversity simply because they have lived longer. Their class contributions are significant because they relate more to their greater life experiences. However, these students encounter many of the personal and academic problems that typical students do.

Ms. Campbell expounds upon a very key principal; "The important thing to understand is that learning doesn't have to fit a prescribed time frame." All students must keep this in mind throughout their lives.

An abroad perspective: Alicante, Spain

Courtesy of Paul Benedetto

The beach on the Mediterranean Sea in the coastal town of Alicante.

By Paul Benedetto

Do not to be fooled by the common label attached to the experience of "Studying Abroad." As I look back on my experience this past summer in Alicante, Spain—learning the language, immersing myself in the culture, taking in the sites—the term "study abroad" seems to cheapen the experience for me.

I spent the summer in a University-approved program with several other Bucknell students. The reason it cheapens the experience to call my travels "studying abroad" should be fairly obvious to anyone that has participated in a similar program. To me, the word "study" implies spending hours toiling over books, highlighting and outlining texts. But this is not at all the case.

I am so enthusiastic when I speak of my travels to other students and encourage them to find a program as suited to their interests as this was to mine is not because I traveled over four thousand miles to sit in a library.

As we all know, Lewisburg is not a booming metropolis. Sure, we are all receiving an invaluable education here and undoubtedly we all find some way to amuse ourselves in our free time, but the appeal of going "abroad" is irresistible to many Bucknellians. There are reasons, however, beyond taking intermediate language courses or pursuing an international business degree that would merit spending the time, effort and money to travel to foreign lands in the name of education.

As anyone who participated in the same program that I did will tell you, there were numerous hours each day that we were required to spend in a classroom. And as a matter of fact, all of the classes were taught only in Spanish, which is nothing to scoff at. However, I'm sure they would also all agree that these were the most inconsequential hours of each day.

The true and most invaluable experience for me this summer was the time spent acquainting myself with the Mediterranean coastal town of Alicante. It was the exhausting effort to speak in Spanish to local shopkeepers and the sweat that beaded on my brow trying to woo women in another language.

No amount of time spent in a classroom could have inspired the awe I felt while staring up at the ceilings of La Alhambra, the Moorish castle built in Grenada during the 13th and 14th centuries—the most intricate mosaic work I have ever seen. Even Hemingway, in his most acclaimed novel *The Sun Also Rises* failed to do justice to the surge of adrenaline that coursed through my veins as I ran, exhilarated and petrified, from seven maniacal bulls at 8 a.m. through the streets of Pamplona.

Now it is true that when I finally returned to the United States after six weeks in Alicante my Spanish was notably better. And I do give credit to the University of Alicante, the program coordinator Antonio Torres Alcalá and the professors at the University who helped to train our ears and our tongues to mimic the sound of true Spanish. But if that was the only reason I traveled all the way to the Mediterranean, I might as well have stayed home and taken classes with a native Spaniard.

I don't believe that anyone pursuing a liberal arts degree at Bucknell is without the understanding that hard work and good study skills are essential for a successful academic experience. However, no amount of time spent in a classroom can ever serve as a substitute to the actual adventure of getting lost in a foreign city and using that wealth of knowledge acquired through years of study to help solve such a dilemma.

I do not believe that a foreign study experience is nothing but an excuse to take time off from learning to perfect the philosophy of hedonism in life. I believe that I learned more in those six weeks in Spain than I could hope to learn in a year in the cozy haven of Lewisburg.

I learned more in Spain because I was left confused and defenseless in a foreign country with nothing but my wits to guide me. Before I embarked, I was as prepared as any student could hope to be by a proper education in school, but when the time came and I found myself on the shores of Alicante, I knew then that the world was my classroom, and I was its pupil.

Women's Resource Center forms support group for assault survivors

By Katie Hays

Memories of sexual or physical abuse neither settle in the mind nor dissolve over time. Well aware of this fact and determined to provide a supportive and healing atmosphere for those who live with such memories, the Women's Resource Center has recently organized an on-campus women's support group for survivors of sexual or physical assault.

Meeting weekly in a safe and open setting, the group both stimulates discussion and provides a network of support for those students who have experienced abuse in the past. It aims to help students "break the silence"—to discuss, to learn, and to heal.

Facilitated by Janice Butler of the Women's Resource Center and Shallary Simmons Duncan of Psychological Services, the members encourage one another, provide support and share common feelings and experiences. After forming this past semester, the group remains intimate, understanding and friendly.

"Our purpose is to try and help those who have been through a traumatic situation to be with others who have experienced something of a similar nature," Butler said. Indeed, sitting among equals and supporting one another in an open and safe environment has helped many students who have participated in such on-campus groups in the past.

While Duncan and Butler help to facilitate discussion and to provide helpful exercises for the group, the students form its core. "The group truly belongs to the students who come to it," Butler said. "It's for support rather than therapy, and the participants benefit just by talking and sharing."

Some of the issues with which the group has typically dealt in the past include establishing healthy boundaries, regaining a sense of trust, recovery of self-esteem and how to handle fear and anger. Each group session commences with exercises designed to stimulate thought and discussion regarding a broad theme such as trust. The week's meeting comes to life as the exercise evolves into conversation and discussion.

"Some people, as they contemplate coming to the group, imagine that we dwell on the incidents that brought the group together, but now it's a discussion of the group members' present lives, and helping them to cope with the after-effects of abuse," Butler said. More concerned with the present experiences and emotions of its members than with reiterating the past, the group encourages progression and movement through conversation and exercises. This healing cannot take place if the issue is not confronted.

More people experience sexual and physical abuse than most realize. These misconceptions may lead those who live with such painful memories to consider themselves one of a very small fraction of the population. "Given the statistics, there are many survivors of abuse on our campus. It's a big step to reach out for help, and it is also a great one; it is important to recovery," Butler said. "It's not just recent events that bring people together for this; we have people in the group who were abused in high school or even as children, and all help one another through the group discussions and attention."

The support group provides a calm and comfortable environment and caring community for those interested in recovery; its closeness and confidentiality remains a great aspect for its members. Those who join the group help themselves not only in the present but in the future as well. "It's better to deal with the issue now and get help from a supportive group than to allow it to remain with you and to allow it to resurface again and again when you're older," Butler said.

"We've had groups in the past; interest ebbs and flows over the years, but right now we have enough interest here on campus to keep the group going," Butler said. The interest continues as more students decide to confront their past in the present, to work to improve their own sense of well being and comfort and to do so in a supportive and friendly atmosphere.

The women's support group for those who have experienced sexual or physical assault remains confidential and meets on Mondays from 5-6:15 PM. If interested, please feel free to contact Janice Butler at 577-1375, (e-mail butler@bucknell.edu) or Shallary Simmons at 577-1607, (simmons@bucknell.edu) for more information.

SAMS dance all night for a cure

By Chad Gillenberger

Multiple Sclerosis (MS) is a neurological illness that affects over 350,000 people today in the United States alone. It is caused by inflammation or scarring of myelin, a protective covering of nerve fibers in both the brain and spinal column. No one knows what triggers Multiple Sclerosis. It usually strikes between the ages of 30 and 50, is most commonly found in Canada, the United States, South America and Europe and is nonexistent near the equator. Those afflicted with the illness struggle with daily activities. Fatigue, muscle weakness, spasms, numbness, slurred speech, difficulties with vision, and memory loss are all common symptoms of multiple sclerosis. Extreme cases may result in paralysis, muscle cramps, loss of bladder and bowel control, and sexual dysfunction. Between 25 and 30 percent of all MS victims require the aid of a wheelchair. Because so little is known about this devastating disease, there is a great need for public support.

Here on campus, Students Against Multiple Sclerosis (SAMS) is striving to raise support and awareness about MS within the general public. The current co-presidents of SAMS are Nicolas Karabe, a senior international relations and political science major, and Michelle Payne, a sophomore psychology major. Along with eight other volunteers, these two dedicated leaders work together to spread the word around the campus about MS.

SAMS holds two main awareness and fundraising events every year. The first, held on Parents Weekend, is "The Mile of Quarters." This event helps raise awareness about MS, and more importantly, it helps raise funds to support research working toward finding a cure for MS. The goal of the event is simple, get a string of quarters to extend a mile. While a single quarter may not seem to do much good, a mile of quarters adds up to $15,840 showing that every little bit helps.

Jonah Half—*The Bucknellian*

Leigh-Anne Cook '01 and Tom Egan '00, active members of SAMS

The other event that SAMS sponsors each year is the "24-Hour Dance Marathon." Being the larger of the two SAMS events, the marathon is instrumental to the success of SAMS goals. The Dance Marathon will begin in the Bison at 6pm tomorrow night and last until 6pm the next day. Each hour of the marathon will have a different theme, determined by the group supporting that hour. The Silhouettes will be sponsoring the first hour of the marathon and will perform for the first half of their hour. Other organizations sponsoring hours include: Pi Beta Phi, Alpha Phi Omega, SEAC, BAC, Phi Mu, Calvin & Hobbes, Ultimate Frisbee and Kappa Alpha Theta.

In addition to organizations coming to sponsor their hours, some individuals and couples will attempt to dance throughout the entire marathon. These students have procured pledges from businesses, organizations and other individuals for each hour they dance. The marathon is not limited to these individuals and groups-any student wishing to participate may attend at any time for a one-dollar donation. At the end of each hour there will also be a raffle awarding prizes that were donated through the generosity of local businesses. Past prizes have included fine jewelry, gift certificates at local businesses and even round-trip plane tickets to anywhere in the United States. SAMS will also be selling t-shirts to help support their cause.

Last year the number of dance marathon participants dwindled and SAMS were unable to hold their marathon so come out this Friday and show your support for a great cause. Volunteers are still needed to help set up for the marathon Friday at 4pm, and SAMS encourages anyone interested in working for this outstanding cause to join the group.

"Helping others is a great feeling, people need to know about this horrible illness, it could affect any one of us at anytime. The SAMS marathon is not only a great way to support an excellent cause, it is also a lot of fun and a great way to meet new people," Payne said.

Any local businesses interested in supporting SAMS as well as any individuals or groups wishing to help support or participate in the marathon are encouraged to call Nicolas Karabe at 577-5767. All questions are welcome, and SAMS is always looking for new members.

Wink Thinks

Jacqueline Flicker—*The Bucknellian*

Dear Wink,

I am sure I don't need to tell you that dorm life is rough. Even the people who have huge rooms still lack many of the comforts of home. This year, as I entered college, I knew that my room would be far from the Ritz and I accepted that. Thankfully my room and roommate have been good to me for the most part. To be honest, I guess I have had the typical freshman living experience—noisy halls and lifelong friends. However, there has been one aspect of my dorm experience that I didn't foresee.

My problem began when my good friend who lives next door got a new boyfriend. He is a nice guy, and I love the girl to death, but when he spends the night, I don't sleep. This is somewhat awkward for me to say, but I feel it is something that I need help with and simply don't know who to ask.

You see, when they have these "slumber parties" the two of them engage in what I consider to be normal behaviors of any adult—they are sexually active. However, while every individual has the right to express him or herself in such a manner, I hear every little thing that goes on during these episodes due to the fact that our dorm room walls are paper-thin! I have tried everything-even moving my bed-but nothing seems to work.

I have to see this girl every day and, honestly, what am I to think? I would like so much for this to end. It is getting to the point where I feel really awkward and need to say or do something but I just don't know how. Is there any way that I can stop the insanity without making myself look like a jerk and ruining my relationship with my neighbor?

Sincerely,

Still Sleepless

Dear Still Sleepless,

Just to make you feel a little bit better, I know for a fact that this is not as rare an occurrence as you may perceive it to be. Nevertheless, it is a situation I don't think anyone should be subjected to. I definitely think you owe it to yourself to do something because you shouldn't have to deal with this kind of "distraction".

Off the top of my head, I can think of a few options, without having to tell the girl personally, that should fix your little problem with her late-night activities. The first option you have is to tell your RA. It may be a little odd explaining the situation to him or her, but nevertheless it is their job to deal with such issues in a professional manner.

If you choose to take this route, your neighbor should never find out it was you who made the complaint, and furthermore, it will take all of the pressure off of you in terms of having to confront this girl. Something that you also have to realize is that she may have no clue that her actions are that audible, and therefore could be incredibly embarrassed and apologetic for the whole situation. After all, these are very personal actions that are not meant to be shared with a large population.

The second easy option that you have is to invest in a Discman. This way you can listen to some tunes while you go to bed, and are able to avoid a confrontation. However, if I were you I would just handle the situation myself. To tell you the truth, you are the one who has nothing to fear and should just speak your mind.

Why not go over at a time when you see fit-maybe when you are being bothered-and in a polite voice just tell the two of them to shut up. In the worst case scenario, you get slapped. A little thing like this is not going to ruin your friendship, and you deserve your sleep, so take a stand and go get it. Who knows, in the end she may thank you for saving her from some future embarrassment.

If ever faced with an uncomfortable situation the worst thing that you can do is avoid it, it will only prolong the matter and drive you crazy. It's better to find the root and simply end it, no strings attached. As Vertical Horizon says, "Somewhere there's speaking and it's already coming in, oh and it's rising at the back of your mind." Until next time relax, have fun, and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-allquestions are confidential and answers are always thorough. However,please write questions that are decent because we can't include materialthat is libelous or an invasion of privacy. Questions or comments can besent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling.

Non-traditionally aged students: They're just like you, only older

By Catherine Crews

On a typical day around campus, you might see Ellen Campbell making her way through the academic quad on her way to class, or you might see Mike Niebauer sitting in the caf discussing politics with his "peers". While these situations may sound typical, they aren't. Students like Ellen Campbell and Mike Niebauer make up a unique group of people within the Bucknell community known as non-traditionally aged students.

According to Betty Tufts, associate director of admissions, there are numerous students attending Bucknell who don't fit the mold of a traditional student. "Our non-traditional group consists of transfer students, Bucknell employees on a part time basis, and others from the community who are also attending part time," said Tufts. "The transfer students usually hail from Penn College of Technology, Harrisburg area community colleges, and The Community College of Philadelphia."

> *"The important thing to understand is that learning doesn't have to fit a prescribed time frame."*

Although Tufts estimates that there are 20 full time non-traditional students, the exact number of non-traditional students is hard to gauge. This is due in part to employees attending a semester or more of classes without informing the Registrar's office.

The admissions process for these students is slightly different than for students coming from high school. If a student has been out of school for at least ten years, SAT scores are not required. The Admissions office looks at the student's most recent academic data, which usually consists of college experience. Students who have not completed any college coursework are not considered for admission and instead are given the suggestion to attend a community college first. An integral part of the admission process is an interview, which also includes input from the admission officers at the perspective student's previous college[s].

There are many reasons as to why older people choose to return to school. For Ellen Campbell, it was an opportunity to enrich her life with learning and attain her goal of becoming a preservationist of old homes. Campbell has attended numerous other colleges including Boston University and the University of Massachusetts. "College has been a discovery process for me," said Campbell. "When I first attended, I want didn't to commit to the four year plan. I was in the midst of trying to figure out what I really wanted to do with my life."

Another non-traditional student, Mike Niebauer, returned for medical reasons. Mr. Niebauer has gone through multiple eye operations, which he credits with helping him to realize that he "would rather do something with [his] brain than with [his] back." He transferred here after attending Penn College.

Both Campbell and Niebauer have developed new goals for their future. Campbell would like to work in a field that contributes to society. Niebauer has several goals, one being to become involved international union organizing. For these students, school is a chance to work toward their goals and become more complete people.

In general, the traditional students' reception towards their older counter parts has been positive. Yet, Niebauer and Campbell both agree that they do occasionally receive odd looks or glances in their direction. Campbell feels that one of the reason why a student may not be receptive towards her is simply because she is an adult.

"Students leave home to get away from their parents, to be on their own, and they end up having another 'mom' in one of their classes," said Campbell. "They think they can't swear etc. ... see, they don't know me."

Having friends that are half your age is also interesting. Niebauer says that he has found a group of people that accept him for what he brings to the group. His main problem isn't the friends, it's the lack of activities for him on campus. "There is only so much I can do....I would go out more often but by the time I get to the weekend, I'm wiped from the previous week," said Niebauer. "I do enjoy activities such as the Middle Eastern Dinner and I have done the coffeehouse thing but it is a problem for non-traditionally aged students."

A huge goal of colleges around the nation has been diversification. The non-traditional student brings tremendous diversity simply because they have lived longer. Their class contributions are significant because they relate more to their greater life experiences. However, these students encounter many of the personal and academic problems that typical students do.

Ms. Campbell expounds upon a very key principal; "The important thing to understand is that learning doesn't have to fit a prescribed time frame." All students must keep this in mind throughout their lives.

An abroad perspective: Alicante, Spain

Courtesy of Paul Benedetto

The beach on the Mediterranean Sea in the coastal town of Alicante.

By Paul Benedetto

Do not to be fooled by the common label attached to the experience of "Studying Abroad." As I look back on my experience this past summer in Alicante, Spain—learning the language, immersing myself in the culture, taking in the sites—the term "study abroad" seems to cheapen the experience for me.

I spent the summer in a University-approved program with several other Bucknell students. The reason it cheapens the experience to call my travels "studying abroad" should be fairly obvious to anyone that has participated in a similar program. To me, the word "study" implies spending hours toiling over books, highlighting and outlining texts. But this is not at all the case.

I am so enthusiastic when I speak of my travels to other students and encourage them to find a program as suited to their interests as this was to mine is not because I traveled over four thousand miles to sit in a library.

As we all know, Lewisburg is not a booming metropolis. Sure, we are all receiving an invaluable education here and undoubtedly we all find some way to amuse ourselves in our free time, but the appeal of going "abroad" is irresistible to many Bucknellians. There are reasons, however, beyond taking intermediate language courses or pursuing an international business degree that would merit spending the time, effort and money to travel to foreign lands in the name of education.

As anyone who participated in the same program that I did will tell you, there were numerous hours each day that we were required to spend in a classroom. And as a matter of fact, all of the classes were taught only in Spanish, which is nothing to scoff at. However, I'm sure they would also all agree that these were the most inconsequential hours of each day.

The true and most invaluable experience for me this summer was the time spent acquainting myself with the Mediterranean coastal town of Alicante. It was the exhausting effort to speak in Spanish to local shopkeepers and the sweat that beaded on my brow trying to woo women in another language.

No amount of time spent in a classroom could have inspired the awe I felt while staring up at the ceilings of La Alhambra, the Moorish castle built in Grenada during the 13th and 14th centuries—the most intricate mosaic work I have ever seen. Even Hemingway, in his most acclaimed novel *The Sun Also Rises* failed to do justice to the surge of adrenaline that coursed through my veins as I ran, exhilarated and petrified, from seven maniacal bulls at 8 a.m. through the streets of Pamplona.

Now it is true that when I finally returned to the United States after six weeks in Alicante my Spanish was notably better. And I do give credit to the University of Alicante, the program coordinator Antonio Torres Alcalá and the professors at the University who helped to train our ears and our tongues to mimic the sound of true Spanish. But if that was the only reason I traveled all the way to the Mediterranean, I might as well have stayed home and taken classes with a native Spaniard.

I don't believe that anyone pursuing a liberal arts degree at Bucknell is without the understanding that hard work and good study skills are essential for a successful academic experience. However, no amount of time spent in a classroom can ever serve as a substitute to the actual adventure of getting lost in a foreign city and using that wealth of knowledge acquired through years of study to help solve such a dilemma.

I do not believe that a foreign study experience is nothing but an excuse to take time off from learning to perfect the philosophy of hedonism in life. I believe that I learned more in those six weeks in Spain than I could hope to learn in a year in the cozy haven of Lewisburg.

I learned more in Spain because I was left confused and defenseless in a foreign country with nothing but my wits to guide me. Before I embarked, I was as prepared as any student could hope to be by a proper education in school, but when the time came and I found myself on the shores of Alicante, I knew then that the world was my classroom, and I was its pupil.

Courtesy of Paul Benedetto

The group of Bucknellians who travelled to Spain in the fall, with their two Spanish Professors.

Women's Resource Center forms support group for assault survivors

By Katie Hays

Memories of sexual or physical abuse neither settle in the mind nor dissolve over time. Well aware of this fact and determined to provide a supportive and healing atmosphere for those who live with such memories, the Women's Resource Center has recently organized an on-campus women's support group for survivors of sexual or physical assault.

Meeting weekly in a safe and open setting, the group both stimulates discussion and provides a network of support for those students who have experienced abuse in the past. It aims to help students "break the silence"—to discuss, to learn, and to heal.

Facilitated by Janice Butler of the Women's Resource Center and Shallary Simmons Duncan of Psychological Services, the members encourage one another, provide support and share common feelings and experiences. After forming this past semester, the group remains intimate, understanding and friendly.

"Our purpose is to try and help those who have been through a traumatic situation to be with others who have experienced something of a similar nature," Butler said. Indeed, sitting among equals and supporting one another in an open and safe environment has helped many students who have participated in such on-campus groups in the past.

While Duncan and Butler help to facilitate discussion and to provide helpful exercises for the group, the students form its core. "The group truly belongs to the students who come to it," Butler said. "It's for support rather than therapy, and the participants benefit just by talking and sharing."

Some of the issues with which the group has typically dealt in the past include establishing healthy boundaries, regaining a sense of trust, recovery of self-esteem and how to handle fear and anger. Each group session commences with exercises designed to stimulate thought and discussion regarding a broad theme such as trust. The week's meeting comes to life as the exercise evolves into conversation and discussion.

"Some people, as they contemplate coming to the group, imagine that we dwell on the incidents that brought the group together, but now it's a discussion of the group members' present lives, and helping them to cope with the after-effects of abuse," Butler said. More concerned with the present experiences and emotions of its members than with reiterating the past, the group encourages progression and movement through conversation and exercises. This healing cannot take place if the issue is not confronted.

More people experience sexual and physical abuse than most realize. These misconceptions may lead those who live with such painful memories to consider themselves one of a very small fraction of the population. "Given the statistics, there are many survivors of abuse on our campus. It's a big step to reach out for help, and it is also a great one; it is important to recovery," Butler said. "It's not just recent events that bring people together for this; we have people in the group who were abused in high school or even as children, and all help one another through the group discussions and attention."

The support group provides a calm and comfortable environment and caring community for those interested in recovery; its closeness and confidentiality remains a great aspect for its members. Those who join the group help themselves not only in the present but in the future as well. "It's better to deal with the issue now and get help from a supportive group than to allow it to remain with you and to allow it to resurface again and again when you're older," Butler said.

"We've had groups in the past; interest ebbs and flows over the years, but right now we have enough interest here on campus to keep the group going," Butler said. The interest continues as more students decide to confront their past in the present, to work to improve their own sense of well being and comfort and to do so in a supportive and friendly atmosphere.

The women's support group for those who have experienced sexual or physical assault remains confidential and meets on Mondays from 5-6:15 PM. If interested, please feel free to contact Janice Butler at 577-1375, (e-mail butler@bucknell.edu) or Shallary Simmons at 577-1607, (simmons@bucknell.edu) for more information.

Student-run productions display talent both in acting and directing

"An Evening with Tom Stoppard"

"The Real Inspector Hound"

By Katie Parker

"The Real Inspector Hound", a comic whodunit with unexpected twists, debuted in the Harvey M. Powers theatre Friday night, presented by the Department of Theatre and Dance. Starring Ian McNaugher '01 and Jay Klaitz '01 as two critics who somehow become involved in the obvious insanity of the play they are critiquing, the play was entertaining, hilarious, and always biting and intelligent.

The set itself was remarkable, with great pains taken to make it as stereotypically mysterious as one would imagine a British manor overrun by a killer-to-be.

The most notable feature of the evening was the comic performance of Elizabeth Asti '00 as Mrs. Drudge. Upon entrance, Mrs. Drudge appeared to be a secondary character, of no real importance. Gradually she becomes more and more significant throughout the play, and Asti managed to weave together this significance and insignificance wonderfully. At times, despite several other actions going on in the background, she was the only thing you could focus on! This was truly a wonderful play, with a spectacular cast and applause-worthy direction by David Carpenter, '00.

"Artist Descending a Staircase"

By Jeremy Walker

"Artist Descending a Staircase" also premiered last weekend following "The Real Inspector Hound." The play was originally a radio show written by Tom

Stoppard that first premiered on BBC Radio 3 in 1972. It tells the story of three modern artists over sixty years of their lives.

As the play opens Martello and Beauchamp are old and senile. They've come home to find their best friend Donner dead on the floor. Each artist suspects the other of murder. A succession of flashbacks follows the first scene and we see the moments leading up to Donner's death, as well as their younger years shared together in 1914, 1920 and 1922. Along the way, we are introduced to Sophie, a blind girl whom they all adore.

The play analyzes misperception in both art and life as well as comments on the current state of modern art. A four-person ensemble translated the production to the stage with remarkable ease, playing both age and blindness convincingly. John Mitchell '00 played Martello, Dave Green '00 played Beauchamp, Josh Eisinger '00 played Donner and Jennifer Schermermund '00 played Sophie. The play was directed by Jeremy Walker '00 as part of his senior thesis.

Sandy Pisieczko '00, John Mitchell '00, Dan Spink '00, and Amy Gilday '00. *Scott Solomon—The Bucknellian*

The cast spent six weeks rehearsing the play, including morning movement/improvisation rehearsals led by Bucknell Dance guru and cast member Schermermund. "It was such a joy having a cast as close-knit and dedicated as this one. They surpassed all of my expectations and were each amazing to work with," Walker said.

Carolyn Jamison '00, co-designed the set which was adored by the weekend's audience. Using Dada art as their influence, Jamison and Associate Professor of Theatre Elaine Williams designed a functional unit that was a work of art in itself! It was complete with suspended staircase, ready-made art objects reminiscent of Duchamp and flying set pieces. Renee Awad '98 stage managed the show which was a technical triumph.

Rod Young '99 designed sound for the production, an integral part of this show in particular. Assistant Professor Paula Davis-Larson designed authentic looking costumes and Professor Heath-Hansum's lighting design was spectacular. Associate Professor of Theatre Bob Gainer kept the show together at its seams as the production's faculty advisor.

Gainer shows dedication to both his students and his appreciation of the arts

By Nicole Gull

Although we may recognize the Department of Theatre and Dance as an interesting and complex aspect of University academics, how much do we really know about its history and the individuals that are most involved in the department? Embarrassingly enough, very little.

Originally, coursework in theatre was housed within the English Department. The department was not considered its own entity until 1985. In 1987, however, the department grew with the introduction of dance and finally came to be The Department of Theatre and Dance in its own right. One individual in particular is greatly responsible for the development of the department at the University —Harvey Powers.

Courtesy of www.department.bucknell.edu/theatre_dance/faculty.staff/bob.html

Gainer is the director of theatre, as well as a professor here at the University.

Powers served as a professor here for 38 years (1949-1987) and taught the first accredited courses in acting, directing and theatre arts. It is in honor of Powers' contributions that Coleman theatre was deemed The Harvey Powers Theatre and that the University now enjoys a an autonomous Department of Theatre and Dance.

Robert Gainer, director of theatre and professor of acting and directing, would like to remind students of the diverse opportunities afforded within the Department of Theatre and Dance. In the Bachelor of Arts program, students are able to complete a Theatre Major, study abroad to gain conservatory training and learn in a nurturing and attentive environment under the guidance of a supportive faculty.

Gainer recognizes that the number of courses within the major is fairly limited, but he notes that this limitation is complemented by a close knit and enthusiastic learning environment. Students are offered classes in both theatre and dance as the two arts are directly related and enjoy working together whenever possible. In fact, the positive characteristics associated with the department are only furthered by the students in the department. "Theatre students are passionate and hungry to learn by doing and being involved in the art form - this is what excites the faculty," Gainer said.

This May, the department will lose 10 senior majors to graduation. "I do not remember a time that we had such superb and committed theatre majors. It is both so exciting and sad to see them graduate this year," Gainer said. Of these 10 seniors, seven had the opportunity to complete performance studies in the artistic hub of London, England and three (Jeremy Walker, David Carpenter, and Cassandra Pisieczko) have taken on the responsibility of casting and directing productions this spring.

"The Theatre Department here at Bucknell is more like a family than an institution. A close group of students and professors work side by side to produce something they love. Bob Gainer is often the cornerstone of that family, the tireless caretaker with an eye for detail that makes sure all areas of production are well covered," Walker said.

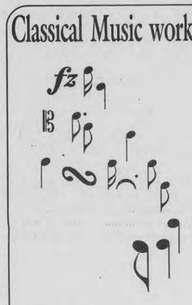
The alumni also play a distinct role in the department. They frequently make themselves available to students and graduating seniors as they pursue professional acting, directing, or further study in the field. In the past four years, the Department of Theatre and Dance has seen four students enter Columbia University as graduate students in the MFA program and has also connected several students with University alumni in their search for internships in the field.

Like many of his students, Gainer too has a drive and deep interest for the arts. After completing his Master of Fine Arts in Stage Direction at The Yale School of Drama, he spent eight years in New York City. There, he ran his own theatre company that focused on the production of new plays and various British pieces as he enjoyed the thrill of working with contemporary playwrights at that time.

However, the past seven years have brought on a re-direction for Gainer. He has returned to a desire not only to direct, but to perform as well.

Last year while on academic sabatical, Gainer lived in New York City and performed in a variety of productions. A few off the list include a Tennessee Williams piece at Columbia University, work with renowned performance artist Meredith Monk and a production with Yoshiko Chuma and Janice Brenner. In addition, Gainer has plans to return to perform a second time with Brenner's company, "Janice Brenner and Dancers" for a week this March.

Classical Music works as a natural cure for stress



By Andrea Beisser

With Spring Break rapidly approaching and the semester heating up with papers and exams, a Bucknell student may need a momentary breather from the overwhelming stress. One suggestion to relax and calm the mind is to check out a classical music CD at the library, and sit peacefully for a half hour letting the music refresh your mind. Thumbing through the panoply of CDs, you might have no idea which to choose froma Beethoven—sonata, Mozart symphony or Handel suite?

One suggestion is to find the *Symphony No. 2* by Jean Sibelius. This piece is a captivating arrangement divided into three movements that each represent a different mood. With the theme centering around nature and the declaration of independence by the Finnish people, Sibelius begins the first movement, the *allegretto*, with a light melody. The listener is able to picture a beautiful countryside with rolling hills and rich natural beauty. The mood is calm and peaceful with hints of excitement to keep the listener in anticipation of change. The dynamics allow the music to dance and encourage a feeling of release and joy. The second movement of the piece, the *tempo andante ma rubato*, displays the Finnish rejection to Russian rule. It begins with a drumroll and melancholy suspense, foreshadowing the coming turmoil. Sibelius has changed the mood from pleasure to anxiety and even a tinge of fear. The intensity mounts throughout the movement as it erupts into hostile harmony as the Finnish struggle for independence.

After the vigor of the second movement, the listener senses a climax of vitory and elation. The third and fourth movements, *Vivacissimo* and Finale respectively, portray victory and achievement. The third movement signals heightened rebellion and leads into the celebration of independence captured in the Finale.

Sibelius composed Symphony No.2 in 1901 and this selection is performed by Sir John Barbirolli and the Royal Philharmonic Orchestra. Listening to the music is refreshing to the soul and will temporarily release you from all the pressures of school. After feeling the personality and emotion of Sibelius's symphony, you will feel renewed and ready to hit the books with a refreshed perspective on life.

Duo-Pianists, Cheng and Ray impress audience at Weis Center

By Blaire Zeiders

How fast can you type? Think one hundred words per minute is fast? How about 500 words per minute with one hundred percent accuracy? Now imagine your fingers flying with ease over the keys, never missing a beat and churning out rich sounds and exciting rhythms, capturing the attention of all that are fortunate enough to be listening. No, we are not talking about typing anymore. The seemingly "500 notes per minute" precision of Gloria Cheng's and Vicki Ray's Duo-Pianos concert was something to be admired.

Last Friday in the Weis Center, Ms. Cheng and Ms. Ray gave a stunning performance of contemporary piano literature. While admission was free, the skill displayed was priceless. Almost from the first chord of music, the two women seemed to be in a world of their own and completely possessed by the music they were creating.

The instruments were set up facing each other so that each woman could look up at any time and make eye contact with her partner. However, it was evident that these two pianists could feel what the other was going to do before she did it. When a movement ended and a pause in the music ensued, each lady appeared to come out of a trance and back into reality.

Sometimes whispering, other moments arguing, the two pianos seemed to converse with each other throughout the concert. The opener, a piece by Campion was a bright and vivid "argument" between the instruments, while the Dutilleux number was expressive and haunting. Visions de l'Amen closed the performance with some moments of softness and others of unbelievable speed and intricate runs up and down the keys. The fact that the two women could play one part, let alone stay in sync the entire time, is worthy of respect and perhaps a little awe.

Courtesy of Weis Center

The duo performed in the final Grace Notes! Series installation.

The program included Edmund J. Campion's "A Complete Wealth of Time," Henri Dutilleux's "Figures de Resonances," and Olivier Messiaen's "Visions de l'Amen." All of the music was written fairly recently, ranging from 1943 to 1990. This was evident in the style of the pieces. Interesting and complex harmonies sometimes made one wonder if there was in fact any structure to the music, but when all resolved itself by the end of the piece, the intricate planning of the composers was revealed. This concert was not for those who wanted to hear lullabies and familiar ballads. The music was usually neither sweet nor romantic; loud, abrupt chords were the norm. Despite this fact, those who came to hear a splashy display of talent and excitement were well rewarded.

Gloria Cheng and Vicki Ray are definitely no strangers to the world of piano performance. Cheng has been a frequent guest of the Los Angeles Philharmonic and a member of the Intercontemporain, a Paris-based ensemble. She debuted in New York's Carnegie Hall in 1993 and can be seen in the Pasadena, California Piano Spheres series. Numerous composers have written music especially for her, and in July of 2000, she will showcase her work on Piano Dance.

Vicki Ray is a soloist who performs many places and has received kudos from the *Los Angeles Times* for her stunning "musical thoroughness" and "technical panache." She has been a part of numerous ensembles and festivals, including the Blue Rider Ensemble of Toronto and the Salzburg Festival. She has a CD entitled *Left Edge*, which includes some pieces written for her. She is currently a faculty member of the California Institute of the Arts. Vicki Ray and Gloria Cheng's Duo-Pianos concert was presented in conjunction with Bucknell's Gallery series and was the fourth and final installment of the Grace Notes! Series.

Two Past Midnight perform Friday

By Jennie Scheerer

If you have never heard Two Past Midnight, Bucknell's only coed *a capella* group, then you are definitely missing out. Fortunately, you will have the opportunity to hear them again or for the first time this Friday night in Bucknell Hall in "An Arousing Evening with Two Past Midnight," their first performance of the semester. "We chose Bucknell Hall hoping that it would be filled, creating a more fun environment," said member Blaze Berdahl '02.

According to their members, Two Past Midnight's repertoire is "quite diverse, ranging from vocal jazz to oldies to modern pop. We're a group of very different people with widely diverging musical tastes, and we've tried to reflect this in our selection of music."

The group's self-titled debut CD has been out for a while now, and they are going back into the studio in a month to record their second album. "We've been rehearsing like crazy, and the sound has never been better," Mark Crawshaw '01 said.

On Friday night, the group will be performing twelve songs including some of their more recent ones like "Lover," "Moments of You," "Boxer," and "Sweet Dreams." They also will bring back some old favorites including "Express Yourself" and "Good Lovin."

Courtesy of Blaze Berdahl

"An Arousing Evening with Two Past Midnight", will be the co-ed *a capella* group's first performance of the semester.

Additionally, they will be introducing two new surprise songs, but you must attend the concert to find out what they are.

Current Two Past Midnight members include Amanda Martin '03, Adam Hargus '03, Jeff Clark '03, Brian Strojny '03, Melissa Milanak '03 and Rebecca Dykema '02, Alex Greico '00, Angela Kahn '00, Chris Bellaccio '00 and Jenn Schweiger '00, Mark Crawshaw '01, Matt Griffin '02, Nik Sneshkof '02, and Blaze Berdahl '02.

Tickets to Friday's performance are $2 and the show begins at 8 pm. Arrive a little early, since Bucknell Hall is a small venue and fills up quickly. Don't miss the first opportunity this semester to hear this amazing group.

Farrell combines songs from both Jane's Addiction and Porno for Pyros in one album

Courtesy of www.addict.com

***Rev* includes the greatest hits from both of Farrell's bands.**

By Campbell Gerrish

This past fall, Perry Farrell, former front man for Jane's Addiction, and present lead singer of Porno for Pyros, put out a compilation of his work with the two bands entitled *Rev*.

Included on the album are two new tracks Farrell recorded independently with various musicians he has worked with. *Rev* could be considered the greatest hits of Jane's Addiction and Porno for Pyros.

The first two songs are Farrell's original works. For the title song, "Rev," Farrell recorded with Rage Against the Machine guitarist Tom Morello, Red Hot Chili Peppers guitarist John Frusciante and Stephen Perkins, who drummed with Farrell in Jane's Addiction and Porno For Pyros. *Rev* has a sound reminiscent of the style of Jane's Addiction and includes Morello's innovative guitar style and effects and Frusciante's rapid strumming. While it does contain a slow melodic part in the end, the song is not one of Farell's strongest works.

In the second song, "Whole Lotta Love," Farrell experiments with techno drum beats, and deep, pulsing bass lines. Once again, this being another new tune, it is not quite as catchy or fun as Farrell's earlier work. Although both "Rev" and "Whole Lotta Love," do contain some fresh sounds, they seem to be just a diversion from Farrell's better works.

There are some very strong tracks on the album as well. The remix of "Been Caught Stealing," possibly Jane's Addiction's biggest hit, is incredible, mostly due to the bongos that are introduced. They provide a cool intro, some extra percussion beneath the drums and fills during the breaks where there used to be only the standard drum beat. Farrell also changed the end adding some bongo solo spaces.

Next is "Jane Says," a song that competes against "Been Caught Stealing" as Jane's Addiction's most popular. Nothing new introduced into this version of the song, but it is still as good as the original. It still contains acoustic guitar steel drums, and Farrell's distinctive, whiny voice.

The album includes other Jane's Addiction favorites such as "Stop," "Mountain Song" and "Summertime Rolls." There are also tracks from the lighter side of Perry Farrell — Porno for Pyros. Although, "Tahitian Moon" is a funky, hard and driving song, others like "Kimberly Austin," "Tonight," and "Pets" are quieter.

"Pets" is a very mellow piece in which Farell's voice sounds better than usual — more smooth and a little less whiny than on other songs. The song has a great beat, peaceful open guitar chords and a soft bass.

Another cool, mellow Porno for Pyros song is "100 Ways." On this track the band adds some horns and besides the fact that it is all electric, it sounds a bit like "Jane Says" during the main part. There is also a strong chorus in which the bass line is more pronounced. Other Porno For Pyros tunes on the album are "Hard Charger" and "Satellite of Love."

Perry Farrell is an incredible talent, heading two incredibly popular bands. If you are a fan of Jane's addiction and/or Porno for Pyros, *Rev* is worth checking out.

The tradition continues with *2nd annual Chrysalis Ball*

By Erica Delsandro

Once again, the entire Bucknell community is invited to take part in an evening of elegance. The Chrysalis Ball, whose theme this year is "Bucknell, Dancing Through the Decades," is quickly becoming the most anticipated annual event on campus.

On April 29th, Bucknell cordially welcomes alumni, faculty, staff, parents and students to the gala event of the season. As a tradition that spans the millennium, the Chrysalis Ball will evoke Bucknell's history and celebrate its future.

Bucknell, "Dancing through the Decades," will highlight the University's past by delving into musical archives and celebrate the decades of the 20th century in a countdown to the new millennium. The Chrysalis Ball commemorates the tradition that encompasses the University and secures the tradition by looking to the past as a means to celebrate the future. Take this opportunity to join with the Bucknell community and dance through the decades at the Chrysalis Ball where the tradition continues!

The T.O.K.E.N.S organization has already put an immense amount of time and effort into planning this event, and they anticipate an even greater turnout than last year. If you missed it last year, be sure to mark your calendars for Saturday April 29th. Tickets are $15 and can be purchased at the Bucknell Bookstore or the Langone Center Box Office. The event is black-tie optional. For more information, contact Kathy Arnett in the Office of Campus Activities and Programs at 570-577-1217.

Bison make waves at invitational

Water Polo finishes Bucknell Invitational 3-1; B-Team emerges undefeated

Mathew Kasdan—The Bucknellian
The Bison will travel to Gannon for their first League games Sat.

By Allison Kuhn

Although the Bison women's water polo team fell to Salem-Teikyo, 12-2, they managed to defeat Penn State, 9-7, long time rival Slippery Rock, 10-6, and Maryland, 8-1, in what proved to be an exciting Bucknell Invitational. The Bison B-Team managed to come out undefeated beating Maryland, 8-5, and Slippery Rock, 10-6, while tying Salem-Teikyo, 5-5.

In a close game against Penn State, the Bison managed to stay on top despite some defensive breakdowns late in the fourth quarter.

"We held a 6-3 lead late in the third quarter only to see Penn State pull within one with 22 seconds to play," coach John Ziegler said. "A final goal by Jennifer Rupert '03 from the outside sealed the two-point victory."

Adrienne Schober '02, Brooke Rea '02 and Rupert had two goals apiece, while Julie McGlaughlin '01 and Paige Cull '01 had four and three steals respectively.

Despite Schober's five steals in the Salem-Teikyo game, the Bison were unable to come together offensively. Bucknell's two goals in the game were netted by Rea and Katy Stahler '03.

"We consistently either had the ball stolen on top or forced turnovers early in our offensive possession, which led to many breakaways goals for Salem," Zielger said.

The loss to Salem-Teikyo did little to discourage the Bison, and the Bison came out strong and were ready to play against Maryland. Last Sunday, they held Maryland to only one goal in the game in their victory.

Goalie and team co-captain Kristin D'Agostino '00 had nine saves while Rea netted three goals in the second quarter and Rupert added three goals in the fourth. Co-captain Emily McKnight '00 and Schober had five and four steals respectively.

"I was very pleased with how we rebounded on Sunday from the tough loss on Saturday night to Salem," Zeigler said. "The first game against Maryland was one where our press defense proved too much for Maryland. We held them to only one goal in the first half and zero in the last quarter."

The Bison finished off the weekend with an exciting win against Slippery Rock. "Prior to Sunday, BU women had never beaten Slippery Rock and we played an outstanding defensive game to win fairly easily, 10-6," Zeigler said. "Alternating between press, crash and drop defenses kept Slippery Rock from running an effective offense."

D'Agostino had an amazing 10 saves in the game. The exceptional offensive performance was led by Stahler, who netted three goals, and Cull, Rupert and Rea, who each had two goals. McKnight made it all possible with three steals and two assists.

"The highlight of the weekend was defeating Slippery Rock. We played as a team for four quarters and were able to walk away with a big win," D'Agostino said. "A solid defensive effort coupled with some key offensive plays made the difference in that game. We have never beaten Slippery Rock before, so that game was a big boost for us so early in the season."

The B-Team's domination was due to a great deal of teamwork and cooperation. Dana Clarke '02, DeAnn Long '02, Meredith Stevens '02 and Allison Hernandez '01 helped lead the squad to an undefeated weekend. Clarke recorded 11 goals in three games, while Lindsay Chesterfield '03 was spectacular in the net-registering 13 saves in the game against Slippery Rock B.

The Bison next head to Erie, where they will play the first round of league games against Gannon, Indiana University of Pennsylvania and Penn State. They are looking for their experience from the past two tournaments to help them with their games this weekend.

Swimmers excell at ECAC's

By Brooke Rea

After an impressive showing at Patriots, where the Bucknell men's and women's swim teams captured third and fourth place respectively, seven Bison swimmers went on to compete at ECAC's last weekend.

Although most of the team qualified to swim at the meet, many athletes opted out due to academic commitments. ECAC's required the swimmers to leave last Wednesday and return Saturday night.

"At Patriots, we really surprised ourselves," captain Nicole Brandemarti '00 said. "ECAC's just weren't as big a deal as Patriots, and the people who went basically did it for themselves."

During a weekend of tough competition, the Bison fared well both as collectively and individually. Although only five women and two men chose to swim at ECAC's, the men placed 24th out of 36 teams and the women 15th out of 29. Brandemarti and co-captain Kelly Wilson '00 provided senior leadership for the squad, along with juniors Jeff Sharpe and Molly Lowe, sophomore Abby Weaver, and freshmen Becky Dolan and Kurt McCoy.

Even more impressive than the team finishes were the Bison's individual performances witnessed at ECAC's, as well as notable finishes (all—around) on the women's side. Dolan, Weaver, Wilson, and Brandemarti proved to be a formidable force when teamed up for the relays. They captured a seventh place finish in the 200 freestyle relay with a remarkable time of 1:40.99, 12th place in the 400 freestyle relay and ninth place in the 800 freestyle relay.

While Lowe was not on the relays with the freestyle swimmers, she took care of the fly events. Her final time of 2:06.86 earned Bucknell a fourth place finish in the 200 fly, with Brandemarti not far behind with her 10th place finish only .35 seconds later. Lowe also nabbed 14th place in the 100 breaststroke with a time of 1:08.76.

Sharpe and McCoy were the lone male swimmers for the Bison, but showed everyone at ECAC's how far they have come this season. Sharpe, another freestyler for the Orange and Blue, finished 15th in the 50 freestyle with a time of 21.73. McCoy took 9th place in the 1650 freestyle, clocking a time of 16:36.72, his fastest time of the season by 17 seconds. He also had a personal best time in the 500 freestyle, which earned him 14th place.

McCoy's first experience at ECAC's was a memorable one. "It was a blast," he said. "I didn't go to Patriots, but I still wanted to improve my times and ECAC's was my opportunity to do that. I ended up getting best times for all of my events."

Wilson had similar sentiments after the last meet of her college career. "At the end of every season you think that it can't get any better than this, but every year it does," she said. "This season was such a great way to finish off my time at Bucknell, and I am really happy with how I—and the team as a whole—ended the season."

Mudsharks' hard work pays dividends

Finish 3-1 in first spring tournament after rigorous off-season training routine

By Adam Feldman

"We feel the pain now, they feel it later!"

Elite athletes inspired by this extensively train during the off season. All athletes train during the regular season. However, the superstars are able to separate themselves with their year round work ethic. There is no off-season for these men and now there is no off-season for the MudSharks, Bucknell's men's ultimate frisbee team.

After a rebuilding semester last fall, the MudSharks have entered the spring season with new confidence. This confidence stems directly from the intense workouts the team has been holding in the Fieldhouse everyday.

This year's captains, Matt Fisher '00 and Adam Feldman '01, have asked a lot from their young team this semester. They have asked them to be the best, and the two captains are confident that the team will be able answer this demanding request.

This confidence has obviously permeated the entire team. Practices, though intense, are upbeat and enjoyable. "Though some mornings I have trouble getting out of bed,I see my game improving daily," Brian Lowe '03 said. This past weekend was the first time where the MudSharks could measure their success and verify their optimistic views. The team played in a one-day tournament in Philadelphia with some of the best teams in the area.

The 'Sharks first game, against Swarthmore, acted as an excellent gauge to measure their new abilities and confidence. In the final weekend of the fall season, the 'Sharks lost to Swarthmore 11-8 and now was the time for revenge. The off-season training along with the returning of Bruce O'Brien '00 and Tim Scheu '01 from the jungles of Africa helped propel the 'Sharks to an early lead and an eventual 11-8 victory. The 'Sharks had passed the first test.

The second game matched the 'Sharks against the B—team from Brown University. Brown's A—team is consistently one of the best teams in the country and the 'Sharks expected an intense battle. The B—squad ran an offense very similar to their A team's offense; however, they did not have the talent to run it precisely and this led to their downfall. The 'Sharks cruised to an 11-7 victory.

The next game answered many dreams of the 'Sharks veteran players, or perhaps their nightmares. Many of the veteran 'Sharks lose sleep pondering about the missed opportunities against their arch-rival, Princeton. "Have we ever beat Princeton?" Fisher ironically asked. The answer is no, at least not in the past five years.

Courtesy of Matt Ferenc
Captains Matt Fisher '00 and Adam Feldman '01 and the Mudsharks start started off their season in style last weekend in Philadelphia.

The 'Sharks were heavy underdogs matched up against the extremely talented Princeton squad but came out hungry for the victory. Princeton, who cruised through their first two games, did not expect a seesaw, nail—biting experience. The 'Sharks took the early lead at 2-1, but Princeton eventually took the half 6-4 on the 'Sharks miscues.

However, the second half was a different story. The 'Sharks, who played a little tentative in the first half, came out with a new confidence and desire to upset the talented Princeton squad. The 'Sharks fought to an 8-8 tie and had an opportunity to take the lead. But, their youth finally showed through. At 8-8 and down 9-8, the 'Sharks twice turned the disc over close to the Princeton goaline. These mistakes cost the 'Sharks the momentum as well as the game, as they eventually lost, 11-8.

By the time the fourth game against Penn State had started, the word had traveled that the 'Sharks had given Princeton an intense battle. All the teams now knew that Bucknell was not a team to take lightly. Penn State proved a worthy adversary but the 'Sharks prevailed 11-8 to finish the day at a successful 3-1 and open their spring

Ice Hockey wins title

By Trip Sanders

The Bucknell ice hockey team won three times last weekend to finish off an undefeated season and bring home the Mason-Dixon League crown.

The marvelous playoff run began on Friday night when the Bison took on an upset-minded Penn State Delaware County team.

Bucknell, seeded second overall in the tournament, took on the seventh ranked Nittany Lions at the Sunbury Ice Arena before the largest crowd ever in Bucknell hockey history.

With the rowdy fans behind them, the Bison started off strong after a half-hour delay due to the late arriving Nittany Lions. The game began with Bucknell dictating play to the agreement of the crowd with jarring checks and crisp passing.

The hard play was rewarded with goals by Eric Silvestri '03 and Jeff Werring '00 in the first period. The second began with the Bison adding to their lead with goals from freshman Jay Sulvinski and seniors Alex Dixon and Rocco Russo. The score became 6-0 by the end of the second and frustration on the Penn State bench became evident.

The final period featured more rugged play by both teams while the Bison continued their offensive performance —netting five more goals before the end of the game and allowing only two by Penn State. It became an exclamation point for the Bison, closing out the last home game of the year.

The game was well out of reach before it turned ugly. Each team racked up penalty minutes for fighting and the referees stopped play with under a minute remaining. Bucknell skated off the ice to loud cheering from the crowd.

Jared Silliker—The Bucknellian
Jeff Werring '00 led the Bison to the Mason-Dixon League crown.

With this first win under its belt the team traveled to Baltimore, Md. to play a semifinal match against the third placed team, Loyola. The game was hosted about 10 minutes from Loyola College, so the crowd was largely in its favor. The game started with each team trying to feel the other out. The result was a close checking, poorly refereed first period that ended with no score.

The second began with Bucknell showing much more intensity, reflected by the two goals the Bison scored. The first was netted by Nate Ledyard '02 when he tipped a slapshot by David Streets '01. The 1-0 lead increased to 2-0 when Chris Newhouse '01 fired a slapshot past the Loyola goalie from the blueline. Bucknell continued its tight defensive play preventing any further scoring in the second period. After coming out of the locker room for the third period, the Loyola team picked up its intensity and tied the score with two goals within one minute. Despite the goals, goaltender Paul Van Dillen '01 played excellently between the pipes for the Bison, preserving the regulation tie and sending the game into overtime.

With the momentum heavily in Loyola's favor, Bucknell was forced to dig deep within itself and find a way to win—and within the final 40 seconds did so on Ledyard's second goal. Ecstatic— the rest of the team hurdled the bench and piled on top of Ledyard after his goal. The Bison regained their composure to begin focusing on their final opponent: Navy.

Bucknell had not played the Midshipmen since last season, when they swept both games, but this was a new team, a better one. The matchup was dead even—Bucknell had more skill but less conditioning and organization.

The game began much the same way that the Loyola game started—cautiously.

Bucknell and Navy spent most of the first period evaluating the other and played a strong fore-checking, dump—and—chase style. The result ended with few scoring opportunities and zeroes on the scoreboard.

In the second period Bucknell found its stride, capitalizing on a blistering slapshot goal by Streets. Bucknell seemed energized by this goal and its play picked up, resulting in another goal by Werring.

After this goal, the Bison seemed to change their style. Shifting to a more defensive strategy, Bucknell ended the second period with a 2-0 lead. With only 15 minutes left, the Bison felt they had the midshipmen on the ropes, headed for their first title in five years.

But this overconfidence allowed Navy back in the game. The Midshipmen reeled off two goals within a two-minute span, bringing the Bison out of euphoria. The game remained that way until about four minutes to go. On a semi-breakaway for Trip Sanders '00, the Mids' goalie attempted to get to the puck first, but failed, resulting in an empty-net goal for the Bison and a 3-2 lead.

With the momentum back in Bucknell's favor, the game seemed all but over. The seconds ticked away slowly, each seeming like an eternity. Unfortunately with about two minutes left in regulation, Navy again knotted the score. The pendulum swung back in Navy's direction with the third period ended in a 3-3 tie.

Just as the night before, the Bison had to go to overtime—this time with the Mason-Dixon title on the line. After a moving pep talk by captains Russo and Werring, the Bison realized their season was one shot away from being over. Overtime began with each team trying not to make a mistake and trying not to give up a good scoring opportunity. Each team succeeding in doing that for four minutes. Down to its last shift, Bucknell put its second line on the ice, composed of Alex Dixon '00, Newhouse and Sulvinski.

With a characteristic full ice rush, the Bison connected five passes to gain the Navy blueline. Setting up in the zone, the three teammates worked it around and made one last push to the net with a pass to Newhouse, finding a wide open Sulvinski at the crease, who netted the game winner with under 20 seconds remaining in overtime.

The amazing part of this story is Bucknell beat every team it faced this year with no official coach, no trainer, little funding from the University and few friends in the league it plays. This championship makes up for the team's past three seasons of playoff headaches.

The credit goes to all the players who contributed to the team's success—especially to the seniors for their leadership, the goalies for their consistency, and the defense for its solid play. This team should go down as one of the best teams in league history. Congratulations on an undefeated season and a league championship—the Bucknell ice hockey team earned it.

Getting to know Bucknell's new AD... John Hardt

New Athletic Director brings a hands-on approach and a staunch commitment to the University's student-athlete ideal

By Carmen Mauriello

John Hardt was named Bucknell's director of athletics and recreation on Jan. 6, replacing 11-year Athletics Director Rick Hartzell and Interim Director Brad Tufts. Hardt, a 1982 honors graduate and law school graduate of the University of Iowa, has worked in administrative positions for the athletic departments of Iowa, Syracuse and Michigan State. He had been at Michigan State since1996 as associate director of athletics for administration and compliance services.

Paige Cull—The Bucknellian

John Hardt brings extensive experience to BU from his positions at Iowa, Syracuse and Michigan State.

Hardt took a few minutes out of his hectic schedule to express his goals, strategies and values for the Bucknell athletics program in this *Bucknellian* interview.

Carmen Mauriello (CM): How have your first two weeks been at Bucknell? What's been first on your agenda?

John Hardt (JH): Well it's really been a whirlwind, as you might expect. My top priority was getting out and introducing myself to people — particularly up on campus: the University leadership, faculty and staff members as well as getting to know the athletics department staff and coaches.

CM: What short and long term goals have you set for the program and what time commitment do you think will be required to achieve them?

JH: It's a little bit early to put a timeline on my goals, but coming into this position, I want to build on the strengths that Bucknell is known for as far as its athletics program. And that's the tremendous graduation rates for student-athletes, where annually we lead the nation. We also have a great history of developing academic All-Americans. It's an exciting time to be involved with the athletics program here at Bucknell because of progress with the new athletics complex that has been part of the Capital Campaign — that's going from the fundraising concepts phase to the actual planning, design and implementation phase. That's a part of the immediate planning process. Another important element is going to be incorporating the University's gender-equity plan and achieving those goals that are outlined. In addition there's some competitive goals, where ultimately I'd like to see all of our programs at the place where all our programs are right now—that's competing annually for the Patriot League Championships and other conference championships and qualifying for the NCAA postseason.

CM: What differences do see between athletics at a large, public school, like Michigan State, and at small, private school, like Bucknell? How do you anticipate your role to change?

JH: There are really some significant contrasts. The first thing that strikes you is the size of the school and the athletics program. Whereas Bucknell is a relatively large athletics program with 28 varsity sports, we accomplish managing that with a relatively small staff. Michigan State, first of all, has 43,000 students but its athletics program is comparable in size with 25 sports programs. The real difference is what we refer to at Michigan State as "revenue-producing programs": football, basketball and ice hockey. There's a certain professionalization that has occurred at that level of competition that really does not exist here. And that is, in the student-athlete equation, there's a much heavier emphasis on the athletic part of that equation than on the student equation. But here, it's clear in every facet of our program that academics takes priority.

CM: At MSU, the athletics department was able to offer athletic scholarships to lure potential recruits. How do you expect the recruiting process to be different here at Bucknell?

JH: I think the recruiting process is similar no matter where you are in Division 1. You have certain strengths and you have certain weaknesses, and I think your challenge as a coach or as an athletics administrator is to present your program in such a way that it appeals to the best set of prospective student-athletes. The Big Ten and Big East schools have had a long tradition of awarding scholarships to athletes based on merit and performance. The history and culture at Bucknell and the Patriot League schools is significantly different. An ongoing issue and dialogue in the league concerns our financial aid policies; we're certainly going to continue to monitor those conversations. I think it's going to be my responsibility as athletics director to make certain that we're having a dialogue on this campus as well about what the future holds and the potential for awarding athletically-related aid.

CM: Do you think offering athletic scholarships would contradict the academics-first ideal that Bucknell advances and might undermine its status as one of the nation's premier academic-athletic institutions?

JH: I do not think that the awarding of athletically-based scholarships is inconsistent with maintaining the high standards we have academically. It will help assist having more quality candidates to select rather than have the contrary effect. I think there are some programs out there that have been able to balance their academic priority merit-based athletic scholarships—you look at programs like Duke, Vanderbilt and Stanford.

CM: Being a member of Iowa's Rose Bowl football team in 1982, athletics have obviously played a major role in your life. What do you see the role of athletics to be in the life of a student-athlete?

JH: I think athletics play an important-role in the learning process for student-athletes and their development as decision-makers. Personally, I think I benefited from my involvement in varsity athletes at the University of Iowa in developing everything from working effectively in teams to discipline and organization and the old-fashioned ideal of hard work. I think athletes at Bucknell have the same benefits from their experiences here.

CM: You inherit an athletics program at Bucknell that has been a perennial power in the Patriot League, but its image has been tarnished by the sanctions placed on it by the NCAA this fall. How do you hope to repair its image? What effects do you see the sanctions having on the athletics program in the coming years?

JH: I look at the infractions situation as unfortunate, but as an opportunity for us to build on and learn from. We've implemented a comprehensive compliance program to assist all of our coaches and all of our student-athletes in their efforts to operate and be involved in our varsity programs. In some respects it was unfortunate, but again presented us an opportunity to really evaluate whether we were providing the kind of support services and the types of programming necessary to support a Division I athletics program.

CM: What other facets of Bucknell's athletic programs do you seek to improve?

JH: I'm in the process now of meeting individually with each of our coaches and all of our administrators to determine what are our strengths, what our are weaknesses, what our are needs and what are our wants for our programs. When I've finished these meetings, I'm going to assess these inputs and begin to get a handle on where we need to go as far as what our issues are that we need to address immediately and what are some of our longer—term issues that need to be addressed.

CM: How do you like Bucknell so far?

JH: It's been wonderful. It's been everything I thought it would be, and I really had high expectations. The coaches, the staff, the athletics department and the people up on the hill have been very supportive and very welcoming. It's been just a fantastic two weeks—again, a bit of a whirlwind—but everyone's very cooperative and I'm excited to be here and looking forward to my years ahead leading our athletics program and building on the strength that's already in place so we can achieve more success in the future.

Derek Jeter and the Yanks look to win their third straight MLB title.

Baseball's back!!

Spring training opens for 1200 MLB'ers

By Sean Houston

Last week marked the final wave of arrivals of major league ballplayers to their spring training sites in Florida and Arizona. Over 1200 regulars, reserves, rookies and near-retirees will be vying for only 750 Opening Day roster spots. Many players like Red Sox ace Pedro Martinez are already assured of a spot on the roster and will be concentrating on brushing up on familiar skills and maybe experimenting with new things. Others like Ken Griffey Jr. will be busy adjusting to new surroundings and teammates after an extraordinarily busy offseason. The invitations of still others—such as country music singer Garth Brooks by the Mets—only leave me scratching my head.

The heated positional battles traditionally associated with this time of the year will not be absent. At least one such question surrounds every team. With the recent suspension of their projected starting DH Darryl Strawberry for drug abuse reasons, not even the two-time defending World Champion New York Yankees are immune from nervousness and uncertainty. Other hot topics over the winter have included: what are the Angels going to do with their extra outfielder(s); can the Cubs victory total once again exceed Sammy Sosa's homeruns; will the Mets overtake the Braves in the NL East; and will Ken Griffey Jr.'s substantially below-market value contract set a beneficial precedent for small and mid-market teams?

The answer to the first question doesn't really hold as much fascination for me as it seems to for the national press. The Angels are going to stay in the AL West cellar for all of the foreseeable future and their outfielders are overrated to begin with. At any rate their management will never trade their "extra" outfielder (presumably Jim Edmonds or Garret Anderson) because of the teams horrible history of injuries.

The second question is intriguing. Two years ago when the Cubs inked Sosa to a four year-$44 million contract they were derided for lavishly overspending on an underachieving and expendable outfielder. It was believed that the only record he could ever challenge would be the single season strikeout record. Two years have made a world of difference and rumors are now floating about a $20 million-per year extension for Sosa.

The Cubs as a team however are going to remain the "loveable losers" of the NL Central ... as compared to the "unlovable" Milwaukee Brewers. Their offense sports four black holes at shortstop, catcher, third base and centerfield. Their pitching will be better than last year with the addition of Ismael Valdes from the Dodgers and the return of the injured Kevin Tapani and Kerry Wood, but the team ERA will still be on the wrong side of 5.00.

I apologize to all the Mets fans out there but this team will be hardpressed just to repeat as the National League wild card. John Rocker's suspension has just been virtually lifted, and the Braves will also be getting back all-stars Javy Lopez, Andres Gallaraga, and Kerry Lightenberg. The addition of Mike Hampton to the Mets helps but does not clearly outweigh the losses of John Olerud and Roger Cedeno. Todd Zeile and Derek Bell will be among the least productive players at their respective positions—the entire Mets outfield is suspect. Furthermore, there is no guarantee that the Mets defense will ever allow only 20 unearned runs in a season ever again.

As for player salaries, I think that the Griffey contract is a one-time thing. Top players (and their agents) are already racing to assert that this was an abberation and that Shawn Green's $14 million a year contract will be viewed as only a floor for top positional player negotiations. Many believe that even the glut of potential free agents circulating at the conclusion of this season will not serve to lower salary demands, thus dashing the hopes of "small" and "mid-market" teams. One thing that should be kept in mind is that the owners of so called "mid-size" markets are actually turning handsome profits and could afford to spend as much as the other teams. Two examples of this are the Twins (owned by billionaire Carl Poland) and the Padres (owned by the founder of McDonalds).

But everything else aside, I would like to take this opportunity to make some fearless and shameless predictions about the end of year standings of the upcoming season.

NL West	AL West
1. Giants	1. Athletics
2. Diamondbacks	2. Mariners
3. Dodgers	3. Rangers
4. Rockies	4. Angels
5. Padres	
NL Central	**AL Central**
1. Astros	1. Indians
2. Reds	2. Whitesox
3. Pirates	3. Royals
4. Cardinals	4. Tigers
5. Cubs	5. Twins
6. Brewers	
NL East	**AL East**
1. Braves	1. RedSox
2. Phillies	2. Yankees
3. Mets	3. Blue Jays
4. Expos	4. Devil Rays
5. Marlins	5. Orioles

Cinderellas always crash the Big Dance

By Rob Schmicker

Every year the NCAA Tournament shows basketball fans one thing—that nothing is ever guaranteed.

A highly-ranked program can see its national title hopes suddenly shattered by a Cinderella team that seemingly has no right even keeping the game close. But that is the beauty of the Big Dance. You can never count out the underdogs.

In the past few years we've seen Weber St., Coppin St. and Detroit upset powerful programs like North Carolina, South Carolina and UCLA, respectively. On any other given day, these seemingly unknown teams would have no chance against the big boys. But all you need is forty minutes of uninspired play and you can put your name on the list of programs that have been upset by the little guy. Granted, not everyone has a chance to be Cinderella (no 16 seeds and only two 15 seeds have ever won) but there will always be at least one Cinderella that will dance late into the night.

Two years ago, little known Valparaiso University completed their first round upset of Mississippi on a Bryce Drew 3-pointer at the buzzer. It then became the darling of the tournament with its second round win over Florida State, before falling short against Rhode Island in the sweet 16. Its magical week put the virtually unheard of Mid-Continent Conference team on the college basketball map.

Then last year Gonzaga University, led by junior point guard Matt Santangelo, danced even further into the night. The tenth-seeded Bulldogs defeated seven-seed Minnesota, two-seed Stanford and six-seed Florida to become the first West Coast Conference team to make it to the Elite Eight. In doing this, they gained Cinderella immortality.

Why such a big fuss about Gonzaga and Valparaiso?

It's easy. Players on these smaller teams put all the hours of work and dedication into their team because they love to play. A very small percentage will ever get recruited to play in the pros, so they enjoy their time on the court and give everything they have. It's either win your conference tournament or stay home. Those that are fortunate enough to make it into the field of 64 have nothing to lose and give everything in search of their dream.

So who will it be this year? It could be Montana, Radford or Alabama A&M. Or it could be Murray St. or Butler. It could even be someone from the Patriot League. You never know for sure. The underdogs will make or break most people's tournament picks, so choose wisely.

Courtesy of AP

I like Kent, Indiana State and Penn to surprise some people. Other than that, look for a 12-seed to win (it has happened for 11 of the last 15 years) and continue into the second round.

But even if there are no major upsets, sit back, relax and watch the greatest sporting event of the year. Oh, and root for the little guys.

Jagr's injury poses problems for Pens

By Kevin Logan

It's no secret that Jaromir Jagr plays an instrumental role on the Pittsburgh Penguins. But it has become all too apparent over the last week just how instrumental that role is. Since Jagr, the leading scorer in the NHL, injured his left thigh last Monday, the Pens have not come up with a win. Their tie to Ottawa Monday night stretched their winless streak to five games—all of which were played against fellow Eastern Conference teams.

In the contest against Ottawa, the Pens struck first on a goal by Matthew Barnaby, giving them hope of breaking the slump. Barnaby snapped a wrist shot that found its way through Senators' goalie Patrick Lalime's five-hole. The 1-0 lead would only last until the second period, when Andreas Dackell tipped one by Jean-Sabastien Aubin to knot the score at one. Aubin has been starting in place of regular starter Tom Barrasso, whose father just passed away on Monday night.

Both goaltenders played solid games, particularly in the overtime period. For Pittsburgh, Aubin was forced to make a point-blank stop on Vaclav Prospal halfway into the overtime, and then later made a series of outstanding saves on Radek Bonk and Marian Hossa to save the tie for the Pens. At the other end, Lalime made a key save on a Martin Straka breakaway to preserve the tie for the Sens.

With the 1-1 draw, seventh-place Pittsburgh was not able to gain any ground on the Senators, who are in sixth with a six-point advantage. The Penguins are also in danger of being overtaken by the New York Rangers, whom they lost to last Tuesday. The Rangers trail by only two points.

New Jersey ends losing streak

During the midst of the Pens slump, the first-place Devils suffered a loss at the hands of the struggling Montreal Canadiens. It was New Jersey's fourth straight defeat, showing signs of a post All-Star break slump and giving teams such as Philadelphia a chance to do some much needed catching up.

However, the Devils were given the opportunity to play the Habs again just three days later, this past Sunday, and this time they came out on top. Not only did they win, but they did it with flare, shutting the Habs out 3-0 and using three different players to score the goals.

New Jersey scored on second period goals by Petr Sykora and the re-acquired Claude Lemieux, who was brought back to New Jersey from Colorado earlier this year. The goals were the 19th for both players. Bobby Holik then netted his 20th in the third to seal the victory. Rookie standout Scott Gomez recorded two more assists, adding to his already league-leading scoring for rookies. Martin Brodeur stopped all 30 shots faced for the shutout, while Jeff Hackett made 45 saves on the evening.

The victory ended the Devils' longest losing streak since November of 1995, and it pulled the Devils back to an eight-point lead over the Flyers in the Eastern Conference.

Player of the week:

—New Jersey's Martin Brodeur: Brodeur recorded his 40th career NHL shutout Sunday night against the Montreal Canadiens to help pull New Jersey out of its slump.

Notes from around the league:

—Too old: Rumors surrounding a possible trade between the Devils and Canucks proved to be false Tuesday. New Jersey owner John McMullen denied talk of the Devils acquiring veteran Mark Messier for Denis Pederson, Brendan Morrison and a draft pick, claiming Messier to be too old and too expensive.

—Our prayers are with him: Flyers head coach Roger Nielson, diagnosed with bone marrow cancer in December, will undergo a stem cell transplant Monday to cure him of the cancer. He is not expected to return to the Flyers bench until at least mid-April.

NBA Experts' Picks

By Justin McCarthy and Ali Ahmed

Indiana at LA Lakers

The best in the East visiting the best in the West. This game could certainly be a precursor to the matchup we see in the NBA Finals. The Pacers defeated the Lakers earlier this year by getting superbly better contributions from their bench. The matchup to watch in this game will not be in the middle between Shaq and Smits, but rather up top between Bryant and Miller. Miller is by far a much better shooter; however, Bryant is a slasher and should be able to drive to the basket for easy buckets—especially with the attention that O' Neal's presence demands.

Justin's Pick: Lakers by four

Even though Indiana has the best record in the conference it still has a hard time earning respect. This game is the Pacers' chance to prove their doubters-including me-wrong. For the Pacers to have any chance, they need either Jalen Rose or Rik Smits to have monster games supporting Reggie Miller. Also, it will be interesting to see how they decide to play the Kobe and Shaq tandem. I think the Lakers will have too much—especially defensively—for the Pacers to handle.

Ali's Pick: Lakers by 15.

Utah at New York

This is a matchup of two veteran teams who have experience at virtually every position. The Jazz defeated the Knicks in an early season meeting before the Knicks got all their pieces together and starting actually playing as a team. Now with Ewing's impact in the middle, Malone will not have nearly as good a game as he did in their first matchup, in which he tallied 33 points and 11 boards. Also with Houston's play currently surging, the Knicks will show the Jazz why they were the Eastern Conference Champions last season.

Justin's Pick: Knicks by nine

New York has too much talent and not enough to show for it in the win column. Despite their injuries, the Knicks should be playing better and more consistently then they are. I think that part of their problems arise form having players that don't really fit the mould for the positions they play, such as Sprewell playing the three and LJ playing the four or three. A team like Utah, however, will probably have a hard time stopping whoever the Knicks use in the two spot. Ewing should have a good game against Greg Ostertag.

Ali's Pick: Knicks by eight

Seattle at Minnesota

The Sonics already defeated the Timberwolves once this season for two reasons: one, they held Garnett to a relatively modest 22 points, and two, Payton had a huge game with 36 points and 10 assists. If the T-Wolves want to win this conference matchup they will need to reverse those two flows. Getting a big game from Garnett should not be a problem, however containing the "Glove" should be. Expect Payton to have another big game, but this time Garnett will answer to the challenge of leading the T-Wolves, getting some help from the improving Szczerbiak.

Justin's Pick: T-Wolves by five

Gary Payton is probably hating the management even more with every single game that passes. His Supersonics got Horace Grant and Barry while the Blazers got Scottie Pippen, Steve Smith and Detlef Schremph. Payton will once again be expected to carry the load for the Sonics and should help to slow down offensive threat Terrell Brandon. However, in the frontcourt, the Sonics will be no match for Garnett, Wally and Smith. The Sonics best move is to run the offense through Payton where Brandon will have no chance to stop him and the Wolves will have to double team.

Ali's Pick: T-Wolves by five

Miami at Phoenix

It has been repeated time and time again this season: who has a backcourt that can challenge the Suns' duo of Anfernee Hardaway and Jason Kidd? The answer: no one. Although the Heat can surely rival Phoenix at the one spot, the outcome of this game will come down to the matchup between Kidd and Tim Hardaway. If T. Hardaway can stop and contain Kidd on the perimeter and slow down Phoenix's offensive attack, Miami will be able to stay in this game. However, still expect Robinson, A. Hardaway and Gugliotta to have a presence.

Justin's Pick: Suns by 11

Now that Phoenix has its whole roster back together, how far it goes will depend a lot on how tough its frontcourt can play against the frontline players of Sacramento, Minnesota, LA, Utah and especially against San Antonio and Portland. Also, if Anfernee Hardaway can return to anything close to his old form from Orlando, the Suns should be money the second half of the year. Out of all the teams thinking they could contend this year Miami really needed to make a deal before the deadline. Can Tim Hardaway really carry the Heat into the playoffs? Think again.

Ali's Pick: Suns by 23

Toronto at Portland

Portland is coming off a disappointing loss to the LA Lakers, and they will surely be looking for victims to take out their frustration on. Are the Raptors that team? Earlier in the season, the Blazers defeated the Raptors by completely shutting down Carter and holding him to a dismal 13 points on 33% shooting. If the Raptors have any hope of staying close in this game, they will need contributions from their entire team, from veterans Oakley and Christie to young players Carter and McGrady. Expect Smith and Stoudamire to have big games with Wallace and Pippen making key contributions for Portland. Unless Carter can score 50+ points again, Portland should run away with this game.

Justin's Pick: Blazers by 17

This might be one of the most exciting games this year on national television. Carter, McGrady, Davis and Oakley going against Smith, Pippen, Wallace and Sabonis should be some of the most exciting and hardest fought matchups this year. The Blazers will probably need the toughness of Brian Grant to match up against Oakley and Davis. The game might be decided by the matchup at the point. Also, how well can Carter play against one of the best defensive players ever: Scottie Pippen?

Ali's Pick: Blazers by seven

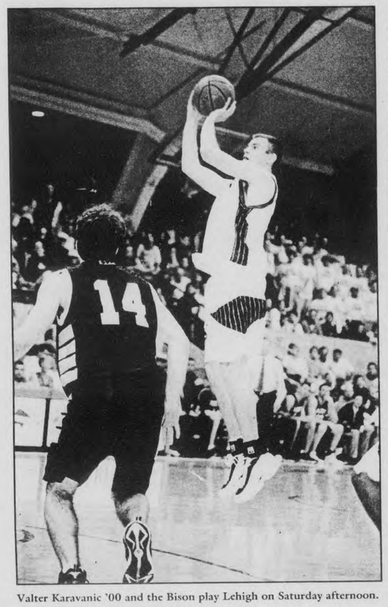
Patriot League

Third-seeded Bison a threat at Patriots

Despite 0-4 record against League's best, Bison optimistic about chances at '00 Patriot League Tournament



Valter Karavanic '00 and the Bison play Lehigh on Saturday afternoon.

By Chris Ellis

Sleeper? Darkhorse? Also-ran? Favorite?

After three months of basketball and 12 regular-season contests, the Patriot League has sorted itself out. The best have risen to the top, the weakest have sunk to the bottom. For six of the League's seven teams, their role in this weekend's Patriot League tournament is clearly defined.

And between them all sits Bucknell.

At the top are Lafayette and Navy, two teams who have already reached the 20-win mark, breezed through their league schedules with relatively few roadbumps, and have fared well against major-college non-league competition.

At the bottom are Colgate, Holy Cross, Lehigh and Army, four teams with sub-.500 records, none of which recorded more than four Patriot League victories.

And seeded third is Bucknell. The Bison played well out-of-conference, struggled against the league's top teams, dominated its weaker ones and sit poised as possibly the league's most dangerous team as tournament play begins.

"It doesn't get any better than this time of year," head coach Pat Flannery said. "Knowing that you have the team and the ability to go to a tournament and be able to win. I feel great about what this team has done and what are chances are. I'm really looking forward to it (the tournament)."

Ordinarily, Bucknell's 17-10 overall record and 8-4 conference mark against a relatively strong schedule would be good for a small-college team. But this season, Bucknell's record was trumped by Lafayette's 21-6 mark and Navy's 22-5 record. Both teams also finished 11-1 in Patriot League play, defeating all comers and splitting their head-to-head contests. Those two teams, with two of the highest RPI ratings in Patriot League history, are the teams to beat in what may be the Patriot League's strongest season.

Lafayette, by virtue of its higher RPI rating (Lafayette's was 129 to Navy's 132) earned the #1 seed for the League tournament it will host this weekend, but declined the first-round bye in the seven-team field for an opportunity to automatically host the League Championship game if it should reach the final. Lafayette's decision means that if Bucknell can get by sixth—seeded Lehigh, a team that it has handled in both its regular season meetings, the Bison will play the archival Leopards in the tournament's second round.

"We know what we get an opportunity to do if we get past Lehigh," Flannery said. "But we have to get by them first. We respect Lehigh a great deal and know what we have to do to advance in this tournament."

To win the Patriot League Championship, the Bison will not only have to win at least one more game against a team from the League's second division, but reverse a trend that saw them consistently lose to the league's top teams. During the regular sea-son, the Bison earned victories in the games that they needed to win—Bucknell won all of its contests against Army, Holy Cross, Lehigh and Colgate-but went a combined 0-4 in their four games against Navy and Lafayette.

Saturday's regular season-finale, a 74-59 loss to Lafayette at home in which the Bison were handled almost from the outset, was arguably the most disheartening of those defeats. But to Flannery, the difference in talent between the league's two elite teams and the third-seeded Bison is by no means gaping.

"We just had a bad game on Sunday. We could spend hours talking about it, but we simply didn't play well," Flannery said of the loss to Lafayette. "The more I watch Lafayette, the more I realize that there's no doubt what we're capable of doing against them."

Although three freshmen and one sophomore see significant minutes, Bucknell is still a team whose scoring—and on—court leadership-is dominated by seniors. Dan Bowen and Valter Karavanic, Bucknell's two leading scorers who struggled in the season finale against Lafayette, will be relied upon to provide the scoring touch and defensive spark for the team. Bowen and Karavanic, along with fellow seniors Shawn Asbury, Dy Cameron and Brian Muckle, have been to two Patriot League finals in their three tournament appearances.

"I don't look at (this tournament) as being any bigger just because we're seniors," said Bowen, whose 15.3 points per game, 43 blocks and 193 rebounds this season will likely earn him an All-Patriot League selection. "If you look at this as your last game, you put too much pressure on yourself. We've played well in the past, and there's no reason to think that, come Saturday, we won't be roaring to go."

On Saturday, the Bison will have to contend with a Lehigh team that played Bucknell fairly tough for some stretches this season. In their first meeting in Bethlehem, the Bison had to hold off a late run to post a 67-57 victory, and, with Jared Hess-Lehigh's leading scorer-sidelined due to injury, the Bison posted a 73-56 win at home.

Bucknell will play in the second game of the tournament's first day, facing the Mountain Hawks at 1:30 p.m. Lafayette will play Army at 11:00 a.m. and #4 Colgate will face #5 Holy Cross at 3:30. If the Bison should win, they would play at 1:30 p.m. on Sunday. All Bucknell games will be broadcast on 100.9 FM.

Dan Bowen '00 should repeat as an All-Patriot League selection in '00.

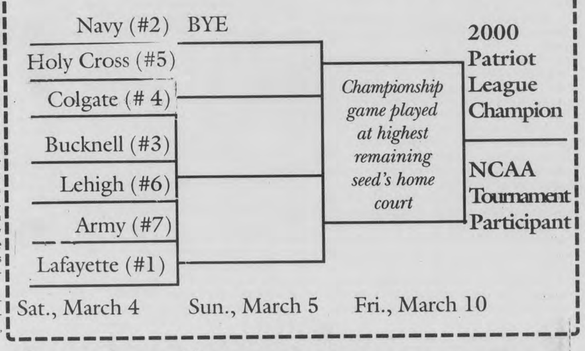
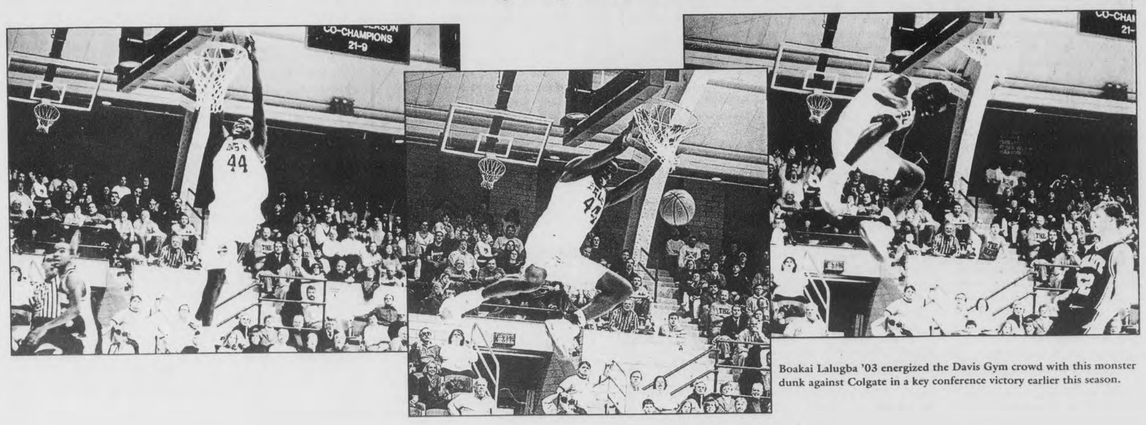
The road to the Big Dance run's through Lafayette



The anatomy of a dunk



Boakai Lalugba '03 energized the Davis Gym crowd with this monster dunk against Colgate in a key conference victory earlier this season.

Tournament Previews

Bison lose a heartbreaker to Lafayette 61-60

Despite their recent skid, the Bison like their chances of getting to the Patriot League Championships as the two-seed

By Andrew Bevan

In a game full of strange ironies, the Bucknell women's basketball team ended its regular season on a bad note this past Sunday as they saw their losing streak extend to four with a one-point loss to Lafayette. In potentially their last game at Davis Gym this year, the Bison had more assists than the Leopards, more steals and less turnovers—and still lost.

The Bison were looking to end their three-game skid and go into the postseason tournament with some momentum in Sunday's game. And they looked as if they were going to do so early, as they jumped out to a quick 5-0 lead with just over a minute gone. Four minutes later, the Bison had extended their lead to eight, 14-6.

"(Going in) I was very concerned about the start of the game," head coach Kathy Fedorjaka said. "I felt good when we came out and took the lead, 14-6. But we didn't take the game at that point. We could have put the game away early."

The Leopards responded by outscoring the Bison 19-4 over the next seven minutes to take a seven-point lead, 25-18. The Bison battled back to cut Lafayette's lead to two, 32-30, as both sides headed to the locker room.

Lafayette kept hold of the lead throughout the beginning of the second half, twice extending it to eight. With just under nine minutes to play in the game and finding themselves down by eight, the Bison went on a 10-0 run to take back the lead, 53-51, with just under six and a half minutes to play. The game remained extremely close the rest of the way with the lead exchanging hands four times.

The Bison took the lead, 61-60, with just over three minutes to go on a jumper by Jen Winhofer '00. That would be the last time Bucknell scored that afternoon as Lafayette made a lay-up with a minute and a half to play to retake the lead for good, 61-60. Freshman guard Molly Creamer missed a jumper at the buzzer that would have given Bucknell the victory.

Lori Houck '00 led all scorers with 21, including eight points in the first four minutes of the game, and Vicki Quimby '02 added 14 for the Bison, along with seven rebounds and five steals.

"Lori Houck and Vicki Quimby had solid games," Fedorjaka said. "Quimby had a stellar performance. She really carried us in the first half when Lafayette was making their big run."

Winhofer had eight points to go with seven rebounds. "Jen hit some key shots down the stretch," Fedorjaka said. Lyndsay Earhart '00 had another strong game off of the bench, scoring four points, grabbing three rebounds and dishing off two assists.

Bucknell's senior tri-captains, Houck, Winhofer and Earhart, were honored before the game. "The seniors have been solid kids in our program," Fedorjaka said.

The Bison now turn their attention to the Patriot League tournament this coming weekend at Lafayette. As the #2 seed in the tournament, the Bison will tip-off against Navy, the #7 seed, in the opening game of the tournament at 3 p.m. this Friday.

The Bison were victorious in both of their regular season games against Navy this year. They defeated the Midshipmen at home on Jan. 12th, 64-58, and sneaked out of Annapolis on Feb. 5th with a 46-43 victory. The Midshipmen have had a disappointing season - finishing at the bottom of the Patriot League - after being picked to finish second in conference in the 1999-2000 Patriot League Coaches' Poll.

However, the Midshipmen are no strangers to postseason play, having lost in last year's title game to Holy Cross. They also come into this game having won three of their last five league games. "They are the most tournament tested team besides Holy Cross in the tournament," Fedorjaka said.

The Midshipmen also feature preseason player of the year pick Erica Hayes, who averages close to 16-17 points a game. "Her inside presence is definitely a concern for us," Fedorjaka said.

"We know we are going to see 40 minutes of zone. We are going to have to shoot well from the outside and attack the zone inside by getting the ball to Quimby," Fedorjaka added.

Bucknell is in the top half of the bracket for the tournament. If it defeats Navy, Bucknell's next possible opponent is either the #3 seed, Colgate, or the #6 seed, Army. The Bison were 1-1 against the Red Raiders in the regular season with both games being extremely close and not decided till the last minute.

Bucknell was 2-0 against the Cadets this year. The Bison won by 18 the first time the two teams met this year at West Point. The second contest at Davis gym was much closer with Bucknell pulling out the seven-point victory in the end.

The Bison are excited about their chances to become the '99-00 Patriot League Champions.

"We're psyched about how the tournament panned out. We are in good shape to win this thing—we simply need to take care of ourselves and come out with high energy and motivation," Winhofer said.

"The tourney gives us, as well as everyone, a chance at redemption because we are playing with a clean slate," Kate Rounsley '02 said.

"Our goal all along has been a championship, and that hasn't changed," Monique LeBlanc '02 said.

Fedorjaka echoes the sentiments of her players. "We've got the best road to the finals. The team knows they can do it," she said.

While the Bison have been struggling of late, two facts to keep in mind are: first, Bucknell has defeated every team in the league this year, and second, the team "has done well in fresh starts," according to Fedorjaka.

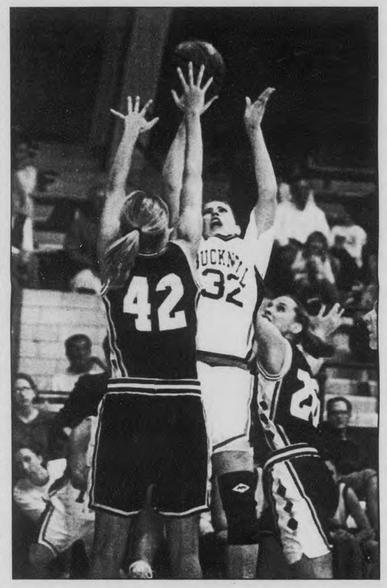
The Bison started the season 4-1 and after a very tough road trip over winter break, during which they struggled through a five-game losing streak, they went 6-0 in the first round of conference play. The Bison finished up their regular season with a 13-14 record overall (8-4 in the Patriot League).

"This has been such an up and down season for us, but the time has come for us to prove that we are the best team in the league and we will rise to the occasion," Kate Franks '03 said.

"It's a whole new season. We have good people on this team. We need to get tough and do ourselves justice," Fedorjaka added.

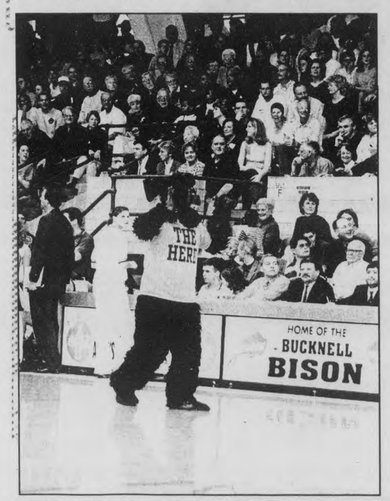
By late Saturday night the two league finalists will have been determined. The championship game will be held at the site of the higher remaining seed next Wednesday, March 8 at 7:30 p.m.

Lori Houck '00 led the Bison with 21 points against Lafayette. Houck, Jen Winhofer '00 and Lindsay Earheart '00 were honored at Senior Day, during the Lafayette game, as the team's tri-captains and only seniors.



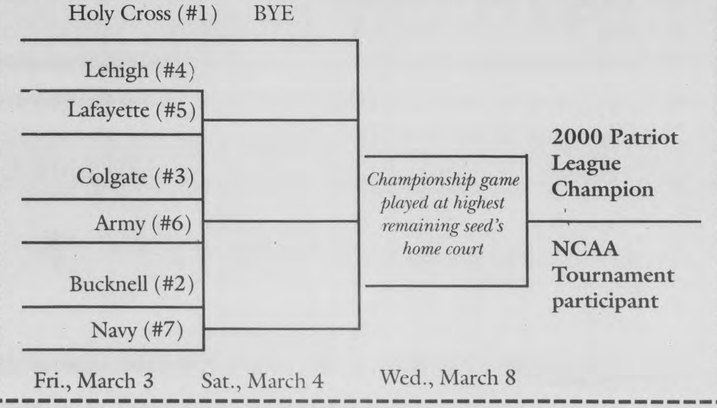
Guard Kate Franks '03 has had a major impact in her first season at BU.

All photos by Tim Choate '01 for The Bucknellian.



The Gorilla and the "Herd" must be a force at this weekend's championships among at Lafayette to give the Bison an emotional edge.

Women may have to go through Holy Cross to fulfill their quest



Sports

Your slipper, Cinderella

Commentary

Sports Editor: Carmen Mauriello

In less than 10 days, many Bucknellians will be as far from Lewisburg as they ever have been—unwinding, relaxing and trying to forget about a stressful month-and-a-half of school. But as you're flipping through the channels at your tropical paradise, you may get an unexpected flashback of 20-page research projects and two-hour midterms.

Dickie V will be running through the guest list for the Big Dance: Duke, Cincinnati, Arizona, Stanford, Bucknell...falling out of your chair, you wonder if you've that much soda to drink. But then you see Dan Bowen '00 thunder across the screen to the chant of, "he's a real PTP'er." And there's Brian Werner '03—a "diaper dandy."

Don't ask your roommate to pinch you too hard, because this fantasy could very possibly come true. Both the Bucknell men's and women's basketball teams enter this weekend's Patriot League Championships three games away from their respective NCAA tournaments.

Win all three and they're in; lose one and they're out. It's no easy task but it's cool to know that both teams theoretically have a chance to not only advance to the NCAA tournament but to be crowned national champions. Sorry—didn't mean to put too much pressure on you guys.

You may be wondering how Bucknell, tucked away in its little bubble, could be selected for the tournament. Well it happens to be that the NCAA grants 29 of the 31 Division I conferences an automatic bid to the tournament (exceptions being the Mountain West and WAC), and—lucky for us—the Patriot League is one of those 29.

There's 64 total spots in the tourney, but it'll be a cold day in hell before a team that doesn't win the Patriot League (one of the few conferences that doesn't grant athletic scholarships) receives one of the 35 at—large bids. Those spots are usually granted to teams from the larger conferences: ACC, Atlantic 10, Big East, Big 10, Big 12 and Pac-10, who can sometimes place as many as 6-8 teams in the tournament.

So that leaves the Patriot League and about sixteen other small conferences-—like the MAAC, Southern, Northeast, and Big Sky—only one hope for getting their names known. In the four, 16-team team brackets, these teams usually find themselves seeded anywhere from 12th and 16th—and thus are usually thought of as cakewalks for their highly touted foes.

But that's why they play the games. Every tournament, some little nobodies consistently pop up and do something that no one expected them to do—win. In last year's men's NCAAs, 14-seed Weber State shocked three-seed North Carolina, 76-74, and 12-seed Detroit knocked off UCLA, 56-53. But the biggest Cinderella was 10-seed Gonzaga, who advanced all the way to the Elite Eight before falling to eventual national champion Connecticut, 67-62.

On the women's side, 11-seed Southern Methodist topped six-seed Toledo, 91-76, and 11-seed St. Joseph's dropped six-seed Tulane, 83-72, in the 1999 tournament.

So there is hope for these underdogs. Last year's Bucknell men's squad was just a few baskets away from being one of them, as the Bison battled Lafayette in the Patriot League Championship game-only to fall, 67-63, after a late Leopard run. It was Bucknell's second loss in the title game in three years.

Lafayette went on to represent the Patriot League in the NCAAs, but the 15th-seeded Leopards lost to two-seed Miami, 75-54, in the first round of the East Regional.

But the Bucknell's men's program is not foreign to the NCAAs, as the '88-89 unit defeated Lafayette, 71-65, in the ECC title game to earn the Midwest Region's 15th seed in the Big Dance. The Orange and Blue traveled to Dallas, Tx. to challenge second-seed Syracuse, which boasted future NBA players Derrick Coleman, Sherman Douglas and Billy Owens. Bucknell was defeated, 104-81, but gained a great deal of respect with a valiant second-half comeback.

Just two years earlier, the Bucknell men advanced to the NCAAs for the first time in school history by downing Towson State, 86-74, in the ECC championships. There they met John Thompson's top-seeded Georgetown Hoyas, whom the Bucknell took an early 19-13 lead on but eventually fell to 75-53.

The Bison women have never advanced to the NCAA tournament, but are anxious for their shot this weekend.

Unfortunately, both squad's come into this weekend's event on very shaky ground. The men fell to Lafayette, 74-59, Sunday and have failed to defeat either the top-ranked Leopards or second-seeded Navy this season. And, as the third seed, the Bison most likely will have to best both rivals.

The women have faltered since ending the first half of their Patriot League slate in first place. They've lost their last four games-all heartbreakers—and will need to turn things around quickly as the tournament's second seed. On the positive side, the women have been the only Patriot League team to defeat top—seeded Holy Cross this season.

But that's the magic of it all. It doesn't matter how you come into the tournament; it only matters how you come out. You could have lost all your league games this season-in fact you could've lost every game you played—but if you win three consecutive games in the Patriot League tourney—you're in.

That's why everyone loves watching the small conferences' tournaments; more people watch them than many of the larger conferences' tournaments-because there's more at stake. The top teams know that they're in regardless of their tourney results; the smaller schools know that they're not in unless they win.

The top teams in these smaller conferences are at the risk of having their entire season go for not if they falter, and the bottom teams know that they can more than make up for a season of underachieving in just a few games.

So when formulating your plans for this coming weekend, give the Patriot League tourney a thought. Lafayette's only about two hours away and your Bison have a real shot of winning and advancing to the 2000 NCAA tournament.

Valter Karavanic '00 could be posting up against Cincinnati's Kenyon Martin, and Kathy Fedorjka could be battling wits against legendary Tennessee coach Pat Summit.

Imagine that.

Lax teams gearing up for spring seasons

Women look to rebound from 5-8 '99

By Chuck Vicente

With the spring time steadily approaching, head coach Barb Jordan is eager to lead her Bucknell women's lacrosse team into another exciting season.

After coming off a 5-8 record last season (1-4 in the Patriot League), the squad has much room for improvement. Coach Jordan is very optimistic about the Bison's 2000 schedule.

"We really just want to play up to our potential ... to the best of our ability," she explained. And in order perform there, the Bison absolutely must have confidence in their play.

The Patriot League can be anyone's this season. While Lafayette is a threat with a core group of seniors and Holy Cross is coming on strong, the league is extremely close top to bottom this year. The Bison's '99 record was tarnished by many close loses within the league.

Their strength will come from their defense, which is lead by goalie Annie Richards '01, Erin Curtis '00, and defensive co-captain Maura Narog '00. Narog, who brings experience and leadership to the defense, Curtis have been playing together for two years now and work extremely well together.

Richards is a talented, vocal player in the cage who is looking to keep up her impressive performance from last season, which she ended ranked sixth among NCAA D-I goalkeepers. And for the first time in her three-year career, Richards is supported by two additional keepers, Nicole Kallis '00 and Heather Hall '00.

The Orange and Blue's attack has depth yet is fairly young. The unit's experience comes from Larissa Carso '02 and Ashley Evans '01. Both had success last year and look to be scoring threats again this year. Narog described Evans as having "great skills, knowledge of the game and experience."

Also, freshman Suzanne Raffaele should do some damage on offense. According to Jordan, she has "a great shot [on goal], and if she has confidence, we look to see big things from her."

The midfield plays perhaps the most pivotal in the success of the team. With a secure defense and a young, talented attack, the midfield must create a good transition between the two. In comes the answer: five returning varsity members including Kari Evans '01, Melissa Montefusco '02, co-captian Krista Gerhard '00, Ashley Rust '00 and Paige Brewster '01.

Gerhard, a co-captian, provides experience and leadership. She looks to be a key in moving the ball to the offense.Evans should also add to a solid midfield. "One thing we look to capitalize on is the fast breaks," Evans explained.

There seems to be few weaknesses for this season's Bison squad-except for the fact that, as Jordan points out, the Bison are "not the fastest team." However, they make up for their lack of speed with a strong defense and all-around smart play. They are trying to work the ball around more on offense to set the tone for games.

Co-captains Gerhard and Narog stress the importance of team unity and leadership. "Our team is very dynamic. Everyone brings different talents and abilities to the team so we don't count on just one person to get the job done," Narog said. "This year we have an overall solid team which utilizes all of our strengths to overcome our opponents."

As its first game steadily approaches, the Bucknell women's lacrosse team is eager to face the competition. The William & Mary Tournament this weekend should give the young team a chance to display its abilities and strengths. Over spring break, they will face Ohio State on March 12 and Duquesne on March 14.

14 seniors make men league contenders

By Mike Myers

It is that time of year again. The 2000 NCAA lacrosse season has begun and the Bucknell men's lacrosse team is gearing up. This season marks the first year the Patriot League champion will be an automatic qualifier for the NCAA Division I Tournament, and the Bison are a top contender for the spot.

The Bison have 14 seniors returning this year. "We have outstanding leadership," head coach Sid Jamieson said. Adam Smith '00 will be returning at goal for the Bison while Alex Gibson '00 will lead on attack.

Other key returnees for Bucknell include Steve Burman '00 and J.C Metivier '01 on defense and face-off specialist Alex Rudis '00 at midfield, who will serve as the team's captain.

"Our goal this year is nothing short of making the NCAA Tournament," Rudis said. "We are poised to be very successful."

One of the Bison's strongest assets this year is their defense. "We are very solid in every area on defense," Jamieson said. "Our defensive unit is very strong, has good depth and has excellent skills."

"Our goal this year is nothing short of making the NCAA Tournament. We are poised to be successful." —Alex Rudis '00

In addition the Orange and Blue have an outstanding group of defensive midfielders, which are lead by Mark Juelis '01, Brad Eyre '00 and Stephen Ward '00.

The Bison also have a strong unit of midfielders with a great deal of senior leadership. The only question the Bison have yet to answer has to do with their attackers; after one game it has still not yet been determined who will be the complete unit on attack.

Bucknell is coming off of an impressive fall season in which they played in both the Fall 1999 Scrimmage Day at Yale and the Fall 1999 Scrimmage Day at Penn State. The Bison went 4-1 at Yale, beating Fairfield, Hartford, Harvard and Marist, while losing a heartbreaker against Yale that came down to the final few seconds. They turned out an excellent performance at Penn State as well, defeating Hartwick, Radford and Villanova, while coming from behind to tie the Nittany Lions.

The Bison opened their spring season last Saturday with a victory over SUNY-Stony Brook at Hofstra. The Bison will face one of their toughest opponents of the season on March 7 when they travel to seventh-ranked Maryland.

Bucknell will face six top 25 teams this season, but the Bison are looking very impressive and have a great shot at winning the Patriot League Championship.

Grapplers' "alter ego" shows up vs. Navy

Bison again crushed, 32-3, but hope to their salvage season at EIWA Tournament

By Justin White

The Bucknell wrestling team struggled last Saturday in its final regular season match of the season, losing to Navy 32-3 at Davis Gym.

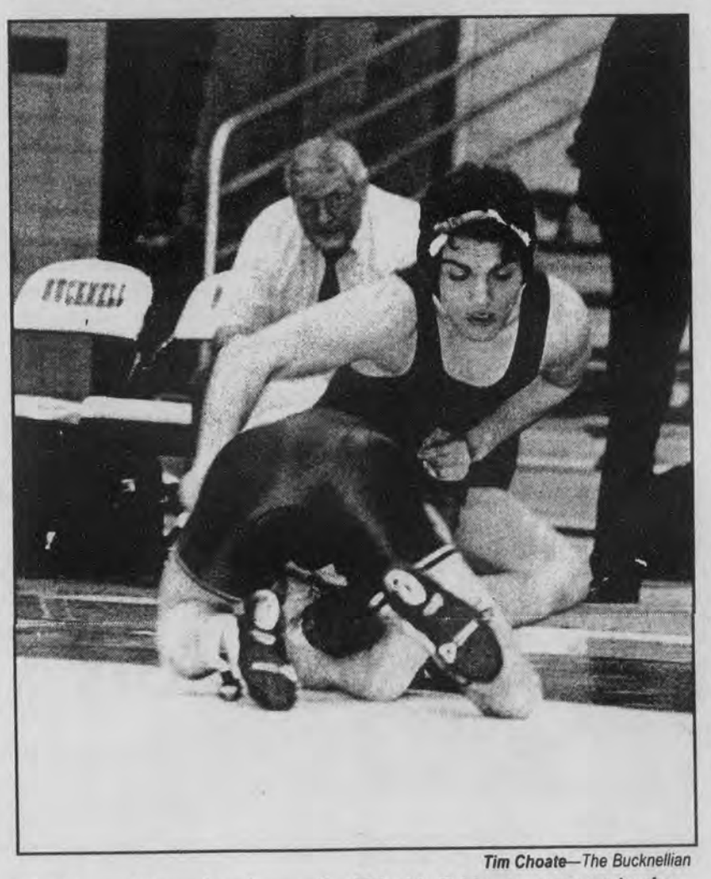
Saturday also marked Senior Day for the Bison, who will graduate four seniors at the close of this season. Rashaan Williams, co-captain this year, recorded three wins and one major decision. Mike Cerrone was a four-year member of the team; he posted a 2-2 record this year.

The Bison also will graduate two of their regular starters: Gbenga Akinnagbe and Brian Pitzer. Akinnagbe has a team-best record this season of 16-11 overall with three pins and five major decisions. For his career, Akinnagbe has tallied 24 wins and six major decisions.

Pitzer will graduate with at least the third-best overall record in Bucknell history and with the Bison career pins record (currently at 49)—all this despite an injury plagued senior season.

However, out of the four, only Akinnagbe wrestled against Navy. Bucknell's only win against the Midshipmen came at the 174-pound weight class by freshman Brock Hostetter, who picked up a 4-1 decision.

Coach Hangey was disappointed—to say the least—with his team's performance. "They (Bucknell) brought their alter ego to the match, because it wasn't the team I know," Hangey said.



Tim Choate—The Bucknellian

The Bison will travel to Annapolis, Md. this Friday to compete in the EIWA Chamionships. Akinnagbe and Pitzer are Bucknell's best prospects to be seeded at the event and advance to the NCAA tournament.

The Orange and Blue hope to improve upon their lackluster finish to the season this Friday and Saturday, when they will travel to Navy for the EIWA Championships. The Bison will dual it out with the other 14 EIWA teams.

In all likelihood, Bucknell will have only one or two wrestlers seeded in the tournament. Pitzer, a 165-pounder, will return to the mats after a torn pectoral muscle sidelined him in recent weeks.

He is well-prepared to face some stiff competition in his class. "I've wrestled them all over the course of my four years here," Pitzer said. "I know them and they know me." Pitzer's season-long goal is a top eight finish at Nationals that would earn him All-American honors.

Akinnagbe also may receive a seed in the 184-pound class for the Bison.

This meet in Navy is the biggest qualifying tournament in the country. A win in the semifinals of the tournament guarantees the respective grappler a spot in the national NCAA tournament March 16-18 in St. Louis.

Dr. Steffen H. Rogers named president

By Brian Watson

The Chairman of the Board of Trustees announced yesterday the naming of Steffen H. Rogers as the 15th president of the University. Since 1966, Rogers, 58, has been provost and vice president of academic affairs at Clemson University in South Carolina and has also served as the school's acting president for several months in 1997-1998 and in fall 1999.

Rogers will assume the presidency on July 1, succeeding William D. Adams, who will the same day take over as president at Colby College in Maine.

"I'm very excited about coming to Bucknell. It's a great opportunity and a wonderful University," Rogers said in a phone interview Wednesday night. "We would never want to lose the ambiance and traditions of Bucknell. My presidency will be one of evolution, not revolution."

University Trustee Lee Hamilton '57, the search committee chair, said, "The mantra that we adopted as a presidential search committee at the outset of our very comprehensive process was that we were seeking to find the best talent possible to be Bucknell's next president, at this point in the University's history. We are delighted that the search has resulted in the selection of Dr. Steffen Rogers, who I believe meets, and will likely exceed, our lift expectations."

Rogers has an extensive background in both teaching and administrative positions. As Clemson's provost and vice president for academic affairs, he serves as the university's chief academic officer and chair of the faculty. Rogers oversees all of the colleges, undergraduate and graduate programs, research offices, computing and information technology divisions and the library. He also worked as a professor of biology at Clemson.

> *"My presidency will be one of evolution, not revolution."*
> ***—Dr. Steffen H. Rogers***

From 1991-1996, Rogers served as dean of the College of Arts and Sciences and professor of zoology at the University of Rhode Island.

He began teaching in 1970 as an assistant professor of biology at Tulsa University, where he would go on to serve as acting dean of the College of Arts and Sciences. He also directed Tulsa's facility for the Oklahoma Center for Excellence in Molecular Biology and Biotechnology.

Rogers received a bachelor's degree in biology from Georgia Southern College in 1964, and later a doctorate in biology from Vanderbilt in 1968. He then held a postdoctoral position in pathobiology at the Johns Hopkins University School of Public Health.

Specializing in cell biology, electron microscopy and parasitology, Rogers has written or co-authored 30 journal articles and has served as a reviewer for *The Journal of Parasitology*, *The Journal of Histo- and Cytochemistry* and *The Journal of Microscopy*.

Rogers has been a part of four capital campaigns at three universities and has secured of helped to secure almost $17 million in funded proposals and grants in his previous positions.

Rogers said he is excited to work at a smaller university, which will give him the chance to work closely with the faculty and student body. "At Tulsa, I knew all the faculty by their first names and knew many of the students," Rogers said. "I lost that at URI and Clemson, so I'm looking forward to the opportunity to (reestablish these relationships) at Bucknell."

Clemson president James Barker had nothing but praise for Rogers. "The University has attracted and recruited a really talented person. I'm absolutely confident he will be a wonderful president for Bucknell," he said.

In keeping with current tradition, Rogers said that he normally goes by "Steff," a nickname he feels comfortable with, though he prefers using his official title in ceremonious occasions.

Rogers' pastime is automobiles, spending several years as a racecar driver and regional executive of the Sports Car Club of America.

Bloomsburg fire hits close to home

Impact of second fatal fire forces immediate response from campus community

Courtesy of http://voice.bloomu.edu

The TKE fraternity house was reduced to a smoldering rubble after the fatal fire.

By Peter Van Emburgh

The second fatal fire in three months to occur on a college campus struck close to home last Sunday, killing three Tau Kappa Epsilon fraternity members at Bloomsburg University, located 30 minutes away from Bucknell.

While the cause of the fire has not yet been identified, two fraternity members and one alumnus escaped the heavy smoke while the three other residents, a dog and the house perished. Among the three men killed was the president of the chapter.

The rapid early-morning blaze was a tragic repeating of a 1994 fire at the Beta Sigma Delta fraternity house at Bloomsburg that took five lives.

"This University has suffered a terrible blow," Bloomsburg President Jessica Kozloff said. "The families and friends of those who perished as well as those who have survived are in deep shock, sorrow."

After the Seton Hall fire that occurred on Jan. 19, Bucknell quickly reassessed the fire safety of the residence halls and fraternities on campus. When word of the Bloomsburg fire was reported on Sunday, Bucknell students and administrators began to take a second look at fire prevention at the University.

"You don't think something like this could happen to you once, and it's happened to us twice," said James E. Hollister, a spokesperson for Bloomsburg.

TKE fraternity members had held a "date party" involving 15 couples Saturday night, and many of the occupants were awake as late as 3:30 a.m., according to Police Chief Larry Smith. Total membership of the TKE chapter is around 18 people but only six lived in the house, Hollister reported. The three survivors reported awakening to the fire alarms and heavy smoke. Two escaped jumped from a second-story window clad only in their underwear while the third got out the front door, according to police. The neighboring homes were severely scorched and damaged but no one was injured.

In addition to canceling all classes on Monday, Kozloff ordered that all flags on the campus be lowered to half-mast. Greek houses had their letters covered with black cloth in mourning.

"As one would expect, questions are being raised about the safety of the house," Kozloff said.

The fraternity was cited for a dozen code violations during a regular inspection in October: a battery missing from a smoke detector, a missing doorknob and a discharged fire extinguisher.

Most of the violations were corrected within a month and the remaining violations were signed off by late January, according to code enforcement officer Dean Von Blohn. The town of Bloomsburg required a minimum of three smoke detectors— the TKE house exceeded that number according to Von Blohn.

"I tell you this to emphasize that the fraternity, which actually owned the property, was taking due diligence to maintain the property as required by state law and in keeping with University standards for recognition of fraternities and sororities," Kozloff said.

Bucknell administrators reacted quickly to take further precautions regarding fire safety. Dean of Greek Life Roy Baker sent an email out to each chapter informing the residents that the Department of Public Safety would be conducting evacuation drills at each house this week.

"In addition, please know that your alarm systems were checked [over Spring Break] by the Department of Physical Plant," Baker said in the email. "All alarm systems were found to be in appropriate working order."

Bucknell Student Government (BSG) President Chris Bouchoux '01 expressed his concern regarding the fire, both on a personal level and as a campus leader.

"From living in a fraternity house I know that the potential for a fire is, although remote, always present. Even though my house has a sprinkler system, I know that a fire is not an impossibility," Bouchoux said.

BSG executives immediately contacted the Bloomsburg student government president and offered their condolences and assistance to the campus community.

"After the Seton Hall fire, the BSG executives met to discuss potential fire problems on campus," Bouchoux said. "Specifically the worry was over fire alarms repeatedly going off and possible student indifference, for example, Roberts Hall."

However, Residence Hall Association President Bridget O'Mara '02 said, "RHA really hasn't given [fire safety in campus residence halls] the attention it deserves."

Bouchoux also expressed concern about the fire safety on campus and said that the issue will be addressed again in upcoming meetings, keeping the welfare of the students and University in mind.

While the shock of the tragic Seton Hall fire earlier this semester emotionally affected many members of the University campus, the reality of Bloomsburg's fraternity house fire has frightened even more.

In a news conference on Tuesday, members of the TKE fraternity told the media, "The memory of those who died in the fire would not be forgotten, and that the loss of the TKE chapter here is one that will be felt beyond this campus."

New House Party guidelines aim for increased success

By Chris Ellis

After a House Party that saw a marked increase in student violations and disruptive behavior, outgoing Dean of Students Richard Chapman challenged the leaders of Greek organizations to create a weekend that would be both a reward to students and a responsible environment. After almost two semesters of debate, those leaders have devised a plan of action that will attempt to make the 2000 House Party a success.

The results of the deliberations of the House Party review committee, chaired by IFC executive John Rietz '01, are a few minor changes in regulations regarding House Party guidelines. More importantly, though, the committee hopes to create an weekend where House Party keeps the atmosphere of previous years, but does so in a far more responsible setting.

"We are looking to provide a safe environment where Bucknell Greeks can come together and enjoy bands and DJ's while following University guidelines and rules established by the House Party committee," said IFC president Keith Hoffman '01. "This year, we have taken additional steps to curb underage drinking and alcohol abuse which have plagued House Party in years past."

Most of the House Party regulations from last year will remain the same. However, in response to the volume of infractions that occurred last year, several regulations have been either highlighted or strengthened. In particular, the University plans to pay closer attention to issues of alcohol abuse, especially consumption in inappropriate places or during regular class hours. The guidelines strictly mandate that alcohol can only be consumed during hours of registered social functions (5:00 p.m. to 2:00 a.m. on Friday and noon to 2:00 a.m. on Saturday) and must take place within designated snow fences or tape barriers.

In an effort to make all students more aware of the regulations regarding House Party, the University and Greek community have addressed all students through residence hall postings, letters to non-Greek upperclassmen and meetings with freshmen halls.

The new approach to House Party came after Chapman, in an effort to address problems during past years, wrote to past IFC and Panhellenic Council Presidents Peter Kadens '00 and Jessica Lodato '00, challenging them to either create guidelines which would help ensure a more successful House Party, or face far tighter University-created restrictions placed on the event.

"Various reports and accounts that have reached me, both formally and informally, make it difficult for me to conclude anything but that the Spring '99 House Party weekend was not planned, monitored or controlled as well as that of the previous year," Chapman wrote. "Clearly, if this event is to continue, it must be more in keeping with University and community expectations."

The IFC and Panhellenic councils were directed to undertake a self-study of House Party and put forth its own recommendations for ways that the event could be controlled. According to Dean of Greek Life Roy Baker, this review committee was established to give Greeks the opportunity to devise their own solutions to House Party problems.

"The objective of (The House Party Committee) was to create several new strategies to make House Party safer and more controlled," Baker said. "The new policies for House Party were created by the committee and approved by the Panhellenic councils."

Engineering students test snowboards

By Laura Day

Tim Choate—The Bucknellian

Students are developing tests for snowboards to attract new markets.

Remember the days when you would sit in class and question yourself, "When am I ever going to use this in real life?" Well, those days have long passed as students concentrate more and more on their career fields.

In fact, a group of University engineering students are experiencing first-hand just exactly how their educations influence real-life decisions and operations. This group is developing tests that will help Walbridge Design and Manufacturing, a new snowboard manufacturer, to produce better and higher quality boards.

The University students are creating the prototype testing equipment which will help the company tailor boards to certain groups of riders, for example, women.

The team of students includes four senior mechanical engineers, two senior electrical engineers, four mechanical engineering graduates and two junior mechanical engineers. The four senior mechanical engineers act as the core group.

Cary Briggs, president of Walbridge Design and Manufacturing, is very excited to be working with the Bucknell team. "Because of the Bucknell project, we will be able to offer something truly unique. Next year, we'll be the ones pushing the envelope," she said.

Only two years old, Walbridge is trying to establish itself as a prominent snowboard manufacturer and carve its niche in the 3.6 million snowboarders' population market.

"It's really great. Now we can make a difference, be on the cutting edge."

—Fred Luchsinger '00

The company hopes that by targeting research and development it will be able to develop better boards. Other companies will pay a premium for Walbridge to design their boards. The key to this strategy is the research and testing done by the University group.

Walbridge will be able to build lighter, faster, and stronger boards as a result of the new testing equipment that the University students are developing. Briggs emphasized that the key to successful boards is proper testing. Too many boards in the market today are undertested and over-engineered because the market is expanding so quickly that technology cannot keep up. Briggs further explained the problem that the company, with the University project, is going to solve; "Manufacturers buy expensive fibers, make a new board, then go out and have kids ride it. We didn't get good feedback. It wasn't scientific."

The proposal, put together by Steven Shooter, assistant professor of mechanical engineering, and Keith Buffinton, associate professor of mechanical engineering, has the students creating both a computer program and a robot to test new snowboards. The students first tested Walbridge's current supply of snowboards. They mounted strain gauges, sensors and accelerometers on the boards to measure the strains and vibration.

Then, during their winter break, the students and professional riders tested the boards at the Seven Springs ski resort.

Blair Sutton '01, Mechanical engineer, is using the gathered data to minimize the vibrations of the board. "You don't want the board to keep vibrating like old shocks in a car," Sutton explained. He's working with the shape of the board, the carbon strips, and rubber edges to solve the problem.

Since collecting their data, the project group is now constructing a robot that will imitate the board's actions on the slopes. By replacing the rider and simultaneously gathering data, both time and manpower are saved. The main objective of all the testing is to design a board that will better hug the snow and therefore go faster.

Briggs also explains that Walbridge wants to address the women's market. "That segment has really been neglected, other than making boards lighter and painting them pink," he said. In reality, there are many physical differences between men and women, including their center of gravity. Boards designed specifically for women will increase speed and control.

Shooter further added, "A subjective opinion doesn't help you figure out the next step. Our job is to figure out what makes the good, good, and the bad, bad."

Both Shooter and Buffinton have been instrumental in the project. They helped get the funding for the project through Pennsylvania's Ben Franklin Partnerships. Shooter is thrilled with the project. He described the project as so much fun for the students. "They don't even realize how much they've learned. It also demonstrates that engineering isn't just working on a boring project," he said. "There is real need for engineers in the sports industry. With the increase in the competitive spirit, there's a demand for better performance. As soon as they get technical, engineers step in."

Fred Luchsinger, a senior working on the project, is excited that he can incorporate his love for boarding with his work at school. "It's really great. The first boards were really primitive. Already I see a lot of improvement. Now we can make a difference, be on the cutting edge," Luchsinger said.

Construction Update

Jonah Half—The Bucknellian

The new music building (above) and residence hall (below) get some bricks on its facade as it gets closer to completion. The goal for the completion of both buildings is by next Fall.

Public Safety Log

March 13, 2000

INFORMATION/RECOVERED UNIVERSITY PROPERTY - Public Safety responded to Gateway Roser for the report of a two way radio found during room inspections. The radio is stored at Public Safety while the incident is under investigation.

INFORMATION/RECOVERED UNIVERSITY PROPERTY - Public Safety responded to Roberts Hall for the report of a barricade found during room inspections. The barricade was returned to the warehouse. The incident is under investigation.

March 14, 2000

INFORMATION/ASSIST STATE CONSTABLE - Public Safety assisted the Pennsylvania State Constable to serve a summons for a civil suit to an employee.

March 17, 2000

INFORMATION - Public Safety responded to the parking lot at the rear of Davis

Gym for the report of a portable CD player removed from an employee's vehicle. The incident is under investigation.

March 19, 2000

TAMPERING WITH FIRE EQUIPMENT - Public Safety responded to Vedder Hall for a fire alarm investigation which was caused by vandalism to the building's alarm panel. Repairs made. The incident is under investigation.

THEFT - Public Safety responded to the Bucknell West area for the report of a bicycle taken from a residence. East Buffalo Township Police was notified and the incident is under investigation.

March 20, 2000

INFORMATION/UNIVERSITY PROPERTY DAMAGE - Public Safety responded to Harris Hall for the report of a broken window pane. No witnesses or suspects could be

located in a search of the area.

LARCENY/THEFT BY UNLAWFUL TAKING - Public Safety responded to Carey House for the report of a locked bicycle taken from the bike rack. Lewisburg Police was notified. The incident is under investigation.

INFORMATION - Public Safety responded to Smith Hall for the report of the odor of marijuana. No witnesses or suspects could be located in the area.

MEDICAL ASSIST/STUDENT HEALTH TRANSPORT - Public Safety responded to Swartz Hall for the report of a student struck by a bicycle tire that exploded for an unknown reason. A Student Health Services driver transported the student to Evangelical Community Hospital for treatment. The individual later returned to campus.

RECOVERED PROPERTY - Public Safety responded to Hunt Hall for the report of a frozen yogurt sign found there. No witness or suspects could be located in a search of the area. The sign will be stored while the incident is under investigation.

This Week in Bucknellian Headline *History*

Bucknell 12 - State 8

March 7, 1899

Bucknell defeated State College in basketball last Saturday, in the Tustin Gymnasium, winning out by a score of 12 to 8. This was the last game of a series as well as the final game of the season for the visitors.

This game was the third defeat for the "White and Blue" supporters during the trip.

Friday night was the time arranged for the game but owing to poor gas service it was impossible to get lights for the gymnasium. Every possible resource for securing light for the evening was exhausted and after several hours of fruitless toil in this direction it was decided to adopt the last and only alternative and play the game on Saturday morning.

About 9:30 Saturday morning the University band marched downtown playing sweet strains of music and advertising the game by means of a banner. When they reached the gymnasium three-quarters of an hour later the running track was already filled with anxious onlookers eager to display their pent up enthusiasm.

At 10:30 Referee Garner called the game with State defending the western goal. From the start the playing was fast and snappy, Bucknell having rather the best of odds during the first half.

The Class of 1893

March 11, 1907

Although twenty-seven men and women matriculated in the class of 1893, but eleven of them kept in the race until the finish on Commencement Day. The old adage holds true, however, that "good things come in small packages," for of the ten members still living, all have been making their way to the front in their various fields of work.

20 Men, 5 Women Pledged to Greek Campus Groups

March 5, 1936

Fraternity and sorority enrollment has undergone an increase at Bucknell so far this semester, as 20 new men have pledged at eight of the 13 houses, and five women have made their sorority choice.

The newly re-organized and re-instated Phi Lambda Thetas lead for the current semester with five new pledges and two actives. The Kappa Delta Rhos are next in line with five pledges and, followed by the Sigma Alpha Mus with three more actives and one pledge.

The Kappa Sigmas have pledged a new trio while the Sigma Chis and the Phi Gamma Deltas have added two pledges each. The Sigma Alpha Epsilons and Phi Kappa Psis have each taken a neophyte into the fold.

Construction Progresses on Men's Dormitory; Phone and Air Conditioning Grace Each Room

March 11, 1965

Construction is on schedule for the two new wings of Swartz Hall that are expected to be completed and ready for occupancy in Sept. of 1965. The completion of these two new wings represents the first new construction in the men's residence halls since 1955 when the James S. Swartz hall was added to the campus.

The additional wings will house 231 men. Each floor will accommodate 29 men, including 12 double rooms, one triple room, and two single rooms. There will be a lounge area on each floor.

Two of the two most attractive aspects of the two new wings, to be designated as "C" and "D" wings, will include a telephone in every room and air conditioning. The hallways will be carpeted to enhance the appearance of the building, as well as to eliminate noise. Located in the basement area of the "C" wing will be facilities that will service all four wings of Swartz hall. In these areas will be located vending machines, pool tables, washing and drying machines, and television viewing areas.

Heat and Water Problems Plague Residence Halls

March 6, 1992

Physical Plant employees have recently been flooded with calls from campus residents, angry because their rooms are sweltering and their showers are cold.

Inadequate heating and plumbing in residence halls have been an ongoing problem for students in who perceive the administration as neglecting to implement needed improvements.

Although the University claims to be aware of the situation and working towards a solution, students have noticed very little change. According to the University's mission statement, "Bucknell's residential character provides a matrix within which institutional programs and practices that exemplify compassion, civility, and a sense of justice form an aspect of the educational system."

Insufficient water systems commonly disrupt the daily routines of students. According to Terri Sonneman '92, the resident assistant on the fourth floor of Trax Hall, the water situation is becoming "progressively worse." Sonneman also commented that, "more often than not there is no water pressure" leaving the three showers on the second floor to serve all the women living in Trax.

"It's very frustrating for me, being responsible for these women, to see this situation," said Sonneman.

News Briefs

Man Trapped In Van Tries To Amputate His Own Arm

Trapped for days in a crashed van as traffic whizzed by only a few feet away, Lee Risler got so desperate he tried to cut off his pinned hand with a pocketknife.

Risler's van veered off Interstate 605 and overturned in a ditch around 3 a.m. Saturday. The 54-year-old sandal maker spent the next 2 1/2 days stuck there, his arm trapped under the van, his feet hanging out the window and his head covered with boxes of sandals.

Risler was freed around noon Monday when a California Department of Transportation worker spotted his 1991 Ford hidden by trees a few yards off the freeway, about 15 miles southeast of downtown Los Angeles.

Risler complained of a tremendous thirst and was bleeding from the hand, but he was coherent, rescue workers said.

Maintenance worker Joe Ochoa, the second on the scene, said Risler told him, "I tried to amputate my arm because I'm trapped."

Despite Ruling Elian Still In Limbo

The U.S. government, which favors reuniting Elian Gonzalez with his father in Cuba, won a victory Tuesday when a federal judge in Miami threw out a political-asylum lawsuit filed by the 6-year-old boy's U.S. relatives who want him to stay in the United States.

But the ruling from U.S. District Judge Michael Moore still left the international custody battle in limbo. Elian's family in Miami planned to press its legal fight, while Attorney General Janet Reno said the government would seek to return the boy to Cuba in a prompt, fair andorderly manner.

"We will evaluate the situation and consult with representatives in Miami and make a decision shortly," Reno said in Washington. She declined to comment further, including whether the department had a target date for returning the boy.

But Justice Department officials said they would take no action that could provoke a confrontation with Miami's large Cuban exile community.

"We are pleased that the court has sustained our judgment that Elian should be reunited with his father," Reno said. "The court's decision reaffirms our position that only Elian's father can speak for his son on federal immigration matters."

Massive Blackout Hits Columbia After Rebel Attack

Officials said normal power supplies would be restored well before the start of the workday Wednesday in Bogota, after a sabotage campaign by anti-government rebels left a large section of central and northeast Colombia without electricity.

Power was lost in Bogota and at least six other cities following the bombings of 11 high-voltage power pylons and an electricity substation over the weekend and Monday, a public holiday.

Colombian officials blamed the National Liberation Army, or ELN — the smaller of two rebel insurgencies in the country — for the attacks. The rebels oppose the planned sell-off of state-owned national grid ISA and state-run power generator ISAGEN, and were able to take the country's three largest hydroelectric dams off the nation's power grid.

"Terrorist groups think this is how they're going to obtain peace, but all they are obtaining is the repudiation of Colombians who want to work and move the country forward," Finance Minister Juan Camilo Restrepo told Caracol radio.

The government has said it will not drop its plans to sell off ISA, scheduled for the second half of the year, or ISAGEN, set for the second quarter of this year.

Pope, In Israel, Repeats Appeal For Cooperation

Pope John Paul II's historic Middle East journey took him into Israel on Tuesday, making him the first leader of the world's 1 billion Roman Catholics to travel to the Jewish state in 36 years.

"Yesterday from the heights of Mount Nebo, I looked across the Jordan Valley to this blessed land," the 79-year-old pontiff said after stepping from the Royal Jordanian jet that carried him across the Jordan River from Jordan to Israel. "Today, it is with profound emotion that I set foot in the land where God chose to pitch his tent and make it possible for man to encounter him more directly."

Israeli Prime Minister Ehud Barak, President Ezer Weizman, their wives and dozens of religious and state leaders greeted John Paul at Ben Gurion Airport.

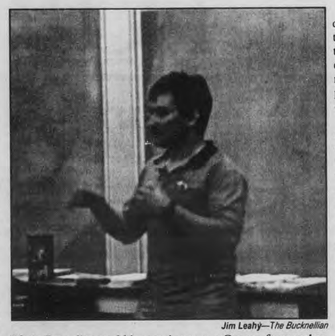
"Welcome to the Holy Land," Barak told the pontiff as the two shook hands in a steady rain.

As he had in Jordan, the pope called for cooperation among the region's peoples to achieve a lasting peace and justice.

News Briefs Compiled From CNN Interactive by David Arnold

Union activists call for boycott

By Jim Leahy



Jim Leahy—The Bucknellian

Efrain Pena discussed his experiences as a Oregon farmworker.

Sweatshops are usually thought of as small rooms with little light that are locked from the outside. Workers inside are making clothing or shoes for American companies that are looking to minimize salary costs. But what about laborers on farms who make little money and work long hours with little or no job security?

"Sweatshops Without Walls," a program sponsored by SEAC, PULSE and the Economics Department, brought in representatives from PCUN, Northwest Treeplanters and Farmworkers United. They were able to share their experiences with University students on the evening of March 7 in Rooke Chemistry.

PCUN is an Oregon farmworkers union that works to support Latino field workers and is the largest Latino organization in Oregon. Their mission is to "empower farmworkers to understand and take action against systematic exploitation and all of its effects." They help migrant workers learn English and adapt to America, lobby for legislation and they provide recreational and social services for the workers.

The objective of the group's talk at the University was to gain support for a boycott of NORPAC, a large conglomeration of over 250 Oregon growers who sell their goods to some food service corporations and to the public through their own brand names. The brands include "Flav R Pac," "Soup Supreme," and "Westpac," and the food service companies include Aramark and Marriott.

According to PCUN, these growers in concert with NORPAC have a monopoly that they use against the migrant workers to keep them at bay. They want the growers to enter into collective bargaining agreements that will give the workers they employ more say in the process as well as increased job security.

Efrain Pena, a worker originally from Mexico, shared his experiences as a farmworker and currently a field organizer for PCUN. While on the job, Efrain was a pesticide applicator. He told the group that he was given little training and also no information about the dangers of the pesticides he applied to the crops.

One of the union organizers, Rebecca Saldana, talked about the plight of the farmworkers and how she came to be a worker for the union. She was the daughter of a migrant worker and a student at the University of Seattle when she decided to get into social equality and workers rights. She is part of this touring the country to get the word out and organize a large-scale boycott of NORPAC.

NORPAC and PCUN have many things to work out as the Union prepares the boycott. The farmworkers lie in the middle as their rights are violated. University students are supporting their cause and the lecture on "Sweatshops in the Field" allowed the farmworkers' cause to be heard.

Alix Olson is one of the slam poets performing at the Bison next Wednesday

Poets set to "slam" the Bison

By Jim Leahy

For those of you who thought poetry was for polite academics with a true sense of its depth and meaning, the Stadler Center for Poetry has a surprise for you. Slam poetry, a dramatic form of poetic presentation, will be brought to the Bison on Wednesday, March 29 at 7 p.m.

Performers Regie Cabico and Alix Olson will be on hand to show off their stuff. They are both well known in the slam poetry circle and have won numerous prestigious awards in the field. A third poet will join them, taking the place of Roger Bonair-Augard, the reigning Slam poetry Individual National Champion who was originally scheduled to attend.

The poets are members of the Nuyorican Poetry Cafe in Manhattan. The name combines the name of their hometown, New York City, and the Puerto Rican heritage of the group.

Slam poetry originated in a Chicago saloon in the '80s with hopes of livening up the art and bringing it back to a popular audience. It combines the craft of poetry with the energetic intensity of dramatic performance or stand-up comedy, or both. Judges selected at random from the audience rate each poem on a scale from zero to 10, with winners declared at the end of the evening.

The poets, who have competed in the National Poetry Slam Championship, will perform their own works for the Bison fans and serve as moderators for the festivities. Bucknell students will also join the artists and perform their own individual and collaborative poems.

Olson, a 1997 graduate of Wesleyan University, was part of the 1998 National Poetry Slam Championship team. She has performed across the country for countless audiences and for groups of all kinds.

Michael Carlin of the Stadler Center encourages students to go out and see for themselves how unique this performance style can be. "It encourages the audience to cheer like they are at the World Series for good performances and heckle the bad ones," Carlin said. He hopes that the University students involved in the program will enjoy it as well.

Sponsors for this event include the Stadler Center for Poetry, the Bucknell Office of Multicultural Affairs, the student literary magazine *Mirth Grinder*, and the student art group Exposed.

Speaker to address overlooked women

"Forgetting Social Movements: Women and the Transitions to Democracy"

The Race/Gender Resource Center and the Women's Studies Program are hosting a guest speaker on Thursday, March 23rd at 8:00 p.m. in the Forum. Temma Kaplan, Professor of History and the Director of Women's Studies at the State University of New York at Stony Brook, will present a lecture entitled "Forgetting Social Movements: Women and the Transitions to Democracy."

In her lecture, she will discuss how women, and the social movements in which they have engaged against authoritarian governments, have been overlooked in writing the history of so-called "transition to democracy" in Spain. With reference to a similar amnesia about what constituted democracy in Chile, Argentina, and South Africa, she will discuss the politics of forgetting.

From Notes & Notices

Party from page 1

House Party also focused on giving Greeks the opportunity to monitor and police the event themselves. In addition to mandatory "cleanups" of campus by Greek members, the IFC and Panhellenic councils are sponsoring Dining Services run food stations throughout the weekend, and Greek students will be assigned to monitor the weekend events, attempting to stop and control disruptive behavior before Public Safety or the University needs to intervene. By giving Greeks some control over enforcement, the House Party review committee hopes that potential problems will be stopped before they come to fruition.

"They (the Greek monitoring students) are not here to write people up," Baker said. "They are there to enforce House Party guidelines and to keep students out of trouble. If students fail to cooperate with the monitors, the issues will be taken to the next level and will involve University charges."

Above all, Baker, Hofmann and others preach the importance of behaving responsibly during House Party. Problems will not arise, Greek leaders feel, if students simply drink at the proper times and in a responsible manner.

"Neither the students or I are trying to put too many controls on House Party— we just want to make sure that everyone handles themselves responsibly," Baker said. "For House Party to be a success Greek students must recognize that they need to be part of the solution. I think that we are taking the right steps to actually make the event successful. The Greeks are doing what I have asked them to do ... I am pleased in the direction we have gone in this year."

Editorial

House Party can be a success, not a problem

The University has addressed the lack of tradition and enthusiasm apparent in recent years, especially in increasing non-alcoholic events. Events like the Chrysalis Ball and various concerts have helped to improve these traditions, moving away from the Greek-dominated social options.

The fraternity and sorority systems themselves are arguably the greatest living tradition on this campus, though numerous national incidents have questioned their value to campus communities.

But these systems facilitate arguably the most anticipated event on campus each year-House Party weekend.

However, this tradition has not gone unopposed. In recent years, the social scene on campus has been more strongly enforced, though House Party continues to be the time for everyone to let loose.

In the past, House Party weekend was held later in the spring, where warmer weather permitted more outdoor parties. In recent years, the University has pushed the weekend back to March, where Greeks are at odds with colder temperatures and questionable weather conditions.

Last year, Former Dean of Students Richard Chapman issued a letter to former Panhel and IFC asking them to do their part to help keep the weekend under control. If not, he warned, House Party could be meet increased opposition.

The University is worried that students will either miss classes or show up intoxicated, a clear concern that House Party will impede on our academic mission. Students were strongly urged in a student mailing to refrain from bringing any beverage to classes on Friday.

With many worried that House Party's future existence is in jeopardy, the Greek governing bodies have issued a set of guidelines for this year's celebration, forcing Greeks to be fully responsible in all aspects of the weekend.

This year, Greeks will be fully responsible for cleanup during the weekend and the Greek Monitoring Team (GMT) will be dispersed throughout campus to oversee the festivities. Along with GMT monitoring the chapter parties, each chapter will also provide members to serve on a House Party Monitoring Team that will simply patrol Fraternity Road and the downhill streets for any flagrant violations or tend to safety concerns. These regulations are necessary-they give Greeks an opportunity to take responsibilities for their actions, an aspect that frequently comes into question.

The new Monitoring Team will be carrying radios during their patrols; this will allow them to contact Public Safety if necessary. The Greeks are intent on enforcing their own events, with Public Safety and Lewisburg Police serving as a backup.

House Party has become probably the most beloved tradition at the University. Despite an apparent glorification of the problematic "binge drinking," House Party is probably the most anticipated event all year. This year, Greeks and non-Greeks alike should be looking to have a fun and safe weekend and show the University community that House Party can, in fact, be a success.

The spirit of House Party weekend will undoubtedly live on even if the University cracks down in the future, but Greeks and independents alike must work to be responsible to keep it successful. With these guidelines comes an increased need for students to act accordingly— House Party will only survive as long as we allow it to.

Gun policy insanity incites debate

By Josh Guyan

Gun control is back in the news and what is going on is simply insanity. I can certainly understand both sides of the issue and owning a gun in America truly is a fundamental, Constitutionally protected right, but when you look at what is actually in dispute—it's insanity. The Second Amendment advocates, the National Rifle Association, and the Congressional Republican leadership say they support background checks at gun shows. The President, Handgun Control Inc., and the Congressional Democratic leadership also want background checks at gun shows.

What they are fighting over is the amount of time allowed for those background checks. The Republican leadership wants a twenty-four hour period and the President and the Congressional Democrats wants a three-day period. This doesn't seem like a big disagreement, does it? The Democrats say that a three-day period is needed for some checks and the Republicans counter that since many or most of the gun shows are weekend events, a three-day wait could seriously disrupt the business.

This is a valid argument. If a gun show comes to town for a weekend but has to wait three days for background checks, they can't do business.

Then I discovered the reality of the situation. Seventy-five percent of the background checks are done in two hours. Ninety-five percent of the checks are done in twenty-four hours. Only five percent of all gun show background checks require three days and those five percent are twenty times more likely to be denied a gun because they are felons, minors or mentally unstable. Those are the facts.

The NRA and the Congressional Republican leadership are fighting for that five-percent of the gun-buying population. That's what the big fight is about.

My feeling as to why they're fighting so hard is because the NRA and the Republican leadership never wanted any background checks in the first place. Remember they fought background checks for sales at gun shops under the Brady Bill.

They said they would go for the twenty-four hour check because they thought they could hold onto the argument about ruining gun show business and they were scared of the election implications of their opposition to gun control legislation.

Now that argument has fallen through and they're in big trouble.

Despite this reality they are continuing to fight gun control at every turn. Last week the House voted on the Lofgren Resolution which was a non-binding resolution simply to suggest that the Committee on Gun Violence created after Columbine meet. The House leadership hadn't thought it necessary for that Committee to even meet yet, much less do anything about gun violence.

The House Republican leadership fought the resolution and the NRA came out against it. However, the resolution passed, but the leadership most likely will still not have the Committee meet. This is gun policy insanity.

The good news is that insane gun policy is not a Republican disease. It is a Congressional Republican disease. Governor George Pataki of New York announced plans to implement serious gun control measures in his state. They include background checks at gun shows, safety locks, an assault weapons ban and ballistic fingerprinting. His plans are supported among others by Governors Ridge (PA) and Whitman (NJ), both fellow Republicans.

Governor Pataki is not being disloyal to the NRA, the national Republican leadership or Second Amendment advocates. He is supporting common sense gun control because as a governor he's the one who has to deal with gun violence and he knows these programs can help.

Letter to the Editor

To the Editor:

I am writing in response to a letter published last week criticizing the choice of Irish poet Eavan Boland as the 2000 Commencement speaker. While I am well aware that you cannot please all of the people all of the time, some effort of acceptance must come from the student body itself.

As an English major, I clearly have more than the average interest in Ms. Boland's visit. I concede the fact that students of any discipline other than the literary arts may not share my personal interest. But I believe that by suggesting speakers of fields such as Geography and Biology, we are still alienating a segment of the student population. While I recognize that a speaker of closer relevance to Bucknell may be of greater interest to the student body as a whole, we should be thinking also in terms of the goals of this University to which we have contributed for the past four years.

We are all aware that the University is working toward greater diversity and internationalization within the student population and its academic endeavors. In keeping with such a theme, does it not make sense to invite an international figure of a turmoil-ridden country to help us gain some exposure to a part of the world we rarely experience?

While I agree we have many wonderful and inspiring professors at Bucknell, I think it would be even harder to attempt to please the senior class by choosing a faculty member from a field that many not be of interest to everyone. We have such a diverse range of majors in our class demographics, I believe choosing someone of one particular field will alienate those who chose not to take that aspect of our academic curriculum. If you choose an English professor you may alienate the Engineers, an Economics professor may not appeal to the Biology students, and so on. Perhaps a poet may not appeal to everyone either, but an internationally influential scholar should.

Please also keep in mind that as the system was explained to the student body, the speakers were invited to the University based on a list of the top choices of the senior class. Ms. Boland made it on to that list somehow, so I was not the only person who voted for her. I believe we should welcome the opportunity to invite someone different and unique to our campus, something we as a class do not take enough advantage of. We cannot always have exactly what we want, yet we should embrace the opportunity to enhance the diversity and interests of our campus. How do you know Ms. Boland will not be relevant to Bucknell until you hear her speak to us?

Elections in Taiwan spark dispute

By Gretchan Schrock

The institution of democracy was further strengthened on March 18 when the citizens of Taiwan voted in their second democratic presidential election. However, the outcome, a victory by the opposition Democratic Progressive Party over the previously formidable Nationalist Party, has strained relations between China and Taiwan, leaving the United States wondering what to do in terms of foreign policy. The election of Chen Shui-ban produced protests within the island, a temporary plunge of 2.6 percent on the Taiwanese stock market the following Monday and demands that President Lee Teng-hui resign as leader of the defeated Nationalist Party. Why has this victory caused so much turmoil in Asia?

Until this past week, the Nationalist Party has effectively dominated every aspect of Taiwanese politics and influenced other sectors of its society, namely business, ever since its leaders retreated to the island in 1949 after being defeated by Mao Zedong's Communist forces. The Nationalist Party ruled under martial law until 1987 and allowed the first direct presidential election in 1996, in which Lee Teng-hui won.

Throughout the past fifty years, the government in Taipei has asserted that it is the true government of China and that someday it will recover the mainland, though in 1991 Taiwan renounced that it will reclaim the rest of China through the use of force. With the election of Chen Shui-ban, the independence movement that has influenced the island's politics in past years is gaining more strength. Chen, until recently, openly advocated independence from mainland China, a stance that if continued would have placed Taiwan and its main ally, the United States, on a collision course with China.

The Communist government in Beijing believes in the principle of a single China and that Taiwan is just a 'renegade province' that must return to the motherland. On March 20, Chinese President Jiang Zemin stated that China is willing to have talks with the island's newly elected leader as long as Mr. Chen recognizes that China is indivisible. "We have said in the past, and we still think, that no matter who is in power in Taiwan, we welcome him to come to the mainland for talks. At the same time, we can go over to Taiwan. But dialogue or talks should be on the basis that he first of all recognize the one China principle," said President Zemin. Last week the Prime Minister of China, Zhu Rongji, warned that any move toward independence-or even reluctance in reunification talks-could prompt China to 'spill blood.' Still, Mr. Chen insists that Taiwan must be treated as equal if talks take place, implying that Taiwan should be treated as an independent country.

Now where does the United States fit into this equation of heightened tensions and foreign policy reassessment? The stance of the American government is that the true government of China resides in Beijing; therefore, under Washington's strange 'one China' policy, no senior American official can officially visit or consult with Taiwanese leaders. However, it keeps Taiwan supplied with a vast array of defensive weapons in order to protect itself from the threat of China, which is technically its own country.

The Clinton administration's drive to get China admitted into the World Trade Organization, which is more about security and China's role in world affairs than trade regulation, could be severely hindered by China's possible harsh reaction to the presidential election in Taiwan. Therefore, American diplomats are urging President Zemin to limit what he says publicly and to reach out to Mr. Chen, instead of giving in to the hard-liners. Simultaneously, the White House, playing the role of mediator, is trying to convince Mr. Chen to not say anything that could incite China.

The main issue at the center of this foreign policy crisis is whether Taiwan should become independent of mainland China. First, one must realize that there is no international law allowing self-determination unless the territory in question is under colonization or severe oppression. Taiwan was never a colony of China nor is it under severe oppression. It has a flourishing democracy and a robust economy with a great deal of autonomy because of its de facto status.

The only argument one can make is that because it is not recognized as independent, it is oppressed. The response to that argument is that it has never officially declared its independence so there is nothing to recognize. Furthermore, the United States and other countries insist on the idea of 'one China.'

On the other hand, there are two different Chinas-communist, agricultural on the mainland and capitalist, democratic in Taiwan. Thus, different political systems, ideologies, societal structures and slightly different cultures exist. Any attempt to completely reunite Taiwan with the mainland would result in one side, most likely the Communists, oppressing the other.

Taiwan already has many aspects of statehood—a defined territory, population, an organized government, foreign relations (though limited) and some amount of permanency. The only obstacle in its way toward statehood is recognition, which can only possibly come after an official declaration.

The only plausible, legal solutions to this international relations problem is for Taiwan to retain its current status as a de facto state or for it to be given a large degree of autonomy, like Hong Kong, after reunification with China. Both solutions present the island with the guarantee of a considerable amount of political, economic and social independence, which is the only thing possible under current international law.

Time to teach OPEC a lesson

By Michael Boland

Anyone else notice the price of gas over Spring Break? Yeah, me too. I realized that the guys on the evening news weren't kidding. Gas prices are high. *Really* high. Too high.

World oil production is controlled by OPEC (Organization of Petroleum Exporting Countries). OPEC member nations produce the vast majority of the world's oil, and by collaboration they set the international price for a barrel of crude oil. They are, in effect, a petroleum cartel. Whenever they feel that the price of oil has dipped too low, they all cut back production so as to reduce supply and drive up price.

While I'm not a huge fan of federal government action in the free market, this is an exceptional case. It is the responsibility of the federal government to protect its citizens from foreign aggression, and what the American consumer is experiencing right now in terms of oil prices is a clear example of economic thuggery.

In an attempt to help, Congress considered abolishing the 5-cents/gallon federal tax on gasoline. But, no, Congress decided, we can't do that: the funds from that tax are earmarked for highway improvements. We *need* that money. Besides, who cares if gas is $2.00 or $1.95? Such prices are still too high.

Congress and the Clinton Administration considered releasing some of the Strategic Oil Reserve, a stockpile of hundreds of millions of barrels of petroleum that the United States keeps on hand, to release whenever OPEC lets oil prices get too high. By releasing some of the SOR onto the market, supply would increase and prices would drop. But Clinton doesn't like that option either because he believes that the SOR was created for times of national emergency and not merely for use during times of economic discomfort.

Our brilliant Administration's current strategy is to send our Energy Secretary on diplomatic missions around the world, hat in hand, asking OPEC nations to kindly increase production. Shockingly, success has been limited. OPEC doesn't want to lower the price of oil. They've got something that we want and they enjoy watching us beg for it. They have every right to try to charge whatever price they want.

But if they want to play hardball, then the United States government should play right along. We're the most powerful nation on earth, and it's time we started acting like it. So what can our government do? What policies can be changed to ensure that we're no longer kowtowing to sheiks and petty Third World dictators?

I would suggest speaking their language: talk in terms of dollars. Quite simply, I think we should suspend all foreign aid to OPEC nations as long as the price of petroleum is unacceptably high. This will show them that we mean business, and that we won't be pushed around. Some of these countries owe us big-time, anyway.

Nigeria, for example, is an OPEC nation. The United States hands them over $30 million per year in direct aid; that's not even counting what they get from the IMF and the United Nations. I'll bet if we threatened to take away the aid, we'd have more cheap oil than we'd know what to do with. The same thing goes for Indonesia, OPEC nation and recipient of somewhere around $80 million in aid.

Even nations who *aren't* getting direct aid, such as Kuwait, are receiving our help in other ways, especially militarily. All of these hundreds of millions of dollars can be revoked; it's not as if these countries have a 'right' to our money.

If OPEC wants to be adversarial, then we should oblige them. Playing nice hasn't worked; it usually doesn't when you're playing with sultans and emirs and people named Saddam Hussein. For all of our sakes, it's time to toughen up, to stop rewarding smug autocrats with taxpayers' dollars, and force them to deal with economic consequences of their actions.

Rampage proves police are 'Baltimorons' too

Joseph Palczynski terrorizes Baltimore citizens during Spring Break

By Kristen Jancuk

While many of my friends were spending spring break in Mexico or the Bahamas, I prepared myself for a boring week at home, expecting the highlight of my vacation to be Joshua Jackson's appearance on Saturday Night Live. Imagine my surprise when I discovered that a homicidal maniac was terrorizing Baltimore! My vacation suddenly became a lot more interesting, thanks to Joseph Palczynski, the ineptitude of the Baltimore County Police Department and the stupidity of the people of Baltimore.

In case you haven't heard this story, let me summarize for you. Joseph Chester Palczynski, a convicted criminal with a history of mental illness, murdered four people on March 7 and kidnapped his ex-girlfriend, Tracy Whitehead. He eluded police until last Friday night when he shot his way into the home of Whitehead's mother, Lynn Whitehead and held the occupants hostage for five days. Finally, Tuesday night Palczynski fell asleep on the sofa (a brilliant idea when you're trying to hold people hostage), his hostages escaped and the police entered the house and killed him.

The stupidity begins even before the murderous rampage. A friend of Palczynski's bought him a shotgun and an assault rifle, although she knew he was unable to purchase them because of his criminal record. Didn't that sound some sort of mental alarm? This woman is obviously a genius.

After his rampage, the BCPD believed Palczynski was hiding in the woods in eastern Baltimore County. Very precise. They trekked through the woods all week, assisted at one point by the FBI, while the local news constantly interrupted my sitcoms with 'breaking news': "Police haven't found Palczynski yet." "Police still haven't found Palczynski." "Police found tuna cans that may be Palczynski's." How does this qualify as 'breaking news'?

The BCPD was so good at not finding Palczynski that he managed to hop a train to Virginia, break into a house, steal firearms and force Virginia resident William Terrell to drive him back to Baltimore where he went into hiding again. How in the world did they miss this?

"Eyewitness News" informed viewers that Palczynski was believed to have a television, yet they proceeded to detail exactly where police were searching and where they were going to search next. Why not just hold up a big sign? "Palczynski, the BCPD is in Middle River, so if you're there, move! They'll be searching Essex next, so don't go there!"

The news also broadcast pleas from friends and family of Palczynski, asking him to surrender. His grandmother said that she didn't think her grandson wanted to hurt anyone. Yep, that's why he killed four people. She insisted that his rampage ensued because he didn't take his medication. If this guy is so mentally ill that he's going to go on a murder spree because he skipped a pill, shouldn't he be locked up in an institution somewhere?

When Palczynski finally turned up Friday night with his hostages he was, of course, nowhere near where the police were searching. The BCPD scurried over to Dundalk and barricaded the surrounding neighborhood, insisting that people either evacuate the area or stay in their homes until the situation was over.

I've never heard so much whining in my life. A man interviewed by the Baltimore Sun stated "I want to go home and get a shower ... I have a date." A murderer is holding hostages and shooting at police and you're worried about a date? I think she'll understand! Another man, trapped in his house, complained to the local news about not having any cigarettes. Yes, that's certainly a pressing issue at a time like this.

This was a horrible tragedy, worsened by the media and the citizens of Baltimore. Even though Palczynski is dead, I think some other participants in this circus should be thrown in jail. Nominees include the officers who were supposed to be watching Whitehead's home, William Terrell's wife who didn't call police when her husband was taken away at gunpoint, the managers of the local news stations who practically handed police tactics over to Palczynski and the citizens in the hostage area willing to risk their lives because they were out of cigarettes.

We survived Joseph Palczynski. Don't you think you owe us something? Write for Ops! Email Kristen (jancuk@) or Maureen (fick@)

Welcome to the 'real world'

College life misrepresented as carefree existence

By Nora Daniels

From freshman year on, college students are seen by others to be in a blissful extended four year party, a time to idyllically frolic about, party all the time and rely on mommy and daddy for money and support.

These observers laugh at the supposed stress university professors place on their students, dismissing all-night study sessions with shrugs and grins, promising the 18-, 19-, 20-, 21-, and 22-year olds that the 'real world awaits,' and only then will they know the truth of life.

On behalf of college students near and far, I take issue with the idea that we are not in 'the real world,' that 'the real world' is a place in our futures where we will be hit on the head with the pressures and pains of 'real' living: bills, demands, responsibility and employment.

I can call upon my own experience, like those of other students here and at other institutions of higher learning, to prove that I face these same pressures and pains and to attest to the fact that I am living right now in the 'real world.'

I get my credit card bills, my insurance bill and my tuition bill sent to me, not to my parents. I pay these bills, sometimes easily, other times with a knot in my stomach as I see my bank account balance plummet rapidly. If this isn't real, if I'm not meeting the demands of the world, then I don't know what it is I am doing.

I have responsibilities, from work to classes to family and friends, and even to myself. Making sure I meet the demands placed upon me isn't always easy, but the sense of accomplishment I feel when I know I've succeeded is very worthwhile, strong and true.

Employment? I have three jobs. I've been called a workaholic, which probably isn't too far from the truth. Since I delivered my first newspaper at age 9, I've known the value of hard work, and I continue to dedicate myself to even the most unappreciated positions.

I might be a bit unusual, I admit it. But when it comes right down to it, I'm speaking from experience, my own, but pieces of others as well.

I know college students who spend their non-class time stocking shelves at Wal-Mart; I know college students who wait tables to make money for books and food. Some students go home to children, to family demands, to habitual stresses.

Sure, there are college students who revel in the bubble of higher learning and preparation for the future, but even these students are living, even these students are real. The 'real world' is not only our future, but also our present, our lives, ourselves.

FEATURES

LAUNCHcast is latest feat for Boulter '96

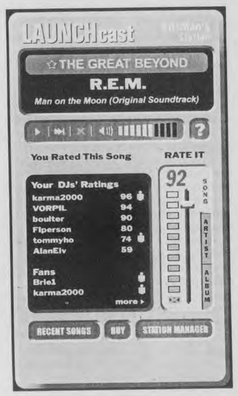
Former *Bucknellian* editor develops new personalized radio station on Internet

By Jared Silliker

As recent college graduates, Jeff Boulter '96 and his colleague Todd Beaupre decided they wanted a better way to listen to their favorite tunes. They figured it out and a whole lot more.

Imagine programming your disc changer to play all your favorite songs from all your favorite albums. Only you don't need any compact discs or even the player. All you need is your computer, access to the Internet and a set of speakers.

This is LAUNCHcast (www.launch.com), where through an interactive web site you can listen to your own personalized radio station. There is no need to download bulky files and collect them on your hard-drive. There is no "stealing" involved such as downloading copyrighted MP3s, facilitated by programs such as Napster.



LAUNCHcast just provides the music you like.

Users of LAUNCHcast are able to rate songs, albums and artists—these preferences are then used to play one's favorite music. LAUNCHcast also features the ability to connect to other users' stations and influence their own listening choices.

For Boulter, LAUNCHcast is just another chapter in an already remarkable career, albeit only four years in the making. He actually got off to a fast start, though. Even before graduation, Boulter, along with Dave Maher '96, had developed the first version of CRAYON (Create Your Own Newspaper), www.crayon.net, which is a web site that allows users to receive a personalized newspaper via the Internet. Boulter's first job after Bucknell was at Firefly Network, Inc., a company dedicated to developing personalization technologies and other online products. Boulter sold CRAYON to Firefly and eventually met Beaupre, who had also sold Firefly a web site, entitled HitsWorld, a compilation of user-generated music charts from all over the web.

While at Firefly in 1997, Boulter and Beaupre began challenging themselves with how to best listen to music in their office, and the idea behind LAUNCHcast was born.

"Todd and I were both avid music fans. We had similar music tastes, but we were looking for a better way to listen to music," Boulter said.

The concept was still a little rough, however; at one point the two were merely loading a 101-disc changer with their own CDs, hitting random and streaming the output to the rest of the office. Their curiosity begged further questions.

"What if, we thought, we could use Firefly's music recommendation software to be the DJ for the CD player and use its knowledge about what kinds of music we like to pick what songs to play?" Boulter said. "We couldn't tell it that we loved this CD except for one track or play this CD more than this CD."

That's as far as the two got while in Cambridge, Mass. Firefly was bought by software giant Microsoft in the Spring of 1998 mostly for its exchange network, dubbed Passport, which allows users to use only one password to access many web sites.

Boulter was faced with a difficult decision—remain unemployed in Boston or pack up for Seattle and work for the largest software company in the world. He eventually chose the latter, moved to the West Coast and joined Microsoft. His fiancée, Anne Evans '97, joined him and began graduate work at the University of Washington. The two are due to marry in August 2000.

Once in Seattle, Boulter admits that he, Beaupre and other developers from Firefly had a lot of time on their hands as the Passport project was fairly disorganized. This, of course, equated to lots of ping pong and more time to develop what would become LAUNCHcast.

First, Boulter began collecting MP3s, and he and Beaupre began fooling around with streaming the files—playing as they are being downloaded—through players such as Winamp. They developed an interface for users to indicate how much they liked the song they were listening to, and an algorithm that played their favorite tunes more often.

The two became increasingly excited, showed their stuff to coworkers and continted improving the project. "Todd, being a statistics major, was good at figuring out the algorithms we would use and I enjoyed developing the code for it," Boulter said.

There were still a lot of problems and unanswered questions, however.

First, although Microsoft holds some stake in web sites such as MSN.com and Hotmail.com, the company centers most of its resources on its software platforms instead of web content. Second, MP3s take up considerable disk space. Additionally, there were some quality concerns with bandwidth-starved users and it was not clear how they would service millions of users and support millions of songs.

Things began to get a little clearer, however, when the two ran into Thomas Heogh, a venture capitalist and former colleague at Firefly. Heogh heard of their project and stopped by one day to check it out.

"We talked about all [our concerns] that would have to be worked out before something like this could work," Boulter said. "He was blown away."

Heogh then called Dave Goldberg, CEO of LAUNCH, and Boulter and Beaupre were visiting Los Angeles in less than a week. LAUNCH is a digital media company geared toward providing new music over the Internet.

"We talked about what we were interested in creating and the people at LAUNCH were equally excited. They had a lot of the pieces we'd need," Boulter said.

Boulter and Beaupre had to act fast.

The two spent Easter weekend working out a deal at LAUNCH's Santa Monica offices. That Monday, they resigned from Microsoft and Tuesday Boulter finally convinced Microsoft that they had no interest in CRAYON, and they sold it back to he and Maher.

With that, Boulter and Beaupre were off to sunny Santa Monica. There, the hard work was just beginning. For several months, the two toyed with the project, rewriting code and implementing new features. They optimized algorithms while another LAUNCH team encoded over 50,000 into Windows Media format (smaller than MP3s), and were able to stream their material through an internet delivery service, which uses satellites to deliver content from the fastest server available. By Nov. 1999, they had external beta ready for testing.

The next months saw many improvements to the service, and new features are still being integrated, including efforts to make LAUNCHcast available remotely.

"The result is what you see today, which I think is the really the best way one can listen to music," Boulter said of LAUNCHcast. "You have more control than a big CD changer in your home and you don't need to download a single song. It's better than MP3s because you don't have to worry about maintaining the music or figuring out what to play at any given minute. It just plays the music you like."

Boulter, originally from Manchester, N.H., was a computer science and engineering major at Bucknell and served as the Editor-in-Chief of *The Bucknellian*.

Wink Thinks

Dear Wink,

You know how some people annoy you no matter what they say or do? Well, there is a girl on my floor who, although I am friends with her, I know most people think that she is the kind of annoying person that I just described. I really don't mind her company but I know she doesn't fit in as well as she might wish.

She and I, with the rest of our girlfriends, go out on the weekends.

However when we all go out, the guys stay away from us because she is there. I know a person can't change his or her personality, but I think I know of a way in which my friend's situation could improve. In addition to being slightly annoying, my friend also wears clothes that are inappropriate for her body type (read size). I have tried to take her to aerobics before, but she just isn't into it. I really don't know what to do. Is there any way I can change the situation for her by making her feel confident and a little more socially accepted?

Sincerely,

Pretty Much Clueless

Jacqueline Flicker—*The Bucknellian*

Dear Pretty Much Clueless,

I think it is good that you are able to find qualities in a person that other people may not necessarily see. It is good for people to have all kinds of friends. However, you should never force yourself to be friends with someone because you feel sorry for them. If you are really only pretending to care and that isn't fair to your so-called "friend." I understand what you mean about irritating people but in life it is necessary to be open-minded and non-judgmental.

There is no way to change someone's personality; they are who they are. It is a tough situation for you because you can't really ask this girl not to come with you, but when she does you can't seem to meet anyone. There are a few possible solutions.

Just because you go with someone to a party doesn't necessarily mean that you have to spend the whole night with them-spread out a little! After all, maybe you are cramping her style just as much as she is yours.

Another option is for you and your friends to break up and go different places. You could kind of form groups; one weekend she could go with one set of people, and the next go with another group of friends.

Additionally, give her the room that she needs to go out and meet people with similar interests with. There are plenty of people around for all types of individuals.

With regard to the issue of your friends choice of clothes, all I can say is that if she wants to wear something, there is very little you can do to dissuade her. Maybe you and your girlfriends can go shopping one day and make casual comments on what would look good on her.

One of my roommates, Brian Neuman, is on the wrestling team and he gave me some suggestions on good things to eat, as well as ways to loose some weight. First he recommends avoiding junk food or drink carbonated beverages and staying away from fattening or fried foods. Salad with a moderate amount of dressing and foods high in protein such as chicken breasts are very good for those watching their weight. Limiting carbohydrates are good, especially if you don't work out, because if unused they turn to fat. Additionally try to avoid eating at night.

Basically, what I think you have to do is be more understanding. Just accept people for who they are, no matter how weird. I would like to finish up with a few words of wisdom from my friend Brian Neuman, the king of sympathy himself, who says, "Eli...damn, why do you have to be so insensitive all the time?" Until next time relax, have fun and let Wink's wisdom be your guide.

If you are interested in writing to Wink there is no need to worry-all questions are confidential and answers are always thorough. However, please write questions that are decent because we can't include material that is libelous or an invasion of privacy. Questions or comments can be sent to Eli Winkler at box C2815, attn: Wink Thinks.

Please note that Wink Thinks is meant to be instructional as well as entertaining. However, it is in no way a substitute for professional counseling

Burgess details life of mountain climbing

Slide show and talk present experiences leading up to climb of Mt. Everest

By Ira Thorpe

Have you ever wondered what it would be like to see the sun rise from the highest point on Earth? On Wednesday, March 22 this and other fascinating stories were told by one of the few people ever to experience it, Adrian Burgess. Burgess presented his lecture "In Search of Everest," a combination slide show and talk recounting the highlights of his near thirty years of climbing and mountaineering experiences.

Besides reaching the summit of Mt. Everest, a climb which he called "neither the most difficult, nor the most rewarding" of his career, Burgess has climbed countless other peaks on four different continents: K2 (the world's second-highest peak); Mt. McKinley (a.k.a. Denali); and a first-ascent on Annapurna IV. Still an avid rock, ice, and mountain climber, Burgess currently lives in Utah and makes his living as a speaker.

Adrian Burgess and his identical twin brother Alan were born in the Yorkshire moors of England. It was among the small cliffs of these moors that the brothers first experienced roped climbing, using their "mum's" washline as a climbing rope. In the summer of 1966 they crossed the English Channel onto the continent and quickly established a reputation for themselves as superb climbers. The brothers performed second ascents that had been established by mountaineering legends such as Walter Bonnatti and René Desmaison.

In 1973, along with two friends, the brothers packed a van full of food and climbing gear and drove across the continent to the Himalayas. It was the first of many trips to the region in which they would climb several of the world's highest peaks. As time passed, they ventured to North and South America to climb many of the highest peaks in the New World. In addition to the fame generated by their technical achievements, they developed a reputation as "the bad boys of climbing." In his speech Burgess recounted an incident that occurred during an expedition to climb Fitzroy, a massive tower of bare granite perched high on the mountainous border between Argentina and Chile:

"After three months of continued attempts, most of our food had gone but we remained focused and resourceful. I baked some bread with the remaining flour, and my brother stole into the mists to rustle some sheep. We climbed to the summit carrying tasty mutton sandwiches."

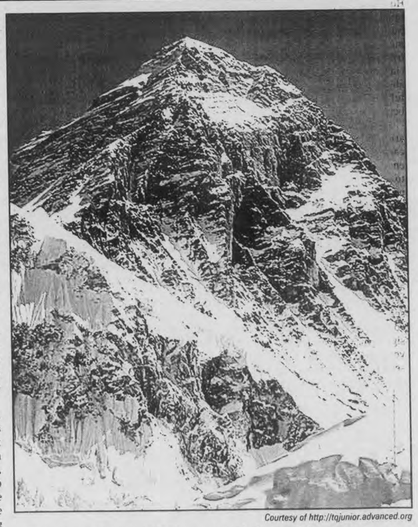
By sometimes invoking such "creative" measures, the brothers managed to successfully complete many of the world's most difficult climbs. But success is a relative measure. "Half of my friends are dead," Burgess said, agreeing with the climber's axiom that "half of the known, famous climbers get to retire.

Burgess is confident, however, that he will be able to retire. He credits this to two important skills—climbing fast and knowing when to turn back. During his successful bid for the summit of Everest, he climbed for only 17 hours over a period of three days, a blazingly fast time. On nearby Lhotse, the world's fourth-highest peak, he turned around less than an hour and a half from the summit because of a sudden, fierce storm, much like the one that claimed the lives of eleven climbers on Mt. Everest in 1996. "Many people would have tried to push it and got killed," Burgess said. "Success is also coming back home."

Still going strong at age 50, Adrian now works the professional lecture circuit speaking to up-and-coming leaders and outdoor groups; he has also written a book about his climbing adventures, *The Burgess Book of Lies*. His brother Alan runs Camp 5 expeditions, a mountaineering guide service based in Salt Lake City, Utah. During the winter, you will find him ice climbing in Colorado and in the summer rock climbing in Utah. "I haven't done anything in my life except climb," Burgess reflected, "that's all I know how to do."

Adrian's adventures and experiences have given him a unique perspective on life. His time in the mountains has taught him to live slower and appreciate the simple pleasures that life has to offer.

"As I look back on all the events, all the mountains, all the struggles and all the defeats, I cannot help but realize they are nothing more than the result of one person's dreams, the things that give us a reason to live, that enrich our lives and give us passion. For without passion we are really nothing at all. So, as long as I can dream, I will climb."



Courtesy of http://tqjunior.advanced.org

Adrian Burgess climbed only 17 hours to reach the top of Mt. Everest.

An abroad perspective: Melbourne, Australia

Courtesy of Matt Albert

The abroad students enjoy a sail around the Whitsunday Islands.

By Matt Albert

After disembarking the plane in Melbourne, Australia, the other Bucknell abroad students and I were immediately issued our boomerangs and kangaroos. It was great having a kangaroo for traveling since there are very few paved roads in Australia, and I used my boomerang to kill emu and snakes for eating. University life was slightly different there too. Instead of being instructed on computers and politics, we learned how to paint pottery and tell the time by looking at the sun.

I would have been only mildly surprised if this description did mirror reality. Preparing for my fall '99 semester abroad at the University of Melbourne was difficult. I had heard that Australia was an advanced country, but visions of Paul Hogan and wrestling crocodiles could not be pushed from my mind.

The facts are that Australia is home to only 17 million people (compared to 255 million here), with the vast majority located in three cities: Sydney, Brisbane, and Melbourne. The rest of the country is mainly desert and inhabited only by aborigines and Crocodile Dundee. I did not know which extreme to expect, so I tried to keep an open mind.

To my relief, Melbourne turned out to be quite normal. I describe it as a friendly New York City. Most every Australian, for that matter, seemed to have one less chip on their shoulder than Americans. Even the tram driver had a half smile on his face. The Aussie motto is "no worries," and that is how they conduct their daily lives.

After arriving July 6, the hundred "yanks" (slang for "Americans") were split up for orientation and went to their respective residence halls. Melbourne University offers 12 campus dorms, called "colleges" (Swartz Hall would be a college). Each college holds about 150 students and is rather exclusive considering Melbourne University enrolls 30,000 students. Six of us yanks were placed in a smaller dorm called University College. This would be the setting for most of my stay.

Classes were a good 15-minute walk away from my college and were very different. I am accustomed to computer science classes of 20 students but, here they topped 250. There were also very few grades throughout the semester. A class had one or two homework assignments if you were lucky, followed by a three-hour final test worth 80 to 100 percent of your grade. It was very easy to forget about them during the first three months since nothing was due each week. All the yanks struggled to keep up with readings and assigned work for fear of having to learn a semester's worth of material in one week before the final. Unfortunately, I was on the losing side of this struggle most of the time.

So the semester rolled on. August and September went well. The weather was around 50 degrees each day. I enjoyed my first skiing experience at one of the many Aussie mountain resorts and was introduced to a favorite Aussie pastime: Australian Rules football. The game can be best described as a cross between American football (which they called gridiron) and soccer, minus just about every rule. The game is fast paced, high scoring and rather violent. I would not be surprised to see it make the jump across the Pacific at some point.

During this time, Australians were also in the midst of a very important national referendum. The question put to a vote was whether Australia should become an independent republic. As it stands, Australia is still a commonwealth of Britain, meaning the ultimate ruler of Australia is the Queen of England. Further, the national flag and currency have British markings.

Voting day passed and Aussies voted to remain a British Commonwealth, which surprised and disgusted me. How could a modern country want to stay a colony of England? Australians mocked the British at every opportunity and had more allegiance with the US. Despite not needing Britain in any way, they chose to stay connected to the crown. The reason: if it ain't broke, don't fix it.

October approached, along with our two-week spring break. Since Australia is in the Southern Hemisphere, its seasons are opposite of ours, giving us yanks time off to see the countryside. By countryside, I mean beach.

Australia is home to some of the greatest beaches in the world. Many of us traveled from Melbourne to Cannes, one of the northernmost cities on the island, by way of the shoreline. Stops along the way included Sydney, Brisbane, Byron Bay and Frasier Island (the world's largest sand island). Each stop offered great scenery and a new perspective of Aussie life.

We also were able to go sailing for three days around the Whitsunday Islands, the gateway to the Great Barrier Reef. A few days later we snorkeled above the reef itself and saw some amazing sea life. Turtles, starfish, clams, fish of every color, and even a few sharks were not uncommon during the dives.

By mid-October it was back to Melbourne and back to the reality of final exams. The next two weeks I tried to cram, I mean review, for each final. The testing procedure itself is interesting. To accommodate the tens of thousands of students, the university holds the bulk of the test at the Melbourne Showgrounds. The grounds are a tram ride away and consist of three large buildings, each holding desks equal to the amount of about four Gallery Theaters. Students are crammed into these buildings hundreds at a time to sweat over an exam that can make or break a semester.

Two weeks and a few pub visits later, I was back on the 747 traveling home. Five months abroad had gone by in a heartbeat. As soon as I saw my parents again back in Pittsburgh I could not help breaking down a little. I was exhausted, happy, sad, relieved and jet lagged all at the same time. Not only had a significant time in my life ended, but I was also changed as a person.

Back here in the US, I try to live the Aussie life of "no worries" and I have learned to stand back and appreciate things a little more. I hope to make it back to Australia some day, not only because I love the country, but also because I miss riding around on my kangaroo.

Matt Albert poses with his newfound friend, a kangaroo.

Computing, programming is way of life for Computer Science Professor

By Katie Hays

Are you a computer science major? Do you use a computer? If so, chances are that you use one configured, at least in part, through Ralph Droms' innovation. Droms, an associate professor of computer science at the University for the past 13 years not only teaches, but designs computer programs. Notably, he is the designer of the Internet standard DHCP (Dynamic Host Configuration Protocol) that uses TCP/IP to automatically configure many of our computers. Yes, he probably understands the meaning of more three and four letter acronyms than the average Depression-era politician does and no, you won't hear him brag about it. Droms' friendly, involved, and peaceful nature marks him as an outstanding member of the University faculty.

Droms originates from the Philadelphia area. As an undergraduate, he studied and earned his degree in math and computer science at Penn State. He later studied at Purdue to earn his Ph.D. in computer science. "I started at Penn State not well aware of the computer science department, and ended up switching fields my senior year," Droms said. "I didn't at first realize all of the opportunities that were there in that department, but now, it's my career."

Before coming to Bucknell, Droms served as a member of the research staff for IBM's T.J. Watson Research Center, and later, as a researcher for UNISYS. He's now teaching two courses at Bucknell, an operating systems design and a computer network course and next year, during Droms' sabbatical, he plans to research at SISCO systems.

Courtesy of www.eg.bucknell.edu/csci

Professor Ralph Droms, Computer Science

Droms says that his favorite part of working with students is the projects and labs where students create a working computer program for themselves. "In the networks course, for example, I write a simulator server, and students write their own programs in order to connect to the server; once they do, they can play a game through the network connection. It's a good feeling to see students come away from the labs having actually built something," Droms said.

Droms himself has "built" and written several programs and texts. He specializes in network configuration technologies (mainly TCP/IP networking), and most recently, published The DHCP Handbook (Droms and Lemon, MacMillan Technical Publishing). He has also recently published "Managed Configuration of TCP/IP Hosts with DHCP," an article which appeared in IEEE, Internet Computing (July/Aug. 1999). Drom's computer science interests range from computer network protocols to distributed applications, from operating systems to compuier architecture.

When he is not in his office, designing or teaching, Droms' involvement with the IETF (Internet Engineering Task Force), in which he chairs the Dynamic Host Configuration working group, gives him frequent travelling opportunities, and his family accompanies him whenever possible. In the past, the IETF has enabled Droms, his wife Jan, and their two daughters, Stacey and Becca, ages 14 and 11, to visit Germany and Norway; they are now planning to see Australia.

Though Drom's children may benefit from his dedication to his field, they don't share his interest in computer science. However, he notes with a grin, "They do chat with their friends on America Online pretty often." His 14 and 11 year old have designed no configuration programs using TCP/IP technology as of yet, and Droms seems, rightly, unconcerned.

To those students who sit in his peaceful office, Droms' attentive listening, kind smile, and straightforward conversation reveal not just his place as a respected computer science expert. As a great teacher and computer science expert, Droms might be called a GT/CSE ... a true asset to the University.

Canadian musician, Ferron to visit campus Friday

By Jennie Scheerer

Ferron has been recognized for 23 years as one of North America's finest songwriters, whose first three albums, released in 1980, 1984 and 1990 respectively, all received across-the-board critical acclaim. "Ferron is a fiesty idealist whose idealism is rooted into the reality of dashed dreams or broken romance and a huge IRS bill. It's tough, reflective and ultimately uplifting music," said *The Boston Globe*.

Born in Toronto, Canada, Ferron was raised in a struggling working class environment near Vancouver. She left home at age 15 to work several blue collar jobs and develop the musical talent that she felt inside her.

By 1975, she worked by day and performed to small crowds at a Vancouver coffeehouse by night. At that same time, Ferron met Gayle Scott, her first managerand the woman her helped her give direction to her career and release her first CDs.

Ferron has lived and worked in the United States since 1987 and she has formed her first American label, Cherrywood Station. On this label, she produced, manufactured and distributed *Not a Still Life*, a solo CD which she recorded live in concert; *Resting With the Question*, an instrumental CD; and the tender and emotional *Driver*. In 1994, the New York Times held *Driver* in high acclaim, and through this success Ferron was accepted on to the Warner Bros. Label. She produced the CD *Still Riot* in 1996, through which she received the continued respect of fans as well as industry talent who felt it was time she be recognized after her many years of hard work and dedication.

"I feel this responsibility to say something and have it be true for me. The gift to me is finding that my work somehow resonates on a deep level with other people and they find that it is also "true" for them.

Ferron has toured extensively throughout North America at concert halls, clubs and festivals in the U.S. and Canada. She is held in high regard by the Indigo Girls and toured with them on and off between 1990-1996. She is the Writer in Residence at Institute for Musical Arts in Bodega, CA.

Ferron will be entertaining the campus community with her uplifting songs on Thursday March 23 at 7:30 in Larison Dining Hall. Admission is free.

A tribute to Andrew Lloyd Webber's Cats . . .

Goodbye to one of Broadway's favorite musicals

Courtesy of http://jellyforom.tripod.com/

***Cats* has entertained sold out crowds during the course of its 20 year run.**

By Andrea Beisser

Broadway will be saying farewell to *Cats*, one of its most cherished and dramatic musicals. The famed play is based on a collection of poems by Thomas Stearns Eliot called *Old Possum's Book of Practical Cats* which was published in 1939. Eliot first arranged the book for his Godchildren beginning in 1931.

The collection brought to life and animated the lives of cats who mirror human attributes. This unusual idea inspired adults to take interest in the book and led to its emergence as a Broadway production. Andrew Lloyd Webber began experimenting with the poetry by adding it to music in late 1977. He remembered reading the poems as a child and was intrigued with the idea of putting existing lyrics to music, which was uncommon in that time. Webber staged a performance of his music selections in a special concert in the late summer of 1980. From there, the play was brought to the public spotlight and introduced on the Broadway scene.

Cats portrays an unusual style in that it does not follow a distinct story line. Instead, it is more like an anthology of characters that are represented as cats. The intent of Eliot's arrangement was to show how cats mimic human characteristics in society. It also served as a way to portray life in the streets of England. The cats were given unique personalities and names. One cat, known as Grisabella represents shriveled fame and beauty. Her poems voice regret and pain from the memories of her days in the stage spotlight. The weary, rugged appearance depicted on *Cats* is the result of corruption and a deluded view if what she thought happiness was.

The Rum Tum Tugger cat is an egotistical, attention-seeking performer. He struts jubilantly around the stage, consumed with himself and impressing all eyes that follow him, both audience and female feline performers on stage. He could be synonymous to Elvis Presley, who also basked in the public spotlight as well. Old Deuteronomy represents a character of great stature. His gray, aged appearance symbolized dignity and wisdom. The cats seek his adornment and look to his expertise and experience for wisdom.

A contrasting character would be Macavity, the mystery cat. Symbolizing a trickster with a knack for escaping the law, this cat takes the human qualities of a mob member. Evading authorities and the confinement of a prison cell, Macavity dances around the stage to a jazzy tune and leaves with a fantastic electrical display. Despite his deviant tendency, the mystery cat is a favorite among the audience members.

One must not forget Skimbleshanks, the railway cat. This cat performs to a musical chant that mimics a train rhythm. Its energy captivates audiences and encourages the feeling of innovation associated with Skimbleshanks. The few cats named above are just a handful of the characters who contribute to the production of *Cats*. The literary greatness of T.S. Eliot combined with some of Andrew Lloyd Webber's best creates a brilliant performance.

Don't let the cats dance their way off Broadway without delighting you with their theatrical energy. Try to catch the next bus to New York and attend a performance.

2nd Annual Choreographer's Showcase features campus talent and wide variety of dancing

By Rianna Romanowski

The Choreographer's Showcase is in it's second year. It is a Department of Theatre and Dance production, and is partly student-run, partly faculty-run. Director of Dance Danna Frangione serves as our advisor.

This year, the showcase is a mix of student, faculty, and guest artist choreography, with six out of the nine pieces choreographed by students.

The student choreographers are: Cara Alaimo '00, Kristy Kuhn '00, Steve Stasson '02, Krystal Rickard '00, Amy Rinker, and , Rianna Romanowski '00. Guest artists include Beth Hirschhaut-Iguchi and Janelle Oltorik Wilkinson, both 1993 University graduates.

The faculty choreographer this year is Paula Davis-Larson. There is a wide variety of dance forms in the concert: both guest artists set jazz pieces on the dancers, Davis-Larson set a Bulgarian folk dance, and student choreographers set tap, jazz, and modern pieces.

Over the past few years, there has been an increase in the number of students wanting to participate in dance, both in the classroom and on the stage. The showcase came into fruiton last year out of the desires of more dance students to perform and of students who wanted to choreograph, but weren't able to participate in Bucknell Dance Company.

Last year the showcase was performed in Tustin Studio Theatre, and this year it will be performed in the Harvey Powers Theatre in Coleman Hall. There is general seating, no reserve tickets, it costs $1 to get in, and is on March 30 and 31 at 8 pm.

UPCOMING CAMPUS EVENTS

* March 24- Weis Center Series 2 Rennie Harris, hip-hop pioneer, "Pure Move ment" Weis Center 8 p.m. $20
* March 23, 24- Original theater and dance piece, directed by senior Jen Schmermund, Harvey Powers Theater 8 p.m. $1
* March 28-Guest recital with Fitzwilliam String Quartet, Rooke Chapel, 8 p.m.
* March 30-Choreographers Showcase, Harvey Powers Theater 8 p.m., $1
* Senior Recital Paul Crowe, tuba, Bucknell Hall, 8 p.m.

Morphine's last album remembers front-man, Mark Sandman

By Campbell Gerrish

Morphine, the mysterious and notorious sax, bass and drums trio, released its last album with front-man Mark Sandman, *The Night*, this past February. Sandman, vocalist, bassist, and lyricist for the band, passed away shortly after the completion of the album. It is a terrible shame for the music world to lose such talent, but Sandman exited this world leaving behind a terrific last work.

Much of *The Night* includes Morphine's characteristic dark and simple-sound , but the group also experimented with a wide variety of instrumental additions and slightly different musical styles. One notable guest is John Medeski, of Medeski, Marin and wood who plays organs on two tracks, "Top Floor, Bottom Buzzer," and "I'm yours, You're Mine."

Sandman lays down a solid funky bass line, and Medeski adding verbrato organ. It has a dark element to it, but this song is probably the band's most up beat song to date. Morphine went even further than the Medeski addition on this tune adding backup female singers during the chorus.

The album's title song, "The Night," is another one of its best. For this one, Sandman recorded a piano track and included a guest cello player. The synthesis of droning cello, soft piano, bass sax and a funky but quiet drum beat depict impeccably the feeling of a peaceful "Night." Its poignant lyrics set over the music make a song so wonderful that you'll sit listening happily, completely relaxed, but on the verge of tears.

"Rope on Fire"is a very mellow piece with hints of Indian influence is another facet of *The Night* that makes it such a unique album. On this song there are a number of guest instrumentalist additions — cello, bowed bass, viola and hand drums. The string section and sax add a lot to make this song sound similar to a traditional Indian song. The percussion is great; you can't hear too much of what's really going on with the percussion until all the instruments cut out and it's just the drums beneath Sandman, but finally you realize how much is actually going on.

Lastly, "So Many Ways,"an anthem for the trials and tribulations of a drug user, is just incredible. For this song, Morphine plays all the instruments including organ, acoustic guitarand bass played by Sandman, and then drums and sax by Dana Colley and Billy Conway. The drum beat is especially strong in following along more "tribal" than funk lines, along with great sax and acoustic guitar. These three aspects filtered into Morphine's arena of unique, "baritone" level sound produce quite an extravagant pop tune.

Some said Mark Sandman was insane, some said he was a genius; others thought he was both. Many times with genius comes madness, a condition once lamented by one of Sandman's idols, Allen Ginsberg. As stated by Sam Seiler, "The paths of exceptional creative talent and its insanely evil stepbrother are almost indistinguishably close, but they're not completely parallel and— as the life of Sandman ... showed in its all too sudden end · when these paths come too near each other the gravity of madness always wins. And when it's over there is no second chance, no future, no rewind button. All that is left is what is left over; in this case, what was left over was The Night. Savor it".

Courtesy of www.lukin.com

Morphine completed their latest album, *The Night* this past February just before the tragic death of Sandman.

Unexpected, yet appropriate visitor adds to student recital

By Jennifer Johnson

Sunday afternoon was the Senior-Sophomore Recital of senior Electrical Engineering major and music minor Heidi Daub and music education major Matthew Hoy '02; Daub performed on the piano and Hoy on the violin.

When asked about the recital, Daub said, "I've taken lessons here for about three years but most of the recital work I've done has been accompanying music majors. This was a really big deal for me to do a solo recital. I wasn't sure I wanted to but I was highly encouraged by my piano teachers, Professor Lois Forbes and Professor Lois Svard."

While Daub and pianist Annabelle Choi were performing a Ravel piece for four hands, an unexpected visitor fluttered by.

"The funniest part about it all is that one of the movements of the Ravel is supposed to sound like birds and then what do you know, one flies in!" Daub said. A bird had somehow entered Bucknell Hall, probably through a door left opened to let in some fresh air.

The crowd of students, professors and family members were shocked and somewhat amused by the birds' visit. "Heidi and I agreed that the bird may have been attracted to the Ravel piece, which contains music that mimics bird sounds. A pianist once was practicing a Messaien piece written about different types of birds and actually had the exact type of bird which he was playing on the piano at the time call back to him through an open window!" Michael Taylor, '00 said.

During the intermission the windows were opened in order to aid the bird's escape but she decided to stick around for the second half. This portion included solos by Daub and Hoy, and concluded with a trio with Daub, Hoy and cellist Zoya Jenks.

Daub said of the finale, "It turns out my favorite piece overall was the Mozart Trio because it was so much fun. Matt, Zoya, and I really came a long way in a short period of time and they did such an excellent job."

The recital ended with congratulations from family, friends and faculty, along with the question of how to return the bird outdoors. (For you animal lovers out there, actions were taken to return the animal to her home.)

Student-directed showcase this Friday

By Jennie Scheerer

As both her senior honors thesis and senior independent theatre project, Jennifer Schmermund is directing a showcase within the Theater and Dance departments. Schmermund has acted in several theatre productions here, and has been dancing and choreographing for the Bucknell Dance Company for the past four years.

Schmermund chose to combine her these passions through the creation of an original performance piece using actors, dancers, and musicians. For inspiration, she has looked to the progression of movements in art history throughout 19th and 20th centuries, specifically realism, impressionism, and expressionism.

The text is a compilation of poetry by e e. cummings interspersed with poetry written by Schmermund herself .

"The performance itself explores the agonies and ecstasies of the artistic process, reflecting the rehearsal process my cast has endured to get to this point. At the beginning of the semester, there were a series of workshop rehearsals with a strong emphasis on improvisation. I rehearsed each group individually until March, when I brought the dancers, actors, and musicians together. From that point, rehearsals have been focused on finding ways to bring these groups together as a company using the material produced during the workshops," Schmermund said. There will be a display in the lobby highlighting the visual art Schmermund used as inspiration. The video she made of rehearsals will also be playing.

The cast members include dancers Sarah Wagner '01, Claire Welsh '00, Stephanie Turi '03, and Schmermund.. Actors include Amy Gilday '00, Misty Trezona '02, Hillary DePiano '02. Musicians Micah Schweizer '00 on flute, Megan Ranciер '01 on violin, Daniel Morel '03 on keyboard, and Galen Grant will also be performing on percussion.

Also involved is a team of talented and dedicated designers with whom Schmermund has been working closely. Mary Kokie '02 has spent this semester de<ligning and hand-making extraordinary costumes for the entire cast. Chaz Crosby and Eric Hart are designing lights, and have been working hard hanging and focusing the lights to fit the different moods of the piece. Dr. Gary Grant, the chair of the theatre department, has been Schmermund's advisor throughout the process.

The show is titled "someone once said" and will be performed in the Harvey M. Powers Theatre in Coleman Hall at 8pm this Friday and Saturday. Admission is $1.

Cider House Rules provokes both thought and emotion

By Krista Reisdorf

Courtesy of http://movies.yahoo.com/

Michael Caine, Tobey Maguire take on characters in John Irving's novel.

The film "The Cider House Rules" tells the story of Homer Wells (played by Tobey Maguire), a long-time orphan who is now student to the head of the New England orphanage, Dr. Larch (portrayed by the very talented Michael Caine). When Homer gets the chance to break free from the world and the home he has always known, he takes it. Homer begins the journey of a lifetime when he jumps into the car of Wally (Paul Rudd) and Candy (Charlize Theron) and finds out that life does exist outside the walls of the orphanage and away from the tutelage of Dr. Larch.

His hopes are high and his enthusiasm is great as he ventures into a life with a new job, new friends and the pursuit of love. But Homer soon realizes that life is not for the weak, and getting what you want is not always what you expected.

Michael Caine delivers with a magnificent portrayal of Dr. Larch, who is losing the boy that he had once embraced as his own. Caine plays his role with great sincerity and credibility. He compels the audience to experience his emotions—whether they be pain, fear, vulnerability, or love. The warmth and humanity Caine brings to the role amplifies his superb performance. Maguire gives Homer a very "boy-next-door" appearance and feeling with his subtle good looks and basically downplayed acting. He states his lines matter-of-factly and almost completely without drama, which may seem detrimental to any role. Instead it is refreshing and brings unusual charm to the character, as if he were born to speak the words in that manner.

Theron gives a decent performance as Candy, the object of Homer's affection, although at times there seems to be something missing. However, she maneuvers the role with grace and emotion, still yielding a satisfactory depiction of the character. A pleasant surprise in the film is the impressive acting ability of newcomer Eryka Badu, who plays one of the apple-pickers in the orchard where Homer works. She seems to pull off the role almost effortlessly, giving the audience a moving and remarkable performance.

In the end, "The Cider House Rules" is a poignant tale of love and life, revealing to us that each road one takes has a greater purpose—only the choice needs to be made. The film does not use the sly tricks that are in many other movies today. It does not tell you when to cry or when to laugh. It allows you to feel, and that is a great accomplishment.

Law schools introduce animal law

Activists turn from destructive protest to more constructive means—and for the first time, law schools are listening

By Alex Piel

Though dousing fur coats with spray paint, destroying animal research laboratories, and releasing captive lab subjects are some methods of exposing the continuing animal rights violations in this country, activists are finding an alternative and more influential way of spreading their message. Students at law schools such as Harvard, Duke and Georgetown University have begun to study and learn about legal struggles for non-human animals.

With revolutionary discoveries and technological breakthroughs in genetic manipulation and neuroscientific analysis, the distinction between human and animal has grown faint, and lawyers have generated enough precedent—setting judgments to define and create an entirely new field of study: Animal Law. This growing field is now attracting more and more students at the law schools that offer it across the nation.

"It is timely," explained Alan Ray, assistant dean for academic affairs at Harvard Law School. "We felt the course would respond to a growing student interest and to growing scholarship in the field. We're not making any broader statement of policy about animal rights, but we do believe there are legitimate issues raised that deserve consideration about the legal status of nonhuman animals."

To teach the first course at Harvard, the board hired renowned Massachusetts's attorney Steven Wise. Following in Peter Singer's 1976 *Animal Rights and Human Obligations*, Wise recently published a book arguing for animal legal rights, *Rattling the Cage*, which was hailed by primatologists, activists, and scholars alike. It's not hard to see the rumblings of a revolution beginning to gain popularity in North America, a rebellion that is beginning in high school and college campuses across the United States over an issue many still believe is as extreme as the 19th-century belief that black slaves were people, owned property. Back then it was inconceivable to imagine slaves having rights. Over a hundred years later, we have merely substituted animals for slaves.

"This is one of the most difficult social revolutions we have ever had," says Wise. "I think," he continues, "that the history and the law and the theology is so ingrained in human beings that to some degree, to a large degree, we need a major paradigm shift." The new approach abandons defiant strategies such as tossing paint on fur coats, raiding fishmongers and storming research facilities, and replaces it with a more cerebral and acceptable advance supported by the increasing scientific and ethical rationale that animals are capable of thinking and feeling more deeply than we previously thought. Proponents are taking their passions and eagerness into classrooms, courtrooms and legislatures across the country are trying to persuade teachers and judges that animals are sentient creatures and not property, but they are not so oblivious to majority thinking as to try to include every organism arbitrarily without discussion. Instead, Wise keeps his classes and students focused on issues and not examples.

"Can animals feel pain?" Wise asks the class. More importantly, he goes on, "Does it matter?" Wise's class discussions swerve and twist varying from the kosher slaughter of animals, poultry consumption, and seafood eating to animal cognition and signing chimpanzees.

Students argue for and against animal rights preparing for the obvious attacks and vulnerabilities of such a perspective. The scope of the class is so broad that, though he leads the discussions, Wise cannot be an expert on all the issues. Working his way through a jungle of topics that demand consideration, Wise and his class debate the history of animal rights including the Bible pronouncement that humans were created in God's image and Aristotle claiming that life on earth is here to serve mankind.

Courtesy of chimps-inc.com

Dave Kumar, a third-year law student auditing the class out of pure love for the topic and professor, agrees that this issue is the beginning of a revolution. "I feel like this is the start of something big, something where the parties involved don't have voices of their own."

Similar to the task famed primatologist Jane Goodall has set out to accomplish, Wise has recently focused on gaining more rights for non-human primates. In the coming years, Wise hopes to present a case that chimpanzees and bonobos, share enough genetic and social similarities with humans that they deserve more fundamental legal rights. In trying to protect them from hunters, traders, and farmers, Wise hopes to initially rid biomedical research labs of non-human primates, and eventually all animals.

But Wise has his critics. Skeptics acknowledge an increase in litigation, but to suggest that animals should have legal rights is more than some can accept. Most non-activists find the claim a step outside ridiculous. "I do not regard myself as an 'animal-is-a-thing' person," said University of Chicago professor Richard Epstein, who has become one of the few legal scholars to publicly question the law school trend. "That's a grotesque position. But we can't falsify what we know as the truth about evolution and human behavior. Animals aren't human beings." Epstein, however, is at a loss to explain how the issue has gained such popularity and why courses have recently multiplied at schools from Harvard and Georgetown University in Washington, D.C., to the more conservative University of Florida in Gainesville. "I'm stunned at the level of interest this topic has generated," he said.

Last summer in the *New York Times*, Epstein was quoted as asking if we would next pursue animal rights for bacteria. Soon thereafter, Epstein received a flood of letters from the public. Some letters called for him to be removed from the staff, while others were supportive of his position. "One would much rather see this thing more loosely decided on its merits, but it goes straight to the heart of how man should control his environment and there is this peculiar kind of backlash," Epstein said. "The courses are in danger of becoming a propaganda effort because there is a tilt in the field—everybody who teaches them is for 'the cause'. But as far as I know, a chimpanzee has never yet made a case for itself before a court."

Though animal rights advocates site scientific evidence comparing human and chimpanzee genetics and the 98.5 percent similarity between the two groups, there are other ties. A report appeared last summer in the journal Nature showing that chimpanzees in the wild create complex social communities that, like human societies, develop into distinctly different cultures. Primatologists will vouch that other social behaviors including tool making, grooming, and courtship suggest that these animals live in a social group far more complex than we realize. Only last year did a report come out in Science that two rhesus monkeys could not only discriminate quantities, but also apply an ordinal, abstract rule to novel stimuli. Though their capabilities can no longer be doubted, many still question their degree of awareness.

A controversial issue in animal cognition today is whether or not non-human animals, chimpanzees especially, understand their place in the world and share, with us, consciousness. Citing their other qualities, Wise believes chimps and bonobos demonstrate they are conscious beings deserving not just human protection, but legal rights. Wise confronts many a critic with this claim, though evidence is scarce and subjective.

"I think Steve Wise has a great mission," said Bucknell alumni and Harvard professor Marc Hauser. Author of *Wild Minds: What Animals Think* (2000) and *Animal Communication* (1996), Hauser is hesitant to jump on the bandwagon. "Wise wants to make sure animals aren't dismissed as property, and I'm 100 percent behind that. On the other hand, when he crosses disciplines, his reading and understanding of animals is not how I interpret them. He promotes stuff I don't think is easily justified," Hauser said.

Hauser thinks that even though chimps share some cognitive similarities with humans, they are incapable of understanding what others know, think, believe and desire—qualities often listed by researchers as necessary for having a theory of mind and consciousness. "We have to be careful about ascribing human motivations and reactions to animal behaviors," he said, "or suggesting that we know what's going on in their hearts and minds when we just don't have it yet."

The last decade has seen an increase in animal cruelty laws, harsher punishments, and widespread public concern for these acts that were once ignored. Last year in Seattle, the City Council came very close to endorsing an ordinance banning circus animals from the town. Recently in San Francisco, the local animal control commission advised adding the term "pet guardians" to official documents describing the relationship between pets and their human companions.

In the past six years, the number of states with felony violations for animal cruelty rose from six to 27. In November of 1999, an Oregon teen found guilty of dragging a dog to its death was sentenced to 10 years in a state training facility under a felony cruelty law.

"That would have been unthinkable five years ago," said Pamela Frasch, a Portland, Ore., attorney and an author of the field's first casebook, *Animal Law*. "But it's a step toward legal rights when anti-cruelty laws like that are upgraded to felonies. It increases public awareness that animals are not just things, but creatures that feel pain and have awareness and deserve to be treated like more than inanimate objects."

Though skeptics say that these cases and others like it represent incremental change, Wise hopes these small successes will encourage judges to accept cases that will create enough foundation to build a common law for animals. "As in comedy, timing is everything in the law," Wise said. "I don't think we will see the first successful lawsuit [establishing animal rights] for another 8 or 10 years. But in the meantime, we can begin to establish principles in areas of common law, even in cases that don't seem relevant."

Once established, they can be tested and eventually applied in a broader sense." Through this process, though endless for Wise and those that share his beliefs, Wise cites how quickly science and law have advanced and grown together. Hopefully with promotion from Wise and his colleagues, society will change their approach to animal rights. "Lawyers are coming out of the woodwork to learn about this," Wise said. "With the books and courses out there, they're more comfortable making their interests known. They can't be accused any longer of wasting time on an area that's frivolous."

"How can we go around arguing that we, as human beings, deserve fundamental rights when we are drawing arbitrary lines?" he asked. "What's the difference between my two—year—old twins and a chimpanzee who speaks with a repertoire of 1,000 signs?"

Future U.S. fighter aircraft in development

By Matt Markl

The U.S. Armed Forces has not developed a totally new fighter aircraft since the late 1970's when it first launched the Have Blue Program, which went on to become the F-117 Nighthawk. Currently, the U.S. military is funding three fighter development programs. The Planes under development are the F-22 Raptor, the Joint Strike Fighter, and the F-18 Super Hornet. If built, these planes will become the backbone of fighter aircraft used by all branches of the U.S. military well into the next century. However, each program is experiencing difficulties, which could cause elimination.

F-18 Super Hornet

The F-18F Super Hornet, unlike the Raptor and the Joint Strike Fighter, is not a totally new aircraft. It is built on the existing airframe of

A newly delivered Super Hornet landing aboard an aircraft carrier.

the F-18F Hornet, but that is where the similarities end. The Super Hornet is designed to take over the responsibilities once carried out by the F-14 Tomcat (the plane Tom Cruise flew in the movie *Top Gun*). The principle mission of the Tomcat was to intercept enemy aircraft before they could pose a threat to the fleet. The Super Hornet cannot fly as high or as fast as the F-14, but it's far more maneuverable and its internal weapon systems are far more advanced. Through the use of special radar absorbing materials, the Super Hornet has one-tenth the radar cross section of the original Hornet, even though it is slightly larger. The first F-18F was delivered to the U.S. Navy earlier this year. The Super Hornet will gradually replace the aging fleet of F-14's and will become the Navy's primary all-weather interceptor. Many people feel that the Super Hornet's performance or lack thereof especially in relation to speed, range and altitude, will present a problem in an armed conflict. Only time will tell if the Super Hornet can fill the shoes of the F-14.

F-22 Raptor

The F-22 Raptor is the most advanced fighter aircraft ever built. The plane is still being tested by the U.S. Air Force, and if it goes into production it will be the most expensive fighter aircraft ever built. Sources at Lockheed-Martin estimate the price tag to reach over $170 million per plane.

The Raptor will be a culmination of many new and exotic technologies. It will be the first aircraft in history capable of cruising at supersonic speeds without the use of afterburners. This technology, dubbed "supercruise," was tremendously difficult to master. Scientists have been tinkering with it since the late fifties. The Raptor will be powered by two F119-PW-100 engines, capable of producing over 35,000 pounds of thrust apiece, according to Pratt & Whitney (the exact thrust capabilities are still classified). The advantage of cruising at supersonic speeds without afterburners is the conservation of fuel. An afterburner is like pouring gas on to a campfire. Though a lot of energy is produced, fuel is consumed at an incredible rate. Supercruising will allow the Raptor to stay in the air longer and patrol larger areas at greater speeds.

Another one of Raptors advanced technologies is its data-link capability. This allows one F-22 to communicate with another F-22 via computer without the use of a radio. This means that planes will be able to securely communicate with one another without having to worry about the enemy eavesdropping.

The Raptor will be far more agile than any current fighter. This is because it incorporates thrust-vectoring technology, increasing maneuverability. Most planes only utilize their wing surfaces to control the path of their flight. The F-22 will not only use its flaps, but will also channel the thrust leaving its engines.

Courtesy of af.mil

The F-22 during its 500th flight test hour. The Raptor has completed 11 percent of its flight-test regime so far.

This is achieved by positioning two paddles above and below each engine exhaust. These paddles can be controlled by the pilot and allow the plane to perform maneuvers which would be impossible in any other aircraft.

Another one of the Raptor's advanced features is its stealth capability. The plane's radar cross section (how big the aircraft appears on the enemy's radar screen) is approximately the size of a bumblebee. The plane is the next generation in stealth technology. All of its surfaces are angular and are covered with radar absorbing material. Even the weapons of the aircraft (missiles, laser-guided bombs, and a double barrel 20mm cannon) are housed within its fuselage to avoid sending back a signal to enemy radar.

Though the Raptor is a technological marvel, there is still a good chance that the program will be cancelled. Last October the House of Representatives voted to suspend, but the program was saved at the last minute by compromises made in the Senate.

Joint Strike Fighter

The Joint Strike Fighter, like the Raptor, is a totally new aircraft. It is being designed and built to fill numerous roles within the United States armed forces and within the United Kingdoms Royal Navy. The plane if built will be adopted by every branch of the armed forces, with the Marines, Army, and Navy all possessing it in different variations. The Royal Navy will also purchase a variant of the Joint Strike Fighter acquired by the Marine Core. As of yet no functioning Joint Strike Fighter has taken to the air. Prototypes of the aircraft are currently in the process of being constructed and assembled by Lockheed-Martin and Boeing.

The Joint Strike Fighter program is supposed to produce a fighter aircraft which is affordable and easy to maintain, while being able to complete a vast array of missions. All variations of the planes planned by Boeing and Lockheed-Martin are currently estimated to cost under $70 million apiece (relatively cheap by today's standards). Ultimately, price will be an overwhelming factor in the final decision of which company's plane will be built, since in total it is estimated that about 3000 aircraft will be built for operation in the next century.

So far the Joint Strike Fighter development program has gone unscathed even though the program has numerous enemies. Most of them argue that a single aircraft could not possibly be versatile enough to fulfill as many missions as its supporters have planned for it. There is also concern that the Pentagon has placed too much emphasis on developing a low cost aircraft, sacrificing aircraft performance and even worse, U.S. air superiority in future conflicts.

It is fairly likely that the Super Hornet, Raptor, and Joint Strike Fighter will all see active use in the United States Armed Forces. But their use will most likely be on a much smaller scale then originally attended. Currently, the U.S. has no friend or foe with aircraft comparable to its own. The fall of the Soviet Union almost a decade ago erased the only power that could compete with the United States in the air. However, the quickest way to be overtaken in any field is to become complacent and content with your position. In the end, Congress will have to decide if the high cost of the fighters in development is worth the edge it will give the U.S. over all the other armed forces in the decades to come.

Ian Joseph '01, *who went two for three wit two RBIs to lead the Bison baseball team to a 5-1 victory over Cornell.*

Lacrosse earns national ranking

Enter the top-20 for the first time since 1996 after a 10-9 upset of Army

By Mike Myers

The Bucknell men's lacrosse team split four contests over spring break, playing three teams ranked in the top 20. After their upset of Army, the Bison entered the polls as the 20th ranked lacrosse team in the nation—their first top-20 ranking since 1996.

The first of the four games came on Tuesday, March 7, when the Bison played strong defense in holding the explosive Maryland Terrapins to just five goals in the first 45 minutes. The Bison held Maryland scoreless in the third quarter but allowed four goals in the fourth period. Maryland prevailed 9-3, but it still was an impressive showing by the Bison.

On March 11, the Orange and Blue challenged the University of Pennsylvania at St. Paul's School in Baltimore, MD. The Quakers entered the game ranked 12th in the nation and were coming off a victory over Notre Dame.

Once again the Bison defense was amazing, holding Penn to just five goals. Andy Smith '00 recorded 12 saves in goal while Jim Egan '00 scored two goals, including the goal that put Bucknell up 4-3 with 7:57 to go in the game.

Penn responded by scoring with just under four minutes left to tie it up. This forced the game into overtime, where Penn scored the game-winner with 1:44 left to go for a 5-4 win.

Next, Bucknell put on an offensive display against Mt. St. Mary's on Tuesday, March 14, scoring six goals in the first quarter. Alex Gibson '00 led the Bison with two goals and two assists, while Keith Poisella '02 and Chris Cutillo '03 added two goals apiece. The Bison cruised to an 11-1 victory.

> *"Our defense has been consistent the entire time...I think we have a chance to go to the [NCAA] tournament."*
> ***—Dennis Geraghty '03***

"We stuck to our game and played really well offensively and defensively," Gibson said. "We played as a team."

Bucknell recorded a big win over Patriot League nemesis Army, which was ranked 18th in the country, on Saturday, March 18, with a 10-9 victory over the Cadets. This was just the Bison's second win all-time against the Cadets, who came into the game 18-1 against Bucknell—the Bison's only win coming in their undefeated 1996 season.

Goaltender Justin Sussman '03 stood tall between the pipes in place of the injured Smith. Sussman made 12 saves on the day to preserve the Bison victory. Michael Cheng'01 and Dennis Geraghty'03 each notched three goals in the victory. Gibson also scored a goal and added three assists. Poisella scored a goal and an assist, while Brad VanNostrand'00 chipped in with two assists for the Bison.

"Our defensive has been consistent the entire time," Geraghty said. "Our offense struggled the first couple games but when we needed to we got the job done. I think we have a chance to go to the [NCAA] tournament."

Bucknell will head to Easton on Saturday, March 25 to take on Patriot League rival Lafayette at 1:00 p.m. The Bison will return home for a Patriot League showdown with preseason league favorite Hobart on Saturday, April 1 at 1:00 p.m.

Courtesy of Athletic Communications

Michael Chang netted three goals to lead the Bison to their 10-9 upset of Army.

Experienced baseball squad hungry for success in '00

By Andrew Bevan

The coming of spring brings with it many things. One of those is the start of America's pastime, baseball. The Bucknell baseball team looks to continue its success in the Patriot League as it begins the 2000 season.

Head coach Gene Depew returns all but two players from last year's squad that won the regular season Patriot League Championship and lost in the final game of the Patriot League finals against Navy. The Bison were picked to finish second this year behind the Midshipmen in a preseason poll voted on by the head coaches in the league.

The Bison come into this season with a large advantage in terms of experience with three senior position players and four senior pitchers.

"We have a lot of depth in the pitching staff and overall we have pretty decent team speed," Depew said.

Junior outfielders Ian Joseph and Kevin Eiben return as the two leading base stealers in the Patriot League last year.

However, the Bison suffered a personnel setback when junior pitcher Kevin McDowell went out for the year with an elbow injury, which required surgery over spring break. The loss of McDowell creates a one dimensional pitching staff for the Bison in that they have no experienced left-handed pitchers.

Bucknell began its 2000 season on the road as it traveled south to the University of Virginia to face the Cavaliers.

"The UVA series was an opportunity for us to get outside and get some first game experience," Depew said.

In the first game of a doubleheader on Saturday, Feb. 26, the Bison fell behind early when senior tri-captain and starting pitcher Matt Potalivo '00 gave up two runs in the second inning. The Bison got a run back in the fourth when they loaded the bases and right fielder Mike Ritz '01 hit a sacrifice fly to score Eiben from third. But that was all the Bison would get as they fell, 6-1.

In the second game the Bison got on the scoreboard first after Joseph led off with a double down the right field line and scored on a single by senior tri-captain and second baseman Tyler Prout. The Bison extended their lead in the second, scoring three runs with RBI's from shortstop Chris Herron '01, catcher Brad Gething '01 and Joseph.

Starting pitcher Scott Perry '00 pitched five and two thirds innings, striking out five and surrendering seven hits and two runs. However, the bullpen was unable to seal the deal for the Bison as the Cavaliers scored three runs in the last inning to secure a 5-4 victory. Sophomore Greg Farmery took the loss for the Bison. Herron went two-for-three with a double and a RBI while Joseph went two-for-four with a RBI and a double to lead the Bison.

In their last game of the series against the Cavaliers on the following day, the Bison did not fare so well, losing 13-2. Bucknell scored its only runs of the afternoon on a two-run home run by senior tri-captain and catcher Frank Fresconi in the first inning. However, Virginia came right back with three runs in the bottom half of the first and never looked back. Senior pitcher Ed Soley had some difficulties with his control and suffered his first loss of the season.

"I was pleased with the defense we played and we had pretty good pitching. We lacked some consistency on offense," Depew said.

The Bison returned home the following weekend to face Cornell in a four-game series. The Bison split the first doubleheader with the Big Red on Saturday. In the first game, Bucknell put runs on the board right away, scoring a total of eight runs over the first two innings. The Bison added one run in each of the next three innings and gained their first victory of the season, 11-2. Perry secured his first win on six innings of three-hit ball, striking out seven. Offensive leaders for the Bison included junior third baseman John DiBonaventura, who went three-for-three with two RBIs, and Gething, who went two for four with two RBIs. The Bison lost the second game of the day in a close contest, falling 8-6 to the Big Red.

The Bison loaded the bases in the last inning only to see junior first baseman Russ Lindberg go down on strikes on a questionable call. In what would be his only start of the season, McDowell gave up six runs on eight hits in five and a thirds innings. Offensive highlights for the Bison in that contest included a fourth inning home run by Lindberg and two doubles by Fresconi.

Bucknell brought out the brooms the following day, sweeping the Big Red in the second doubleheader behind two strong pitching performances. The first game was a pitcher's duel as Potalivo pitched a complete game for the Bison, surrendering two runs on five hits and striking out five. Eiben singled in the winning run in the bottom of the seventh as the Bison squeaked out a 3-2 victory.

In the second game, Soley turned in a masterful performance, giving up one unearned run on two hits and striking out seven. Joseph went two-for-three with two RBIs to spark the Bison offense to a 5-1 victory.

"We played much better offensively and we improved overall. We had a chance to win all four games," Depew said.

The Bison headed to Florida for Spring Break to participate in the Homestead Challenge. Bucknell started off very well, winning its first four games in convincing fashion, 14-2 over Marist, 19-7 over Sacred Heart, 12-5 over St. Cloud St. and 10-4 over St.Francis. Potalivo, Perry and Soley all picked up their second wins of the season and sophomore Chris Lackett picked up his first victory.

The next four games for the Bison were the complete opposite of their first four as the Bison suffered four straight defeats at the hands of Rhode Island, 8-7 in extra innings, Wagner, 9-7, and Drexel twice, both by a score of 4-1. "We did not hit the ball as well we could have in our last three games," Depew said.

The Bison play next at home against Bloomsburg this Thursday at 3 p.m. "We need to get back to the way we were playing before," Depew said. "We want to be at our best for the 20-game league season."

Bucknell continues its season this weekend with doubleheaders at Temple and Lebanon Valley. The Bison open Patriot League play the following weekend at Lafayette in a pair of doubleheaders.

Bison excel out West

By Allison Kuhn

Matthew Kasdan—The Bucknellian

The Bison finished the Coyote Classic 3-2.

The Bucknell women's water polo team returned from a spring break trip in California with a successful record of 3-2. The Bison played in the Coyote Classic Invitational at California State San Bernardino. Bucknell defeated host San Bernardino, 9-6; the University of Le Verne, 7-6; and Chapman, 9-3. Its winning streak ended against California Baptist, as it fell 10-3, and Bucknell lost to Cal Baptist for a second time later in week, falling 12-7.

"I was happy with our 3-2 finish at the Coyote Classic, however, we did not play well in our first game against Cal Baptist," head coach John Zeigler said.

In the first game of the invitational against San Bernardino, Katie Stahler '03 had four goals and four steals while Adrienne Schober '02 added two goals, four assists and one steal to pace the Bison. "We started the week off right with a strong game against San Bernardino," senior co-captain Emily McKnight said. "Our ability to adjust to different environments was a big advantage." The game against Le Verne allowed the team to again play as a whole and utilize its depth. Paige Cull '01 and Julie McLaughlin '01 both had two goals, while Brooke Rea '02 added two goals, two steals and one assist.

Against Chapman, there was opportunity for the Bison to open up the bench and use more of the team. Rea led with two goals and two steals. Stahler, Cull, McLaughlin, Kim Kaczor '01 Schober, Katie Kohn '03 and Liz Wilmarth '03 also found the net. In addition, Stahler had four steals."

Cull led the Bison in the first game against Cal Baptist with two goals and two steals, and Stahler contributed one goal and two steals. The Bison did not play well against Cal Baptist, as it was their fifth game in as many days. "We were worn out and we didn't have the stamina that we needed to compete with a powerhouse like Cal Baptist," Schober said.

In the last game against Cal Baptist the Bison made several improvements; they were able to compete at their opponent's level and put up a fight, although they ultimately fell 12-7. Cull had three goals and two steals, while McKnight added two goals and McLaughlin had one goal, two assists and a steal. Co-Captain Kristen D'Agostino '00 had 11 saves in the goal.

"I was very pleased with the game we played against a solid Cal Baptist team later in the week and we kept the score close through most of the game. We played with a lot more intensity and had Rea not been ejected from the game with three major fouls early in the second period, I think we could have won the game," Zeigler said.

All in all the tournament was a success and the Bison displayed excellent offensive and defensive prowess. "We put together three solid games combining a very good offensive effort from Rea, Cull and McLaughlin with a solid team defense," D'Agostino said. This weekend the Bison look to compete in four league games at Salem-Teikyo University. The Bison will face Salem-Teikyo, Grove City, Washington & Jefferson and Slippery Rock.

Bucknell's spring break trip has helped the team develop the skills it needs to be successful in the league games. "The California trip was overall a big success and with the improvements we made I think we are ready for tough games this weekend against Salem-Teikyo and Slippery Rock," Zeigler said.

Softball sets sights on Patriot League title

By Brooke Rea

With a promising season still ahead, the Bucknell softball squad, which head coach Terrie Grieb called "the most talented team I've ever had," returned from spring break competition with an impressive record.

In Florida, the Bison played Caldwell College, Pine Manor College, Columbia University, Scranton University and Pace University, tallying a 5-3 overall mark. Two of these losses were to Columbia, whom the Bison challenged three times but only came out on top once, 8-2. Their only other defeat was a 2-0 loss to Pace University.

> *"[This years's team is] the most talented team I've ever had."*
> ***—22-year coach Terrie Grieb***

Captain Kristina Tan '00 was very pleased with the team's performance over spring break. "We did really well as a team, but a couple of tough breaks caused us to lose three games that we could have won," she said. "Judging from last week I think we will have a very promising season."

Grieb agrees that this trip was a strong beginning for the 2000 season. "We had a great spring break, and that usually doesn't happen," she said. "A 5-3 finish is something to be proud of, and we did what we had to do in Florida."

When league play begins next weekend, the Bison will rely on pitching strength and overall depth to defeat top Patriot League foes such as Lehigh and Army. "Army is ranked number one right now, and they have always given us a tough game in the past," Tan said. "But we will rely on what we have—a very strong pitching staff and tremendous hitting depth."

Looking to strengthen the team both on and off of the field, Tan and co-captain Nicole Zergebel '00 have made team unity a goal for the season. They stress the importance of playing together as a unit and being able to rely on each other in every respect.

According to Grieb, this goal is already being met. "On this team our strength is our depth," she said. "If one day someone's having a bad day, there are three or four others who can pick up the slack. On offense and defense this team gets it done."

Bucknell tied for third place with Colgate in the preseason polls—falling behind Army and Lehigh—but Grieb has no doubts that her Bison will come out and surprise everyone this season. "This team has a chance to be even better than the team that won the championship, and I'm not sure other coaches understand how good this team will be," she said.

Grieb puts much of her faith in her senior leaders, who she credits with much of the team's strength and success. "[Tan and Zergebel] are the gas that makes us go," Grieb said.

Last Tuesday's game against Delaware was postponed due to rain, but the season will be in full swing beginning this week. Important match-ups will come in early April when the Bison face Lafayette, Lehigh, Colgate, Towson and Army.

This season the Orange and Blue aim to win their conference, giving them an automatic bid to the NCAA's. No one believes that they can do this more than Grieb, who's faith in the team should go unchallenged given her 22 years of coaching experience at Bucknell.

"I've never known any other school, and I started up the program here," she explained. "I love the fact that at Bucknell, the kids play because they love the game, not because they are forced to because of a scholarship. These girls legitimately love softball, and it shows."

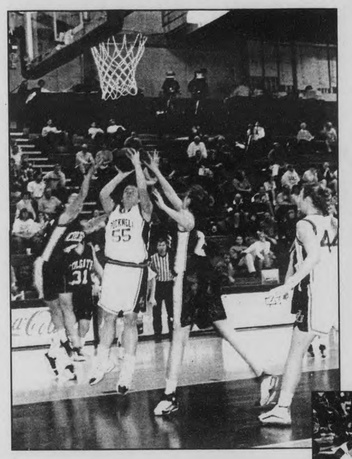
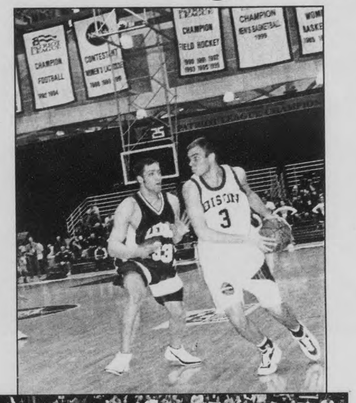
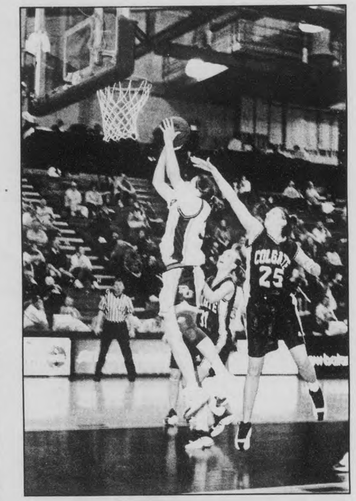
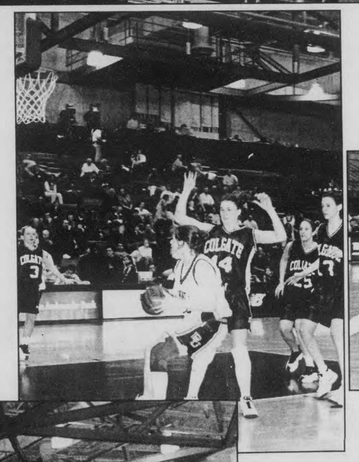
SCENES FROM THE *Patriot League Tournament*









Women celebrate, while men go home early

The Bucknell women's basketball team advanced to the Patriot League Championship game for the first time in its history, after rolling by Navy, 62-43, and Colgate, 69-66, at the League Tourament at Easton. The Bison traveled to Holy Cross for the championship game, seeking the League's automatic bid to the NCAA tournament. Unfortunately, the Bison were no match for the Crusaders, falling 87-63.

Bucknell's championship run was led by senior guard Lori Houck, who played all 80 minutes for the Bison at the League Tournament and was named a repeat All-League selection. Vicki Quimby '02 was also named to the first team, while freshman sharpshooter Molly Creamer was selected to the second team.

The men's squad ended its season in disappointing fashion at Easton. The Bison were stunned, 73-62, by six-seed Lehigh—a team Bucknell hadn't lost to since 1991. The Bison finished with a 17-11 overall record.

Resiliency has led Pomfret and Schiding to success

By Brooke Rea

Talk to Bucknell seniors Dave Pomfret and Brian Schiding about their four-year friendship and their answers are so similar you'd swear they had planned what to say ahead of time. The two track stars were roommates their freshman year and became close friends, living together sophomore year and again this year.

"Track has mainly been a strengthener for our friendship, but it can be a strain sometimes," Pomfret said. "We are both extremely competitive people, and that can lead to conflicts. But on the whole, track has made us better friends."

Schiding echoed these sentiments almost exactly, adding, "I know I can rely on Dave because we have been teammates and friends for so long. Whenever I would get down or get injured, he would tell me to look past it and work through it. There are many times he has helped me to stick with the sport."

Pomfret and Schiding both began their track careers in seventh grade and became more serious about the sport during high school. Schiding began doing what he does best—the long jump and sprints—and tried some other events throughout high school. Eventually he was recruited by Bucknell and decided to come here because of the high academic reputation.

Paige Cull—The Bucknellian

Brian Schiding '00 and Dave Pompret '00 (from left) have excelled as a jumper and a pole vaulter respectively. Both recieved gold medals at the '00 indoor Patriot League Championships at the BU Fieldhouse.

Pomfret played several sports in junior high and competed in track and gymnastics in high school. Gymnastics helped him with the difficult moves and flexibility needed for the pole vault, his main event. He focused more intensely on track toward the end of high school and was heavily recruited by Bucknell.

When he arrived his freshman year, Pomfret found that three of the assistant coaches he had met on his recruiting trip had left and been replaced. "It was a little surprising," he said. "But it turned out to be a great situation. The new coaches were good and we had a really tight group of jumpers."

Pomfret recalls freshman year as his best training year, when he worked hard and improved his vault by one foot. In the three seasons since then, improvement has been steady but not as drastic.

Schiding describes his freshman year as "an eye-opener." He has never been unhappy with his performances, but always strove to do just a little bit better. This season, all of his hard work came together and earned him a standout performance at Patriots. There, Schiding won both the triple and long jump, a feat he had never managed in his four years at BU.

"I've usually been able to win one or the other," he said, "but this time I was able to put them both together and that was a great feeling."

The Patriot League meet, hosted by Bucknell, was also a highlight of the season for Pomfret, who won the pole vault and broke his own school record with a best-ever performance of 17'3". "All of us seniors were going into that meet thinking that it was our last chance to compete for Bucknell on that track, and we wanted to go out strong," he said.

Pomfret's performance at that meet was a Patriot League, Bucknell, meet and Fieldhouse record, as well as a provisional qualifier for the NCAA Championships, but the rest of his indoor season was no less impressive. After a solid showing at the Bucknell Winter Classic on February 12th, Pomfret was named ECAC Athlete of the Week for his winning jump of 16'9".

Schiding's '99-00 season has been full of ups and downs, but despite an injury sidelining him for a couple of weeks, this jumper came back better than ever. "After the injury, I came out and jumped my best ever on Jan. 29th, breaking the school record. Throughout college I have been a very resilient person, and this was just an example of that."

Resiliency seems to be Schiding's forte, as he ended his final season at Bucknell with two incredible victories at Patriots. Likewise, Pomfret couldn't have asked for a better season finale than his vault at the same meet. These two friends and teammates may not have come so far in their own careers without each other's support, but they credit their success to other people as well.

"The track team is very close," Schiding said. "We are kind of like a big family. And the reason that we are as good as we are is because we have great coaches. They really push us to work for academic success and athletic success."

Pomfret feels just as lucky to be part of Bucknell's track and field tradition. "It's really a great group of guys. My teammates are the people I hang out with and they are my closest friends on campus. Track gives us all a chance to travel and see places outside of Bucknell."

Schiding is an economics major and his future plans are still a bit uncertain. He hopes to obtain a position as a graduate assistant at a university where he could coach track while working towards an MBA. He may continue to train but admits that he's not sure the time commitment is feasible after college.

Pomfret also hopes to become a graduate assistant at a university to coach track and study exercise physiology with his background as a Biology major. He is planning to continue to train after college and compete in open meets, but also hopes to get on the coaching track as soon as possible.

Grapplers end disappointing season

By Justin White

The Bucknell wrestling team completed their season on March 3 and 4 at the Eastern Intercollegiate Wrestling Association Championships at Navy. The Bison had a disappointing meet, placing no wrestlers in the top three. All season long the team struggled to get over the hump in important matches such as the ones they faced at Navy.

The lone bright spot came from senior Gbenga Akinnagbe. Akinnagbe was the #8 seed in the 184-pound weight class. He went 3-2 overall, losing to the #1 seed and eventual winner in his second match. However, he bounced back to upset the #6 seed from Harvard, advancing to the third-place match. In the third place match, Akinnagbe fell short, losing 12-4 to the #4 seed from Rutgers.

The Bison will graduate two regular starters at the end of the year. They are Akinnagbe and 165-pounder Brian Pitzer. Pitzer is third in career wrestling wins at Bucknell and first in number of pins. Coach Hangey could not say enough about the impact the seniors have had upon the program.

"Across the board, they are great kids," Hangey said. "Their effort, in the way they have conducted themselves, has been second to none."

The Bison have a strong nucleus of grapplers returning next year with only the two regular starters leaving. With a couple good recruits to plug these holes and a strong work ethic in the off-season, the team should head in the right direction come next year.

IM Corner

Remember to turn in your rostef sheets to the Fieldhouse boxes no later than noon on Friday, March 24th. Also, anyone who needs roster sheets can get them in the Fieldhouse offices located on the corner of the track.

Look in this section next week for a recap of the winter session and coverage of the basketball championship.

Have fun and keep playing hard!

For any questions call Ian or Brad at x74378.

Bison look to build on success

By Sean Houston

The Bucknell men's varsity golf team's spring season began on Monday, March 13 against Methodist College at Talamore Golf Club in Southern Pines, North Carolina. The results on the whole were positive, with close scores posted from all six of Bucknell's participants, despite the fact that the Bison were outscored 4 1/2-1 1/2 points by Methodist.

Freshman Jimmy Anderson won a round, and team captain Ken Kosteva '01 won Bucknell's other half point by matching his opponent's performance.

There are many things working in the team's favor this spring. It returns all 10 players from last fall's squad and the extra semester of experience for the team's six freshmen may build upon the team's promising fall performance. The squad's fall season was highlighted by a fourth place finish (out of 16 teams) at the Rutger's Invitational and a third place finish (out of 15 teams) at the ECAC qualifier.

The match season for the varsity golf team will not be long. In fact, the Bison will have less than a month of match play and only two more tune-up matches before hosting the Patriot League Championships on April 14-16. With the loss of one match due to a scheduling conflict, every remaining round will be vital in preparing for the Patriot League Championships, but the team's constant practice on its home green should provide it with a distinct advantage when championship time arrives.

Kosteva feels that despite the team's youth it can put up a respectable showing at Patriots, perhaps as high as third place behind the defending champions Navy and perrenial power Lehigh. "I think that would be a reasonable goal for the team," Kosteva said. "We'll all do the best we can, and I'm hoping to earn All-Patriot League honors."

The next scheduled matchup for the team will be the George Washington Invitational on the weekend of April 1-3, where it will compete against a deeper pool of top opponents.

No rest for Bison track and field

By Justin White

It's that time ... again. The Bucknell men's and women's track teams are close on the heels of the end of their indoor season and are ready to hit the track for their outdoor season.

The track teams have tirelessly trained and competed since January with little or no rest. In fact, many athletes also participated in the cross country season that began in early September. In track, time off means an opportunity to get out and train hard, instead of an opportunity to become a couch potato.

The teams competed in their final meet of the indoor season at the ECAC and IC4A Championships on March 4-5 in Cambridge, MA. Entrance into these championships is based solely upon the best times produced during the indoor season. The meet often provides performances comparable with those at Nationals, as the best on the East Coast from North Carolina to Maine participate in the meet.

The men performed well in the IC4A Championships, finishing 27th out of 55 teams: Two Bison made All-East, finishing in the top eight of their event. Ron Hess '00 had an outstanding race in the 1000 meters with a time of 2:26.27. He came within a half step of winning the race, placing second by .15 sec, after losing a shoe in the last 300 meters. Brian Schiding '00 also placed eighth in the long jump, leaping 23'4" to also earn an All-East spot.

The women competed in the ECAC Championships and placed 31st out of 46 teams with a score of six points. Bucknell's biggest surprise of the day came in the triple jump. Kim McGrath '00 was seeded 20th heading into the event; however, she jumped 38'7.5" to finish an impressive seventh overall.

The Bison ran well in the 4x400 meter relay with sophomores Stephanie Bango, LaTonya McSwain, Christie Wolfgang and senior Yetunde Daniels. The relay team finished fifth with a time of 3:47.64.

Coach Gulden praised the depth of his women's team. "We didn't double anyone in the relays. Nobody in the meet has that distinction with us."

Some of the track members began their outdoor season at the University of North Carolina-Charlotte on Saturday, March 18; the meet acted as a tune-up. Bucknell sent athletes mainly in the field events, specifically in those events that are not run during the indoor season such as the hammer throw and javelin.

The full squad will return to action this Saturday for the Susquehanna Invitational. Due to construction at Susquehanna, Bucknell will host the meet at Christy Matthewson Memorial Stadium. This is the first of four track meets that Bucknell will host this season. The Bison are expecting to handily defeat the other teams in this small invitational.

Both the men and women have one major goal this season: to win the Patriot League Championship. The Bison's top contenders are the usual suspects. For the women, that means Navy and, for the men, the team to beat is Army. In both cases, the Bison should prove a tough rival.

NCAA brackets thrown out of wack with upset-filled first weekend of tourney

By Rob Schmicker

For two days, it seemed like everything was going according to plan; but then it all came crashing down.

In the first round of the NCAA tournament, the lower seeded team won only three of the 32 games. This was a startling trend in comparison with some of the recent tournaments. But the second round proved to be unkind to the higher seeds, as five of the top eight teams in the nation lost.

In the West region on Saturday, #8 Wisconsin upset #1 Arizona and #2 St John's lost to #10 Gonzaga. Sunday was no different. In the East, #2 Temple was shocked by #10 Seton Hall, who was playing without its best player, and #1 Duke barely survived against Kansas. And before the day was over, the South would lose its top three seeds, including #1 Stanford-who lost to an underachieving North Carolina squad.

So where does that leave us? To the dismay of everyone who filled out a bracket, the West has semifinal matchups of Wisconsin vs. LSU and Gonzaga vs. Purdue. In the South, we have North Carolina vs. Tennessee and Miami (FL) vs. Tulsa.

I'm sure that everyone is a little upset about losing his or her pool, but lets face it. This is what the tournament is all about. Seeing a team, that no one has given a chance, succeed is better than having the higher seeds steam-roll through the tourney. Finally, the smaller schools are able to get some recognition, and we don't have to hear about the same stories over and over again.

First example: Seton Hall. The Pirates lost their playmaker and leader Shaheen Holloway midway through the first half against Temple due to an injured ankle. Playing Temple is hard enough. Playing them without your best player is even harder.

But sophomore point guard Ty Shine came in for Holloway and what followed was one of the best performances of this year's tournament to date. He came out firing and turned a nine point Seton Hall deficit into a one-point halftime lead. Then down the stretch, he hit two key three-pointers and showed the poise of someone who has been there before (although no one on Seton Hall has been). He ended the day with 26 points and now will lead the Pirates into a showdown with Oklahoma St.

Then of course, there's Gonzaga. Once again, the Zags have raised a few eyebrows as they defeated Louisville and St John's. For those who thought that Gonzaga was a one-year wonder with its trip to the Elite Eight in '99, this team is for real.

They have an excellent backcourt in Richie Frahm and Matt Santangelo, and their bigmen Casey Calvary and Axel Dench are surprisingly good. I think Purdue has their hands full on Thursday, as the Zags have too many weapons. No matter whom you decide to stop, someone else will come up with a big game. They are no longer a Cinderella team.

Then there's the Wisconsin Badgers, who at one point were on the bubble.. They have done nothing besides defeat Fresno St. and top seeded Arizona. And who would have thought that North Carolina, who has played well below expectations all year, would beat Stanford?

How about Miami and Tulsa, one of whom will be dancing into the Elite Eight? Traditionally neither is a basketball powerhouse, but they have taken the tournament by storm and are ready to steal the show. All of these teams are what is great about the NCAA tournament. You can never really know what will happen next.

Courtesty of A.P.

Gonzaga advanced into the Sweet 16 again.

With that in mind, here are a few predictions for the next round: LSU, Oklahoma St., Duke, UNC and Tulsa will move on. Joining them will be Michigan St., who will continue its roll towards the title led by Mateen Cleaves, Morris Peterson and Charlie Bell.

But waiting for the Spartans in the Elite Eight will be a tough Iowa St., who will put an end to UCLA's hot streak. Marcus Fizer will continue to dominate opponents and will lead the Cyclones into what should be the national title game. These two are just that good. Finally, joining the previous seven will be Gonzaga. The Zags have more tournament experience than any other team in the West, and they will continue their run.

But remember ... anything is possible.

Going once, going twice ... another star sold

Deals abound at NHL trade deadline, involving Mogilny, Barrasso and Bourque

By Kevin Logan

As the dust clears in the NHL, 23 players are sporting jerseys bearing the logos of different teams. That's the result of the 12 deals that took place on Tuesday, March 14th, the 2000 trade deadline.

Probably the biggest deal of the day was the Vancouver-New Jersey trade that saw Alexander Mogilny go to the Devils in return for youngsters Brendan Morrison and Denis Pederson. Mogilny, one of only three active NHLers to have scored 70 or more goals in a season, brings to New Jersey solid, veteran scoring ability, and is expected to mesh well with the style of fellow Russians on the Devils squad: namely, Sergei Nemchinov, also recently acquired Vladimir Malakhov, and assistant coach Viacheslav Fetisov. The deal gives Vancouver a pair of young and developing forwards to help establish a promising offensive future for the Canucks.

The other major trade of the deadline involved veteran Penguins goaltender Tom Barrasso. Barrasso, who was plagued by injury and recently left the Penguins due to the illness and the death of his father, was dealt to the Ottawa Senators for goalie Ron Tugnutt and defenseman Janne Laukkanen. The deals come on the heel of the blockbuster trade in which future hall-of-fame defenseman Ray Bourque, yet to win a Stanley Cup, became an Avalanche after asking to be traded to a Cup-contending team.

After 20-plus seasons as a Boston Bruin, during which he established himself as one of the greatest defensemen ever to play the game, Bourque left for Colorado, where he has already scored five goals for the Northwest division-leading Avs.

The transactions around the league weren't only limited to players, though. Owner John McMullen of the Devils announced that he had agreed to sell the team to a company associated with George Steinbrenner's YankeeNets, which owns both baseball's Yankees and basketball's Nets.

The deal could mean the Devils jointly moving into a new arena with the Nets, possibly in Newark, and may mean the end of highly respected GM Lou Lamoriello's accomplished career with the team. There are rumors of Lamoriello finding a home in Boston, where Bruins president and general manager Harry Sinden may retire.

The Visor Question

With the recent injury of Toronto's Bryan Berard, there has been talk around the league of possibly implementing a mandatory rule for all players to wear face visors. Berard's right eye was seriously injured by a high stick from Ottawa's Marian Hossa on March 11th. It is still in question whether or not he will be able to regain vision in the eye.

Several players around the league have begun playing with visors as a result of the injury, including New Jersey's John Madden. However, like Madden, who ditched the visor after one period, many find them to be uncomfortable and burdensome, and feel the visors should only be an option.

The question is also raised about the visor's effect on ruffians throughout the league. Fighters and scrappers have a tough time throwing punches when opponents have visors protecting their faces, and it is often looked upon as a cheap way out when a fighter guards his face with a visor.

In addition, many players and coaches feel that mandatory visors may encourage players to become even more careless with their sticks. New Jersey's Scott Gomez, who does not wear a visor, explained that playing in college, where full face masks are required, there was a greater tendency for players to raise their sticks because there was no fear of hitting someone in the face.

Unlike the full visors and masks used in college, however, the visors used in the NHL do not cover the entire face, so an injury like Berard's would still be possible, as many sticks in the past have been known to slip underneath the shield and cause injury.

In any event, the league has agreed that the increasing number of high sticks is a serious issue that will take center stage as the NHL prepares for the playoffs.

TENNIS From page 16

their matches in straight sets.

In their last game of the break on March 17, the Bison fell 9-0 to the University of the South, a team which finished third in the nation in Division III last year.

This spring break trip marked the beginning of the women's spring season. The Bison prepare for a challenging season, as they are pitted against Patriot League rivals Colgate, Lafayette and Lehigh. The team will continue working towards the Patriot League Championships, which will be held at Army on April 29-30.

"At minimum, we want to finish in the top three [in the league]," head coach Rebecca Helt said.

The Bison are led by senior co-captains and four-year contributors Callaghan and Honko. "They are the Bucknell women's tennis team," Helt said. "They held us together through transitions."

NBA Experts' Picks

By Justin McCarthy and Ali Ahmed

Philadelphia at Indiana

This game will come down to the match-up at the two spot: Reggie Miller versus Allen Iverson. Miller has a better supporting cast behind him to back him up, in Rose and Jackson along with a very deep bench. Iverson's Sixers, however, have only gotten better with the acquistion of Tony Kukoc, turning them towards the playoffs and making them a Cindarella contender. The biggest thing that may lead the Sixers to victory is that fact that the Pacers have already clinched a playoff spot, while the Sixers still have some work to do to secure one of their own; therefore the Sixers' desire and need to win will prevail.

Justin's Pick: Sixers by five

Philadelphia really needs to pick up its game coming down the stretch if it wants to have home court advantage in the first round of the playoffs. Also, they need to start finding ways to make Kukoc fit in with the offense better. If Kukoc becomes a legitimate second threat, it should pick up the rest of the team. Indiana knocked the Sixers out of the playoffs last year and this game should be no different. The key match up will be Rose's offense and Lynch's defense.

Ali's Pick: Pacers by 10

New York at Portland

This matchup could be a preview to the NBA Finals (quiet all you Laker, Heat and Pacer fans). The Blazers may have the better post-playing forwards; however, the Knicks have the better shooting forwards, led by Sprewell. The Blazers just have no one to matchup with Ewing, who last time out scored every Blazer. And now with Brian Grant on the injured list, the Blazers should have worries on the boards as well. A great matchup in this game will be between shooting guards Allan Houston and Steve Smith, both of whom were their teams leading scorers in their previous meeting which the Knicks won by double figures.

Justin's Pick: Knicks by three

This should be one of the best match-ups in the front court. Both teams have great depth off of the bench. Even with Brian Grant out the Blazers can still bring Schremp and Jermaine O'Neal off of the bench. The Knicks have to find somebody who can guard Scottie Pippen and also can Marcus Camby or Kurt Thomas must stop Rasheed Wallace. The Knicks also need to make sure they don't turn the ball over against the tough Blazers defense. It will be interesting to see who the Knicks start at small forward-Larry Johnson or Lateral Sprewell-to match up with Pippen.

Ali's Pick: Blazers by 20

San Antonio at Seattle

These teams have played three close games already this season, with Seattle winning by three and six points on two occasions, and San Antonio winning once by two. Duncan and Robinson have dominated the Sonics this season, averaging 26 points/12.7 rebounds and 19.7 points/9.7 rebounds against them respectively. However, they have lost because they were unable to produce any other offense either from the rest of their starters or from their bench. The Sonics possess a very well-balanced attack lead by one of the best guards in the league, Gary Payton, and by forward Vin Baker. To counter their lack of support, the Twin Towers will need to control Baker and prevent Payton from driving, hoping that their backcourt can prevent him from burying jumpers.

Justin's Pick: Sonics by seven

Seattle just does not have the firepower to match up with the elite teams in the West. Gary Payton deserves all the credit in the world for getting his team where it is. Vin Baker has never really stepped up and provided the offensive threat that Seattle expected. San Antonio is primed to start its run into the playoffs, and expect David Robinson to start picking his game up. Nobody on San Antonio can guard Payton but nobody on Seattle can stop the two Spurs big men.

Ali's Pick: Spurs by 15

Phoenix at Miami

The Suns were victorious over the Heat just a few weeks ago, but with the loss of Gugliotta for the rest of the season, this game will end differently. The Suns possess the better backcourt by far, as they outscored their Miami counterparts 38-16 in their previous meeting. However, if the Suns hope to win this time they will need a huge game from Anfernee Hardaway and they will need to find a way to stop Miami's inside game of Mourning and Brown. This game may ultimately come down to the team's respective benches, in which case the Suns should win, after-all they outscored Miami's bench 35-20 previously.

Justin's Pick: Miami by eight

I really liked Phoenix's chances before Tom Gugliotta went down. Luckily Rogers has picked up his game, but it still raises the question of their depth in the front court. Mourning should have an easy time with the Phoenix centers unless he gets into foul trouble. The young backcourt of Phoenix has to show the old guards of Miami that they can't take the Heat deep into the playoffs. Pat Riley may be a great coach but his roster moves the last couple of years have not panned out. Time to rebuild in Miami.

Ali's Pick: Suns by eight

Charlotte at Detroit

These teams are fairly evenly matched and this game will provide two premier matchups: Jones against Stackhouse and Coleman against Hill. The Hornets are undefeated against the Pistons when they have Jones in their lineup, however they have not been able to beat the Pistons without him, therefore expect Jones to have a huge game. Expect Hill and Stackhouse to compensate for Jones presence on the scoreboard. Both these teams are currently fighting for playoff position and the Hornets, the sixth seed, are only one game up on the Pistons, the seventh seed.

Justin's Pick: Pistons by nine

These are two teams that have two stars who are going to be free agents at the end of the year. Eddie Jones is my pick for the top two guard in the league this year. With Orlando, Los Angeles and Chicago having plenty of cap space, Charlotte needs to make a concerted effort to keep their star. The same goes with Detroit and Hill. Jerry Stackhouse has really taken his game to the next game but can he match up with the defense of Eddie Jones. Also, who in the Pistons line-up can stop Mason, Campbell and Coleman?

Ali's Pick: Hornets by five

Sports

Resiliency has led Pomfret and Schiding to success

By Brooke Rea

Paige Cull—The Bucknellian

Brian Schiding '00 and Dave Pompret '00 (from left) have excelled as a jumper and a pole vaulter respectively. Both recieved gold medals at the '00 indoor Patriot League Championships at the BU Fieldhouse.

Talk to Bucknell seniors Dave Pomfret and Brian Schiding about their four-year friendship and their answers are so similar you'd swear they had planned what to say ahead of time. The two track stars were roommates their freshman year and became close friends, living together sophomore year and again this year.

"Track has mainly been a strengthener for our friendship, but it can be a strain sometimes," Pomfret said. "We are both extremely competitive people, and that can lead to conflicts. But on the whole, track has made us better friends."

Schiding echoed these sentiments almost exactly, adding, "I know I can rely on Dave because we have been teammates and friends for so long. Whenever I would get down or get injured, he would tell me to look past it and work through it. There are many times he has helped me to stick with the sport."

Pomfret and Schiding both began their track careers in seventh grade and became more serious about the sport during high school. Schiding began doing what he does best—the long jump and sprints—and tried some other events throughout high school. Eventually he was recruited by Bucknell and decided to come here because of the high academic reputation.

Pomfret played several sports in junior high and competed in track and gymnastics in high school. Gymnastics helped him with the difficult moves and flexibility needed for the pole vault, his main event. He focused more intensely on track toward the end of high school and was heavily recruited by Bucknell.

When he arrived his freshman year, Pomfret found that three of the assistant coaches he had met on his recruiting trip had left and been replaced. "It was a little surprising," he said. "But it turned out to be a great situation. The new coaches were good and we had a really tight group of jumpers."

Pomfret recalls freshman year as his best training year, when he worked hard and improved his vault by one foot. In the three seasons since then, improvement has been steady but not as drastic.

Schiding describes his freshman year as "an eye-opener." He has never been unhappy with his performances, but always strove to do just a little bit better. This season, all of his hard work came together and earned him a standout performance at Patriots. There, Schiding won both the triple and long jump, a feat he had never managed in his four years at BU.

"I've usually been able to win one or the other," he said, "but this time I was able to put them both together and that was a great feeling."

The Patriot League meet, hosted by Bucknell, was also a highlight of the season for Pomfret, who won the pole vault and broke his own school record with a best-ever performance of 17'3". "All of us seniors were going into that meet thinking that it was our last chance to compete for Bucknell on that track, and we wanted to go out strong," he said.

Pomfret's performance at that meet was a Patriot League, Bucknell, meet and Fieldhouse record, as well as a provisional qualifier for the NCAA Championships, but the rest of his indoor season was no less impressive. After a solid showing at the Bucknell Winter Classic on February 12th, Pomfret was named ECAC Athlete of the Week for his winning jump of 16'9".

Schiding's '99-00 season has been full of ups and downs, but despite an injury sidelining him for a couple of weeks, this jumper came back better than ever. "After the injury, I came out and jumped my best ever on Jan. 29th, breaking the school record. Throughout college I have been a very resilient person, and this was just an example of that."

Resiliency seems to be Schiding's forte, as he ended his final season at Bucknell with two incredible victories at Patriots. Likewise, Pomfret couldn't have asked for a better season finale than his vault at the same meet. These two friends and teammates may not have come so far in their own careers without each other's support, but they credit their success to other people as well.

"The track team is very close," Schiding said. "We are kind of like a big family. And the reason that we are as good as we are is because we have great coaches. They really push us to work for academic success and athletic success."

Pomfret feels just as lucky to be part of Bucknell's track and field tradition. "It's really a great group of guys. My teammates are the people I hang out with and they are my closest friends on campus. Track gives us all a chance to travel and see places outside of Bucknell."

Schiding is an economics major and his future plans are still a bit uncertain. He hopes to obtain a position as a graduate assistant at a university where he could coach track while working towards an MBA. He may continue to train but admits that he's not sure the time commitment is feasible after college.

Pomfret also hopes to become a graduate assistant at a university to coach track and study exercise physiology with his background as a Biology major. He is planning to continue to train after college and compete in open meets, but also hopes to get on the coaching track as soon as possible.

Grapplers end disappointing season

By Justin White

The Bucknell wrestling team completed their season on March 3 and 4 at the Eastern Intercollegiate Wrestling Association Championships at Navy. The Bison had a disappointing meet, placing no wrestlers in the top three. All season long the team struggled to get over the hump in important matches such as the ones they faced at Navy.

The lone bright spot came from senior Gbenga Akinnagbe. Akinnagbe was the #8 seed in the 184-pound weight class. He went 3-2 overall, losing to the #1 seed and eventual winner in his second match. However, he bounced back to upset the #6 seed from Harvard, advancing to the third-place match. In the third place match, Akinnagbe fell short, losing 12-4 to the #4 seed from Rutgers.

The Bison will graduate two regular starters at the end of the year. They are Akinnagbe and 165-pounder Brian Pitzer. Pitzer is third in career wrestling wins at Bucknell and first in number of pins. Coach Hangey could not say enough about the impact the seniors have had upon the program.

"Across the board, they are great kids," Hangey said. "Their effort, in the way they have conducted themselves, has been second to none."

The Bison have a strong nucleus of grapplers returning next year with only the two regular starters leaving. With a couple good recruits to plug these holes and a strong work ethic in the off-season, the team should head in the right direction come next year.

IM Corner

Remember to turn in your rostef sheets to the Fieldhouse boxes no later than noon on Friday, March 24th. Also, anyone who needs roster sheets can get them in the Fieldhouse offices located on the corner of the track.

Look in this section next week for a recap of the winter session and coverage of the basketball championship.

Have fun and keep playing hard!

For any questions call Ian or Brad at x74378.

Bison look to build on success

By Sean Houston

The Bucknell men's varsity golf team's spring season began on Monday, March 13 against Methodist College at Talamore Golf Club in Southern Pines, North Carolina. The results on the whole were positive, with close scores posted from all six of Bucknell's participants, despite the fact that the Bison were outscored 4 1/2-1 1/2 points by Methodist.

Freshman Jimmy Anderson won a round, and team captain Ken Kosteva '01 won Bucknell's other half point by matching his opponent's performance.

There are many things working in the team's favor this spring. It returns all 10 players from last fall's squad and the extra semester of experience for the team's six freshmen may build upon the team's promising fall performance. The squad's fall season was highlighted by a fourth place finish (out of 16 teams) at the Rutger's Invitational and a third place finish (out of 15 teams) at the ECAC qualifier.

The match season for the varsity golf team will not be long. In fact, the Bison will have less than a month of match play and only two more tune-up matches before hosting the Patriot League Championships on April 14-16. With the loss of one match due to a scheduling conflict, every remaining round will be vital in preparing for the Patriot League Championships, but the team's constant practice on its home green should provide it with a distinct advantage when championship time arrives.

Kosteva feels that despite the team's youth it can put up a respectable showing at Patriots, perhaps as high as third place behind the defending champions Navy and perrenial power Lehigh. "I think that would be a reasonable goal for the team," Kosteva said. "We'll all do the best we can, and I'm hoping to earn All-Patriot League honors."

The next scheduled matchup for the team will be the George Washington Invitational on the weekend of April 1-3, where it will compete against a deeper pool of top opponents.

No rest for Bison track and field

By Justin White

It's that time ... again. The Bucknell men's and women's track teams are close on the heels of the end of their indoor season and are ready to hit the track for their outdoor season.

The track teams have tirelessly trained and competed since January with little or no rest. In fact, many athletes also participated in the cross country season that began in early September. In track, time off means an opportunity to get out and train hard, instead of an opportunity to become a couch potato.

The teams competed in their final meet of the indoor season at the ECAC and IC4A Championships on March 4-5 in Cambridge, MA. Entrance into these championships is based solely upon the best times produced during the indoor season. The meet often provides performances comparable with those at Nationals, as the best on the East Coast from North Carolina to Maine participate in the meet.

The men performed well in the IC4A Championships, finishing 27th out of 55 teams: Two Bison made All-East, finishing in the top eight of their event. Ron Hess '00 had an outstanding race in the 1000 meters with a time of 2:26.27. He came within a half step of winning the race, placing second by .15 sec, after losing a shoe in the last 300 meters. Brian Schiding '00 also placed eighth in the long jump, leaping 23'4" to also earn an All-East spot.

The women competed in the ECAC Championships and placed 31st out of 46 teams with a score of six points. Bucknell's biggest surprise of the day came in the triple jump. Kim McGrath '00 was seeded 20th heading into the event; however, she jumped 38'7.5" to finish an impressive seventh overall.

The Bison ran well in the 4x400 meter relay with sophomores Stephanie Bango, LaTonya McSwain, Christie Wolfgang and senior Yetunde Daniels. The relay team finished fifth with a time of 3:47.64.

Coach Gulden praised the depth of his women's team. "We didn't double anyone in the relays. Nobody in the meet has that distinction with us."

Some of the track members began their outdoor season at the University of North Carolina-Charlotte on Saturday, March 18; the meet acted as a tune-up. Bucknell sent athletes mainly in the field events, specifically in those events that are not run during the indoor season such as the hammer throw and javelin.

The full squad will return to action this Saturday for the Susquehanna Invitational. Due to construction at Susquehanna, Bucknell will host the meet at Christy Matthewson Memorial Stadium. This is the first of four track meets that Bucknell will host this season. The Bison are expecting to handily defeat the other teams in this small invitational.

Both the men and women have one major goal this season: to win the Patriot League Championship. The Bison's top contenders are the usual suspects. For the women, that means Navy and, for the men, the team to beat is Army. In both cases, the Bison should prove a tough rival.

Zags, Pirates and Badgers—oh my!

NCAA brackets thrown out of wack with upset-filled first weekend of tourney

By Rob Schmicker

For two days, it seemed like everything was going according to plan; but then it all came crashing down.

In the first round of the NCAA tournament, the lower seeded team won only three of the 32 games. This was a startling trend in comparison with some of the recent tournaments. But the second round proved to be unkind to the higher seeds, as five of the top eight teams in the nation lost.

In the West region on Saturday, #8 Wisconsin upset #1 Arizona and #2 St John's lost to #10 Gonzaga. Sunday was no different. In the East, #2 Temple was shocked by #10 Seton Hall, who was playing without its best player, and #1 Duke barely survived against Kansas. And before the day was over, the South would lose its top three seeds, including #1 Stanford-who lost to an underachieving North Carolina squad.

So where does that leave us? To the dismay of everyone who filled out a bracket, the West has semifinal matchups of Wisconsin vs. LSU and Gonzaga vs. Purdue. In the South, we have North Carolina vs. Tennessee and Miami (FL) vs. Tulsa.

I'm sure that everyone is a little upset about losing his or her pool, but lets face it. This is what the tournament is all about. Seeing a team, that no one has given a chance, succeed is better than having the higher seeds steam-roll through the tourney. Finally, the smaller schools are able to get some recognition, and we don't have to hear about the same stories over and over again.

First example: Seton Hall. The Pirates lost their playmaker and leader Shaheen Holloway midway through the first half against Temple due to an injured ankle. Playing Temple is hard enough. Playing them without your best player is even harder.

But sophomore point guard Ty Shine came in for Holloway and what followed was one of the best performances of this year's tournament to date. He came out firing and turned a nine point Seton Hall deficit into a one-point halftime lead. Then down the stretch, he hit two key three-pointers and showed the poise of someone who has been there before (although no one on Seton Hall has been). He ended the day with 26 points and now will lead the Pirates into a showdown with Oklahoma St.

Then of course, there's Gonzaga. Once again, the Zags have raised a few eyebrows as they defeated Louisville and St John's. For those who thought that Gonzaga was a one-year wonder with its trip to the Elite Eight in '99, this team is for real.

They have an excellent backcourt in Richie Frahm and Matt Santangelo, and their bigmen Casey Calvary and Axel Dench are surprisingly good. I think Purdue has their hands full on Thursday, as the Zags have too many weapons. No matter whom you decide to stop, someone else will come up with a big game. They are no longer a Cinderella team.

Then there's the Wisconsin Badgers, who at one point were on the bubble.. They have done nothing besides defeat Fresno St. and top seeded Arizona. And who would have thought that North Carolina, who has played well below expectations all year, would beat Stanford?

How about Miami and Tulsa, one of whom will be dancing into the Elite Eight? Traditionally neither is a basketball powerhouse, but they have taken the tournament by storm and are ready to steal the show. All of these teams are what is great about the NCAA tournament. You can never really know what will happen next.

Courtesty of A.P.

Gonzaga advanced into the Sweet 16 again.

With that in mind, here are a few predictions for the next round: LSU, Oklahoma St., Duke, UNC and Tulsa will move on. Joining them will be Michigan St., who will continue its roll towards the title led by Mateen Cleaves, Morris Peterson and Charlie Bell.

But waiting for the Spartans in the Elite Eight will be a tough Iowa St., who will put an end to UCLA's hot streak. Marcus Fizer will continue to dominate opponents and will lead the Cyclones into what should be the national title game. These two are just that good. Finally, joining the previous seven will be Gonzaga. The Zags have more tournament experience than any other team in the West, and they will continue their run.

But remember ... anything is possible.

NBA Experts' Picks

By Justin McCarthy and Ali Ahmed

Philadelphia at Indiana

This game will come down to the match-up at the two spot: Reggie Miller versus Allen Iverson. Miller has a better supporting cast behind him to back him up, in Rose and Jackson along with a very deep bench. Iverson's Sixers, however, have only gotten better with the acquistion of Tony Kukoc, turning them towards the playoffs and making them a Cindarella contender. The biggest thing that may lead the Sixers to victory is that fact that the Pacers have already clinched a playoff spot, while the Sixers still have some work to do to secure one of their own; therefore the Sixers' desire and need to win will prevail.

Justin's Pick: Sixers by five

Philadelphia really needs to pick up its game coming down the stretch if it wants to have home court advantage in the first round of the playoffs. Also, they need to start finding ways to make Kukoc fit in with the offense better. If Kukoc becomes a legitimate second threat, it should pick up the rest of the team. Indiana knocked the Sixers out of the playoffs last year and this game should be no different. The key match up will be Rose's offense and Lynch's defense.

Ali's Pick: Pacers by 10

New York at Portland

This matchup could be a preview to the NBA Finals (quiet all you Laker, Heat and Pacer fans). The Blazers may have the better post-playing forwards; however, the Knicks have the better shooting forwards, led by Sprewell. The Blazers just have no one to matchup with Ewing, who last time out scored every Blazer. And now with Brian Grant on the injured list, the Blazers should have worries on the boards as well. A great matchup in this game will be between shooting guards Allan Houston and Steve Smith, both of whom were their teams leading scorers in their previous meeting which the Knicks won by double figures.

Justin's Pick: Knicks by three

This should be one of the best match-ups in the front court. Both teams have great depth off of the bench. Even with Brian Grant out the Blazers can still bring Schremp and Jermaine O'Neal off of the bench. The Knicks have to find somebody who can guard Scottie Pippen and also can Marcus Camby or Kurt Thomas must stop Rasheed Wallace. The Knicks also need to make sure they don't turn the ball over against the tough Blazers defense. It will be interesting to see who the Knicks start at small forward-Larry Johnson or Lateral Sprewell-to match up with Pippen.

Ali's Pick: Blazers by 20

San Antonio at Seattle

These teams have played three close games already this season, with Seattle winning by three and six points on two occasions, and San Antonio winning once by two. Duncan and Robinson have dominated the Sonics this season, averaging 26 points/12.7 rebounds and 19.7 points/9.7 rebounds against them respectively. However, they have lost because they were unable to produce any other offense either from the rest of their starters or from their bench. The Sonics possess a very well-balanced attack lead by one of the best guards in the league, Gary Payton, and by forward Vin Baker. To counter their lack of support, the Twin Towers will need to control Baker and prevent Payton from driving, hoping that their backcourt can prevent him from burying jumpers.

Justin's Pick: Sonics by seven

Seattle just does not have the firepower to match up with the elite teams in the West. Gary Payton deserves all the credit in the world for getting his team where it is. Vin Baker has never really stepped up and provided the offensive threat that Seattle expected. San Antonio is primed to start its run into the playoffs, and expect David Robinson to start picking his game up. Nobody on San Antonio can guard Payton but nobody on Seattle can stop the two Spurs big men.

Ali's Pick: Spurs by 15

Phoenix at Miami

The Suns were victorious over the Heat just a few weeks ago, but with the loss of Gugliotta for the rest of the season, this game will end differently. The Suns possess the better backcourt by far, as they outscored their Miami counterparts 38-16 in their previous meeting. However, if the Suns hope to win this time they will need a huge game from Anfernee Hardaway and they will need to find a way to stop Miami's inside game of Mourning and Brown. This game may ultimately come down to the team's respective benches, in which case the Suns should win, after-all they outscored Miami's bench 35-20 previously.

Justin's Pick: Miami by eight

I really liked Phoenix's chances before Tom Gugliotta went down. Luckily Rogers has picked up his game, but it still raises the question of their depth in the front court. Mourning should have an easy time with the Phoenix centers unless he gets into foul trouble. The young backcourt of Phoenix has to show the old guards of Miami that they can't take the Heat deep into the playoffs. Pat Riley may be a great coach but his roster moves the last couple of years have not panned out. Time to rebuild in Miami.

Ali's Pick: Suns by eight

Charlotte at Detroit

These teams are fairly evenly matched and this game will provide two premier matchups: Jones against Stackhouse and Coleman against Hill. The Hornets are undefeated against the Pistons when they have Jones in their lineup, however they have not been able to beat the Pistons without him, therefore expect Jones to have a huge game. Expect Hill and Stackhouse to compensate for Jones presence on the scoreboard. Both these teams are currently fighting for playoff position and the Hornets, the sixth seed, are only one game up on the Pistons, the seventh seed.

Justin's Pick: Pistons by nine

These are two teams that have two stars who are going to be free agents at the end of the year. Eddie Jones is my pick for the top two guard in the league this year. With Orlando, Los Angeles and Chicago having plenty of cap space, Charlotte needs to make a concerted effort to keep their star. The same goes with Detroit and Hill. Jerry Stackhouse has really taken his game to the next game but can he match up with the defense of Eddie Jones. Also, who in the Pistons line-up can stop Mason, Campbell and Coleman?

Ali's Pick: Hornets by five

Going once, going twice ... another star sold

Deals abound at NHL trade deadline, involving Mogilny, Barrasso and Bourque

By Kevin Logan

As the dust clears in the NHL, 23 players are sporting jerseys bearing the logos of different teams. That's the result of the 12 deals that took place on Tuesday, March 14th, the 2000 trade deadline.

Probably the biggest deal of the day was the Vancouver-New Jersey trade that saw Alexander Mogilny go to the Devils in return for youngsters Brendan Morrison and Denis Pederson. Mogilny, one of only three active NHLers to have scored 70 or more goals in a season, brings to New Jersey solid, veteran scoring ability, and is expected to mesh well with the style of fellow Russians on the Devils squad: namely, Sergei Nemchinov, also recently acquired Vladimir Malakhov, and assistant coach Viacheslav Fetisov. The deal gives Vancouver a pair of young and developing forwards to help establish a promising offensive future for the Canucks.

The other major trade of the deadline involved veteran Penguins goaltender Tom Barrasso. Barrasso, who was plagued by injury and recently left the Penguins due to the illness and the death of his father, was dealt to the Ottawa Senators for goalie Ron Tugnutt and defenseman Janne Laukkanen. The deals come on the heel of the blockbuster trade in which future hall-of-fame defenseman Ray Bourque, yet to win a Stanley Cup, became an Avalanche after asking to be traded to a Cup-contending team.

After 20-plus seasons as a Boston Bruin, during which he established himself as one of the greatest defensemen ever to play the game, Bourque left for Colorado, where he has already scored five goals for the Northwest division-leading Avs.

The transactions around the league weren't only limited to players, though. Owner John McMullen of the Devils announced that he had agreed to sell the team to a company associated with George Steinbrenner's YankeeNets, which owns both baseball's Yankees and basketball's Nets.

The deal could mean the Devils jointly moving into a new arena with the Nets, possibly in Newark, and may mean the end of highly respected GM Lou Lamoriello's accomplished career with the team. There are rumors of Lamoriello finding a home in Boston, where Bruins president and general manager Harry Sinden may retire.

The Visor Question

With the recent injury of Toronto's Bryan Berard, there has been talk around the league of possibly implementing a mandatory rule for all players to wear face visors. Berard's right eye was seriously injured by a high stick from Ottawa's Marian Hossa on March 11th. It is still in question whether or not he will be able to regain vision in the eye.

Several players around the league have begun playing with visors as a result of the injury, including New Jersey's John Madden. However, like Madden, who ditched the visor after one period, many find them to be uncomfortable and burdensome, and feel the visors should only be an option.

The question is also raised about the visor's effect on ruffians throughout the league. Fighters and scrappers have a tough time throwing punches when opponents have visors protecting their faces, and it is often looked upon as a cheap way out when a fighter guards his face with a visor.

In addition, many players and coaches feel that mandatory visors may encourage players to become even more careless with their sticks. New Jersey's Scott Gomez, who does not wear a visor, explained that playing in college, where full face masks are required, there was a greater tendency for players to raise their sticks because there was no fear of hitting someone in the face.

Unlike the full visors and masks used in college, however, the visors used in the NHL do not cover the entire face, so an injury like Berard's would still be possible, as many sticks in the past have been known to slip underneath the shield and cause injury.

In any event, the league has agreed that the increasing number of high sticks is a serious issue that will take center stage as the NHL prepares for the playoffs.

TENNIS From page 16

their matches in straight sets.

In their last game of the break on March 17, the Bison fell 9-0 to the University of the South, a team which finished third in the nation in Division III last year.

This spring break trip marked the beginning of the women's spring season. The Bison prepare for a challenging season, as they are pitted against Patriot League rivals Colgate, Lafayette and Lehigh. The team will continue working towards the Patriot League Championships, which will be held at Army on April 29-30.

"At minimum, we want to finish in the top three [in the league]," head coach Rebecca Helt said.

The Bison are led by senior co-captains and four-year contributors Callaghan and Honko. "They are the Bucknell women's tennis team," Helt said. "They held us together through transitions."

Sports

A dying breed?

Division I basketball is simply different here.

The notion first occurred to me before the season even started, during the most banal of all college coach's duties: the pre-season press conference. The scene is easy to set: a head coach, who at the time knows very little about his team, surrounded by a sea of reporters, each of whom know even less about his team. Each of the reporters asks simple question after simple question, trying to glean enough worthwhile information from the coach to put together an intelligent-sounding team preview. Put simply, it is a coaching root canal.

Bucknell head coach Pat Flannery was midway through his conference this year-mid sentence, actually—when a reporter, sitting in the front row, accidentally lost control of his pen and flipped it in the coach's direction, hitting him in the lap.

Commentary

Senior Editor

Chris Ellis

"Everyone's been working hard through the offseason, and I think we've been able to assemble a solid group of guys..." Flannery was saying when the pen hit him.

"...A solid group of guys who throw pens at me."

Flannery gave a chuckle, the room followed suit, he gave the pen back to the offending scribe, and the conference continued as normal.

But I couldn't help thinking—what if the setting not been Bucknell, but Bloomington, Indiana or Philadelphia, Pa. What would the reaction have been if a lowly reporter had accidentally hit Indiana's Bob Knight with a pen during one of a coach's most frustrating moments? Temple's John Chaney? I'm guessing they wouldn't been as accommodating as Flannery.

The notion was reinforced at various points during the season. It was reinforced when Flannery, while defending forward Valter Karavanic after Karavanic struggled in a key midseason game at Lafayette, praised not only Karavanic's practice habits and work ethic, but also his 3.8 grade-point average. It was reinforced during post-game press conferences, when words like "interdependent" and "predecessor" outnumbered the "You knows" during interviews. It was reinforced every time Flannery, his coaches, or his players, exhibited class off the court.

Division I basketball at Bucknell has a special place. It has the right place.

Some would argue that basketball at Bucknell isn't even the same sport as at bigger Division I schools. But while the arenas may be smaller and the game a hare slower, the classification, the level—the dreams—are all still the same. At the beginning of each season, 340 schools have at least a theoretical chance of winning the NCAA championship. Indiana is one of them. Temple is one of them. So is Bucknell.

I thought that this season, after three years of good teams and near misses, might be the year that the Bison advanced to the NCAA tournament. The stars were back and the talent was there. Unfortunately, it was not to be. In the first round of the Patriot League tournament, the Bison struggled from the floor, Lehigh coach Sal Mentesana pushed all the right buttons, and the Bison were ushered out early. The Bucknell basketball team would not be going to the NCAA tournament. For the first time in four seasons, the Bucknell basketball team would not come close to going to the NCAA tournament.

And as the four-year careers of Bison players Karavanic, Brian Muckle, Dan Bowen, Dyrika Cameron and Shawn Asbury ended, so did my four-year tenure as Bucknell basketball beat writer. The list of people that made my time tremendous is huge, but the list must begin with Flannery. In an age where humility and priority are all too often missing from college basketball, Flannery was more than willing to accommodate me in my every need. Good quotes when my mind couldn't form a coherent question? No problem. A last-minute one-on-one interview? No problem. A conversation about my club ice hockey team or job search? Flannery was there with that too. My interviews could have been enjoyable to him, or they could have been the most frustrating things in an otherwise busy day. I'll never know. Flannery always made me feel welcome.

So despite the loss, is there really anything to lament? The student support for the team was wonderful, the coach exudes class on and off the court, the team was competitive, and the players are actually, well, people. Bucknell basketball was a dose of reality in the college world—a competitive team with principle. It really does occupy a special place.

So why did this year's loss hit harder than most? It is because that special place is being threatened. With other small conference and patriot league schools adding money and scholarships to their budgets, Bucknell's competitive place is quickly eroding. The University's window of opportunity to both be competitive and principled is fading fast.

Lehigh and Holy Cross have added permissive aid policies to their repertoires, leaving only two Division I non-Ivies without athletic scholarships for basketball. Holy Cross coach Ralph Willard, former head man at Pitt, will make almost $300,000 from his dual roles as coach and assistant A.D. at Holy Cross.

In the past, Bucknell was destined to fall farther down the food chain than most conferences, but the Patriot League's new policies may make it impossible for the Bison to recruit and attract good college basketball players. With the exception of Colgate coach Emmett Davis-who is further hampered by less basketball tradition, no community support and his school's crippling locati[illegible] no Division I staff may have a harder time recruiting than Flannery's.

In the not-so-distant future, the landscape may look something like this: Those who want better competition go to the mid-major conferences. Those who want academics go to the Ivies. Those who want money go to Holy Cross and Lehigh. Those who are left, choose Bucknell.

If that situation would come to fruition, don't expect Bucknell to able to attract talented student athletes like Karavanic on a consistent basis. And don't expect Flannery to stay around, either—his desire to win burns too strongly to stay on a sinking ship, even if that ship is his alma mater.

So the Bison and Flannery, who took his job here five years ago with the thought that he would be able to compete in the long-term, seem like the odd players out. What is the answer? It is certainly open for-debate. Does it involve athletic scholarships? Possibly. Does it involve a greater basketball budget? Possibly. Does it involve a drop to Division III athletics? Possibly. But the reality is clear: Bucknell not only lost a game when it lost to Lehigh last month, but it may have lost one of its few chances to legitimately compete with other Division I schools.

Division I college basketball is changing, even in the smaller conferences, and Bucknell's ability to both be competitive athletically and keep basketball in its proper balance off the court is gradually being taken away.

Basketball at Bucknell is slowly losing its special place and, sadly, it is people like Karavanic and Flannery—those who give you a reason to feel good about the sport—who will be hurt most.

Women learn from early mistakes

Follow disappointing spring break trip with impressive 10-9 win over Stanford

By Chuck Vicente

The Bucknell women's lacrosse team traveled on a difficult three-game stretch. The Bison were hit hard with three loses, but they bounced back to win an impressive game on Monday night.

The Bison's spring break began with a trip to Ohio State. One of the tougher teams on Bucknell's schedule, the Buckeyes are ranked 26th among the top 80 Division I, II and III schools in the nation. It only took Ohio State 44 seconds to score its first goal and dictate the rest of the game. The Buckeyes led 11-0 at the half and cruised on to a 17-0 win.

After a day of recovery, the Orange and Blue faced the Duquesne Dukes. Although they suffered another loss, 12-8, the Bison were much more competitive.

The main reason for the loss was inconsistent play. "We didn't play two halves, and we let Duquesne pull too far ahead," said Bucknell head coach Barb Jordan. "We did come back towards the end of the game, but we ran out of time." A standout for Bucknell was Ashley Evans '01, who contributed five goals and two assists.

Bucknell's last game of the break was against the Monmouth Hawks. The Bison-Hawks matchups have always resulted in tough, physical games. Freshman Suzanne Raffaele notched two goals and an assist, but Monmouth was just too tough and pulled away for a 9-3 victory.

Again, the Bison were set back by inconsistent play. "Monmouth has always been a tough, physical game. Again, we played a great first half and then had a bit of a let down in the second half," Jordan said. "I think if we can put two halves together we will be good."

After a disappointing spring break performance, the Bison tried to put all three games behind them and prepare for last Monday's contest against Stanford. "We weren't prepared to play as a team, but we put it all behind us and proved that [against Stanford]," said defender Erin Curtis '02.

The Bison downed the Cardinal, 10-9, to secure their first regular season win. Jordan was excited to see her team pull off the victory with the help of the good execution of plays, clutch goal tending, strong defense and an overall team effort.

Keeper Annie Richards '01 denied every chance Stanford had to pull away a win. As Curtis explained, Richards was "simply on," as she denied Stanford on 21 of its 30 shots.

On the offensive end, Evans and Raffaele combined for all 10 of Bucknell's goals, tallying six and four respectively. Melissa Montefusco '02 was able to connect with both scorers for an impressive six assists. The key factor in the Bison's win came from ground balls. They were able to grab 31 of the 39 ground balls to control the game. The women have a busy season ahead of them. Their Patriot League schedule starts March 25 at Villanova University.

Courtesy of Athletics Communications

Krista Gerhart '00 presses up the field.

"I just hope we can take what we learned and continue to grow as a team and become stronger because of our winning and losing," Jordan said.

Spring tennis previews

Men struggle at Daytona over break

Courtesy of Athletic Communications

Alex Davydov '02 rips a winner.

By Mike Brophy

While most students were busy basking in the sun or hitting the ski slopes this past week, the Bucknell men's tennis team was busy competing in a week full of matches. Traveling to Daytona, Florida, the Bison faced off against five very strong teams from the south.

With the absence of their senior captain and number one player, T.K. Kelly, the Bison had their work cut out for them. Though they played hard in the hot sun, the Bison unfortunately did not return to Lewisburg with a winning record, dropping four of their five matches.

The week started out with an extremely tough match against Embry-Riddle. Several of the matches to follow were close, but by the end of the day, Bucknell had dropped all nine of its matches.

When Bucknell faced South Carolina State, the outcome was not much different. Losing by a score of 6-1, Bucknell produced only one victory, which came from sophomore Scott Allen. Allen played a very competitive match and ended up winning in three sets.

The tides quickly turned when the Orange and Blue faced Valparaiso the next day. With a new sense of confidence and determination, the Bison were able to defeat this powerful team by a score of 5-2.

Claiming victories in singles play were Alex Davydov '02, Allen, Todd Jacobs '03 and Jake Zelnick '01. Winning their doubles matches were the two teams of Allen/Jacobs and Zelnick/Lee Scarborough '02. With this victory, the Bison moved to 2-3 on the season.

The final two matches of the week did not go as well for the Bucknell squad. Losing to both Bethune-Cookman and Stetson, the Bison dropped their overall record to 2-5.

Though disappointing, these losses did not come as much of a surprise to the team, as they knew the tough competition that they were slated to face.

When asked about his perceptions of the week, Aaron Webster '01, who filled in at number one for Kelly, stated that, "everyone competed well and put in a lot of effort. It is tough when you are missing your captain and number one player."

The men's tennis team is back in action this week, as it will host Mount St. Mary's today and Delaware on Saturday.

Kristin Inglis '02: Voted Most Valuable Player her freshman year for posting winning singles and doubles records.

Jill Wurzburg '03: Competed in top singles and doubles positions this past fall as a freshman.

Morgan Lloyd '03: Competed at the number one singles and doubles positions on the junior varsity team.

Women finish 2-2 at Hilton Head

By Carmen Mauriello

The Bucknell women's tennis team may be short on numbers, but certainly not on desire and determination. The squad traveled to Hilton Head, South Carolina over spring break and opened its season with a 2-2 mark against some top competition.

The Bison began the week with an 8-1 win over the University of Missouri, Kansas City on March 12. Kerry Callaghan '00, Jill Wurzburg '03, Kristin Inglis '02, Tracy Honko '00 and Laura Maisel '03 registered singles victories, while the Bison swept all three doubles matches.

The Orange and Blue then ran into a tough Quinnapiac team, formerly a Division II power, and fell 6-3. Leah Lenox '01, Inglis and Maisel were Bucknell's only winners.

The Bison rebounded with a 9-0 drubbing of Southeast Missouri on March 16. All of the Bison singles and doubles players swept

See TENNIS, page 15

Elizabeth Cizmar '03: Competed at the number three singles and number two doubles positions on the junior varsity.

Tracy Honko '00: Co-captain with a 35-25 dual match record. 1998 Patriot League singles runner-up.

Kerry Callaghan '00: A four-year starter and co-captain this season. Has compiled a winning record every season.

Kelly Dzialo '03: Competed at the number five singles and number three doubles positions on the junior varsity team.

Kary Wolford '02: All-court, aggressive player who competed in both singles and doubles play for the varsity.

Crew tunes up for BU Invitational in Georgia

By Jeff Summerhill

While most students were basking in the sun in Florida, Mexico or other tropical locations, the Bucknell crew teams spent this year's spring break in Augusta, Georgia, home of the United States National Sculling Center. The weather in Georgia was perfect for rowing with temperatures in the 70's and 80's all week. The good weather enabled the men's and women's teams to practice twice a day in preparation for the end of the week regatta held in nearby Aiken, South Carolina.

The regatta featured crews that Bucknell does not get a chance to face in its regular race season. Duke, North Carolina State, Columbia, NYU, Manhatten and Tennessee were among the crews in attendance at the regatta. The Bison crews had a very impressive showing for their first real water race of the season.

The women's varsity four, consisting of Liz Barrows '00, Anne Calcagne '00, Kelly Wanger '00 and Julie Engel '03, took first place in their race, as did the women's varsity pair of Sarah Deignan '00 and Keri Heuberger '02.

In addition, the men's novice "A" boat notched its second consecutive first-place finish. Members of this boat were freshmen Jeff Dasch, Jeff Bolle, Aaron Casagrande, Mike Brooks-Williams, Mike Andrieu, Aaron Bates, Gerald Bell, John Purcell and John Waterman.

The crew teams looks to continue their winning streak this weekend at the 17th annual Bucknell Spring Invitational. The regatta is being held at Walker Lake in Troxelville this year. The field of 19 crews is the largest ever for the Bucknell Spring Invitational and features many top teams, including William and Mary, Virginia Tech and St. Joseph's.

The action will begin at 2:00 p.m. on Saturday and at 8:00 a.m. on Sunday. Come out and support the up-and-coming crew teams in their last home race of the year.

Matthew Kasdan—The Bucknellian

Students enjoy the afternon festivities in Phi Kappa Psi's backyard.

House Party yields mixed reactions

By Jared Silliker

Each year, the effects of House Party are scrutinized by the University community. Last year at this time, the campus saw an increase in incidents surrounding the weekend, especially concerning outsiders and continued abusive behavior on the part of some students, especially in residence halls.

There were positives as well—revised guidelines and the role of Greek leaders appeared to reduce incidents at fraternity parties to a minimum.

"I think the chapters did a pretty good job dealing with problems," Roy Baker, assistant dean of students for Greek life, said. "Every time I asked a chapter to do something, they did so immediately—our Greeks were very responsible."

"I think we did the best job we could in planning House Party," Baker said, emphasizing the crucial role students played in monitoring the weekend activities.

Various students serving as Greek monitors added a new dimension to the weekend. Individuals such as IFC President Keith Hofmann '01 and Panhellenic president Meredith Alan '01 along with Brian Blue '01, Pete Van Emburgh '02 and Mike Kacewicz '02, were on-call during the weekend, helping to respond to problems.

"We had a lot of guidelines that were constantly reinforced," Hofmann said. "We showed that we can have good social events while, at the same time, keeping everyone in line. (Various security measures) gave us a greater degree of responsibility, so we were able to head off a lot of the problems."

Baker said that non-Bucknell students visiting for House Party are often the people who cause trouble. "They don't know the expectations and procedures of the weekend, and they don't really care," Baker added.

The two primary incidents at fraternity houses involved such visitors—fights at both Phi Kappa Psi and Lambda Chi Alpha, the former involving members of the Johns Hopkins rugby team. The team apparently "stopped in" on House Party after a game at Lock Haven.

Far and away, however, the majority of the incidents this past weekend occurred in the residence halls.

"Students are using House Party to do crazy things in the residence halls," Baker said of especially underclass students.

"A lot of freshmen have the mentality that House Party is a free-for-all, and sometimes it leads to irresponsible behavior," Hofmann said. "Unfortunately, it's something we can't really do anything about."

Other problems, according to Baker, included strippers at Theta Chi fraternity, a thong contest at Sigma

Ferraro named Dean of Students

Experienced Columbia administrator plans to work closely with student body

By Brian Watson

Following last week's selection of Steffen H. Rogers as our new president, the University ended another crucial search campaign, naming Richard Ferraro as the new dean of students.

Dr. Ferraro, currently the dean of students at Columbia University's School of General Studies, brings to campus a wealth of administrative experience and student advocacy.

"I was attracted to Bucknell for several reasons. It has excellent students and faculty; it is a good size (neither too small nor too large); it is located in a very pretty part of the country in a very picturesque town; and it has a nice academic focus," Ferraro said. "The persons with whom I met when I interviewed—faculty, staff, alumni and students—impressed me greatly, and I suppose you could say they sealed the deal."

Dr. Ferraro plans to apply his previous experiences at comparable schools in his future tenure at the University. "Bucknell reminds me in many ways of my alma mater, Cornell University (especially as it existed when I graduated in 1973); and it also resembles in numerous respects the College of William and Mary, a school I worked at before moving to Columbia University," Ferraro said. "I was very fond of both universities, and I think that augers well for my move to Bucknell."

"I think of (Dr. Ferraro) as, quietly, very engaging and thoughtful," said Charles Pollock, interim vice president for student affairs. "He didn't give 'pat' answers, revealing of someone clearly focused on doing well for students, enhancing, even maximizing their experience."

Courtesy of www.columbia.edu

Dr. Richard Ferraro will assume his new responsiblities in June.

Ferraro has served as Dean at Columbia since 1995, arriving there after working for six years as the College of William and Mary's assistant dean. Previously he was assistant dean at Emory University and counselor/dean at the University of Wisconsin-Madison.

The dean graduated from Cornell University in 1972 and earned his Master's Degree and doctorate in Renaissance history from Wisconsin. He served a guest lecturer at Wisconsin and then as an adjunct instructor at William and Mary.

A former Fulbright and American Academy Fellow in Italy, Ferraro offered a seminar on the Italian family in the Renaissance at Columbia.

Ferraro looks forward to offering a hands-on approach to the student body. "I have a reputation at Columbia for being a 'hands on' sort of Dean. I try to maintain close relations with students in leadership roles (notably with respect to the Student Government, but also in clubs, publications, and mentorship capacities). I generally keep early walk-in hours, so that I can offer something of an open door policy for students more generally."

Ferraro also plans to use email and the Internet to notify the student body of pertinent issues. He said he occasionally likes to hold Town Hall Meetings "to maintain a good communication and cooperation." The new dean has also held receptions at his home to strengthen his relationships with students.

Ferraro recognizes the importance of community and seeks to create a comfortable environment for all students. "When I was an undergraduate at Cornell, both my parents passed away, and Cornell served for me not only at a place in which I absorbed a huge amount of intellectual matter, but it was also a venue for making long lasting friendships and for forging meaningful mentor/mentee relationships."

He will also look to improve upon other important student issues, including the maintenance of a successful Greek system, offering alternative social outlets, ensuring overall safety, enhancing diversity and helping students to learn about their own identities.

"When one graduates as the end of the senior year, one should not only have perfected a set of skills to enable him her to function in the world of work, one should have a value system that truly allows one to function as a complete, ethical person," Ferraro said.

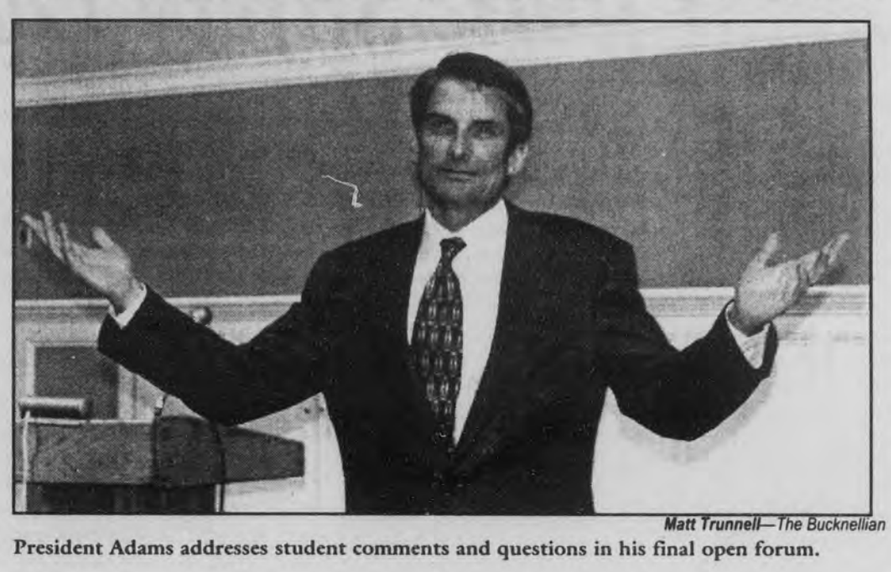
President William D. Adams said in a campus email, "In Dr. Ferraro, we gain a broadly experienced administrator and a proven, accessible advocate for students, one whose own teaching and scholarship have made him a particularly effective integrator of classroom and other learning. He is known for his fairness and compassion, even while upholding high standards for students."

Ferraro will replace Interim Dean of Students Allen Schweinsberg, who has made great efforts to maintain the strength of the dean's office during this transition, in June.

"The strength of our student affairs operations has continued under Allen's leadership, and he has dealt individually with students and their families with exemplary sensitivity and understanding," Adams said.

"Allen came into that role and learned it so quickly and performed it so well, striking that incredible balance between what's fair and the high standards concerning Bucknell's objectives," Pollock said. "He really did a great service, lending his wonderful sense for the institution and plugging the hole with his tremendous knowledge and perspective."

Adams holds final "Yo Bro" open forum



Matt Trunnell—The Bucknellian

President Adams addresses student comments and questions in his final open forum.

By Jim Leahy

As the University looks forward toward welcoming a new president in July, President Adams held his final open "Yo, Bro" forum with students. Drawing a small but informed crowd to Vaughn Literature Auditorium last Thursday night, Adams took the opportunity to interact in a formal manner with the student body for a final time.

Also present at the meeting was a group of University administrators including Deans Conrad, Baker and Schweinsberg, and vice presidents Charles Pollock and Peggy Plympton.

Adams opened the program with an overview of where the University has come during his tenure and where he sees it going in the next few years. He stated the "vital signs of the institution are good" and that the University's student body has been very "impressive."

He cited a rise in admissions inquiries and applications atrecord levels as a sign of the University's on—going strength and the University's financial strength, thanks to the Capital Campaign he initiated.

The subject of Greek life and alcohol also entered the conversation. Adams told the group he thought the University has an "excessive focus on alcohol in social life." Because of that, he put a letter in the accepted students packet this year explaining the University's problem and challenging them to make a decision whether to join the University because of it's party school appearance or its academic prowess. Residential life and its future was a prime focus of Adams' thinking He mentioned that he has formed a task force to be chaired by Interim Dean of Students Allen Schweinsberg and Elaine Garrett, associate dean of the college of arts and sciences, to investigate where residential life is heading. The task force will look into non-Greek life and programs for students who do not join the University's Greek system.

For more on President Adams' tenure at the University, see page 3.

A student in the group also brought up liberal arts education, the subject of Bro's latest article in *Bucknell World*. In the article, he outlines the feasibility and future for the liberal arts education as we move in the twenty-first century.

Finishing the article, Adams wrote: "... Bucknell ... must wrestle with the matter of how best to align its considerable intellectual resources and talents with the demands of the world we find around us, in all of its practical aspects. That work is likely to define us for the next century, and it will require every one of our many talents."

One question brought up was whether Adams has any regrets as he prepares to leave Bucknell and head to Colby College in Maine. He said that he wishes the academic standards of the school had been raised even more and that the University examined its strengths and weaknesses in order to change the weaknesses and better the strengths of the academic mission.

He finished with some sentimental thoughts: "In any part of life there is some serendipity ... and I have been very lucky." "There is an aspect of this place which I cannot describe," Bro said. "A caring about things and people."

As he prepares to the torch over to Dr. Steffen Rogers, Adams urged the student body to "get to know him as quickly as possible ... to share ideas."

Sort of create a "Yo Steffen" forum.

Brigade spends Spring Break helping others

By Jim Leahy

Many University students had so much fun in the sun over Spring Break that they probably didn't even think about one group that went somewhere a little different. The Bucknell Brigade, a group of nineteen students and six staff journeyed back to Nicaragua and the Nueva Vida resettlement camp. Their mission: begin construction of a permanent medical clinic for the over 12,000 residents of the area.

The work to do was difficult to begin with but was made harder because the group had to do it all by hand. They dug holes, installed cement posts into those holes, mixed cement by hand, and installed concrete slabs to form the walls of the foundation for the new medical clinic. According to Anna Tiedeman '00, "when people ask me what I did for my spring break, I tell them I spent it digging holes. I get some pretty interesting reactions."

There is no clinic in the village and Dr. Don Stechschulte served as visiting clinician, helping treat all the people there. Before they left, the group stockpiled supplies to keep up the clinic. They brought everything from bandages to cough medicine to help the people get over the sicknesses they had.

Members of the Jubilee House Community put the poverty of the people in the area into perspective. As hosts to the Brigade, they were able to give the Bucknellians a perspective on life in a world so differ-

"Insider's look" in the new dorm

By Jim Leahy

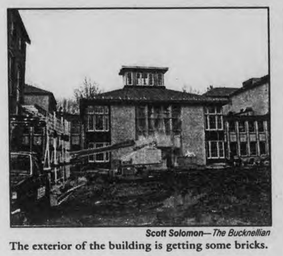
Where can you get a look at a football game, not get wet, and not be a coach or member of the press? On the fourth floor of the new dormitory, of course. The building is well on its way to a July completion and contains many features never seen on the University campus.

Scott Solomon—*The Bucknellian*

A Look inside one of the double rooms.

Containing 16 "pods" of 18 students and one RA each, the building will house roughly 300 students in double rooms. In each pod, there will be a lounge with kitchenette and television. All rooms will be carpeted.

The center connecting section, a two-floor structure that lies between the north and south pods, contains seminar rooms and more washers and dryers than any other building on campus. The second floor rooms contain vaulted ceilings of wood to give a "homey" look to the facility.



Scott Solomon—*The Bucknellian*

The exterior of the building is getting some bricks.

To answer many questions, you can see about half the field, from the rooms that face the stadium. Director of Housing and Residential Life Dan Remley said "This is where I am going to watch a game from when the weather is bad."

The building will open next semester and will be two-thirds occupied by first-year students, some in the residential college programs and others not. Roberts Hall will no longer be occupied by freshmen. Next fall, freshmen will live in either Swartz, the new dorm or in the downhill dorms. There will also be housing for upperclass students in the new dorm.

Football players come through for Red Cross

By Jennifer Jenchura

"We smoked it," commented football coach Joe Tillman after learning his football players helped shatter the old record for units of blood donated at Bucknell.

March 8 was no ordinary day for the Union Country Red Cross. It was a day Bucknell broke its previous record of 301 donated units of blood set in 1991 to raise a successful 329 pints of usable blood. The service fraternity Alpha-Phi-Omega in coordination with the Red Cross of Lewisburg sponsored the drive. Held in Larison Hall, the blood drive also brought out members of Bucknell's football team and their friends.

At the beginning of the semester the football coaches challenged their players to donate blood at the next Red Cross Blood Drive. The incentive? "The winning team could get out of some of the conditioning drills," said Head Football Coach Tom Gadd, "Not to mention the feeling of beating your teammates."

Players were divided into two teams, offense and defense. Both sides were encouraged to recruit the support of their friends, as Red Cross volunteers had to record which team member recruited them. After careful tabulations by the athletic department, in the end the defense and defense's friends were just five shy of offense and the offense's friends' 80 units of blood.

Gadd's inspiration for pursuing the team's involvement in the drive was the notion that blood is in serious demand, enforced by viewing commercials showing a need for more blood donations around the country.

"A few years back some operations were not able to be performed in nearby hospitals due to a lack of blood. This was something that the football team, as a group, could help," Gadd said.

"Part of my job was to get some community service activities for the kids, so we talked to the Red Cross and set it up," Tillman said. Tillman credits the Red Cross for thinking of the competition idea.

As Tillman's first year on the Bucknell staff, he was extremely enthusiastic about the efforts made. "I give all the credit to the kids. The competition between the offense and the defense was intense. It got to be a new kind of bloodbath for us," Tillman said. "It was a war!"

As encouragement, the team invited a representative from the Red Cross to talk beforehand about giving blood. "Some of the guys were a little squeamish about the needle, but they were eventually pulled in by their teammates," Gadd said. Tillman speculates 80% of the team donated, and others helped set-up the drive and serve pizza and cookies to donors. With just about everyone from the team donating, along with the support of friends, the football team alone captured about 40% of the total usable blood.

Even though 366 donors registered, some were deferred due to taking antibiotics or traveling to areas of foreign countries that the Red Cross labels 'risk.'

Bucknell greatly surpassed the Red Cross's expectations. The goal for the day at Bucknell was 250 units. At last year's spring blood drive, only 191 usable units were collected. "At this drive a remarkable 90 people were first time donors. Its amazing to think that when you donate just one pint, you could be saving three or four people's lives," Tillman said. The 329 units from Bucknell will be used for cancer patients, infants, surgery patients, and others with life-threatening illness. Bucknell donations account for one-sixth of the county's collections; and Bucknell is historically the largest drive in Union County. The Northeast region of the Red Cross strives to collect 400 units each day, and Bucknell came very close to meeting that in just a single drive. The Union county division of the Red Cross annually sponsors two blood drives at the University, one held in the fall and one in the spring.

Will this become a tradition? "I think this is something we can do every year in the spring," Tillman said. According to Alpha-Phi-Omega co-coordinator of the blood drive, Lydia Hagstoz, "We are hoping to work with the football team, and possibly other teams for future drives."

Gadd suggests receiving support from other sports teams. "We think other athletic teams will become interested too," Gadd said.

YUPLAY

Siblings Weekend 2000 kicks off Friday

Activities begin this Friday, March 31, at 3:00 and continue throughout the weekend.

Activities are open to ALL students regardless if a sibling is with you. This schedule, for the most part, is exact, but a finalized schedule will be available Friday at registration in the LC Mall from 3:00 to 5:00.

Friday, March 31

3-5pm	Registration, LC Mall
7pm	Movie: Toy Story, LC Forum
9pm	Comedy: Robbie Printz, Bison
9:30pm	DJ Dance, Uptown
10:30pm	Movie: Billy Madison, LC Forum
11pm	Late Night Music Series: Michael Greenberg: "tribute to Dave Matthews" by a Bucknell Sibling, 7th St. Café

Saturday, April 1

11am-4pm	Picnic and Carnival, Fieldhouse
11:30am	Movie: Billy Madison, LC Forum
1:30pm	Movie: Ace Ventura, LC Forum
6pm-Midnight	Fun Flicks (make your own music video), Bison
7pm	Concert featuring Two Past Midnight, Silhouettes, and Jazz Machine, *site to be announced later this week
8pm	Movie: Toy Story 2, LC Forum
10pm	Swing Band: Set 'em Up, Joe Uptown
10:30pm	Movie: Toy Story 2, LC Forum

Sunday, April 2

10am	Continental Breakfast, Larison Dining Hall

PARTY from page 1

Alpha Epsilon fraternity as well as women crawling on SAE's roof.

"There seems to be an attitude that [House Party] is a free-for-all; that there's no rules," Baker said. "And this hurts the whole concept of the event."

Baker went on to note that abusive behavior to professional staff members and a trashed campus are only a couple reasons why House Party has become an event that is no longer fun to operate.

"Why put up the snow fences if students are just going to tear them down," Baker said. These breaches of security are reasons that students may not be allowed to carry alcohol in public in the future. The snow fences merely were a way to allow 21-year-olds to consume alcohol in a given area-with students ignoring these boundaries, the snow fences may go as well. Personal cups may arrive at a similar fate.

Baker noted a need for more alternative beverages as gallons of lemonade went quickly at the hot dog stand along Fraternity Road. He did note that some students have begun to take benefits such as having free food served, which did not exist a few years ago, for granted.

"Students need to realize that we have an opportunity to hold a really neat event, but that they could ruin it for themselves," Baker said. He added that many students don't realize that this type of event doesn't happen everywhere.

Hofmann was happy with the overall success of the weekend. "It was a testament to all the efforts that the presidents and chapters made to keep everything safe, and that's exactly what we did."

Public Safety Log

March 22, 2000

INFORMATION — Public Safety responded to Swartz Hall for the report of a student shooting a squirrel with a pellet gun. No witnesses or suspects could be located in a search of the area.

INFORMATION/SHS TRANSPORT — Public Safety dispatched the Student Health Services driver to transport an ill student to Evangelical Community Hospital Emergency Room for treatment. The student later returned to campus.

BU PROPERTY DAMAGE — Public Safety responded to St. George St. for the report of vandalism to wet concrete. Lewisburg Police was notified. No witnesses or suspects could be located in a search of the area.

INFORMATION — Public Safety responded to the Fieldhouse for the report of an injured student. The individual was transported by a friend to Evangelical Community Hospital Emergency Room for treatment and later returned to campus.

March 23, 2000

MEDICAL ASSIST — Public Safety responded to Moore Avenue at S. 7th St. for the report of a visitor with a leg fracture. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment.

ASSIST LEWISBURG POLICE — Public Safety responded to the intersection of S. 7th St. and St. George St. to direct traffic while Lewisburg Police investigated an off campus motor vehicle accident.

VEHICLE ACCIDENT — Public Safety responded to Lower Harris Parking Lot for the report of a motor vehicle accident involving a university owned car and an unoccupied student auto. No injuries sustained and minor damage to the vehicles.

THEFT BY UNLAWFUL TAKING — A student reported to Public Safety that a pair of trousers with his room keys was taken from an unsecured locker at Davis Gym locker room by unknown person(s). The incident is under investigation.

BU PROPERTY DAMAGE — Public Safety responded to Olin Science for the report of a broken windowpane. No suspects or witnesses were located in a search of the area.

March 24, 2000

INFORMATION/DUMPSTER FIRE — While on routine patrol, Public Safety observed a fire in a Bucknell West dumpster caused by disposal of charcoal briquettes. The fire was extinguished.

NON—EMERGENCY MEDICAL TRANSPORT — Public Safety dispatched a Student Health Services driver to transport an ill student to Evangelical Community Hospital Emergency room for treatment. The student later returned to campus.

INFORMATION — Public Safety responded to the Langone Center for the report of a disorderly student in the restaurant. The student was removed. The incident is under investigation and charges are pending.

UNDERAGE CONSUMPTION/DISORDERLY CONDUCT — A student identified to Public Safety that a group of individuals were pulling down the construction fencing at Hunt Hall. Two individuals were apprehended, determined to be under 21 years of age, and admitted to consuming alcohol. One individual was cited for underage consumption and in a subsequent incident for breaking a window in Vedder Hall, the second individual for underage consumption, disorderly conduct, and criminal mischief. Both individuals were transported to the on—duty RA. The incident is under investigation.

OPEN CONTAINER OF ALCOHOL — While on routine patrol, Public Safety observed a student in front of Sigma Alpha Epsilon Fraternity carrying an open container of beer. A citation was issued.

March 25, 2000

ASSIST LOCAL POLICE/D.W.I. — Public Safety responded to Tower House to assist Lewisburg Police with a student who had been cited by Lewisburg Police for driving while under the influence of alcohol. University charges are pending.

MEDICAL TRANSPORT — Public Safety responded to LCA for the report of a student with a finger laceration. The individual was transported by another student to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

TAMPERING WITH FIRE EQUIPMENT/CRIMINAL MISCHIEF — Public Safety responded to a fire alarm at Roberts Hall and determined that a hallway detector was scorched by unknown person(s). Further investigation indicated that property damage was done to the hallway bathroom. The incident is under investigation.

UNDERAGE CONSUMPTION — Public Safety was alerted that a student was cited by Lewisburg Police for underage consumption.

INSTITUTIONAL VANDALISM — Public Safety responded to Swartz Hall and determined that a wall clock had been torn down and removed by unknown person(s). The clock has not been recovered. The incident is under investigation.

THEFT — A student reported that the contents missing from a book bag turned into Public Safety were a calculator and $30.00. The person who turned the book bag in to public safety indicated that the contents were found scattered on the ground next to the bag. The incident is under investigation.

BU PROPERTY DAMAGE — Public Safety responded to Swartz Hall for the report of a broken window and blood on the floor. No witnesses or suspects were located in a search of the area.

MEDICAL ASSIST — Public Safety responded to the exterior of Roser Hall for the report of a student suffering a seizure. The individual was transported by ambulance to Evangelical Community Hospital Emergency room for treatment and later returned to campus.

VANDALISM/TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm at Vedder Hall and determined the cause was a fire extinguisher discharged by unknown person(s). The incident is under investigation.

INFORMATION — Public Safety responded to the Langone Center for the report of a food fight. No suspects were located but there was evidence of food thrown on the floor. An officer was assigned to the dining hall until the meal was over.

UNDERAGE POSSESSION AND CONSUMPTION — While on routine patrol, Public Safety approached a student with an open container of beer. The individual did display a "21 year old" wristband but was under 21 years of age. The student was cited for possession and consumption of alcohol and transported to the on—duty RA.

INFORMATION/FIRE — Public Safety responded to Bucknell West for a fire alarm activation caused items left on a hot stove. Flames on the electric range were extinguished with a fire extinguisher. The Safety Manager was notified.

INFORMATION/TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to Phi Psi Fraternity for the report of a fire alarm activation caused by a pull station activated by unknown person(s). The incident is under investigation.

INFORMATION — Public Safety responded to 7th St. House for the report of a student with a knife. The student did not appear to pose any threat and the knife was being taken to the house for kitchen work. The knife was confiscated by Public Safety pending an investigation. Charges are pending.

INFORMATION — Public Safety responded to Theta Chi Fraternity for the report of female strippers. University Officials were notified and ordered that the party be shut down and the individuals escorted off campus. Charges are pending.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to two fire alarms at Swartz Hall caused by a discharged fire extinguisher and an activated pull station. The incidents are under investigation.

March 26, 2000

SIMPLE ASSAULT — Public Safety responded to Phi Kappa Psi Fraternity for the report that two students and a visitor who were assaulted. East Buffalo Township Police responded and one visitor was cited for simple assault.

NON—EMERGENCY MEDICAL TRANSPORT — A student contacted Public Safety and requested transportation to Evangelical Community Hospital Emergency room for treatment of an ankle injury. A Student Health Service driver escorted the individual to the hospital and later returned her to campus.

NON—EMERGENCY MEDICAL TRANSPORT — A student contacted Public Safety and requested transportation to Evangelical Community Hospital emergency room for treatment of an ankle injury sustained a day prior to the call. A Student Health Service driver transported the individual who later returned to campus.

INFORMATION/BU PROPERTY DAMAGE — Public Safety responded to 7th St. House for the report of loud noise. It was determined that the floor joist cracked due to the over crowded conditions at a registered party. The area was cleared and carpenters responded to correct the condition.

TAMPERING WITH FIRE EQUIPMENT — Public Safety responded to a fire alarm activation in Vedder Hall. Unknown person(s) had discharged two fire extinguishers. The incident is under investigation.

MEDICAL ASSIST — A student contacted Public Safety and requested treatment for a minor cut. Public Safety provided the supplies and the individual signed a release refusing further medical treatment.

UNDERAGE CONSUMPTION/DISORDERLY CONDUCT/FIGHTING — While on routine patrol, Public Safety observed a disturbance in the area of Lambda Chi Fraternity. A University student was in an altercation with four other males. The student was removed from the area and attempts were made to locate the other individuals involved. The individual admitted that he consumed for beers while being underage. The incident is under investigation and University charges are pending upon further review.

RECOVERED PROPERTY — Public Safety responded to the Langone Center to pick up a parking sign that had been removed from its location by unknown person(s).

INFORMATION/RECOVERED PROPERTY — While on routine patrol, Public Safety found two abandoned bicycles in Lower Harris Lot. The bikes were removed to Public Safety and the incident is under investigation.

VANDALISM/CRIMINAL MISCHIEF — A student reported to Public Safety that unknown person(s) had entered his unlocked room at Phi Kappa Psi Fraternity and broke numerous beer bottles on the floor, damaged a desk chair, and poured windshield washer fluid on clothing. The incident is under investigation.

March 27, 2000

HARASSMENT BY COMMUNICATION/THEFT — A student reported to Public Safety that he had received a harassing phone call of a sexual nature from an unknown person. The student also reported that unknown person(s) had entered his room, poured water on his bed and removed some clothing. The incident is under investigation.

THEFT — A student reported to Public Safety that unknown person(s) had removed her bicycle while parked and locked at the bike rack located between Hunt and Harris Hall. The incident is under investigation.

VEHICLE ACCIDENT — Public Safety responded to lower Taylor Lot for the report of a minor motor vehicle accident involving a student operated vehicle and an illegally parked car. There were no injuries and only minor damage. The individuals exchanged insurance information.

President William D. "Bro" Adams

Courtesy of Cathy Bruce

Bro's school picture in 1961.

A look back on Bucknell's 14th president

By Peter Van Emburgh

In President William D. "Bro" Adams' Inaugural Address on Oct. 29, 1995, he declared, "we look forward to the prospect of increasing our resources in the relatively near future and of adding thereby to the strength of the University. Everything is ripe for us together to take this wonderfully strong place to an altogether new level of excellence, achievement, and public renown."

During Bro's tenure as the University's 14th president, he accomplished all of these goals.

"We will remember him with respect for sticking to the principles and goals he set for his presidency, whatever the opposition, even when they led him, to places he never imagined going," said Rev. Ian B. Oliver, university chaplain.

When Bro Adams arrived on campus in 1995, he had a "wish list" awaiting him. The "wish list" was a set of goals and needs that were necessary for the growth of the University. Adams' mission was to transform the list of priorities into a comprehensive and long-range strategic plan.

Capital Campaign

Perhaps the accomplishment for which Adams will be best known was his leadership in steering the $150 million Bucknell Campaign. Last December, the fundraising campaign accomplished its original goal one year ahead of schedule. With a year still remaining, Adams used the momentum to reach higher limits. The revised goal was set at $180 million, which is "clearly in sight," according to Dick Johnson, vice president of university relations.

"There were funds still lacking in certain areas, such as the planned psychology/geology building," Adams said. "However, we exceeded our goals in areas such as endowment and financial aid." Bro extended a great deal of credit to Johnson, who has managed the fundraising campaign.

"We've added $100 million to the endowment, annual giving has more than doubled, one new building is under construction and we believe we are very close to receiving a green light for two other buildings," Johnson said. "Bro's leadership, his success as a fundraiser and his tireless commitment to traveling for and doing the work of the campaign all have been key ingredients in this tremendous achievement."

Diversity Plan

In the fall of 1995, Adams formed a task force to study diversity at Bucknell and to make recommendations on how the University could become more diverse in the future. The task force studied the issue and submitted its final report early in the spring semester of 1998. The report contains 81 separate recommendations touching on nearly every aspect and part of the University, including admissions, athletics and the faculty.

"I'm very proud of the report— I think it was the cornerstone of my presidency," Adams said. "It was very high on my priority list... as I stated in my inaugural address."

Adams worked to not only improve the racial diversity on campus, but also to recruit students from different socio-economic and religious backgrounds as well.

"In the pursuit of diversity and equity, he has probably done more than any president to support all forms of religious life and expression on campus, especially minority traditions," Oliver said.

Associate Dean of the College of Arts and Sciences Robert Midkiff said, "He has helped provide a vision and direction for the institution in important areas such as diversity."

Athletics

Bro Adams served the last four years as the Chair of the Council of Patriot League Presidents, struggling with crises behind the Lafayette and Holy Cross near-departures. Recently, Georgetown football was admitted as an associate member to begin competing in the Patriot League next year.

"I feel pretty good about the league—we've kept it alive by making some important changes," Adams said.

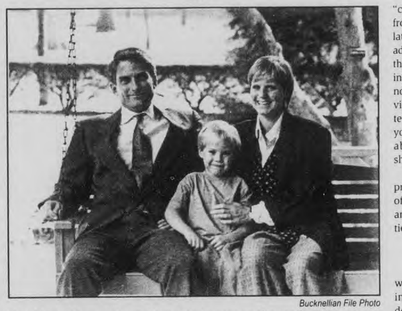
The issue of athletic scholarships will continue to be an issue both to the Patriot League and to Bison athletics. Adams, who is adamantly opposed to the issue, is worried that the pressure of Division I athletics offering athletic incentives may destroy the integrity of league's objectives.

"I'm proud of our athletic program and the way that it fits with the quality of the institution," Adams said. "All of Division I athletics is so fundamentally headed in the wrong direction— it's just the Patriot and the Ivy Leagues holding out."

"As the chair of the league's Council of Presidents, he did an outstanding job running their semi-annual meetings— he kept them focuses and served as an excellent spokesman for the league," said Todd Newcomb, assistant director of athletics. "He will not only be missed by the Bucknell community but also by his peers around the Patriot League."

Associate Director of Athletics Brad Tufts said, "He has contributed his talents and much time to the overall effort of strengthening and expanding the league."

Bro looks forward to engaging in the Division III atmosphere of Colby College in the fall, where he will be "a very active fan."



Bucknellian File Photo

Bro, his son Sean, and wife Cathy Bruce pose on the porch swing.

Alcohol Issue

With growing skepticism concerning the amount of alcohol abuse on campus, President Adams undertook an extensive study last year into the effects of binge drinking on campus. With the Harvard Alcohol Study classifying Bucknellians as "binge drinkers," Adams initiated a Ten Point Plan to help control the effects of alcohol on campus.

"I know it's not a terribly popular subject matter for students, but I feel that it's reasonable," Adams said. "I am pretty glad for what we accomplished— it was a necessary thing."

Adams said that he hoped that the "culture" of students would shift away from their dependency on alcohol-related activities. He sent a letter to all admitted students this year explaining the stricter sanctions imposed, including making sanctions cumulative and notifying students' parents of alcohol violations. Basically, Adams' letter intelligently and delicately explained, "if you don't like the fact we're worried about the situation, then you shouldn't come!" Adams said.

Adams feels that tremendous progress was made with the addition of an alternative social club, Uptown, and other non-alcohol related activities.

Reflection

"As I look back on my time here, I wish I had found more purely relaxed, informal moments to be with students," Adams said. "I think I'll be more mindful about close interaction with the students [at Colby]."

Cathy Bruce, Bro's wife and former U.S. Ski Team member, said that she and their two children have thoroughly enjoyed their five years at Bucknell. "Raising a family on campus and in Lewisburg has been a memorable and pleasing experience," Bruce said.

Bruce is looking forward to living "a new adventure" in New England. "I want to thank the students for respecting our family and our property— the community has treated us so well," Bruce said. "As a first-time president and first-lady, Bucknell has been a wondeffful place to start our 'new' careers."

"The one thing that the students should know about my husband is that he always gave 150 percent toward bettering this school," Bruce said.

In addition to the "physical beauty" of this campus, Adams will miss the "human element" of this school. "The students here are good, thoughtful, intellectual people," Adams said. "I'll miss my colleagues and friends that I have made here over the years."

Legacy

Dick Skelton, senior admissions consultant, has always been impressed with Bro's administrative leadership and long-range planning capabilities. "I've found him to understand the ramifications of various decisions available, to be a decisive and articulate manager, and best of all, now a respected colleague and friend," Skelton said.

Adams will be re-engaged in the planning process again as he will immediately work to develop a stronger, better institution at Colby.

"Bro has offered a model of collaborative and consultative leadership that has contributed to the establishment of a highly constructive atmosphere of campus collaborative work toward shared educational goals," Johnson said.

Marilyn Vargo, administrative assistant to the president, said, "We on his office staff know firsthand how devoted he has been to making Bucknell a better place, and he has certainly achieved that goal in so many ways."

The legacy of William D. Adams will not be short-lived. "He has given us a certain ambition— a strong desire to get better and better at what we do, but always to remain that distinctive place that we know and love as Bucknell," said Charlie Pollock, interim vice president for student affairs. Pollock credits Adams as developing a capability to effectively plan for the future and create an institutional momentum.

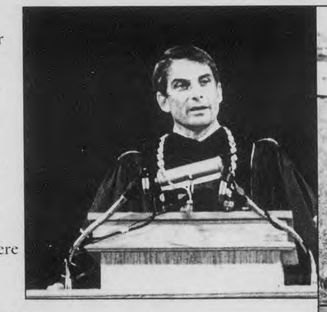
"I've tried to make this University become a better, stronger place and I think that it has become measurably better in the last five years," Adams said. President Adams kept his word since Day One, and through these obieitves exemplified how successful, committed and inspirational an administrator can be.

We've reached a higher level of achievement because of Bro Adams.

Left President Adams and first-lady Cathy Bruce pose prior to his inaugural dinner.

Lower Left During the spring of 1995, Adams lead a rally against CWA. He was very active during his tenure and was supportive of many worthy causes.

Bottom Despite his busy schedule, President Adams still finds time for his loved ones. Here he enjoys a rest with his daugther Carmen.



Bro Adams: Past and Present

Top Bro addresses the university for his first time as president during his inauguration in Oct. 1995

Top Right Bro practices his baseball stance. Adams was born in Pontiac, Mich. and grew up in Birmingham

Right A Vietnam veteran, Adams served in the Mekong Delta in 1968-69 as a first lieutenant.

Two Children Killed When Bus and Train Collide

Two children were killed and five others injured Tuesday after a freight train tore through a school bus — splitting it in two — on the Tennessee-Georgia border. A CSX freight train hit a Murray County, Georgia school bus shortly before 7 a.m. at a rail crossing inside Polk County, Tennessee, on a road that winds back and forth across the border.

A 7-year-old girl and a 10-year-old boy were killed in the accident, a spokeswoman at the Polk County Sheriff's Department told CNN.

Only the CSX engineer and conductor were aboard the 33-car freight train, which was hauling automobiles, a CSX spokeswoman told CNN. Neither was hurt; both were receiving counseling. The bus driver, a 34-year-old woman, was also injured, but not seriously.

An Address for the Homeless at least for the Census

Gary Wolfe is homeless, but the Census Bureau is giving him an address. He's not getting a cozy bed nor a warm meal, but he will count - a change of pace for many homeless whose lives are often ignored.

Census surveyors started visiting homeless shelters Monday to locate as many of the nation's homeless as possible, in part to help determine where federally funded services should be provided.

But Wolfe doesn't believe it. "I can't honestly say I've seen any money from the government from the census," he said on a brisk morning in downtown Washington, huddling under a gray blanket on concrete church steps that serve as his bed. Since he doesn't use a shelter or soup kitchen regularly, his address, for census purposes, will be the intersection of 10th and G streets.

"The census is irrelevant. The bottom line is that you have thousands of people out here who need help," Wolfe said.

To the Census Bureau, the homeless survey is known as a count of people without fixed addresses. From New York to Los Angeles, census-takers on Monday began surveying homeless shelters; on Tuesday, they will stop by soup kitchens and mobile food vans.

Then Wednesday morning, census workers will hit the streets to locate people like Wolfe, who don't sleep in the shelters and don't get their food regularly from soup kitchens. Enumerators will seek information from those lying on park benches and on top of steam grates that line city sidewalks, but they are not allowed to wake anyone up.
